(a) Mr. Maize had no discretion to refuse to issue the permit if all the statutory requirements had been fulfilled;
(b) neither the *Ontario Building Code* nor the *National Building Code* provides any design criteria for the floors of the manure tank;
(c) there had been previous incidents in the Township involving a failure of manure tank design which had led to discharge of manure into drains and ultimately into Lake Huron;
(d) on a prior application by another owner for a large barn with an outside manure storage tank, Mr. Maize had required Mr. Dawley to certify that, among other things, the structure would be watertight;
(e) there was no evidence that the Township council interfered with Mr. Maize's review of the materials filed by the appellant;
(f) Mr. Ueckermann's suggestion that he expected to receive the building permit on June 16 was unrealistic to the point of being incredible, given the quantity of material submitted with the application;
(g) Mr. Dawley's certification was sought in order to fulfill the requirement of the *National Building Code* that the manure tanks must be designed and constructed to prevent leakage; and
(h) it was within Mr. Maize's discretion to request the confirmations he did from Dawley Engineering, and he was not influenced to do so because of improper interference by the Township council.

[40] In the result, the application judge expressed herself as "satisfied that the applicant was not entitled to a building permit prior to the passage of the

interim control bylaw".

[41] The standard of review on appeal, even in cases where, as here, the entire record consists of documentary or written evidence, is one of deference: *Equity Waste Management*, at 333, 336. Appellate courts may not interfere with findings of fact, inferences of fact or conclusions of mixed fact and law, which may not be reversed in the absence of a legal or palpable and overriding error: *Housen v. Nikolaisen* (2002), 211 D.L.R. (4th) 577 (S.C.C.).

[42] In making the findings she did, the application judge carefully reviewed and marshalled the evidence before her. I cannot find, in doing so, and in concluding that the appellant was not entitled to a building permit prior to the passage of the interim control bylaw, that she made any legal or palpable or overriding error.

VIII

[43] For the foregoing reasons, I would dismiss Country Pork's building permit appeal, allow its interim control by-law appeal, set aside the order of the application judge dismissing that appeal, and remit the interim control by-law application to the application judge to reconsider it in accordance with these reasons. As success has been divided, there will be no costs.

Pedwell v. Town of Pelham

DOCKET: C30587

COURT OF APPEAL FOR ONTARIO

WEILER, ROSENBERG and ARMSTRONG JJ.A.

ROBERT PEDWELL, KEITH PEDWELL, MARY PEDWELL, LINDA McLEAN and LANDPARK HOMES INC.	)	Peter T.M. Haney and Thomas Bielby for the appellants
Plaintiffs (Respondents)	)	Thomas Richardson and Katherine King for the respondents
- and -	)	Robert Pedwell Keith Pedwell, Mary Pedwell and Linda McLean
THE CORPORATION OF THE TOWN OF PELHAM and ROBERT JUDGE	)	Evert Van Woudenberg for the respondent Landpark
Defendants (Appellants)	)	Homes Inc. **Heard:** October 16, 2002

On appeal from the judgment of Justice Jean-Jacques Fleury of the Superior Court of Justice dated August 25, 1998, reported at [1998] O.J. No. 3461.

ROSENBERG J.A.:

[1] This appeal from the judgment of Fleury J. concerns the legality of an attempt by the appellant municipality, The Corporation of the Town of Pelham, to prevent a land development in the Niagara Region. In 1989, through a mechanism known as a testamentary devise, Tim Pedwell, a St. Catharines solicitor, created 25 lots on the edge of a piece of agricultural land that had been used to grow grapes. By using a testamentary devise, Mr. Pedwell was able to avoid the provisions of the *Planning Act*, R.S.O. 1990, c. P.13 and the intent, at least, of the applicable zoning by-laws. When Landpark Homes, a local builder, applied for a building permit, the Town became aware of Mr. Pedwell's plan, and hastily enacted an interim control by-law. For approximately two years, this effectively froze the Pedwell/Landpark development plans. At the end of the two-year period the Town enacted a further by-law setting the minimum lot size on agricultural land at 1.5 acres. Since the Pedwell lots are, for the most part, one-acre, this had a significant impact on the proposed development.

[2] The trial judge found that the Town acted in bad faith and he directed that the Chief Building Official issue a building permit for most of the lots and declared that the by-law was a nullity. He also awarded the respondents substantial amounts for damages and pre-judgment interest because the Town had illegally held up development on the lands.

[3] The trial judge made strong findings of fact against the Town. The Town submits that in doing so the trial judge made palpable and overriding errors and that he misdirected himself with respect to the applicable law. I have not been persuaded that the trial judge erred in any material way. Accordingly, subject to minor adjustments concerning the amount of loss on invested funds and the scale of costs, I would dismiss the appeal with costs.

THE FACTS

[4] On August 12, 1988, through a numbered company, Tim Pedwell purchased an 85-acre piece of land in the Town of Pelham from Mrs. Lulu Peacock. Mrs. Peacock's late husband had used the land to grow grapes. Tim Pedwell was acquainted with the Peacock family and performed the legal work for the transaction. He agreed that one lot would be severed off

for Mrs. Peacock's grandson. The application for severance proceeded through the Niagara Land Division Committee and, also, because of an objection from a neighbour, to the Ontario Municipal Board. By February 1, 1989, the severance had been finally approved. Because of the nature of the application, Tim Pedwell had to return the property to Mrs. Peacock by way of deed. She would then reconvey all but one acre back to him. Around this time, Mr. Pedwell became aware that Mrs. Peacock was suffering from terminal cancer. He then explained to her the concept of testamentary devises. At the time, the testamentary devise, in effect, allowed a person to subdivide land in a will. Apparently, the intent was that, for example, farmers would be able to convey lots to their children upon death without having to comply with the ordinary procedures in the *Planning Act* that require an approved plan of subdivision or the consent of the Land Division Committee.

[5] The advantage for Mrs. Peacock was that she would be able to convey lots to her children without having to go through the Land Division Committee procedure. The advantage for Tim Pedwell was that he could substantially increase the value of the land since he could, in effect, create a subdivision on agricultural land. After speaking with her family, Mrs. Peacock chose to proceed with the testamentary devise. Tim Pedwell prepared a deed to transfer the property back to Mrs. Peacock. He testified that he delivered the deed to her. She then amended her will to effect the testamentary devise, dividing the land into 25 one-acre (.4 hectare) parcels and a remaining large parcel of approximately 60 acres. The 60-acre lot and 19 of the one-acre lots were left to Tim Pedwell's nominees, the individual respondents (for convenience referred to as the "Pedwells"). The six remaining one-acre lots were left to Mrs. Peacock's relatives. Mrs. Peacock unexpectedly died shortly after these arrangements were made on March 10, 1989.

[6] In October 1989, the Pedwells entered into a contract to sell 15 of the one-acre lots to the respondent Landpark Homes Inc., a company controlled by Allan Breitkreuz, for $1.08 million. The Pedwells warranted that building permits would be available. The transfers were to close on December 31, 1990 with an option to extend the closing on seven of the transfers to October 31, 1991. The Pedwells also sold the large parcel and an access lot. That transaction was also conditional upon obtaining a building permit.

[7] In November 1989, Mr. Breitkreuz met with the appellant Robert Judge, the Town's Chief Building Official about obtaining building permits. He did not present a formal application at that time. Mr. Judge was surprised that the lots existed. Breitkreuz showed him the reference plan and Mr. Judge said he would look into it. Mr. Judge also told him that he would need septic approvals from the Regional Health Unit. Mr. Breitkreuz then, sometime in the same month, spoke to someone in that Unit.

[8] I will review the facts concerning the Health Unit separately after outlining the respondents' and appellants' evidence about the dealings in late 1989 and early 1990. I adopt the trial judge's summary of that evidence:

> In early December 1989, Mr. Pedwell contacted Mr. Judge, advising him of the creation of the lots by testamentary devise and seeking clarifications as to what would be required by way of pre-requisites for the granting of building permits. The next contact was with Mr. Brooks, Town solicitor. He called Mr. Pedwell and asked for details concerning the testamentary devises. On December 6, 1989, Mr. Pedwell wrote to Mr. Brooks, giving him all of the details and asking that he instruct the building officials to issue building permits. When he heard nothing for close to a month, Mr. Pedwell became concerned over the delays and instructed Mr. Breitkreuz to attend and formally apply for the building permits. On January 3, 1990, Mr. Breitkreuz presented formal applications to Mr. Judge for all of the lots in issue.

[9] A substantial element of the respondents' case rests on the proposition that had the Town officials not improperly interfered, Mr. Judge would have issued building permits prior to that date. The trial judge made that finding subject to two caveats:

> I have no hesitation in concluding that, had these applications been treated normally, approval would have been granted well prior to the end of January *subject to the issue of the Hazard Zoning by-law and subject also to the availability of septic tank permits*.

[10] The caveat concerning the Hazard Zoning by-law is of no consequence to the litigation. The trial judge held that certain of the lots were in a hazard zone and could not be built on and he gave no relief in relation to those lots. The question of septic tank permits is more problematic and is a central feature of the appeal.

[11] The next significant series of events concerns the interim control by-law. After Mr. Judge brought the Pedwell issue to the attention of other town officials, they began discussions about ways to halt the development. They were concerned that the development was not in the public interest. On January 24, 1990, in a letter to the respondent Tim Pedwell, drafted by the Town solicitor but signed by Mr. Judge, Mr. Pedwell was informed that a decision with respect to the building applications "had been deferred pending an evaluation of the impact on Local, Regional and Provincial Planning Policies and legislation by our Town Solicitors and Consulting Planners. Unless special circumstances arise of which we are presently not aware, you can expect a decision on or before February 9th next." Unbeknownst to the respondents or Mr. Breitkreuz, the Town solicitor recommended that the Town enact an interim control by-law to halt any development on agricultural land.

[12] On the same day as the letter went out to Tim Pedwell, the Town Planner, Mr. Barker, provided a report to Town Council recommending there be a planning review to address the issue of non-farm development in agricultural areas. On January 29, 1990, Council adopted this recommendation. On February 5, 1990 Council passed the interim control by-law No. 1319 pursuant to s. 38(1) of the *Planning Act*, R.S.O. 1990, c. P.13. Subject to certain exceptions that are not germane to this appeal, the by-law provided that no one could use land or erect a building within land zoned as agricultural. The by-law was in force for one year. The Pedwells and Mr. Breitkreuz were not given notice of the Town's intention to pass the by-law. On February 6, 1990, Mr. Judge wrote to the Pedwells and advised them that the by-law had been passed and provided them with a copy.

[13] The respondents began an application before the Ontario Municipal Board to set aside the by-law and brought an appeal under s. 15 of the *Building Code Act*, R.S.O. 1990, c. B. 13, to review the refusal to issue the building permits. The OMB hearing was adjourned and did not proceed prior to the expiration of the interim control by-law. The s. 15 appeal was one of the matters dealt with by the trial judge at the trial that began in 1997.

[14] At this point it would be helpful to look at the legal landscape of testamentary devises for creating building lots. The trial judge found that although the report and the by-law were drafted in broad terms to look generally at non-farm development of agricultural lands, the by-law was "targeting only testamentary devise lots and in particular, at the time in question, the municipality only knew of the Pedwell lands as having been subdivided by testamentary devise". The trial judge found that when Mr. Breitkreuz applied for the building permits, "There simply was no obligation to comply with the *Planning Act* and the Town knew this." The appellants challenge this finding. The Town solicitor was aware that creating lots by testamentary devise was legal. However, in his evidence, he attempted to cast doubt on the creation of a large number of lots by this method. He testified that he believed that such schemes were a fraud on the *Planning Act*.

[15] Later in 1990 and 1991 a developer used the mechanism of testamentary devise in the nearby town of Niagara-on-the-Lake. In 1991 and 1992 judges of the Ontario Court (General Division) held that the transactions were valid. In January 1993, a majority of this court upheld those decisions.[1] Meanwhile, in December 1990, the provincial government introduced legislation ending the right to divide property by testamentary devise. This legislation received Royal Assent in June 1991 but did not apply to wills of persons who died on or before July 26, 1990. It therefore did not affect the Peacock will.

[16] Sometime after the by-law was enacted, Keith Pedwell, Tim Pedwell's father, encountered the Town solicitor at an OMB hearing and they had a discussion about the legality of testamentary devises. According to Keith Pedwell, the solicitor, Mr. Brooks, acknowledged that the Town knew of the legality of severance by testamentary devise but the Town would hold the Pedwells up "until the lots were not worth anything". Mr. Brooks denied saying this, testifying that he told Mr. Pedwell that he knew testamentary devises were possible but that the scheme that had been adopted could be controlled under the *Planning Act* because it was a device to circumvent the Act. He also told Keith Pedwell that he thought the Town would be successful in blocking his application or any similar one, and that his application was incomplete. The trial judge accepted Mr. Pedwell's version of the conversation. In doing so the trial judge relied, in part, upon the finding that Keith Pedwell had taken notes of the conversation and because that version was indicative of the kind of attitude demonstrated throughout by the Town and its officials. It was common ground on the appeal that in fact Mr. Pedwell did not take notes of this conversation. I will return to this issue later.

[17] On February 4, 1991, Town council extended the interim control by-law for a further year. The respondents were not given prior notice of the Town's intention to do so.

[18] On January 28, 1992, the Town held a public hearing in respect of a report that recommended an amendment to the Town's zoning by-law that would increase the minimum lot size from one acre to 1.5 acres. Notice of this meeting was published in the local paper. Although the respondents were engaged in litigation with the Town over this very issue they were not given notice of the meeting, and since they do not live in the Town they did not receive the local newspaper. The respondents had retained counsel to proceed with their various actions but they had not made a formal written request to the Town to receive notice of any proposed by-law amendments that would affect their property.

[19] On February 3, 1992, Town Council passed a by-law amending the zoning by-law to increase the minimum lot size from one acre to 1.5 acre as recommended in the report. The recommendation was purportedly based upon the Health Unit requirement for larger lots to accommodate septic needs. The planner who prepared this report conceded that he never talked to the Health Unit during this time about this recommendation. He testified that from previous dealings with the Health Unit he believed this increase in acreage was required.

1 *Niagara-on-the-Lake (Town) v. Gross Estate* (1993), 12 O.R. (3d) 1 (C.A.).

THE ISSUES

[20] The appellants raise many issues but they can be summarized as follows:

(1) The trial judge misapprehended the facts relating to the Health Unit approval of the septic system.
(2) The trial judge erred in allowing the *Building Code Act* appeal and directing that building permits issue in respect of the lots for which Mr. Breitkreuz submitted applications on January 3, 1990.
(3) The trial judge erred in failing to comply with s. 200 of the *Municipal Act*.
(4) The trial judge erred in finding that the interim control by-law and the zoning amendment by-law were passed in bad faith and in quashing the latter.
(5) The trial judge erred in finding that Tim Pedwell delivered the deed to Mrs. Peacock.
(6) The trial judge erred in setting the rate of pre-judgment interest at the *Courts of Justice Act* rate.
(7) The trial judge erred in awarding solicitor client costs.

ANALYSIS

Introduction

[21] While the appellants raise some issues of law, their main arguments concern findings of fact and the inferences to be drawn from those facts. An appellate court is required to give deference to both the findings of fact and the inferences drawn by the trial judge.

[22] In *Housen v. Nikolaisen* (2002), 211 D.L.R. (4th) 577, the Supreme Court of Canada discussed at some length the standard of appellate review where the appellate court is called upon to review inferences from facts. The court concluded that the standard is one of considerable deference. Iacobucci and Major JJ. describe the standard at para. 23 as follows:

> We reiterate that it is not the role of appellate courts to second-guess the weight to be assigned to the various items of evidence. *If there is no palpable and overriding error with respect to the underlying facts that the trial judge relies on to draw the inference, then it is only where the inference-drawing process itself is palpably in error that an appellate court can interfere with the factual conclusion*. The appellate court is not free to interfere with a factual conclusion that it disagrees with where such disagreement stems from a difference of opinion over the weight to be assigned to the underlying facts [emphasis added].

[23] As will become apparent, while I might not have made all of the same findings as the trial judge, nor drawn the same inferences, I am not satisfied that the trial judge was palpably in error.

(1) The Health Unit Approval Issue

[24] The question of the Health Unit approval impacts on this appeal in several ways. The appellants contend that the building applications were never complete and therefore the trial judge should not have allowed the *Building Code Act* appeal. The question of Health Unit approval would also affect the question of damages, even if the by-laws were passed in bad faith. If the development could not have been built because the Health Unit would never have approved of the septic system proposed by the respondents, the respondents' damages would be minimal.

[25] I will outline some of the chronology concerning Health Unit approval and then set out the trial judge's reasons. I will then address some of the appellants' submissions on this issue.

[26] Mr. Judge, who was called by the respondents, testified that when Mr. Breitkreuz brought in the building permit applications, he told him he would need Health Unit approval for the septic system. Until Mr. Breitkreuz obtained that approval, the applications were not complete and could not be processed. The applications were never completed prior to the interim control by-law coming into force.

[27] While Mr. Breitkreuz's evidence on this issue is not entirely satisfactory, it appears that he met with the Health Unit on two occasions before the interim control by-law was passed. On the first occasion someone, who was never identified, told him that inquiries would have to be made with the Town because the Health Unit was unaware of the development. On the second occasion, shortly after he submitted the building applications, Mr. Breitkreuz spoke to the Health Unit and was told that there was no point in his applying for septic system approval because the Town "had some issues" and when the Town was satisfied, the septic approval would be given. No objection was taken to the admissibility of this evidence and, in fact, it was introduced as a result of questions during cross-examination of Mr. Breitkreuz by counsel for the Town.

[28] The only other evidence, if it could be characterized as such, of the relationship between the Town and the Health Unit comes from a letter from Mr. Christensen, a manager with the Health Unit. He was not with the Health Unit in early 1990 and had no dealings with the Town over this issue at the time. However, in response to a letter from the Town's solicitor he wrote as follows in December 1996:

> In 1990 the concept of Testamentary Devise lots was a new one for this Department and as a result we spent a considerable amount of time consulting with our solicitors, Ministry of Environment and Energy consultants and planners in an effort to determine the best approach to access these lots. You must remember that a number of these type of proposals also came forward in other municipalities within the Niagara Peninsula about the same time. It is my recollection that in 1990 there was a pending legal proceeding which was to determine the legal status of these types of lots. Until that particular issue could be resolved, this Department's position was not to recognize plans of testamentary devise lots as being legal lots of record. Therefore, had this particular development come forward prior to a legal decision being finalized, we would not have recognized the boundaries as outlined in Reference Plan 59R-6462 and requested that a complete submission be provided with engineering documentation for us to assess this multiple lot development. This would include but not be limited to submitting a proposal to address such issues as drainage, grading, ground water protection, sewage system designs, etc. Once these particulars had been submitted and reviewed, we would have been in a better position to review lot sizes and comment through normal planning channels, i.e. Draft plan approval.

[29] In commenting on that letter, Mr. Christensen testified that this position "came from our own solicitors of the Region after reviewing it with them". Mr. Christensen did not become involved in the Pedwell issues until sometime in 1991.

[30] The trial judge accepted Mr. Breitkreuz's evidence:

> It is unclear when Mr. Judge advised Mr. Breitkreuz as to the requirement of a septic tank approval from the Health Department. In any event, what is clear is that when he approached the Health Unit, Mr. Breitkreuz was told unequivocally that he would not be getting an approval since the lots were considered illegal by the Town and he was referred back to the Town. Mr. Breitkreuz therefore did not consider taking additional steps towards securing the septic tank permits in light of the attitude taken by the Health Unit officials.

[31] On September 4, 1991, Mr. Breitkreuz first made a formal application for septic approval. He did so only in respect of one lot. When the employee of the Health Unit realized that this was part of a larger development he told Mr. Breitkreuz that he might have trouble getting a permit. On October 17, 1991, Keith Pedwell and Mr. Breitkreuz met with the Health Unit managers. The managers told Mr. Pedwell and Mr. Breitkreuz that the Health Unit was concerned about the legality of the lots; that in the context of a normal subdivision agreement application the Health Unit would deal with such things as soil structure and drainage; and, that

the Health Unit would require an approved drainage plan before septic approval. The Unit also suggested an environmental assessment.

[32] On May 14, 1992, the respondents retained an expert to provide an opinion of whether the lots met the Health Unit's requirements for septic approval as of January 3, 1990. The respondents did not, however, make any further application to the Health Unit.

[33] There was conflicting evidence from the appellants' expert, Allan. Gray and the respondents' expert, Peter McGlone, about what kind of septic system could be used. Mr. Gray was particularly concerned about the concentration of nitrates from a development of the size proposed by the respondents. He did not agree that the Class VI system designed by Mr. McGlone could meet these concerns. He testified that at least the size of the individual lots would have to be substantially increased to 2.5 acres. Mr. McGlone testified that each of the lots should be treated separately and he explained how he could design a safe Class VI system without increasing the size of the building lots.

[34] The trial judge accepted the evidence of the plaintiff's expert and he resolved that issue in this way:

> I am aware of the fact that the Chief Official in the Health Unit has a lot of discretion in approving or not a particular septic tank proposal. I would hope that this official would consider these applications as any other application and that he would not insist on treating them as part of a larger development. Based on my finding that these lots are exempt from planning control under the *Planning Act*, I have no hesitation in declaring that each lot should be considered as a single application and not as part of a whole series of lots in a plan of subdivision.
>
> In light of the established facts and the evidence given by Mr. McGlone, I am satisfied that the following findings of fact can be made:
>
> a) The establishment of septic systems of Class VI on the lots will not create a nuisance.
> b) The establishment of septic systems of Class VI will not be or likely to be contrary to the public interest.
> c) The establishment of septic systems of Class VI on the lots will not create or be likely to create a hazard to the health or safety of any person or result in the impairment of the quality of the natural environment for any use that can be made of them.

[35] The Town submits that the trial judge erred because he failed to consider the evidence of Bjorn Christensen, the official from the Health Unit, who testified that even if these lots were so-called lots of record, for the purposes of the *Environmental Protection Act*, R.S.O. 1990, c. E. 19, the entire development had to be considered. Mr. Christensen seemed to rely upon the respondents' expert's evidence, especially concerning the concentration of nitrates.

[36] It would have been preferable had the trial judge dealt squarely with this evidence. I am not convinced, however, that his failure to do so constitutes reversible error. His findings quoted above deal with the concerns raised by Mr. Christensen in his evidence. It is implicit in those findings that the trial judge, having accepted the respondents' expert's evidence, found that the Health Unit would have no legitimate basis for refusing to issue the approvals.

[37] The trial judge also relied upon the fact that Sharon Delaney,

one of Mrs. Peacock's daughters who had obtained one of the lots under the will, had no difficulty in obtaining septic tank approval in December 1989, a month before Mr. Breitkreuz made his application for building permits. The same reference plan used by Mr. Breitkreuz was attached to Ms. Delaney's application.

[38] The appellants have not shown that the trial judge made a palpable and overriding error with respect to the evidence concerning the septic system.

(2) The Building Permit Appeal

[39] The case proceeded before the trial judge on the basis that no building permit could be issued in respect of this unserviced agricultural land until the Regional Health Unit had given its approval for a septic system. As I have said, Mr. Judge and Mr. Breitkreuz testified that when Mr. Breitkreuz brought in the applications on January 3, 1990, Mr. Judge told him that the Health Unit approval would be required. It is common ground that Mr. Breitkreuz never obtained these approvals before the interim control by-law took effect. The appellants submit that as of the time when the interim control by-law was passed, the applications for building permits were not complete and accordingly, Mr. Judge could not have issued the permits. As a result, the respondents' right to have the building permits issued never crystallized before the by-law came into force. Accordingly, the appellants submit, the trial judge erred in allowing the *Building Code Act* appeal.

[40] The trial judge dealt with the question of Health Unit approval in this way.

> I take it that no building permit will be issued with respect to unserviced lands without a septic tank permit being first issued by the Niagara Regional Health Unit. It is, in effect, a condition precedent to the granting of a building permit. It was argued at trial that because the plaintiffs failed to secure a septic tank permit prior to February 5, 1990 that their action is doomed. Let us therefore examine the circumstances of this failure to comply with the condition precedent. The only evidence that we have concerning the failure to apply to the Health Unit for a permit is in Mr. Breitkreuz' own testimony. He states that some time in January of 1990, he contacted the Health Unit to find out their requirements. He was told, right off the bat, that since his lots were considered illegal by the Town, that there would be no permits issued and that he had better talk to the Town to remedy the situation. We all know what good talking to the Town did.
>
> The question to be answered by me is whether or not the failure on the part of Mr. Breitkreuz to secure a septic tank permit beforehand should be fatal to his application for judicial review of the Chief Building Official's decision. *It would be a travesty of justice if it proved to be fatal. Where, as here, the Town has taken steps to notify the Health Unit of their legal concerns with respect to the creation of the lots and where the Health Unit's response is contingent on what the Town might have to say concerning the legality of the uses, the Town should be estopped from raising the absence of septic tank permits as an obstacle in the process of this appeal. After all, even though the Health Unit is technically completely separate from the Town administration, there comes a point when as a result of the collusion of employees between*

> *themselves any such distinctions tend to disappear.*
>
> In the case at bar, there seems to be no question that all planning forces joined to attempt to thwart what they saw as a flagrant attempt to circumvent the *Planning Act*. Unfortunately for every one, at that time the Legislature in its wisdom had chosen to exempt testamentary devises from *Planning Act* controls. So there was nothing wrong with an individual working around the *Planning Act* in this fashion. There simply was no obligation to comply with the *Planning Act* and the Town knew this. Yet, two of its officials instructed the Chief Building Official to delay the processing of the applications for building permits. There is no authority for such delaying tactics [emphasis added].

[41] Thus, the trial judge concluded that there was collusion between the Health Unit and the Town and thus the respondents' failure to obtain the septic approval should not have prevented issuance of the building permits. He therefore directed that the building permits issue, except for those lots in the hazard zone and subject to the respondents obtaining Health Unit approval. I will assume in the appellants' favour that the evidence does not support the finding that there was collusion between the Health Unit and the Town and that the evidence at its highest merely shows that the Town and the Health Unit had the same concern about the legality of these lots.

[42] However, I do not consider that to be fatal to the respondents' case. As I read Mr. Judge's evidence, he would have issued the building permits, since the application was otherwise complete, had Mr. Breitkreuz obtained the necessary approvals from the Health Unit. There is evidence that other Town officials told Mr. Judge to "hold off" in giving the permits. While Mr. Judge was entitled to seek advice from whomever he thought would assist him in making his decision, he could not refuse to issue the permits, if they otherwise complied with the law. I agree with the trial judge that if the Town officials ordered Mr. Judge to refuse the permits, this would be an improper interference in his duties.

[43] I agree with the trial judge that it would have been unfair to dismiss the appeal because of this technical deficiency when the Health Unit had said that it would not process the applications until the problems with the Town had been sorted out. This placed Mr. Breitkreuz in a "Catch 22" position. In the circumstances, the trial judge made the only order that he could. He could not direct that the Health Unit give its approval. He ordered that the Chief Building Official issue a permit to the plaintiffs "subject to the securing by the said Plaintiffs of a septic tank permit".

[44] The appellants raised two further objections to the trial judge's decision on the building permits. First, they submit that Mr. Judge had the legal obligation to refuse to issue the permits because the Regional Official Plan is "other applicable law" within the meaning of s. 6 of the *Building Code* and the proposed development violated the terms of the Regional Official Plan. Section 6 provides that the chief official shall issue a permit except where the proposed building "will contravene any other applicable law". There is some support for the appellants' position. See *Campeau Corporation v. Township of Gloucester et al. and two other actions* (1979), 22 O.R. (2d) 652 (C.A.) affirming (1978), 21 O.R. (2d) 4 (H.C.J.).

[45] The appellants, however, failed to establish that the development would violate the Regional Official Plan. The appellants rely upon Objective 6.A of the Plan concerning "Policies for Agriculture". That policy directs the municipalities to preserve the predominant use of land in good general agricultural areas for agriculture of all types including livestock operations and compatible uses such as forestry and conservation of plants and wildlife. The policy then sets out the circumstances in which the municipality may consent to severances including severances for farm-related residential lots. Under this policy, the development contemplated in Mrs. Peacock's will would not have been permitted had she been required to seek consent from the Land Division Committee. However, because they were created by testamentary devise, the severances in this case did not require such consent. After Mrs. Peacock's death, the provincial government considered the problem created in this region by severances

through testamentary devise and amended the *Planning Act* accordingly. However, that legislation was not made retroactive so as to apply to Mrs. Peacock's will. Further, the size of the lots complied with the Town's Official Plan as it stood when the applications for building permits were made. I would therefore not give effect to this ground of appeal.

[46] Finally, the appellants submit that the *Environmental Protection Act* is "other applicable law" and that the evidence shows that the septic system proposed by the respondents would release nitrates into the soil in such quantities as to violate the Act. Related to this ground of appeal is the submission that the trial judge erred in permitting the respondents to recall their expert in reply to respond to the appellants' evidence on this issue.

[47] I accept that in the circumstances of this case, the *Environmental Protection Act* can be considered other applicable law within the meaning of s. 6(1) of the *Building Code Act*. See *Welwood v. Huron-Kinloss (Township) Chief Building Official* (2002), 29 M.P.L.R. (3d) 1 (Ont. S.C.J.). Although compare *Burns v. Perth South (Township) Chief Building Official* (2001), 54 O.R. (3d) 266 (Ont. S.C.J.).

[48] The trial judge had the discretion to permit the respondents to recall their expert to respond to the nitrate issue. The question of reply evidence principally arose because of unexpected evidence given by the appellants' expert, Mr. Gray, as to the Ministry policies that he relied upon for his opinion that proposed development would violate the *Environmental Protection Act.* The trial judge ruled that the respondents should be entitled to recall their expert, Mr. McGlone, on that topic. I am not persuaded that the trial judge exercised his discretion improperly or that Mr. McGlone's evidence exceeded the scope of the trial judge's ruling. On the substantive issue, as I have indicated, the trial judge preferred the evidence of Mr. McGlone to Mr. Gray and was in fact quite critical of the latter's evidence, which he found "not very impressive". The trial judge found that the system designed by Mr. McGlone would not create a hazard to the health or safety of any person or result in the impairment of the quality of the natural environment. The trial judge was entitled to accept Mr. McGlone's evidence and accordingly, this aspect of the appeal cannot succeed.

(3) Section 200 of the *Municipal Act*

[49] Before dealing with the trial judge's reasons for quashing the by-law I will address an issue raised by the appellants for the first time on appeal. Section 200 of the *Municipal Act*, R.S.O. 1990, c. M. 45, provided that a proceeding shall not be brought for anything done under a by-law that is invalid "until one month after the by-law … has been quashed or repealed". The interim control by-law has long expired by operation of s. 38(1) of the *Planning Act*. By-law No. 1455 was passed by the Town council on February 3, 1992 and increased the minimum lot size to 1.5 acres for residential lots in the agricultural zone. The respondents applied to quash that by-law on the basis that it was enacted in bad faith. The application to quash the by-law was heard with the respondents' action for damages. The appellant Town consented to this procedure and never pleaded s. 200 of the *Municipal Act* in its statement of defence. The issue was raised for the first time on appeal.

[50] In my view, the holding in *Shaver Hospital for Chest Diseases v. Slesar et al.* (1979), 15 C.P.C. 97 (Ont. C.A.) applies. In *Slesar*, the defendant had pleaded that the contract upon which the plaintiff sued was illegal because it violated two provincial statutes. The issue, however, was virtually abandoned at trial and evidence that might have been relevant to that issue was not introduced for that purpose, although there was some evidence on the issue in the record. On appeal, the defendant appellant attempted to resurrect the issue. Lacourciere J.A. at p. 101 referred with approval to a statement by Lord Halsbury from *Browne v. Dunn* (1893), 6 R. 67 (H.L.) at 76:

> … that you cannot take advantage afterwards of what was open to you on the pleadings, and what was open to you upon the evidence, if you have deliberately elected to fight another question, and have fought it, and have been beaten upon it.

[51] In my view, that is the case here. The Town consented to this procedure. It must have perceived some tactical advantages to having all of

the matters dealt with at the same time by the same trial judge. By the time the trial judge heard this matter it was almost eight years since the building permit applications were made and over five years since the by-law was passed. It would be manifestly unfair to require the respondents to begin their damage action all over again because of an issue that could and should have been raised at the first instance. I would not give effect to this ground of appeal.

[52] Accordingly, the trial judge did not err in holding that the building permits should have been issued prior to the town passing the interim control by-law on February 5, 1990.

(4) Bad Faith

[53] The appellants' principal submission on this appeal is that the trial judge erred in finding that the Zoning Amendment By-law 1455 and the interim control by-law were passed in bad faith and in quashing the former. In holding that the by-laws were passed in bad faith the trial judge made a number of findings of fact that can be summarized as follows:

> 1. Mr. Judge took direction from other town officials to delay the granting of the building permits, and, but for the intervention of these persons the building permits would have been granted in the normal course before the interim control by-law was passed on February 5, 1990, subject to health unit approval.
>
> 2. At the direction of town officials, Mr. Judge wrote a misleading letter to Tim Pedwell on January 24, 1990 giving the impression that the delay in issuing the building permits was for evaluation of the impact on planning policies and legislation by the town solicitors and planners. In fact, by that time the decision had been made to use the interim control by-law to block the development.
>
> 3. The interim control by-law itself was targeting only the Pedwell development even though on its face it appeared to have broad application.
>
> 4. Although the town officials were aware that the interim control by-law would directly affect the Pedwells and Mr. Breitkreuz, they were given no notice that the Town intended to pass that by-law.
>
> 5. Mr. Brooks told Mr. Keith Pedwell that he knew that severance by testamentary devise was legal but the Town would give them a "real hard time" and hold up the development until they were not worth anything.
>
> 6. The Town did not give notice to Mr. Breitkreuz or the Pedwells of the intent to renew the interim control by-law or the intent to pass Zoning Amendment By-law 1455 even though they knew of their direct interest in those by-laws.
>
> 7. The Town did not give notice to Mr. Breitkreuz or the Pedwells of the public hearing on January 28, 1992 to consider passage of the zoning amendment by-law.
>
> 8. Publication of notice in the Pelham Herald was a sure way to ensure that notice would not come to the attention of Mr. Breitkreuz or the Pedwells.
>
> 9. The Town deliberately avoided the prospect of a public hearing where the Pedwells would have had the

> opportunity to present their side of the issue.
>
> 10. The Zoning Amendment By-law that was eventually passed itself violates the Regional Official Plan, which states that the maximum lot size is one acre. The real purpose behind the by-law was to frustrate the Pedwell plan.

[54] The appellants attack many of these findings of fact and the legal effect of those findings. I will briefly deal with those submissions.

a. Mr. Judge took direction from the Town officials

[55] The appellants submit that Mr. Judge had the right to consult with Town officials before issuing the building permits. The trial judge stated the following:

> Surely it is imperative that other Town officials not interfere with the Chief Official in the performance of the duties imposed upon him pursuant to section 6 of the *Act*. Once he has been appointed he should be left alone to perform the functions entrusted to him. If the Chief Building Official is to deal fairly with each application, it is imperative that any such decision making be done impartially. The true measure of impartiality is the ability of the judge or other official to take some distance from his own preconceived notions and prejudices to arrive at a fair decision, looking only at the issues in question. *Mr. Judge therefore should have reached his decision without consulting all other planners and officials* and the decision should have been made on the basis of the requirements outlined in section 6 of the *Act* and not on the basis of extraneous concepts and policies [emphasis added].

[56] I agree with the appellants that the trial judge erred if he held that Mr. Judge had no right to consult with other Town officials. However, in my view his finding on this aspect of the case did not turn on that holding. He found that Mr. Judge made his decision on the basis of "extraneous concepts and policies". In any event, the trial judge went on to hold that these were not consultations but instructions from the Town officials that "smack of interference rather than advice". This finding is supported by the evidence. A particularly troubling aspect of the evidence is that Mr. Judge conceded that at the direction of the lawyer retained by the Town he swore a misleading affidavit in these proceedings in April 1990. In the affidavit, Mr. Judge purports to explain the legitimate planning reasons for refusing to issue the permits. Mr. Judge testified, however, that the affidavit was drafted by the lawyer and did not reflect his belief at the time. There could hardly be stronger evidence that Mr. Judge was not simply taking advice but was acting solely on the direction of the Town officials.

[57] The appellants also submit that Mr. Breitkreuz did not make a proper application for building permits since he had no intention of building the type of home specified in the application. Mr. Breitkreuz submitted identical plans for relatively small houses. His admitted intent was to actually build larger custom homes. The trial judge did not deal with this issue. There was, however, evidence from Mr. Judge that it is possible to submit revised plans, updated septic approval and additional fees, in which case the permit can be transferred. In my view, Mr. Breitkreuz adequately explained why he submitted the plans that he did. He and the Pedwells suspected that something was not right, and so he submitted a plan that he knew should receive approval because he had previously used it. As it turned out, their suspicions were correct.

b. The delaying tactics

[58] The appellants submit that the purpose of the interim control by-law is

to protect the public interest and that it was open to the Town to delay the building permit applications until the interim control by-law was in place. There is no question that the purpose and effect of an interim control by-law is to suspend the rights of owners and developers to undertake otherwise permitted uses. Further, as Laskin J.A. said in *Equity Waste Management of Canada v. Halton Hills (Town)* (1997), 35 O.R. (3d) 321 (C.A.) at 338:

> An important purpose of interim control by-laws is to permit a municipality to change its mind, to reconsider its land use policies. Whether an area is suitably zoned, whether development should be suspended in the public interest, and whether proposed projects are compatible with a municipality's long range planning objectives are matters to be decided by municipal councils, not by courts. The role of the court is limited to ensuring that the municipality did not exceed its powers or exercise those powers in bad faith.

[59] However, I do not read the trial judge's reasons as being at variance with any of these principles. He had to consider whether these broad powers were exercised in bad faith. He thought that one indication of bad faith was that Mr. Judge wrote a misleading letter to the respondents. Mr. Judge confirmed that the letter was misleading. It was open to the trial judge to consider that this was simply one indication to be considered with the other evidence of bad faith. I do not think the trial judge misused this evidence or placed unreasonable emphasis upon it.

c. The by-law was targeted at the Pedwell development

[60] There was conflicting evidence at the trial about whether the by-law was targeted only at the Pedwell development or whether there were a number of other developments in the Town that were using the testamentary devise as a severance vehicle. In my view, the better view of the evidence is that the Pedwell development was the only one about which there was any real concern. There were other developers using this device in the area, but they were not developing lands in the Town of Pelham.

d. Lack of notice

[61] The trial judge was very critical of the Town for failing to give notice to the respondents. The appellants point out that under the legislation no notice needs to be given before an interim control by-law is passed, and that by giving notice in the Pelham Herald of the public meeting and the intent to pass the amended zoning by-law, the Town complied with the applicable legislation. However, the trial judge did not misapprehend the legislation or the evidence in this respect. He acknowledged, "Council did not technically offend any requirements contained in the legislation with respect to the giving of notice". He also expressly noted that under s. 38(3) of the *Planning Act* there is no need for notice to affected persons before the interim control by-law as passed. His point was a different one. The only purpose of the interim control by-law was to frustrate the Pedwell development. He considered that the Town's failure to give notice was a further example of bad faith, even if the technical legal requirements were complied with. By their conduct the Town "deliberately avoided the prospect of a public hearing where the Pedwells might have called them to task on some of the more dubious aspects of the proposed remedies". While I might not have drawn the same conclusion from the evidence, I cannot say that the trial judge's view was unreasonable. As I have indicated, his findings of fact and the inferences he drew from those facts are entitled to deference.

e. The Brooks/Pedwell conversation

[62] I have already referred to this incident in outlining the facts. The parties agree that the trial judge misapprehended the evidence when he held that Keith Pedwell had taken notes of the conversation with Mr. Brooks. However, the trial judge gave two reasons for accepting the evidence of Mr.Pedwell over that of Mr. Brooks, and stated his principal reason in these terms:

> I have no difficulty preferring the evidence of Mr. Pedwell over that of Mr. Brooks for the simple reason that

> the kind of attitude demonstrated throughout this application by the Town and its officials was quite illustrative of the mind set shown by Mr. Brooks at the time.

[63] The trial judge also noted that the action for damages was commenced shortly after this conversation. In the circumstances, the trial judge's error about the note-taking was not material and does not undermine his finding of fact about the contents of the conversation.

f. The amendment to the zoning by-law to increase the lot size

[64] The trial judge found that the real purpose behind the amendment to the zoning by-law was to frustrate the Pedwell development plan. This was a critical finding by the trial judge. It is implicit in that finding that the increase in the lot size had no real planning purpose and was simply designed to prevent a development for which there was otherwise no legal impediment. Once the Court of Appeal dismissed the appeal in the Niagara-on-the-Lake case and since the provincial government failed to make the new legislation retroactive to cover the respondents' case, there was no legal impediment to the Pedwell development. The trial judge noted that the amendment to the zoning by-law to increase the maximum lot size was inconsistent with the Regional Official Plan. Not surprisingly, the trial judge was suspicious of the Town's real motives for the amendment. He wrote as follows:

> It does not require much by way of scepticism to assume that the real purpose behind this by-law was to frustrate the Pedwell plan. This, in my opinion, also stands as a further indication of the bad faith of the Town in passing this by-law.

[65] It is not entirely accurate to say that the amendment violated the Regional Official Plan. Policy 6.A.10(f) provides as follows:

> (f) The size of any new lot shall not exceed an area of 0.4 hectares (1 acre) *except to the extent of any additional area deemed necessary to support a well and private sewage disposal system as determined by the Medical Officer of Health* or such other person appointed for that purpose by the Ministry of the Environment [emphasis added].

[66] Mr. Barker did the planning work that led to the amendment to the zoning by-law. He prepared the report that recommended the increase in the maximum lot size. He testified that he did so because of recommendations from the regional health services department. However, Mr. Barker conceded that he did not talk to anyone in the Health Unit about this change and no one in the department advised him that the one-acre lot size was no longer acceptable. He based his recommendation on reports he had read and his "public and private sector work that was done throughout the Region".

[67] In my view, there is a reasonable basis for the trial judge's conclusion concerning the purpose of the by-law amendment and the trial judge properly considered this to be an important indication of bad faith.

[68] The appellants also submit that the trial judge misapprehended the effect of the amendment since it did not defeat the Pedwells' development plan. The appellants point out that the Pedwells would be able to proceed with the development by combining two of the proposed lots. In my view, this is not a basis for interfering with the trial judge's conclusion. The effect of the zoning by-law was to substantially reduce the number of lots available for development and therefore substantially interfere with the Pedwells' proposals. The trial judge was entitled to rely on this factor as an indication of bad faith on the part of the Town.

[69] To conclude, I am not persuaded that, given the deference to which the trial judge's findings of fact are entitled, that there is any basis for interfering with these findings. The appellants have not shown that the trial judge made any palpable and overriding errors of fact or drew unreasonable inferences from those facts.

g. The test for bad faith

[70] The appellants submit that the trial judge erred in his approach to finding bad faith on the part of the Town. They submit that the trial judge erred in failing to adopt the modern approach to review of the validity of by-laws. That approach is set out in *Shell Canada Products Ltd. v. Vancouver (City)*, [1994] 1 S.C.R. 231 at 244 and 247:

> Recent commentary suggests an emerging consensus that courts must respect the responsibility of elected municipal bodies to serve the people who elected them and exercise caution to avoid substituting their views of what is best for the citizens for those of municipal councils.
>
> …
>
> These considerations lead me to conclude that courts should adopt a generous deferential standard of review toward the decisions of municipalities. To say this is not new. Lord Green said it in *Wednesbury*, and his words have been oft-quoted in Canada. Nevertheless, many courts have continued to take a narrow, interventionist approach to municipal decisions.

[71] Similarly, in *Equity Waste Management of Canada*, this court overturned a decision by the motion judge finding that an interim control by-law had been passed in bad faith. Laskin J.A. at page 339 characterized the motion judge's approach as "too interventionist". The appellants rely upon the decision in *Equity Waste Management* and similarly argue that the trial judge's approach was too interventionist.

[72] Some parts of the trial judge's reasons suggest a more interventionist approach than is permitted under authorities. For example, he said the following:

> In these days of increasing accountability of governments to the citizens who have voted them into office, I have no doubt that it would be considered only normal to insist that a municipal corporation act in the public interest but as well that in doing so it demonstrate good faith to the parties affected by its decision.

[73] However, when the trial judge's reasons are considered in their entirety I am not persuaded that he erred. He was alive to the role the court has in reviewing the validity of by-laws and that it could only intervene if there was a finding of bad faith. The trial judge, moreover, accepted that the Town officials believed that they were acting in the public interest. As he said, "their own subjective assessment of the righteous character of their conduct does not resolve the problems of whether they acted in good faith in so doing". The findings by the trial judge did not rest on second-guessing planning decisions by the Town. He was concerned about the process adopted and the evidence that convinced him that the Town's purpose was to target a development that its officials knew to be legal. There was evidence to support his findings in that respect. As in this court's decision in *Re Hall and City of Toronto et al.* (1979), 23 O.R. (2d) 86 at 92 it was open to the trial judge to find that there was "a singular absence of frankness and impartiality, which are the usual *indicia* of good faith" and a "deplorable lack of frankness and a calculated disregard of the appellant's right to make the best use of his property in accordance with the existing by-laws". Again, while I would not necessarily have reached the same conclusion, I cannot say that the trial judge's conclusion is unreasonable. He had the benefit of a lengthy trial in which the entire

course of conduct was canvassed with many witnesses for the plaintiffs and the defendants. He made findings of fact that I have found are supported by the evidence and he drew inferences that are not unreasonable. In my view, this court is not entitled to interfere with his conclusion.

(5) Delivery of the Deed

[74] The appellants submit that the trial judge's finding that Tim Pedwell delivered the deed to Mrs. Peacock was perverse. The appellants submit that if there was no delivery of the deed, Mrs. Peacock never regained title to the lands that she purported to deal with in her will. Tim Pedwell testified that he delivered the deed to Mrs. Peacock. The trial judge believed him and found no evidence to contradict him. He was not persuaded that the fact Mrs. Peacock returned the deed to Tim Pedwell for registration undermined his testimony. There is no basis for upsetting this finding of fact.

(6) Pre-judgment Interest and Claim for Loss of Use of the Funds

[75] The trial judge fixed the rate of pre-judgment interest at the rate provided for in the *Courts of Justice Act,* R.S.O. 1990, c. C. 43, which in the second quarter of 1990 was 13.5%. The appellants submit that it would have been more appropriate to fix a blended rate since over the several years leading up to the trial there was a fluctuation in the rates. The trial judge delivered reasons addressing this question and was not persuaded he should depart from what he considered was the respondents' *prima facie* right to the interest rate in accordance with s. 128 of the Act. He did not consider that fluctuation in the rates alone was a sufficient reason to depart from the rate provided for in the Act. I see no error in principle in his reasons and would not interfere.

[76] In a related submission, the appellants submit that the trial judge erred in permitting an amendment to the statement of claim to permit the Pedwells to claim an additional amount by reason of the losses suffered as a result of their inability to invest the gross amount from the sale of the lands. The trial judge was satisfied that the appellants were not prejudiced by this amendment. They had been placed on notice of this potential claim in a letter from Tim Pedwell on January 29, 1990. This claim was not included in the statement of claim because, as found by the trial judge, the respondents had erred in their interpretation of s. 128. Further, the trial judge was not persuaded that the appellants would have conducted the case any differently.

[77] The appellants submit that even if the amendment was properly made the respondents failed to adduce sufficient reliable evidence as to how they would have invested the money to establish the amount of their loss. The trial judge permitted the respondents to reopen their case and lead evidence about how they would have invested the money. The respondents attempted to show that they would have invested at least some of the money in high return investments. While the trial judge seemed to find the respondents truthful, he found the evidence speculative and therefore used the *Courts of Justice Act* rate of 13.5%. In my view, this was an error in principle. The burden was on the respondents to establish this part of their case. They did not introduce satisfactory evidence about how they would have used the money or even how the purported investments would have fared over the period. In those circumstances, I can see no justification for using the 13.5% rate, which was almost the peak rate over the period. A more reasonable measure of the loss would be the blended rate of 6.5%. I would allow the appeal to that extent.

(7) Costs

[78] The trial judge awarded costs against the appellants on a solicitor-client basis. The trial judge made this order because the Town maintained its position that the building lots were illegal; used the interim control by-law to freeze development; and then passed the zoning amendment by-law that the trial judge found to have been passed in bad faith. The trial judge has a wide discretion in assessing the scale of costs. However, in my view, he erred in fixing costs on a solicitor-client scale on this basis. The Trial Judge found that the respondents had made out their case but he also acknowledged that the Town officials acted in what they thought was the

public interest. This was therefore not a case for solicitor-client costs.

[79] However, the trial judge made a further finding that the respondents had made an offer to settle that was not quite as favourable to them as the judgment. Thus, he held that in the alternative the respondents were entitled to solicitor-client costs from the date of the offer. Accordingly, the respondents are entitled to their costs of the action on a party and party basis to the date of the offer and thereafter on a solicitor-client basis.

DISPOSITION

[80] Accordingly, I would dismiss the appeal except as indicated with respect to the loss on the use of funds and solicitor-client costs. The respondents having been almost completely successful are entitled to their costs of the appeal on a partial indemnity basis. The parties provided the court with bills of costs and brief submissions. At trial, the respondents were represented by one set of counsel. On appeal, the Pedwells retained new counsel. The respondents have submitted bills of cost that in total exceed $100,000. The interests of all of the respondents were identical and yet there seems to have been little collaboration between the respondents' counsel in their preparation. In my view, this resulted in duplication of work and the incurring of unnecessary costs. Accordingly, I would award one set of counsel fees in the amount of $45,000 inclusive of disbursements and GST for the respondents to divide between themselves as they see fit.

	)	**Heard: March 4, 2002**

On appeal from the judgment of Justice Linda M. Walters dated April 3, 2001.
BORINS J.A.:

Overview

[1] This appeal concerns the constitutional validity of a municipal by-law restricting or prohibiting the erection of certain kinds of signs in the Town of Oakville. The issue is whether the total prohibition on billboard signs and third party signs infringes the right to freedom of expression protected under s. 2(b) of the *Canadian Charter of Rights and Freedoms* and, if so, whether that infringement is justified under s. 1.

[2] In the court below, Walters J. dismissed the application of Vann Niagara Ltd. (Vann) for a declaration that By-law 1994-142 (the "Sign By-law") of the City of Oakville is unconstitutional for the following reasons: (1) insufficient evidence to determine whether the expression in question (billboard advertising) is protected by s. 2(b); (2) insufficient evidence of the impact of the by-law on the applicant's ability to express itself; and (3) even if the by-law does offend s. 2(b), it is saved under s. 1. For the reasons set out below, I would allow the appeal.

Facts

[3] Vann is an advertising company that applied to the Town of Oakville ("Oakville") in 2000 for permission to erect 86 billboard signs in 52 specific locations. In 1994, Oakville passed a sign by-law regulating the posting of signs on private lands. Section 2(5)(a) of the sign by-law states: "No person shall locate or permit the location of a billboard sign". Section 2(16) of the sign by-law prohibits all third party signs on private land within Oakville. A third party sign is defined as "any sign which directs attention to products, goods, services, activities or facilities which are not the principle products, goods, services, activities or facilities provided on the premises upon which the sign is located". The sign by-law, therefore, creates an absolute prohibition on billboards within Oakville and substantially prohibits third party signs on private lands. Persons who erect signs without a permit are subject to a fine.

[4] In 2000, six years after the sign by-law had been enacted, Oakville held a referendum on whether to modify the by-law and permit the erection of some billboards. The referendum question was: "Should the Town of Oakville amend its Sign By-law 1994-142 to allow for the erection and display of billboard/third party signs in some locations in the Town?" However, less than 50% of the eligible voters turned out to vote, so the

results of the referendum were not legally binding on the Town Council.

[5] Oakville, like all cities in Ontario, has been divided into different zones for the purposes of city planning. The areas in which Vann seeks to erect billboards are designated as commercial and industrial zones, and include the area along the Queensway near manufacturing plants and along railway and hydro corridors. Vann does not seek a permit to erect billboards in any zones that are designated as residential or heritage zones, and concedes that Oakville can regulate the use of billboards in those areas.

[6] Vann's advertising business consists of leasing large signs to companies and individuals for the purpose of advertising the products or services which they offer to the public. Vann locates its signs on property which it leases from its owners, such as on railway or hydro rights of way. In the advertising industry these signs are known as billboards. Billboards come in standard sizes, the most common of which are 10 feet by 20 feet, or 200 square feet. As such, Vann's billboards do not advertise the products or services of the owners of the property upon which they are located.

Submissions of the parties

[7] Vann submits that the sign by-law contravenes its right to freedom of expression protected by s. 2(b) of the *Charter*. It argues that billboard advertising is a form of "expression" that is protected by s. 2(b). Vann acknowledges that there is an important public purpose behind the by-law, which is to prevent the proliferation of unregulated signs in Oakville. However, Vann argues that the sign by-law fails to satisfy the requirements of s. 1 because, as a total prohibition on billboards, the sign by-law does not minimally impair Vann's rights.

[8] For its part, Oakville argues that billboard advertising does not fall within the scope of protection afforded by s. 2(b) of the *Charter*. Moreover, in contrast to Vann's interpretation, Oakville characterizes the objectives of the sign by-law as follows: to preserve and enhance the town's unique character; to prevent aesthetic blight; to minimize distractions to motorists; to protect the public from unsafe signs; and to encourage the compatibility of signs with their surroundings. Oakville asserts that the sign by-law is rationally connected to its purposes.

Relevant legislative and Constitutional provisions

[9] The municipality is delegated the authority to pass by-laws regulating signs pursuant to s. 210(146) of the *Municipal Act*, R.S.O. 1990 c. M. 45. Vann does not challenge the enabling legislation under which the by-law was passed. The relevant provisions of by-law 1994-142 read as follows:

1. Definitions

…

(9) Billboard sign – Any ground sign other than a temporary Real Estate sign…measuring more than 7.5 square metres (80 square feet) in sign area;

…

(20) Ground sign – Any sign which is free standing in a fixed position and is wholly supported by a sign structure permanently attached to or affixed into the ground and which is not supported by any building or other structure;

…

(42) Third party sign – Any sign which directs attention to products, goods, services, activities or facilities which

are not the principal products, goods, services, activities or facilities provided on the premises upon which the sign is located;

2(5)(a) No person shall locate or permit the location of a billboard sign.

2(16) No person shall locate or permit the location of a third party sign.

[10] The relevant provisions of the *Charter* are as follows:

Canadian Charter of Rights and Freedoms

1. **1.** The *Canadian Charter of Rights and Freedoms* guarantees the rights and freedoms set out in it subject only to such reasonable limits prescribed by law as can be demonstrably justified in a free and democratic society.
2. **2.** Everyone has the following fundamental freedoms:

…

(b) freedom of thought, belief, opinion and expression, including freedom of the press and other media of communication….

Analysis

Is there an infringement of s. 2(b) of the *Charter*?

[11] According to Chief Justice Dickson's analysis in *Irwin Toy v. Quebec (Attorney General)*, [1989] 1 S.C.R. 927, there are two steps to perform when analysing a law in light of s. 2(b) of the *Charter*. The first step consists of two parts. First, it must be determined whether or not billboards constitute expression. As the second part of that inquiry, it must be determined whether that expression is protected under s. 2(b). As for the second step, it must be determined whether the purpose *or the effect* of the by-law is to limit the freedom of expression. Finally, if the by-law infringes s. 2(b), it is to determined whether it is a reasonable limit according to s. 1 of the *Charter*.

.[12] The parties have conceded that billboard advertising is a form of expression. However, Oakville contends that billboard advertising is not a form of expression protected by s. 2(b) of the *Charter*, and they argue that the appellant has not established an infringement of s. 2(b) on the facts. The respondent relies on *MacKay v. Manitoba*, [1989] 2 S.C.R. 357 in support of its contention that there is an insufficient factual basis to support the appellant's application. In *Mackay*, the Supreme Court of Canada held at .p. 361 that

Charter decisions should not and must not be made in a factual vacuum. To attempt to do so wo uld trivialize the *Charter* and inevitably result in ill-considered opinions.

However, I note that in *MacKay*, as Cory J. stated at p. 363, "there [had] been *not one particle of evidence put before the Court*" (emphasis added). That situation is distinct from this case, in which the claim was based on affidavit evidence and some exhibits, including photographs.

[13] The application judge held that she lacked a factual basis to determine whether the advertising is protected under s. 2(b). However, the application judge acknowledged that she *knew* that "the content of the proposed billboard would contain commercial messages." I take this statement to mean that the application judge accepted as a fact that the content of the billboards' messages would be commercial in nature. I note that in addition to the commercial expression of prospective customers, Vann asked the court to take judicial notice of the fact that, as owner of the signs for rent, it can advertise its own business on the billboards. I am satisfied that the record established that the appellant's freedom of expression and that of its customers was affected by the sign by-law.

[14] The application judge's factual finding is sufficient to determine whether the form and content of the proposed expression gar ners the protection of s. 2(b). Clearly, the intended expression is commercial expression, or advertising. As I will set out, it is well-settled as a matter of law that the right to free expression protects commercial expression.

[15] In *Ford v. Quebec*, [1988] 2 S.C.R. 712, the Supreme Court of Canada was asked to consider whether commercial expression is protected by s. 2(b). While it was not necessary to decide that issue, the Court rejected the submission that commercial expression is not protected, stating at pp. 766-67:

[g]iven the earlier pronouncements of this Court to the effect that the rights and freedoms guaranteed in the Canadian *Charter* should be given a large and liberal interpretation, there is no sound basis on which commercial

expression can be excluded from the protection of s. 2(b) of the *Charter*.

[16] In *Irwin Toy*, the Supreme Court determined conclusively that commercial expression is protected by s. 2(b), and it re-iterated that conclusion in *RJR-Macdonald Inc. v. Canada (Attorney General)*, [1995] 3 S.C.R. 199 and most recently in *R. v. Guignard* (2002), 209 D.L.R. (4th) 549.

[17] *Guignard* is very similar to the present case. In *Guignard*, the proprietor of a building installed a billboard on his own property indicating his displeasure with his insurance company. He was prosecuted under the governing municipal by-law which prohibited such signs. LeBel J., for the Supreme Court, affirmed that commercial expression, and in particular, commercial expression on billboards, enjoys the protection of s. 2(b) of the *Charter*. LeBel J. eloquently stated the values underpinning the protection of commercial expression. He wrote at para. 21

[i]n applying s. 2(b) of the *Charter*, this Court has recognized the substantial value of freedom of commercial expression. The need for such expression derives from the very nature of our economic system, which is based on the existence of a free market. The orderly operation of that market depends on businesses and consumers having access to abundant and diverse information.

Commercial expression is, thus, a key component of our economic system and therefore merits *Charter* protection.

[18] LeBel J. also observed that the right to freedom of expression protects even expression that is challenging and disturbing, and acknowledge d at para. 23 that "the ubiquitous presence of advertising is a defining characteristic of western societies" that we accept "sometimes with mixed feelings". He went on to say at para. 25:

[s]igns, which have been used for centuries to communicate political, artistic or economic information, sometimes convey forceful messages. Signs, in various forms, are thus a public, accessible and effective form of expressive activity for anyone who cannot undertake media campaigns.

Vann argues that its clientele are not likely to advertise using media such as television and radio because of the cost and targeted and limited audience exposure. Consequently, they fall squarely within the group identified by LeBel J.

[19] In *Irwin Toy*, Dickson C.J. observed at p. 968, "'[e]xpression' has both a content and a form, and the two can be inextricably connected". Oakville's sign by-law purports to limit both the content and the form of expression. The prohibition against third party signs constitutes a limit on the content of expression, while the restriction on the size of signs limits the form of expression. The precise content of the proposed signs has not been established. However, whether that content be commercial expression in the form of advertising or consumers expressing their dissatisfaction with a business as in *Guignard*, the form and content are protected under s. 2(b).

[20] As I have outlined above, Vann does not suggest that the purpose of the respondent in passing the sign by-law is to limit its freedom of expression. Nevertheless, the effect of the sign by-law is to prevent Vann from engaging in a particular form of expression and from expressing certain messages. Thus s. 2(b) of the *Charter* is engaged.

[21] Finally, I note that there are three cases from this court which have considered the constitutional validity of by-laws similar to Oakville's sign by-law in different communities in Ontario. In all three cases, the responding towns and cities conceded that their by-laws infringed s. 2(b) of the *Charter*, and this court viewed those concessions with approval. See: *Nichol (Township) v. McCarthy Signs Co. Ltd* (1997), 33 O.R. (3d) 771; *Stoney Creek (City) v. Ad Vantage Signs Ltd.* (1997), 34 O.R. (3d) 65; *Canadian Mobile Sign Assn v. Burlington (City)* (1997), 34 O.R. (3d) 134.

Justification

[22] The onus now shifts to Oakville to demonstrate that its sign by-law is a reasonable limit that can be demonstrably justified. The test set out by the Supreme Court of Canada in *R. v. Oakes*, [1986] 1 S.C.R. 103 requires Oakville to show, first, that its objective in passing the sign by-law is pressing and substantial; second, that the by-law is rationally connected to that objective; third, that the by-law minimally impairs the right to freedom of expression; and finally, that there is proportionality between the effects and the objectives of the by-law.

[23] In *RJR-Macdonald*, at para. 129, McLachlin J. held that where freedom of expression is infringed, there must be a "reasoned demonstration of the good which the law may achieve in relation to the seriousness of the infringement." In order to meet the burden of the test set out in *Oakes*, Oakville may draw on evidence that is "supplemented by common sense and inferential reasoning": *Guignard*, at para. 28.

[24] *Oakes* obliges me to begin the s. 1 analysis by determining whether the objective of the by-law is pressing and substantial. Oakville asserts that the purpose of the by-law is to protect the public from unsafe signs, to reduce distractions that may be an impediment to road safety, to prevent the blight of unsightly signs, and to preserve the unique character of Oakville. Vann does not seriously contest this characterization of the purpose, and it concedes that this purpose is pressing and substantial. Assuming that Oakville's assertions accurately reflect the purpose of the sign by-law, I am satisfied that the objective of the sign by-law satisfies the first step of the *Oakes* test.

[25] The second step of the *Oakes* test requires an assessment of the proportionality of the sign by-law. In my view, Oakville has failed to demonstrate that the sign by-law is rationally connected to achieving its stated goals. Moreover, the sign by-law, as a total prohibition on a form of expression, is not minimally impairing. Thus, the sign by-law fails the proportionality analysis of the *Oakes* test.

[26] First, Oakville has failed to demonstrate that the blanket prohibition on billboard signs is rationally connected to preserving the unique small town feel of the city. The zones in which Vann seeks permission to erect billboards cannot be said to be unique. The sign by-law prohibits billboards throughout the whole city, including unremarkable industrial zones. In a telling demonstration, during cross-examination, the manager of Oakville's Current Planning section (who has been employed as a planner in Oakville since 1978) was shown three unmarked photographs of industrial zones of southern Ontario communities and asked to identify which of the photographs depicted Oakville. The manager of planning was unable to identify Oakville, exclaiming "what a test!" A uniform ban on billboard signs that includes a prohibition on signs in unremarkable areas is not rationally connected to preserving the "unique aesthetic" and "small town feel" of Oakville.

[27] In addition, the ban on third party signs is not rationally connected to preserving the small town character of Oakville. This case is easily distinguished from *Nichol Township*, a case in which this court upheld a prohibition on third party signs as a reasonable limit on freedom of expression under s. 1. Nichol Township is a rural, agricultural community that had received requests for permission to erect very large signs in scenic areas. The signs related to businesses in other towns. In that context, the prohibition on third party signs was connected to maintaining the character of the community. Oakville, however, is a city with a population of 142,000 and with a sizable industrial economy. The prohibition on third party signs in industrial areas cannot be said to be rationally connected to preserving a small town feel in this context.

[28] Oakville has provided no evidence to indicate that its prohibition on billboards promotes road safety. Rather, in the place of evidence in the form of data or evidence from studies, Oakville relies on the opinions of its city planners to that effect. Nonetheless, I am willing to accept that fewer visual distractions do promote road safety such that the prohibition on billboards is rationally connected to that goal. However, the location of billboards a sufficient distance from the travelled portion of a highway will not impair

motorists from observing traffic on the highway.

[29] Second, I am not satisfied that the sign by-law minimally impairs the right to freedom of expression. The standard of justification for a by-law such as this, which constitutes a complete ban on a form of expression, is high. In *RJR-Macdonald*, at para. 163, McLachlin J. held: [i]t will be more difficult to justify a complete ban on a form of expression than a partial ban….A full prohibition will only be constitutionally acceptable under the minimal impairment stage of the analysis where the government can show that only a full prohibition will enable it to achieve its objective. Where, as here, no evidence is adduced to show that a partial ban would be less effective than a total ban, the justification required by s. 1 to save the violation of free speech is not established.

In approaching this part of the s. 1 analysis, I find it helpful to make reference to the other two decisions of this court regarding sign by-laws.

[30] In *Stoney Creek*, the city had enacted a by-law generally prohibiting the use of mobile signs. Some limited exceptions were permitted. The appellant was convicted of erecting a mobile sign without having obtained a permit to do so, and would not have qualified for a permit even if it had applied for one. In that case, Charron J.A. refused to accept the city's contention that because the by-law that permitted many other types of signs, including billboards, it struck a fair balance between individual's rights and the community's interest in pursuing its legitimate goals (which were virtually identical to the goals of the by-law in this case). Charron J.A. held that regulation of the size, number, and location of the mobile signs would achieve the legislative purpose equally as effectively as the total prohibition. Since the city failed to show that the by-law minimally impaired the right to freedom of expression, Charron J.A. declared the by-law invalid.

[31] The definition of a billboard in the sign by-law defines a billboard as a sign measuring more than 80 square feet in sign area. This definition indicates that the by-law's drafters acknowledge that a billboard is a sign measuring more than 80 square feet. Thus, the restriction of the size of signs to 80 square feet is not merely a restriction on the size of a billboard. Rather, the by-law prohibits a type of sign. According to *Stoney Creek* at pp. 72-73, such a prohibition cannot be justified under s. 1 as minimally impairing the right of freedom of expression. As Vann acknowledged, Oakville can minimally impair its rights by regulating the number and locations of billboard signs.

[32] In *Burlington*, released simultaneously with *Stoney Creek*, the city had passed a by-law permitting the erection of mobile signs, but regulating their number and illumination, and imposing time limits on their use. Prior to enacting that by-law, the city engaged in several years of study and consultation with the public. The by-law was reviewed by a committee that included members of the mobile sign industry prior to being enacted. The court rejected the appellant sign association's submissions that the by-law was overly broad and therefore not justified under s. 1. Rather, the court held that the by-law was carefully tailored to meet its objectives and that its impact on freedom of expression was proportionate to the demonstrated benefits of reducing the traffic hazards and visual clutter previously caused by such signs.

[33] As I have indicated, Oakville's sign by-law imposes a complete prohibition on billboard signs and on third party signs. The respondent argues that its sign by-law reflects the will of the community, as evidenced by the results of the non-binding referendum, and should therefore be upheld just as the restriction in *Burlington* was upheld. In my view, the results of the non-binding referendum are of no assistance to the respondent. The will of the public to restrict rights does not, without more, justify that restriction. In *Burlington*, the city engaged in meaningful study and discussion with representatives of the public and of the mobile sign industry and enacted a carefully tailored by-law that restricted sign use, but did not prohibit it. In this case, the referendum conducted by Oakville resulted in such a low public response that it was not legally binding, with

the result that it does not assist the respondent.

[34] The only evidence of public consultation regarding the by-law is the Minutes of a Public Meeting on July 19, 2000 concerning whether or not Oakville should hold a referendum on the impugned sign by-law. Unlike the public consultation that occurred in *Burlington*, this meeting occurred six years after the offending by-law had already been in place. Moreover, during the meeting, counsel for members of the billboard industry who had applied, as Vann had, for permission to erect billboard signs and third party signs, indicated their willingness to negotiate with the city to arrive at a mutually agreeable compromise; however, there is no indication that such discussion occurred, and the referendum went ahead. Most importantly, however, there has been no effort to tailor the sign by-law such that it minimally impairs the right to freedom of expression. This case is, therefore, comparable to *Stoney Creek*, with the result that the sign by-law cannot be justified under s. 1 of the *Charter*.

[35] In my view, s. 2(5)(a) of the by-law, regulating billboards, and s. 2(16), regulating third party signs are complementary. Their combined effect is to ban all billboard and third party advertising on private lands in Oakville. I am satisfied that the entirety of Vann's advertising business comes within the prohibition of ss. 2(5)(a) and 2(16), which, no doubt, explains why Vann challenged the constitutionality of both sections.

[36] I reach this conclusion on the basis of Vann's advertising business and the definitions of billboard sign and third party sign in ss. 1(9) and (42), respectively, of the by-law. Each sign which Vann intends to locate, whether it is larger or smaller than the 80 square foot definition in s. 1(9), by the nature of the advertising it contains and where it is to be located is necessarily a third party sign as defined by s. 1(9). This is because the sign advertises products and services which are not the products and services "provided on the premises upon which the sign is located". Thus, if a billboard type of sign is larger than 80 square feet it is prohibited by s. 2(5)(a); if it is less than 80 square feet, it is prohibited by s. 2(16). It follows that by the nature of its business Vann is affected by both sections of the by-law.

Conclusion

[37] Oakville's By-law 1994-142 infringes the right to freedom of expression and it cannot be justified under s. 1 of the *Charter*. I would, therefore, allow the appeal, set aside the judgment of the application judge and order that the appellant's application for a declaration of invalidity be granted, However, I would suspend that declaration for a period of six months. The appellant is to have its costs of the application and the appeal, on a partial indemnity scale. I would fix the appellant's costs of the appeal at $8,000.

"S. Borins J.A."
I agree K. Feldman J.A."

MACPHERSON J.A. (Dissenting in part):

[38] I have had the opportunity to read the draft reasons of my colleague Borins J.A. in this appeal. I agree with his conclusion that the third party sign component of the Town of Oakville by-law is invalid. I disagree with his conclusion that the billboard component of the by-law is invalid. Because my colleague has set out the relevant factual background, statutory provisions and legal principles, I can state my reasons and conclusions in relatively brief compass.

(1) <u>Ripeness</u>

[39] The application judge, Walters J., stated that she was "not satisfied that the applicant has set out the necessary evidentiary foundation for me to determine whether the expression in question is one which is protected by the Charter". She continued:

Without any evidence directed to the nature of the expression that is being conveyed via billboards, the extent to which billboards are necessary to promote this expression, the hardship, effect, or impact of the by-law on the applicant or other interested parties, the court is not in a position to make the finding requested by the applicant. Certainly the applicant has provided evidence of the effectiveness of billboards, the use of billboards in various other municipalities and the number of billboards per capita in other municipalities. However, none of this information deals with the adverse impact this by-law has on any freedom of expression.

[40] Borins J.A. disagrees with Walters J.'s analysis and conclusion on the ripeness issue. He states:

> The application judge held that she lacked a factual basis to determine whether the advertising is protected under s. 2(b). However, the application judge acknowledged that she *knew* that "the content of the proposed billboard would contain commercial messages." I take this statement to mean that the application judge accepted as a fact that the content of the billboards' messages would be commercial in nature. I note that in addition to the commercial expression of prospective customers, Vann asked the court to take judicial notice of the
> fact that, as owner of the signs for rent, it can advertise its own business on the billboards.

The application judge's factual finding is sufficient to determine whether the form and content of the proposed expression garners the protection of s. 2(b). Clearly, the intended expression is commercial expression, or advertising.

[41] I agree with Borins J.A.'s conclusion on this issue. In my view, the appellant placed a sufficient evidentiary record before the application judge to establish that its expression and the expression of prospective customers was affected by the Town of Oakville's sign by-law. However, the application judge's description of the factual record is not irrelevant; indeed, in my view, it becomes important when the analysis turns to the application of s. 1 of the *Charter* to the billboard component of the by-law.

(2) <u>Freedom of expression</u>

[42] I agree with Borins J.A. that the Oakville by-law infringes s. 2(b) of the *Charter*.

(3) <u>Section 1</u>

[43] I begin my analysis with a preliminary, but crucial, point. For the purpose of his *Charter* s. 1 analysis, my colleague joins ss. 2(5)(a) and 2(16) of the sign by-law. He says that they are "complementary" and that their combined effect is to ban all billboard and third party advertising on lands in Oakville.

[44] With respect, I do not agree with this characterization of the by-law. The billboard and third party sign provisions of the by-law are not complementary; rather, they are separate provisions completely unrelated to each other. In my view, a close examination of the definition and prohibition provisions of the by-law supports this conclusion.

[45] The definitions of "billboard" and "third party sign" are:

> **1.(9)** Billboard sign -Any ground sign other than a temporary Real Estate sign . . . measuring more than 7.5 square metres (80 square feet) in sign area;
>
> **1.(42)** Third party sign – Any sign which directs attention to products, goods, services, activities or facilities which are not the principal products, goods, services, activities or facilities provided on the premises upon which the sign is located;

[46] The prohibition provisions of the by-law relating to billboards and signs are:

2.(5)(a) No person shall locate or permit the location of a billboard sign.

2.(16) No person shall locate or permit the location of a third party sign.

[47] I conclude from the structure and wording of these provisions that there is no linkage between the definitions and prohibitions relating to billboards and third party signs. The provisions respecting billboards deal only with size; there is nothing about the message or contents of signs in these provisions. Conversely, the provisions relating to third party signs deal only with message or contents; there is nothing about the form of expression, including the size of signs, in these provisions.

[48] It is true, as my colleague points out, that Mr. Vann challenges both provisions of the by-law. That is because he wants to sell advertising space to his customers (hence the attack on the third party sign provisions of the by-law) and he wants to do so on very large signs (hence the attack on the billboard provisions of the by-law). However, a two-pronged attack by the appellant does not convert two separate provisions into a "complementary" legislative regime. At the end of the day, ss. 2(5)(a) and 2(16) of the by-law deal with entirely different subject matters: s. 2(5)(a) relates *only* to form; s. 2(16) relates *only* to content. Accordingly, it is essential to conduct a separate s. 1 analysis for each provision.

(a) The billboard provision

[49] I agree with my colleague's analytical framework for assessing whether this component of the by-law violates s. 1 of the *Charter*:

The onus now shifts to Oakville to demonstrate that its sign by-law is a reasonable limit that can be demonstrably justified. The test set out by the Supreme Court of Canada in *R. v. Oakes*, [1986] 1 S.C.R. 103 requires Oakville to show, first, that its objective in passing the sign by-law is pressing and substantial; second, that the by-law is rationally connected to that objective; third, that the by-law minimally impairs the right to freedom of expression; and finally, that there is proportionality between the effects and the objectives of the by-law.

(i) Pressing and substantial objective

[50] Borins J.A. describes the multi-faceted objectives of the by-law as "to protect the public from unsafe signs, to reduce distractions that may be an impediment to road safety, to prevent the blight of unsightly signs, and to preserve the unique character of Oakville". He concludes that these objectives are pressing and substantial. I agree.

(ii) Rational connection

[51] Borins J.A. states: "In my view, Oakville has failed to demonstrate that the sign by-law is rationally connected to achieving its stated goals". In the next paragraph he says: "Oakville has failed to demonstrate that the blanket prohibition on billboard signs is rationally connected to preserving the unique small town feel of the city". Two paragraphs later, he states: "Nonetheless, I am willing to accept that fewer visual distractions do promote road safety such that the prohibition on billboards is rationally connected to that goal".

[52] There are three problems with this analysis. First, with respect, the analysis is inconsistent. If the prohibition on billboards is rationally connected to one of the go als of the by-law (road safety), I fail to see how my colleague can conclude that "Oakville has failed to demonstrate that the sign by-law is rationally connected to achieving its stated goals".

[53] Second, in my view a complete prohibition on certain types of signs is entirely rationally connected to three of the four components my colleague

sets out in his description of the purpose of the by-law. No signs larger than 7.5 square metres certainly promotes the goal of an absence of unsafe signs. No signs larger than 7.5 square metres will reduce distractions to motorists. And no signs larger than 7.5 square metres will reduce the blight of unsightly signs.

[54] Third, my colleague's conclusion on the rational connection component of the s. 1 analysis is inconsistent with the conclusion on this issue reached by this court in all of the leading sign by-law cases: see *Nichol (Township) v. McCarthy Signs Co.* (1997), 33 O.R. (3d) 771 at 774 ("*Nichol (Township)*"); *Stoney Creek (City) v. Ad Vantage Signs Ltd.* (1997), 34 O.R. (3d) 65 at 71 ("*Stoney Creek*"); *Canadian Mobile Sign Assn. v. Burlington (City)* (1997), 34 O.R. (3d) 134 at 138, leave to appeal to the Supreme Court of Canada refused, March 19, 1998; and *Urban Outdoor Trans Ad v. Scarborough (City)* (2001), 196 D.L.R. (4th) 304 at 318. As expressed by Charron J.A. in *Stoney Creek*, at p. 71:

In my view, all provisions in the by-law concerning mobile and portable signs are rationally connected to the purpose of the by-law. Even a total prohibition would still be rationally connected to the stated objective. Obviously, if all portable and mobile signs were removed in the City of Stoney Creek the concerns sought to be addressed by the by-law would be fully answered.

(*iii*) *Minimal impairment*

[55] My colleague concludes that s. 2(5)(a) of the by-law violates the minimal impairment component of the *Oakes* analysis. Central to this conclusion is his assertion that the by-law "creates an absolute prohibition on billboards within Oakville".

[56] With respect, this description of the effect of the by-law is inaccurate. The Oakville by-law is not an absolute prohibition against all signs or billboards, as was the by-law ("sign . . . any advertising billboard") struck down recently by the Supreme Court of Canada in *R. v. Guignard* (2002), 209 D.L.R. (4th) 549 ("*Guignard*"). Rather, the Oakville by-law prohibits certain types of billboards, namely, those larger than 7.5 square metres (80 square feet) in sign area. Billboards smaller than these measurements are *not* prohibited.

[57] In several cases, the Supreme Court of Canada and this court have explicitly stated that municipal regulation of the display of signs and posters including, importantly, provisions relating to their size, is permitted and is consistent with the minimal impairment component of the *Oakes* analysis: see *Ramsden v. Peterborough (City)*, [1993] 2 S.C.R. 1084 at 1107; *Toronto (City) v. Quickfall* (1994), 16 O.R. (3d) 664 at 671 (C.A.); and *Stoney Creek, supra*, at p. 72. In my view, the billboard component of the Oakville by-law is consistent with these authorities.

[58] Moreover, once it is accepted that size restrictions on billboards are appropriate, it strikes me that the courts should be deferential about the actual line chosen by a municipality. Absent evidence of an improper purpose or of a thoroughly unreasonable or impractical line, courts should respect the municipality's choice.

[59] In the present case, the rationale for the billboard component of the by-law was explained in an affidavit by John Ghent, the Manager of Current Planning for the Town of Oakville:

Billboard Signs . . .

38. **. . .**[T]he by-law is similarly aimed at regulating only those signs which would pose the greatest concern relative to the objectives of the by-law. Primarily, this has been accomplished by incorporating size and height restrictions, so that if a sign complies with those restrictions it is permitted as of right **. . .** In the case of a "billboard sign", which is prohibited under section 2(5) of the by-law, there is an area restriction of 80 square feet, built right in to the definition in section 1(9) so that if the sign is smaller in area

the by-law does not apply to it.

[60] On the appellant's side, in his affidavit filed in support of the application, Larry Vann, the President of the appellant, said nothing about the size component of the Oakville by-law. Nor is there any evidence from any of his prospective customers about how the size component of the by-law would affect their advertising activities. In short, there is nothing from the appellant to counteract Oakville's explanation for the line it chose to draw.

[61] I can state my conclusion on the minimal impairment issue in succinct fashion. The case authorities clearly establish that municipal regulation of the display of signs, including size restrictions, usually does not offend the minimal impairment component of the *Oakes* test. In my view, in the present case the record put forward by the Town of Oakville and the absence of any conflicting evidence tendered by the appellant lead to the conclusion that the respondent has met its onus to establish that the size component of its by-law minimally impairs the freedom of expression of the appellant.

(*iv*) *Proportionality*

[62] Since the objectives of the size component of the by-law are pressing and substantial, since there is a rational connection between the size restriction and the purposes of the by-law, and since the size restriction minimally impairs the freedom of expression of the appellant, it follows that there is the required proportionality between the effects and the objectives of the by-law.

(b) The third party sign provision

(*i*) *Pressing and substantial objective*

[63] Borins J.A. concludes that the objectives of the entire by-law, including the third party sign component, are pressing and substantial. I agree.

(*ii*) *Rational connection*

.[64] For the reasons set out in my discussion of the billboard component of the by-law, I am of the view that there is a clear and direct rational connection between the prohibition against the third party signs and the pressing and substantial objectives of the by-law. The effect of the third party component of the by-law is fewer signs in Oakville. This effect is consistent with at least three of the four objectives my colleague sets out to protect the public from unsafe signs, to reduce distractions that may be an impediment to road safety, and to prevent the blight of unsightly signs. As Charron J.A. said in rejecting the appellant's argument relating to the rational connection component of the
.s. 1 analysis in *Stoney Creek, supra*, "the appellant's argument is better addressed on the issue of minimal impairment" (p. 71).

(*iii*) *Minimal impairment*

[65] I agree with Borins J.A. that the third party sign component of the Oakville by-law does not minimally impair freedom of expression. However, I reach this conclusion on a different, and much narrower, basis than my colleague. In my view, the wording of the Oakville by-law is almost identical to the wording of the St. Hyacinthe by-law that was struck down recently by the Supreme Court of Canada in *Guignard, supra*. I set out the definitions of the prohibited types of signs in the two by-laws

St. Hyacinthe

Advertising sign:

Sign indicating at least the name of a company and drawing attention to a business, a product, a service or an entertainment carried on, sold or offered other than the property on which it is placed.

Oakville

Third party sign – Any sign which directs attention to products, goods, services, activities or facilities which are not the principal products, goods, services, activities or facilities provided on the premises upon which the sign is located;

[66] The Supreme Court of Canada struck down the St. Hyacinthe by-law because it infringed on *a property owner's right* to erect a sign criticizing an insurance company with which he was unhappy. That, of course, is not the basis for the challenge to the Oakville by-law. However, since the Supreme Court declared the St. Hyacinthe by-law to be invalid (rather than reading it down), it follows that the Oakville by-law, in its current form, is invalid.

[67] Lebel J. concluded his reasons in *Guignard* with this observation: "It will no doubt be in the respondent's interests to rethink the definition of "advertising sign", in particular, and more clearly identify the real objectives of the bans imposed" (p. 563). The Town of Oakville will need to engage in a similar exercise. For myself, I would simply say that once it overcomes the drafting problem of overbreadth identified in *Guignard* (which relates only to a restriction of the freedom of expression of a property owner), a by-law which restricts third party signs in all other respects should be constitutionally sound, provided there is a clear record demonstrating the pressing and substantial objectives of the by-law, such as community aesthetics and road safety.

(*iv*) *Proportionality*

[68] I agree with Borins J.A. that the third party sign component of the by-law does not survive the proportionality branch of the *Oakes* analysis.

Disposition

[69] I would declare that s. 2(5)(a) of the Town of Oakville sign by-law is valid.

[70] I would declare that s. 2(16) of the Town of Oakville sign by-law is invalid. agree with Borins J.A. that it is appropriate to suspend the declaration for a period of six months.

[71] In my view, success on the appeal is not divided. The billboard component of the by-law is valid. The appellant has been successful in its attack on the third party component of the by-law. However, the challenge was successful only because the bylaw was overbroad in that it infringed on the freedom of expression of property owners, *not* the expression of the appellant or its proposed customers. It will be relatively easy for Oakville to amend its by-law to deal with the *Guignard* problem while still prohibiting all of the advertising the appellant seeks. Accordingly, I would award the respondent its costs of the appeal which I would fix at $8000.

ON APPEAL FROM THE COURT OF APPEAL FOR ONTARIO

Constitutional law -- Charter of Rights -- Freedom of expression -- Municipal by-law limiting size of billboards -- Whether by-law infringes right to freedom of expression -- If so, whether infringement justifiable -- Canadian Charter of Rights and Freedoms, ss. 1, 2(b).

Statutes and Regulations Cited

Canadian Charter of Rights and Freedoms, ss. 1, 2(*b*).

APPEAL from a judgment of the Ontario Court of Appeal (2002), 60 O.R. (3d) 1, 161 O.A.C. 183, 214 D.L.R. (4th) 307, 94 C.R.R. (2d) 255, [2002] O.J. No. 2323 (QL), reversing a decision of the Superior Court of Justice (2001), 88 C.R.R. (2d) 166, 21 M.P.L.R. (3d) 183, [2001] O.J. No. 3794 (QL), dismissing the respondent's application to quash a municipal by-law. Appeal allowed.

George H. Rust-D'Eye, *Barnet H. Kussner* and *Kim Mullin*, for the appellant.

John A. Crossingham, for the respondent.

The judgment of the Court was delivered orally by

1ARBOUR J. -- There is no appeal from the unanimous decision of the Ontario Court of Appeal that the by-law prohibiting third party signs is unconstitutional.

2 We agree with MacPherson J.A. that the by-law limiting the size of signs to 80 square feet (7.5 square meters) infringes s. 2(*b*) of the *Canadian Charter of Rights and Freedoms* but is saved under s. 1 as it minimally impairs the freedom of expression of the respondent.

3 The appeal is allowed, the judgment of the Court of Appeal on that issue is set aside and the constitutional questions** [2] are answered in the affirmative. The appellant will have its costs in this Court. Each party will bear its own costs in the Court of Appeal.

Judgment accordingly.

Solicitors for the appellant: WeirFoulds LLP, Toronto.

Solicitors for the respondent: Crossingham, Brady, St. Catharines, Ontario.

On appeal from the judgment of Justice R.G.E. Hunter dated August 30, 2001.

ABELLA J.A. (Dissenting):

[1] The issue in this appeal is whether someone who has been granted a building permit under the *Building Code Act*, 1992, S.O. 1992 c. 23, can rely on the defence of officially induced error when the resulting construction is alleged to violate the *Conservation Authorities Act*, R.S.O. 1990, c. C.27.

BACKGROUND

[2] Cranbrook Swine Inc. (“Cranbrook”) is in the business of hog farming. Charles D. Terpstra is a director and officer of the company. In 1999, he hired Landmark Builders Ltd. (“Landmark”), a construction company, to be

the contractor for the design and construction of two barns and a liquid manure storage tank.

[3] Cranbrook and Landmark obtained building permits for the construction from the chief building official of the Township of Morris on August 25, 1999.

[4] The construction of the manure storage tank came to the attention of an employee of the Maitland Valley Conservation Authority (the "Authority"). The employee, concerned about the location of the tank, contacted the chief building official of the Township of Morris to arrange to visit the construction site.

[5] His visit persuaded him that the construction might be a violation of the *Conservation Authorities Act*. As a result, the Authority consulted its hydrologist. The resulting memo, dated September 14, 1999, concluded that "the placement of a liquid manure facility at the location currently under construction should not be considered as acceptable under the Authority regulation policies". This led the Authority, on September 15, 1999, to accept a recommendation from its general manager that a violation notice regarding the construction of the tank be issued, on the grounds that the tank was located within a water resource area or wetland.

[6] The notice, sent by the Authority on September 16, 1999 informed Cranbrook, Terpstra and Landmark that the construction was a violation of the *Conservation Authorities Act* because it was taking place in a wetland area without prior approval from the Authority.

[7] On the same day that the Authority sent the notice of violation, a stop work order was issued by the Township of Morris. No construction has taken place at the site since September 16, 1999.

[8] On November 26, 1999, charges were brought by the Authority against Cranbrook, Terpstra and Landmark. The offence alleged was a violation of s. 3(a) of Ontario Regulation 22/91 of the *Conservation Act* which provides that, absent permission from the Maitland Valley Conservation Authority, no person shall

construct any building or permit any building to be constructed in or on a pond or swamp or in any area susceptible to flooding during a regional storm

[9] At the trial before a Justice of the Peace, the defence led no evidence, instead bringing three motions for non-suit. The first motion was that the prosecution had failed to present a *prima facie* case against Mr. Terpstra, personally. The argument on the second motion was that the issuance of a building permit under the *Building Code Act* provided a defence to the charges under the *Conservation Authorities Act*. The third motion was that the area in which the storage tank was being constructed was not a "swamp" or "wetland". There was no evidence of bad faith on the part of the owner or contractor, nor was there any evidence that the building permit was invalid.

[10] The Justice of the Peace allowed the third motion on the grounds that the prosecution had failed to establish that the specific area on which the tank was constructed was a "swamp" within the meaning of s. 3(a) of the Construction Regulation under the *Conservation Authorities Act*. Although he was satisfied that the area adjacent to the construction site was a swamp, he concluded that there was no evidence that the actual site "was or had been a swamp", finding that "it is supposition that because the area adjacent to the cleared area was swamp, that therefore…the site where the tank was…had been swamp".

[11] On appeal, Hunter J. overturned the finding that the construction site was not a swamp, but acquitted the owner and contractor on the grounds that they were entitled to rely, primarily, on the defence of officially induced error. He summarized his conclusions as follows:

There is no suggestion whatsoever that the Respondents at any time acted in other than a reasonable manner; *they acted in good faith*. They went to the authorities and obtained a building permit to construct the holding tank. After construction commenced, it came to the notice of the conservation authorities that construction was possibly taking place in the area of a swamp and was therefore prohibited. Tests were done and this supported the beliefs of the conservation authority and as a result these charges were

brought.

I am satisfied that the Respondents are entitled to rely on the defence of officially induced error. *Having taken the proper steps*, there is no case law that I am aware of or that has been brought to my attention that there was an obligation on them, having obtained the necessary documentation, to go to any other authorities to check to see whether or not it was permissible to construct the holding tank. They did all that was required of them, as I say, in good faith. There is nothing to suggest that the building permit was issued other than in good faith. *They were entitled to rely on that building permit*. The conservation authorities cannot now expect to find favour in this court when charges are laid against the Respondents for breach of the *Conservation Act* (sic.). At the risk of repetition, the Respondents did all they had to do and they cannot now be held liable nor responsible for a possible error committed by the issuing authorities of the building permit. (Emphasis added.)

[12] The Authority, and the Attorney General for Ontario as Intervenor, applied for and were granted leave to appeal this decision pursuant to s. 131 of the *Provincial Offences Act*, R.S.O. 1990 c. P. 33, which states:

131(1) A defendant or the prosecutor or the Attorney General by way of intervention may appeal from the judgment of the court to the Court of Appeal, with leave of a judge of the Court of Appeal on special grounds, upon any question of law alone or as to sentence.

(2) No leave to appeal shall be granted under subsection (1) unless the judge of the Court of Appeal considers that in the particular circumstances of the case it is essential in the public interest or for the due administration of justice that leave be granted.

(3) No appeal or review lies from a decision on a motion for leave to appeal under subsection (1).

ANALYSIS

[13] The only issue in this appeal is whether the respondents were entitled to rely on the defences of officially induced error, estoppel or due diligence in responding to the strict liability offence with which they were charged. In my view, the facts in this case support a defence of officially induced error. Given the role of the chief building official and the significance of a building permit under the *Building Code Act*, it was open to the trial judge, notwithstanding that the defence called no evidence, to conclude on a balance of probabilities that the owner reasonably relied on the issuance of the building permit as an assurance of the legality of the construction of the storage tank.

[14] There was no evidence to contradict a finding of reasonable reliance. On the contrary, there was evidence to support an inference that it is more likely than not that the respondents were unaware of any problems from the perspective of the *Conservation Authorities Act*. There was uncertainty over whether these were, in fact, “wetlands”, and evidence that the local practice was for a building permit applicant to apply to the Conservation Authority only when directed to do so by the chief building official.

[15] The methodology for ascertaining whether a proposed construction is in accordance with the *Building Code Act*, is to apply for a permit. Section 8(11) of the *Building Code Act* states:

No person shall construct or demolish a building or cause a building to be constructed or demolished except in accordance with this Act and the building code.

[16] It would have been redundant for the owner to be required, in the absence of evidence to the contrary, to state the obvious, namely, that he applied for a permit in order to meet the applicable requirements before he started any construction, and that he relied on the issuance of that permit to conclude that he was entitled, by law, to build.

[17] This case turns, in my view, on the wording of ss. 8(1), and (2)(a), of the *Building Code Act*, which provide:

8.(1) No person shall construct or demolish a building or cause a

building to be constructed or demolished unless a permit has been issued therefor by the chief building official.

> s. 8(2) The chief building official shall issue a permit under subsection (1) unless,

(a) the proposed building, construction or demolition will contravene this Act or the building code *or any other applicable law* [emphasis added];

[18] The phrase "applicable law" is defined on O. Reg. 403/97 to the *Building Code Act* (s. 1.1.3.2.) as follows:

> Applicable law means, for the purposes of Section 8 of the Act, any general or special Act, and all regulations and by-laws, enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.

[19] These provisions, in combination, stand for the proposition that no building or construction can take place in Ontario without a building permit, and that no such permit will be issued by a local chief building official if the proposed construction will contravene any applicable law.

[20] The appellants acknowledge that the *Conservation Authorities Act* and the construction regulations enacted under it are "applicable law" within the meaning of s. 8(2) of the *Building Code Act*. That makes compliance with its provisions part of what the chief building official is required to consider in deciding whether to grant a building permit. The granting of the permit is, therefore, on its face, a determination by the chief building official that, among other statutes, the relevant provisions of the *Conservation Authorities Act* have been complied with.

[21] In this case, the owner was required by s. 8(1) of the *Building Code Act* to get a permit prior to building the storage tank. Under the scheme of the Act, anyone applying for a building permit under the *Building Code Act* can reasonably expect to have the permit refused if the proposed construction violates any applicable law; conversely, it seems to me, an applicant can reasonably assume that if the permit has been issued, the chief building official is of the view that no such contravention exists.

[22] The owner and contractor in this case sought permission from the person with the statutory authority to grant it if all applicable laws are complied with – the chief building official of the Township of Morris. It was therefore reasonable for the recipients of what was conceded at the trial to be a valid building permit, to rely on the assumption that since the permit was issued, no applicable law, including the *Conservation Authorities Act*, was being contravened.

[23] These circumstances make the defence of "officially induced error" available. This defence received appellate endorsement from Lacourcière J.A. in *R. v. Cancoil Thermal Corporation and Parkinson* (1986), 11 C.C.E.L. 219 (Ont. C.A.) at p. 231, who explained it as follows:

> The defence of "officially induced error" is available as a defence to an alleged violation of a regulatory statute where an accused *has reasonably relied upon the erroneous legal opinion or advice of an official who is responsible for the administration or enforcement of the particular law*. In order for the accused to successfully raise this defence, he must show that he relied on the erroneous legal opinion of the official and that his reliance was reasonable. The reasonableness will depend upon several factors including the efforts he made to ascertain the proper law, the complexity or obscurity of the law, the position of the official who gave the advice, and the clarity, definitiveness and reasonableness of the advice given. [Emphasis added.]

I agree with the following statement made by Professor Barton [in "Officially Induced Error as a Criminal Defence: A Preliminary Look" (1979-80), 22 Crim. L.Q. 314], at p. 331:

"Where the advice is given by an official who has the job of administering the particular statute, and where the actor relies on this advice and commits what is in fact an offence, even if the agency cannot be estopped does it follow that the actor should not be excused? To do so is not to condone an illegality or say that the agency is estopped into a position of illegality, but

to recognize that the advice was illegal but excuse the actor because he acted reasonably and does not deserve punishment."

[24] In *Jorgensen and 913719 Ontario Limited v. The Queen* (1995), 129 D.L.R. (4th) 510 (S.C.C.) at p. 517, Lamer C.J.C. justifies this defence as an exception to the principle that ignorance of the law does not excuse the commission of a criminal offence, in the following way:

The number of laws under which any person in Canada may incur criminal liability is nothing short of astounding. While knowledge of the law is to be encouraged, it is certainly reasonable for someone to assume he knows the law after consulting a representative of the state acting in a capacity which makes him expert on that particular subject.

[25] Before the defence can succeed, the recipients of the building permit must have considered the legal consequences of their actions, that is, whether their conduct in constructing the tank might be illegal and, as a result, sought advice.

[26] The most obvious reflection of an intention to ascertain whether building the tank was legally permissible, was to apply for a building permit. Because, as s. 8(11) states, it is illegal to construct or demolish a building except in accordance with the *Building Code Act*, and because, under s. 8(1), that requires the issuance of a building permit from the local chief building official, seeking a building permit from the chief building official is therefore seeking advice about whether the proposed construction is legal. A rejection means that the construction is not legally permissible. It follows that the issuance of a valid building permit is *prima facie* evidence of a positive response to the 'advice' sought.

[27] The question then is whether the advice came from an appropriate official. The appellants argue that the only appropriate official who can give advice about whether any construction in the Township of Morris violates the *Conservation Authorities Act*, is someone in the Authority, not the chief building official.

[28] This proposition undermines what appears to be the legislative scheme for ensuring the necessary compliance with all relevant laws before any construction takes place in Ontario.

[29] The *Building Code Act* sets standards for all construction and building projects in Ontario. The scheme it supervises for the issuance of building permits is a mandatory one. The local chief building official is appointed, along with the necessary inspectors, by the council of each municipality, the body entrusted by s. 3 of the *Building Code Act* with enforcement responsibility.

[30] There are, the appellant acknowledges, at least nine statutes affecting the use of land in Ontario, including regulations for environmental protection – the *Building Code Act*, the *Conservation Authorities Act*, the *Environmental Assessment Act*, R.S.O. 1990, c. E.18, the *Environmental Protection Act*, R.S.O. 1990, c. E. 19, the *Fire Marshals Act*, R.S.O. 1990, c. F. 17, the *Municipal Act*, R.S.O. 1990, c. M. 45, the *Ontario Municipal Board Act*, R.S.O. 1990, c. O.28, the *Ontario Water Resources Act*, R.S.O. 1990, c. O.40, and the *Planning Act*, R.S.O. 1990, c. P.13.

[31] Each of these statutes sets out standards which may affect the decision to permit construction on a given parcel of land. But no construction can take place in Ontario unless the local chief building official issues a building permit.

[32] The application form for a building permit states that "Sufficient information shall be submitted with each application to enable the chief building official to determine whether or not the proposed work will conform with the *Building Code Act* and regulations thereunder *and any other applicable law*" [emphasis added].

[33] This obliges the chief building official to ensure that he or she has all relevant information from the applicant to determine whether, among other things, environmental concerns under relevant legislation have been satisfied. And if, based on the information provided in good faith, an error has been made, his or her decision can be reviewed under the *Building Code Act*. But until the issuance of a permit is challenged, as it was in this case

by the Authority, individuals acting in good faith should reasonably be able to rely on it for the assumption that they are in compliance with their legal obligations.

[34] It would be, it seems to me, an untenable proposition to suggest that, absent a separate and specific confirmation in connection with each of the approximately nine applicable statutes, the holder of a building permit cannot reasonably proceed on the assumption that a chief building official has complied with his or her statutory duty. This duty is discharged by the chief building official ensuring that the proposed construction is in accordance with *all* applicable laws.

[35] Part of this responsibility includes directing an applicant for a building permit to any additional authority for prior approvals, where necessary. In fact, there was evidence from Phil Beard, an employee at the Authority for 21 years and the general manager and secretary-treasurer during the relevant time period, that, in the normal course, a builder or property owner would only make an application for a construction permit to the Conservation Authority after having been directed or advised to do so by the chief building official. During re-examination, the following exchange took place regarding the local practice followed by landowners and builders in making an application for a construction permit:

> [Mr. Beard]: *They're usually directed to get our permit first, by the building official* except in the municipality of North Perth, we have an experimental program going, where they can apply jointly for permission under our regulation and under the Building Code. (Emphasis added)

[Prosecutor]: I'm confused by this. I just want make sure that I understand. If an application for a permit is made to the Conservation Authority under the construction regulation, usually what happens is the applicant is referred by the Municipality's building department to the Authority to get their permission first?

[Mr. Beard] That's correct…If they go there first. Yes that's right.

[Prosecutor]: Right. So, the most applications to the Authority for permission to construct are made directly by the landowner or contractor. Is that normal?

[Mr. Beard] Yes, that's correct. The landowner or agent, yes.

[36] What that means is that while it would have been open to the owner and contractor to get advice about whether the tank was permissible directly from the Authority or any of the other agencies with jurisdiction over land use in Ontario, it was, given the language and scheme of s. 8 of the *Building Code Act*, at least as reasonable for them to seek centralized advice from the chief building official of Morris Township. He was, after all, the only official in a position to grant or withhold the permit without which the construction would have been illegal. He was, therefore, an official whose duty it was, prior to making a decision, to determine whether the proposed construction constituted a potential violation of the *Conservation Authorities Act* requiring consideration by the Authority. Even if the Authority had approved the construction, however, it would still have been open to the chief building official to refuse the permit if he felt there was a contravention of the laws of another constituent statute in the regulatory constellation.

[37] The chief building official in Morris Township, in other words, was an appropriate official on whom to rely about whether the construction would comply with *all* applicable laws, since, if it did not, no permit would have been issued. The reasonableness of Cranbrook and Landmark's reliance on the building permit flowed not only from their statutory entitlement to rely on the advice given by the chief building official in the form of that permit, but also from their statutory requirement to do so.

[38] In addition, there was evidence that there was no mechanism in place during the relevant time period to inform property owners directly that their lands may fall under the jurisdiction of the Authority. According to the testimony of Mr. Beard and a former employee of the Authority, the only mechanisms in Morris Township for providing information on property affected by the Construction Regulations during the relevant time period were a responsive solicitor's inquiry service and a general mailing sent to real estate agents, lawyers and chief building officials. Mr. Beard testified that in the early eighties, when the first Construction Regulation was

approved, the Authority worked with municipalities and planning departments to prepare maps for them that outlined all of the areas that were regulated by it. The maps and policies were put together along with explanatory notes in all the by-laws that specifically mentioned the Authority and its regulations. The municipalities were obliged to send a copy of every zoning by-law to every ratepayer in the municipality, so they could see how their own properties had been zoned and would also receive information about how the Authority's regulations affected their property.

[39] These efforts were discontinued as a result of reduced provincial funding in 1995 and 1996.

[40] This does not take away from the local Conservation Authority's responsibility for enforcing the significant legislative mandate of protecting the natural resources of the watershed within defined territorial jurisdictions throughout Ontario. Rather, it points to the clear statutory direction in the *Building Code Act* that the local chief building official should also play a significant role.

[41] Nor do I mean to suggest that in such a complex and interrelated regulatory scheme, a building permit can never be issued in error. The *Building Code Act*, in fact, anticipates this possibility by providing a remedy through, for example, the revocation of a permit under s. 8(10) of the *Building Code Act*. The relevant portions of s. 8(10) state:

> 8. (10) Subject to section 25, the chief building official may revoke a permit issued under this Act,
>
> (a) if it was issued on mistaken, false or incorrect information; [or]
>
> …
>
> (d) if it was issued in error

[42] In addition, a challenge can be brought under s. 25 of the *Building Code Act*, which gives access to an expeditious judicial determination about whether the issuance of the permit was proper. The section states, in part:

> 25. (1) Any person who considers themselves aggrieved by an order or decision made by an inspector or chief building official under this Act or the regulations, except a decision not to issue a conditional permit under subsection 8(3), may, within twenty days after the order or decision is made, appeal the order or decision to a judge of the Ontario Court (General Division) [Superior Court of Justice].
>
> …
>
> 25. (4) If an appeal is made under this section, the judge shall hold a hearing and may rescind or affirm the order or decision of the inspector or chief building official or take such action as the judge considers the inspector or chief building official ought to take in accordance with this Act and the regulations and, for such purpose, may substitute his or her opinion for that of the inspector or chief building official.
>
> …
>
> 25. (7) An appeal under subsection (1) does not stay the operation of the order or decision appealed from but a judge may, on such terms as are just, stay the operation of the order or decision until the disposition of the appeal. 1992, c. 23, s. 25(7); 2000, c. 26, Sch. K, s. 1.

[43] The remaining issue is whether the advice given by the chief building official in the form of a building permit was reasonable in the circumstances. On the theory that members of the public relying on advice from public officials have less knowledge of the law than those officials, the threshold of reasonableness is not a high one. As Lamer C.J.C. stated in *Jorgensen*, at p. 527:

> …It is sufficient, therefore, to say that if an appropriate official is consulted, the advice obtained will be presumed to be reasonable unless it appears on its face to be utterly unreasonable.

[44] The record reveals that it was not immediately clear to the Authority whether the site was within their jurisdiction. Consultation with the Authority's hydrologist was necessary before it could be determined that

the site was a wetland feature, and site visits had to be made by the hydrologist and an ecologist in order to verify this. As well, there was no evidence that tests had ever been conducted on this site, and no evidence that the property owner in this case had previously been alerted to the fact that the property may be under the jurisdiction of the Authority.

[45] It seems to me that, given the conflicting evidence, it could not be said that it was unreasonable for the permit to be issued and for its recipients to rely on it. The Justice of the Peace at trial, in fact, after hearing all of the evidence, concluded that the site was not a swamp. I appreciate that this finding was overturned by Justice Hunter on appeal, but that does not make the issuance of the permit, or reliance on it, unreasonable in these circumstances.

[46] No construction of the tank took place until Cranbrook, Terpstra and Landmark ascertained, by applying for a building permit, that they were legally entitled to do so. Permission came in the form of a building permit, an official document which, based on s. 8 of the *Building Code Act*, authorized construction only if all relevant legal requirements are satisfied. The owner and contractor were therefore entitled, reasonably, to rely on the advice implicit in the issuance of the permit, namely, that they were violating no applicable law in building on the site.

[47] I appreciate that the Authority has been assigned a highly sensitive and significant statutory mandate which it is obliged to pursue with protective rigour. But where, as here, the facts reveal a reasonable reliance on what proved to be a mistake on the part of the chief building official, the defence of officially induced error can be justified.

[48] I would dismiss the appeal.

"R.S. Abella J.A."

MACPHERSON J.A.:

[49] I have had the opportunity to read the reasons prepared by my colleague, Abella J.A. I regret that I do not agree with her proposed disposition of the appeal.

[50] I agree with my colleague's summary of the facts and statement of the issue. I also agree with her conclusions in relation to several components of the defence of officially induced error. However, in the end, I disagree with her analysis concerning the reliance component of the defence which, regrettably, leads me to a different proposed disposition of the appeal.

[51] There is a recognized defence of officially induced error. It is available in criminal prosecutions: see *R. v. Jorgensen* (1995), 129 D.L.R. (4th) 510 (S.C.C.).[1] It is also a potential defence of an accused charged with violating a regulatory statute: see *R. v. Cancoil Thermal Corporation et al.* (1986), 11 C.C.E.L. 219 (Ont. C.A.).

[52] There are five elements or components in the defence – (1) the accused must have considered the legal consequences of its actions and sought legal advice, (2) the legal advice obtained must have been given by an appropriate official, (3) the legal advice was erroneous, (4) the persons receiving the advice relied on it, and (5) the reliance was reasonable: see *Jorgensen* at pp. 525-27 and *Cancoil* at p. 231.

[53] My colleague concludes that all five of these elements are present in this case and that the summary conviction appeal judge was correct to apply the defence on the non-suit and acquit the respondents. I agree with my colleague's conclusions with respect to elements (1), (2) and (3), disagree with her conclusion relating to element (4), and do not reach element (5).

[54] In my view, the respondents' invocation of the defence of officially induced error founders on the reliance element. The summary conviction appeal judge dealt with reliance in this fashion:

There is no suggestion whatsoever that the Respondents at any time acted in other than a reasonable manner; they acted in good faith.

[1] Although Lamer C.J.C. observed that "officially induced error of law functions as an excuse rather than a full defence" (p. 527), most of the case law, the commentators and my colleague use the word 'defence' which, in my view, is also an appropriate label.

. . . . .

I am satisfied that the Respondents are entitled to rely on the defence of officially induced error . . . They did all that was required of them, as I say, in good faith.

In other words, in the absence of evidence of bad faith, the summary conviction appeal judge assumed that the respondents relied in good faith on the advice of the chief building official.

[55] On appeal, my colleague draws a similar inference. In the 'Background' section of her reasons, she states: "There was no evidence of bad faith on the part of the owner or contractor". In the 'Analysis' section of the judgment, she reasons:

[The application form for a building permit] obliges the Chief Building Official to ensure that he or she has all relevant information from the applicant to determine whether, among other things, environmental concerns under relevant legislation have been satisfied. And if, *based on the information provided in good faith*, an error has been made, his or her decision can be reviewed under the *Building Code Act*. But until the issuance of a permit is challenged, as it was in this case by the Authority, *individuals acting in good faith* should reasonably be able to rely on it for the assumption that they are in compliance with their legal obligations. [Emphasis added.]

[56] With respect, I do not agree that good faith, and therefore reliance, can be inferred from the absence of evidence of bad faith. The respondents brought their motion for a non-suit at the conclusion of the Crown's case. They called no evidence. Accordingly, there is no basis for concluding that their application to the chief building official was made in good faith. Perhaps it was; however, perhaps it was not. The point is that there is no way of knowing and, with respect, it is wrong to infer good faith, just as it would be wrong to infer bad faith.

[57] I am especially unwilling to infer good faith and reliance on the facts of this case and bearing in mind the statute in question. The respondents were not applying for a building permit to construct a backyard deck. Rather, they sought permission to construct a liquid pig manure storage tank 160 feet in diameter and 12 feet deep. This storage tank would be located in rural Ontario and, specifically, in a location where, it is clear from the exhibits, including aerial photographs, there are obvious wetlands environmental concerns. This simple fact implicates in turn the *Conservation Authorities Act*, R.S.O. 1990, c. C.27, which is a crucial provincial law with a stated purpose, in s. 20, of furthering "the conservation, restoration, development and management of natural resources". In short, the reality of what the respondents propose to build, and the clear nexus between the proposed structure and the *Conservation Authorities Act*, suggest caution and vigilance.

[58] The onus to establish an affirmative defence rests on the party asserting it. As expressed by Lacourcière J.A. in *Cancoil*, "it will be for the trier of fact to decide whether the accused has proved, by a preponderance of evidence, that he was misled by the inspector into thinking that [the accused's conduct] would not be in contravention of the law" (at p. 231). Or, as put succinctly by Lamer J. in *Jorgensen*, "the accused must demonstrate reliance on the official advice" (at p. 527).

[59] The respondents did not demonstrate reliance in the present case. They brought a motion for a non-suit, and said nothing. This placed the trial judge and the summary conviction appeal judge in the same predicament as the trial judge in *R. v. Savard*, [2001] O.J. No. 3350 (O.C.J.), who dealt with the reliance component of the defence of officially induced error, at paras. 18-20:

And finally, for the defence of officially induced error to succeed, there

must be evidence that Mr. Savard did rely on the erroneous advice he claims that he was given by his Member of Parliament. Quite simply, the court is unaware of what was in Mr. Savard's mind. He did not testify at the trial, by choice, and there is no other way for that determination to be made . . . .

. . . What was he thinking? How did he interpret the advice that he was given? I cannot guess.

. . . Mr. Savard has failed to discharge the burden of proving that his conduct was excused by an officially induced error.

[60] In summary, I do not think the respondents have met their burden to establish the reliance element of the defence of officially induced error. The respondents chose to bring a motion for a non-suit/directed verdict at the conclusion of the Crown's case. They led no evidence that they relied on the advice of the chief building official as confirming compliance with the *Conservation Authorities Act*. The respondents were in the best position, *and had the legal obligation*, to satisfy the court that they acted in good faith and relied on the building permit to establish compliance with the *Conservation Authorities Act*. They did not do this; they remained silent on these matters.

[61] For the sake of completeness, I record that, in my view, there is no merit to the respondents' arguments grounded in due diligence and estoppel.

[62] I would allow the appeal and order a new trial.

"J. C. MacPherson J.A."

SIMMONS J.A. (concurring):

[63] I have had the benefit of reading the reasons of my colleagues Abella J.A. and MacPherson J.A. I agree with MacPherson J.A.'s statement that there are five elements of the defence of officially induced error[2] and with his conclusions that, at the close of the prosecution's case, the respondents had not made out the fourth element and that they did not reach the fifth element. I therefore agree with his proposed disposition of this appeal and respectfully disagree with the disposition proposed by my colleague Abella J.A.

[64] However, I respectfully disagree with my colleagues' finding that, at the close of the prosecution's case, the respondents had satisfied the first three elements of the defence of officially induced error. In addition, I conclude that there was no air of reality to the defence at that point and, therefore, that there was no basis for raising it.

[65] Dealing with the question of whether the respondents satisfied the first three elements of the defence, for ease of reference, I will repeat MacPherson J.A.'s summary of its elements: (1) the accused must have considered the legal consequences of its actions and sought legal advice, (2) the legal advice obtained must have been given by an appropriate official, (3) the legal advice was erroneous, (4) the person receiving the advice relied on it, and (5) the reliance was reasonable.

[66] In order to satisfy the first three requirements of the defence, in my view, it would be necessary that the respondents demonstrate three things that were not addressed by the evidence at trial. First, that they turned their minds specifically to the legal consequences of that part of their conduct that is prohibited by the *Conservation Authorities Act*, R.S.O. 1990, c. C.27, regulation. Second, that they obtained erroneous advice from an official who they believed, on reasonable grounds, was in a position to give advice concerning that issue. Third, that they understood the advice they received to mean that the prohibited aspect of their conduct was not illegal.

[67] Phrased more bluntly, I think it necessary that the respondents demonstrate: (1) that they considered whether it was illegal to build a liquid manure holding tank in a swamp; (2) that they obtained advice from an

appropriate official concerning that specific issue; and (3) that, as a result of the advice that they obtained, they believed it was not illegal to build a liquid manure holding tank in a swamp.

[68] None of the cases that were brought to our attention raised, in such precise terms, the issue of what an accused must consider and understand in order to meet the first three requirements of the defence of officially induced error. Accordingly, I base my conclusion on the enunciated rationale for the defence, which is non-blameworthy mistake as opposed to ignorance: see *R. v. Jorgensen* (1995), 129 D.L.R. (4th) 510 (S.C.C.) at paras. 6-11 and paras. 25-31; and P.G. Barton, "*Officially Induced Error as a Criminal Defence: A Preliminary Look*" (1979-80), 22 C.L.Q. 314 at pp. 317-8 and p. 328.

[69] I rely in particular on the following comments of Lamer C.J.C in *Jorgensen*:

> Once it is determined that the error was one of law, the next step is to demonstrate that the accused considered the legal consequences of her actions. *By requiring that an accused must have considered whether her conduct might be illegal* and sought advice as a consequence, *we ensure that the incentive for a responsible and informed citizenry is not undermined. It is insufficient for an accused who wishes to benefit from this excuse to simply have assumed that her conduct was permissible* [emphasis added][3].
>
> Finally, to benefit from this excuse, the accused must demonstrate reliance on the official advice. This can be shown, for example, by proving that the advice was obtained before the actions in question were commenced *and by showing that the questions posed to the official were specifically tailored to the accused's situation* [emphasis added][4].

[70] Although Lamer C.J.C.'s comments concerning "specifically tailored" questions relate to the reliance component of his analysis, it goes without saying that one would have to advert to the prohibited aspect of one's conduct at some point in order to pose appropriate questions.

[71] In my view, if the respondents never considered whether there were legal consequences of building a liquid manure tank in a swamp, and did not obtain advice, from an appropriate official, which they understood related to that issue, they demonstrate ignorance, not mistake, and they should not be entitled to the benefit of this defence. Given that there was no evidence at trial dealing with these specific issues, I conclude that there was no basis for holding that the first three requirements of the defence were satisfied.

[72] I am mindful that it might be argued that the facts in *Jorgensen* do not support my conclusions about what an accused person must consider and understand in order to satisfy the first three requirements of the defence because, in *Jorgensen*, the accused simply relied on Ontario Film Review Board approvals and there was no evidence that he posed any "specifically tailored" questions to an appropriate official. However, there was evidence in *Jorgensen* that the accused told police that he purchased only videos that had been approved by the Ontario Film Review Board[5]. Moreover, Lamer C.J.C. specifically noted, "the appellants were aware that they were involved in a business which risked infringing the *Criminal Code*" and said he found it significant that "those seeking OFRB approval and classification for films must pay the OFRB per minute of film"[6]. He also said "the appellants sought and paid for the OFRB opinion of these particular films before putting them on their shelves"[7]. Accordingly, it appears clear that, in that case, the accused did turn his mind to the potential legal consequences of the prohibited aspect of his conduct and that there was evidence that he understood Ontario Film Review Board approval meant that the videos were not obscene. There was no similar form of evidence in this case.

[73] Finally, in determining what an accused person must consider and understand in order to meet the first three requirements of the defence of officially induced error, I also rely on Lamer C.J.C.'s comments that, like entrapment, this defence functions as an excuse for what is otherwise culpable conduct. Where the defence is made out, the appropriate remedy is to enter a judicial stay, not an acquittal, thus ensuring that it will be successful in only the clearest of cases[8]. Accordingly, the very nature of the

defence requires that its elements be strictly interpreted and applied.

[74] Turning to the air of reality issue, I conclude that before raising the defence of officially induced error, an accused person must first establish that he made an error that constitutes an error of law. In this case, in my view, no evidence was adduced capable of supporting an inference that the respondents contravened the *Conservation Authorities Act* regulation as the result of an error of law. I therefore conclude that there was no air of reality to the defence of officially induced error.

[75] In *Jorgensen*, Lamer C.J.C. alluded to this preliminary requirement on two occasions when discussing the existence and availability of the defence.

[76] First, when beginning his discussion of the elements of the defence, Lamer C.J.C. emphasized the importance of maintaining the distinction between errors of law and errors of fact in preserving the principle that ignorance of the law is no excuse. In doing so, he said the following at paragraph 28:

The first step in raising an officially induced error of law argument will be to determine that the error was in fact one of law or of mixed law and fact. Of course, if the error is purely one of fact, this argument will be unnecessary … Distinguishing between mistakes of fact and those of law remains conceptually important. Mistakes of law will only be exculpatory in narrowly defined circumstances [emphasis added].

[77] Later, when summing up the requirements of the defence, he said the following at paragraph 36:

It can only be raised after the Crown has proven all elements of the offence. In order for an accused to rely on this excuse, she must show, *after establishing she made an error of law*, that she considered her legal position, consulted an appropriate official, obtained reasonable advice and relied on that advice in her actions [emphasis added].

[78] In this case, the respondents led no evidence at trial. Instead they brought three motions at the conclusion of the prosecution's case to dismiss the charges against them. The first motion related to whether the prosecution had established a case against Mr. Terpstra personally. In their second motion, the respondents claimed that the building permit was a complete defence to the charges under the *Conservation Authorities Act* regulation. In their third motion, the respondents claimed that the prosecution had not established that the construction site was a swamp. The presiding Justice of the Peace dismissed the charges based on the third motion.

[79] On appeal, the respondents submitted that, by issuing a building permit, the chief building official gave an opinion, under s. 8(2) of the *Building Code Act*, 1992, S.O. 1992 c. 23, that the proposed construction complied with "any other applicable law", including regulations under the *Conservation Authorities Act*. They claimed that if the chief building official made an error in giving that opinion, they were entitled to rely on the building permit as evidence of officially induced error.

[80] The essence of the respondents' claim that they made an error of law is that the building permit amounted to "advice" from the chief building official that the proposed construction did not contravene "other applicable law". However, there was no evidence that the respondents were aware, at the time they commenced construction, that the chief building official was required to consider whether the proposed construction contravened "other applicable law" before issuing a building permit. Accordingly, in my view, at the close of the prosecution's case, there was no evidence capable of supporting an inference that the respondents actually made an error, and, therefore, no basis for classifying any error that they may have made. The respondents were not therefore entitled to raise the defence of officially induced error.

[81] In reaching this conclusion, I have considered that, in *Jorgensen*, the accused did not testify, but that Lamer C.J.C. nevertheless held that he might have been entitled to a defence based on error of law. However, in that case, as I have already noted, there was other evidence that the accused made an error of law. In particular, there was evidence that the accused told police that he purchased only videos that had been approved by the Ontario

Film Review Board[9]. In addition, Lamer C.J.C. noted, "[t]he appellants were aware that they were involved in a business which risked infringing the *Criminal Code*"[10]. Accordingly, there was an evidentiary basis for Lamer C.J.C.'s conclusion that the accused made an error of law, namely "concluding *that the films* [he] *retailed were not legally obscene* [emphasis added]"[11].

[82] In summary, because I have concluded that, at the close of the prosecution's case, there was no evidence capable of supporting an inference that the respondents made an error of law, I also conclude that there was no air of reality to the defence of officially induced error, and that the respondents were not entitled to raise it.

[83] I agree with my colleagues that there is no merit in the respondents' arguments based on due diligence and issue estoppel.

[84] I would allow the appeal and order a new trial.

Justice B. Lass

Introduction

[1] Although the title to the action names many parties, the trial is limited to the Plaintiffs and the remaining Defendants, The Corporation of the Village of Bobcaygeon and Jack Phelps. Since the commencement of the action, the corporate Defendant has become part of a new municipality, The City of Kawartha Lakes. Hereafter, the parties shall be referred to as Riverside, Weymouth, Gormaw, Bobcaygeon and Phelps respectively.

[2] The Plaintiffs have sued for damages in tort and in contract for damages sustained following approval of building plans for several rental buildings. During the construction of the fourth building serious construction infractions with respect to the Ontario Building Code Act were revealed. At one point, there was some concern about the need to level the four buildings. The Plaintiffs also claim negligence by the municipality in conducting inspections of the buildings when they were built and failing to advise of deficiencies in the course of construction.

[3] The Plaintiff Riverside Developments Bobcaygeon Ltd. took on the project as a developer and owner with Dewhurst Bros. Construction (Bobcaygeon) Limited acting as the builder. Dewhurst originally was going to buy the land and build the project with a company called Riverside Place Bobcaygeon Incorporated, subsequently called Springbank Homes Limited. When Dewhurst was not able to do so, Riverside Developments Bobcaygeon Ltd. decided to do the project. At that time, the municipality already approved the plans for the first building.

[4] When the flaws in the structures were disclosed in 1997, major remedial work had to be done. This led to the mortgagee taking over the property and having the work done through a receiver who was appointed by court order.

[5] After the remedial work was finished, the buildings were sold by the mortgagee, Bank of Montreal. The remedial work cost $1,691,179.

[6] The Plaintiff Riverside Developments Bobcaygeon Ltd. was the owner of the lands upon which the buildings had been constructed. Mr. Weymouth was the principal shareholder of the corporation. Gormaw was another company in which Mr. Weymouth was a shareholder. It was a guarantor of the Bank of Montreal mortgages on the property. When the Bank obtained judgment on its mortgage, it tied up the assets of Riverside Developments Bobcaygeon Ltd., Mr. Weymouth and Gormaw so that they could not do anything with their assets unless Bank of Montreal approved.

[7] When the property was liquidated after the completion of the remedial work, the Plaintiffs continued to be tied up with the judgment of Bank of Montreal. There was no surplus of funds after the lands and buildings were sold.

[8] The Plaintiffs seek damages on the basis that the Chief Building Official for the municipality, Jack Phelps, failed to exercise his responsibilities correctly when approving the plans for the buildings. The municipality is pursued for its vicarious liability for the negligence of its employee. The loss of the property, the loss of historic income, the loss of equity, excess costs, the debt to The Bank of Montreal together with damage to the reputations of the Plaintiffs form the foundation for the Plaintiffs' claims. Weymouth and Gormaw Developments Limited guaranteed the indebtedness with The Bank of Montreal as well.

Issues

[9] What is the cause of damages sustained by the Plaintiffs?

[10] Although the Defendants do not dispute negligence on the part of Mr. Phelps in fulfilling his duties as the Chief Building Official for the municipality, they do raise the question whether there is any money owing to the Plaintiffs.

[11] Should the Plaintiffs have mitigated their damages? If they did not, is there any sanction?

[12] If there is money owing, to what extent are the Plaintiffs contributorily negligent?

[13] Should any damages owing to the Plaintiffs be set-off by the sum of the judgment of The Bank of Montreal assigned to the municipality?

Overview of How the Building Development Came About

[14] The project to build the structures was initially that of Dewhurst and his corporation. He was going to buy the land from Riverside Developments Bobcaygeon Ltd. Initially, Dewhurst spoke with Mr. Weymouth about the project in the early 1990s; however, Weymouth assessed the economic climate of the time as not being favourable for such a venture. The most he was prepared to do was sell the land to Dewhurst. There was an agreement of purchase and sale between Riverside Developments Bobcaygeon Ltd. and Dewhurst Bros. Construction (Bobcaygeon) Limited. That agreement was to

close on January 30, 1994. That agreement was replaced with another in which a new Dewhurst company called Riverside Place Bobcaygeon Incorporated was to buy the lands with a closing date of May 31, 1994. In the agreement, the purchaser was given permission to do some site work including construction of a building on the property prior to the conveyance at his own risk.

[15] Dewhurst presented plans for the first building to Phelps as the Chief Building Official for The Corporation of the Village of Bobcaygeon. He intended to be the owner of the property. He contacted many prospective tenants. Dewhurst also commenced arrangements for mortgage financing with The Bank of Montreal.

[16] In the end, Dewhurst was not able to place himself in a financial position to undertake the project. Riverside Developments Bobcaygeon Ltd. by this time agreed to take on the project as the developer with Dewhurst being the builder. Weymouth spoke with Phelps and was assured that the plans were satisfactory. Historically, Weymouth had developed land in the Bobcaygeon area, but he was not a builder. He had had Dewhurst build many structures for him in the past and was very satisfied with the work.

[17] Financing was arranged with the Bank of Montreal. For the initial building, the Bank required that Riverside Developments Bobcaygeon Ltd. mortgage its lands and that Weymouth, Dewhurst and Mr. Mattern guarantee the mortgage. There is some dispute why Dewhurst and Mattern would guarantee the mortgage if they were not partners with Weymouth or shareholders in Riverside Developments Bobcaygeon Ltd. Mr. Leeds from the Bank of Montreal understood that the three were in on the project together and that Dewhurst and Mattern were to become shareholders in Riverside Developments Bobcaygeon Ltd. in time. Dewhurst had conveyed that information to Leeds. Leeds also stated that Weymouth had told him the same information. Weymouth denied ever providing such information to The Bank of Montreal. At no time were Dewhurst or Mattern to become shareholders. They had expended money on the proposed project before Weymouth became involved and hoped to earn enough from the building project to pay off their expenditures, but Weymouth firmly testified that there never was any deal to include them in the company.

[18] At one time in the past, Dewhurst had been a minority shareholder in Riverside Developments Bobcaygeon Ltd., but that had been concluded in 1991, long before Weymouth took on the project.

[19] Riverside Developments Bobcaygeon Ltd. is a company in which Weymouth is the principal shareholder. His wife, daughter and son hold shares in the company as well. Dewhurst ceased to hold shares in the corporation in 1991. Riverside Developments Bobcaygeon Ltd. has been a development corporation.

[20] Gormaw Developments Limited is a corporation in which Gordon and Mary Weymouth are the shareholders. It is a development corporation as well. It owns real property in Bobcaygeon. It guaranteed the mortgages as did Gordon Weymouth.

Was Riverside Developments Bobcaygeon Ltd. a joint venturer with Dewhurst?

[21] When Dewhurst was unable to continue with his plans, Weymouth and Riverside Developments Bobcaygeon Ltd. then became involved as the owner and developer of the lands. The

Defendants submit that Weymouth and Riverside Developments Bobcaygeon Ltd entered into a joint venture with Dewhurst. If that were the case, then the actions of one might be binding on the other. For example, if Dewhurst arranged for the plans and made errors when actively working with the Chief Building Official, the joint venture partner would be in the same position as Dewhurst. If Dewhurst were negligent in such activity, the negligence would also be that of Weymouth and Riverside Developments Bobcaygeon Ltd.

[22] Dewhurst and Mattern had put a lot of time, effort and money into the intended project. Mr. Leeds from The Bank of Montreal had notes referring to Weymouth, Dewhurst and Mattern having an interest in another company that was going to become the owner of the whole project eventually. Weymouth was very definite that he did not provide any such assurance to Mr. Leeds. Weymouth thought that if Leeds had such an impression, it could only have been through his dealings with Dewhurst. The other possibility for Leeds reaching such a conclusion is that he may have traded information from his other Bank of Montreal files for Weymouth and Weymouth's company after incorrectly concluding that Weymouth was to be in a joint venture with Dewhurst and Mattern. The missing information in Leeds' documents regarding Weymouth is the timing of receipt of information from Weymouth. There is no date on his documents to back up when he spoke with Weymouth as he alleges. His care at file-keeping is relied upon by the Defendants as one who is meticulous and therefore reliable. I find that Leeds is not as meticulous as is submitted by the Defendants because he has not dated any discussion times with Weymouth. It is consistent with Weymouth's position that any such suggestion of a joint venture came from Dewhurst prior to Weymouth's involvement. Note the dates of the meetings when Leeds met with Dewhurst. They were prior to Weymouth agreeing to become the developer in the project. They were after the agreement of purchase and sale was entered into between Riverside Developments Bobcaygeon Ltd. and Dewhurst's company. That agreement had simply been for Riverside Developments Bobcaygeon Ltd. to sell the land to Dewhurst's company. That being the case, I come to the conclusion that there was no activity by Weymouth with Dewhurst and Mattern that could lead The Bank of Montreal to conclude there was a valid and subsisting joint venture. The notes of Leeds for the Bank are dated June 1994, which is a time before Weymouth and Riverside Developments Bobcaygeon Ltd. were involved with the project. Any assumption by Leeds that Weymouth was or was to be involved with Dewhurst and Mattern can only have been an assumption based on information received from Dewhurst when he was acting without Weymouth. It appears that the Bank took guarantees from Dewhurst and Mattern for the first three mortgages without establishing firmly that this was a joint venture. By the time the fourth mortgage was executed, the Bank was not looking for the guarantee of Dewhurst and Mattern. That is consistent with an acceptance that they were not in a joint venture with Weymouth. This conclusion puts the icing on the cake that there was not any form of partnership or joint venture between Weymouth and the other two men or the Dewhurst company.

[23] Why did Dewhurst and Mattern sign a guarantee for the mortgage from The Bank of Montreal? If they were not stakeholders in the project, there was no need to have them guarantee the mortgage. The Defence submits that these men were included as guarantors because they were joint venturers with Riverside Developments Bobcaygeon Ltd. Another consideration is that the Bank simply wanted all the guarantors it could get. One additional possibility is that Dewhurst had advised Leeds that there was a plan for a joint venture between

himself, Mattern and Riverside Developments Bobcaygeon Ltd. This could have occurred when Dewhurst was trying to arrange financing and was telling Leeds that he would sell shares in his company, Riverside Place Bobcaygeon Incorporated. Such share sales could have included shares to Mattern and Weymouth after the buildings were constructed. I note that eventually these men ceased to be guarantors. As each building was constructed, a new mortgage for that building was drawn. Each mortgage was ranked pari passu with the others. Dewhurst and Mattern signed as guarantors for the first three mortgages on December 21, 1994, September 22, 1995 and July 26, 1996. By the time they got to the fourth building, the Bank was accepting only guarantees from Mr. Weymouth and Gormaw Developments Limited. Those final guarantees were consistent with the ownership and interconnection between Weymouth and his companies only and inconsistent with a joint venture joint venture with Dewhurst.

[24] I am satisfied that there was not a joint venture here. The agreement of purchase and sale that was to close on May 31, 1994 would have resulted in Riverside Developments Bobcaygeon Ltd. selling the lands to Dewhurst or his company. That agreement specifically identified independent activities between the purchaser and vendor. For example, the purchaser acknowledged that there was a site plan agreement with the municipality that governed the lands so that if the buyer wanted any changes, he would have to negotiate with the municipality. In addition, the purchaser acknowledged that Riverside Developments Bobcaygeon Ltd. might develop its adjoining lands in the future and that the buyer would not object to such developments. Those developments would have included multi-residential and commercial uses of the property. Those provisions in the agreement of purchase and sale are not those expected between participants in a joint venture. Rather, they are more consistent with the limitations that two individuals would employ when they are not acting together in a venture.

Was Riverside Developments Bobcaygeon Ltd. a general contractor?

[25] The Defendants also suggest that Riverside Developments Bobcaygeon Ltd. acted as a general contractor when it received the invoices and paid the bills. Dewhurst was the builder. If Riverside Developments Bobcaygeon Ltd. were the general contractor, again there is an argument that it must take responsibility for the acts of the builder. That might be to the extent of 50% contributory negligence. Again, I do not find that Riverside Developments Bobcaygeon Ltd. was a general contractor. Riverside was the developer and relied on the builder to do the construction work. A general contractor will organize, manage and control the project. Riverside Developments Bobcaygeon Ltd. paid the bills, but nothing more. Dewhurst was the builder who hired the trades and saw to it that the construction work was completed. Paying the bills submitted by the trades did not make Riverside Developments Bobcaygeon Ltd. the general contractor. The Defendants submit that Weymouth hired and paid the trades whereas the evidence is that Dewhurst hired the trades.

Was Riverside Developments Bobcaygeon Ltd. as a developer contributorily negligent?

[26] The Defendants further take the position that Riverside Developments Bobcaygeon Ltd. was contributorily negligent as a developer. In other words, the developer contributed to its own loss and the value of such contribution should be deducted from anything the municipality might owe it. Weymouth, as the main voice of Riverside Developments Bobcaygeon Ltd., did not want to pay for professional services and now wants

everyone to protect him including the municipality. If Weymouth advanced a set of building drawings, he should have a responsibility to make sure the drawings met the Building Code requirements. In failing to do so, he should absorb some responsibility. The municipality takes the position that Weymouth had full control over the design and construction of the project. Therefore, the Defendants submit that Weymouth and Riverside Developments Bobcaygeon Ltd. are 50% liable.

[27] The Defendants take the position that whatever category Riverside Developments Bobcaygeon Ltd. is found, i.e. joint venturer, general contractor or developer, Riverside Developments Bobcaygeon Ltd. are liable for at least 50% of the losses sustained.

[28] It is necessary to determine how Weymouth/Riverside Developments Bobcaygeon Ltd. interacted with Phelps and Dewhurst. Weymouth testified that he met with Phelps on several occasions and was assured that the plans presented previously by Dewhurst when he was going to do the project were satisfactory. Weymouth claimed to have met several times with Phelps. He had asked Phelps if there was a need for an engineer because of the size of the project, but that Phelps had told him it was not necessary. Upon that assurance, Weymouth went ahead with the building after arranging financing with The Bank of Montreal. He was emphatic that he was not a builder. He relied on Phelps as the Chief Building Official when he stated that the plans met the requirements for such an undertaking. He had worked with Dewhurst in the past and was satisfied with the finished product that Dewhurst produced.

[29] Phelps did not recall meeting with Weymouth to discuss the plans. He testified that he did not meet with Weymouth about the buildings while they were being constructed. Yet he testified that he avoided Weymouth because he talked a lot. Phelps has a selective memory. He served as the Chief Building Office for the municipality for more than two decades. I conclude that Phelps simply did not do his job correctly. He could not be sure what he approved and reviewed. He claimed to inspect the buildings as they were being constructed, but he did not go to the upper level where he would have seen that firewalls were not installed. He could have concluded that there were no firewalls just by looking from the ground level because the walls would have projected above the roofline. Both Bernard Finney and Dr. Southward confirmed this. They are professional engineers. I accept that an experienced building official should know that firewalls would go above the roofline. The upper level of the buildings was open so that a fire could have spread from one end of each building to the other without obstruction.

[30] I conclude that Phelps' evidence is less reliable because he does not provide much of an accounting of the events. He denies talking with Weymouth but at other times his reference to Weymouth talking leads to the conclusion that Phelps must have had many conversations with Weymouth. Phelps testified that he got to the point of avoiding Weymouth because Weymouth talked too much. At the same time, Phelps acknowledged the plans for the building. He was of the opinion that the building did not require the work of an architect or an engineer. Mr. Finney advises that they could have put in firewalls correctly but that they put in improper firewalls without severance in the ceiling area. The installed ones did not go through the ceiling to the roof. If firewalls had gone through the attic area, they would have done the job effectively. It is apparent that Phelps and Dewhurst talked about how to get the buildings constructed and meet the Building Code. Phelps did not address the needs of the Building Code sufficiently. The

size of each building makes it a Part 3 Building Code structure. An alternative to make it a Part 9 Building Code structure requires many adjustments that will provide protection to the public. A Part 3 building requires the use of an architect and engineer whereas a Part 9 building does not. These buildings went up as Part 9 buildings without the assistance of architects and engineers. When that happens, the Chief Building Official and inspector becomes more important in making sure that the construction is done within the requirements of the Building Code. A Part 3 building is inspected by the architect and engineer. I am persuaded that Phelps simply did not do his job. He was the person responsible for making sure that the Building Code was met. Phelps had to make the final decision about whether or not something was being done correctly. Weymouth simply came in after the approval, and the plans continued as had been approved with Dewhurst. I do not doubt that Phelps and Weymouth did speak about whether the plans that Dewhurst was using were satisfactory. Weymouth was not a builder. Rather, he was a developer. When the Chief Building Official for the municipality advised him that the plans met the requirements of the Building Code for the Province, it is reasonable for Weymouth to rely on those assurances. It is also reasonable that the owner then relied on the building inspector to check the construction as it advanced.

[31] I do not find any contributory negligence on the part of Weymouth and Riverside Developments Bobcaygeon Ltd. When he made inquiries with the Chief Building Official and was assured that the Code was being met with the plans that were already on file with the municipality, Weymouth did not fall down on his responsibilities as owner and developer of the property. The development was going to be a Part 9 group of structures without the benefit of professionals such as architects and engineers. The municipality failed in its responsibility to the owner to allow an improper structure to go up and then not to inspect it as it was built. Further, I find that Weymouth did not act in a way that would attract liability to him. He relied on the Chief Building Official who reported that the plans that Dewhurst had provided earlier met the Building Code requirements so that the project was an approved one. It is reasonable that a person in Weymouth's and Riverside Developments Bobcaygeon Ltd.'s positions would conclude that they had good plans for a building project. It is further reasonable that they would rely on the building inspector to inspect the construction to be sure that the buildings were being put correctly. The consequences of the mistakes made by Phelps are that three buildings were constructed and a fourth was well under way before any problem came to light.

Would one expect that the errors of Phelps would lead to the full extent of losses claimed by the Plaintiffs? Did the negligence of Phelps cause the losses sustained by the Plaintiffs?

[32] The Plaintiffs' have one grouping of damage claims for lost equity in the property, lost historical income, excess costs incurred that are attributable to the deficiencies together with a higher prejudgment interest than provided in the Courts of Justice Act. The losses claimed by the Plaintiffs take into account proceeds received from the sale of the property, income earned by the receiver from operating the apartments, and the obligations under the mortgages against Riverside Developments Bobcaygeon Ltd. and guaranteed by Weymouth and Gormaw Developments Limited. The Plaintiffs separately claim the debt incurred with the mortgages on the property. The Plaintiffs also claim damages for loss of business reputation for all three and a general damage claim for pain and suffering for Gordon Weymouth. The Defence submits that the full scope of damage claims by the Plaintiffs is excessive and

not reasonably foreseeable as damages flowing from the actions and lack of actions of Phelps.

[33] In Kamloops (City) v. Nielsen]1984] 2 S.C.R. 2, the Supreme Court of Canada reviewed a two-part test when determining whether a public body owes a duty of care to individuals. First, there is a prima facie duty of care from the municipality if there is a proximate relationship between the parties so that it is reasonably foreseeable that carelessness on the part of the public body would result in injury to the individual. Secondly, the court examines the legislation governing the public body to determine whether a private law duty should be imposed in the circumstances.

[34] In Ingles v. Tutkaluk Construction Ltd. [2000] S.C.J. No. 13, the Supreme Court of Canada, in applying the Kamloops test, considered whether the relationship between the public body and the individual was close enough that it was foreseeable that a deficient inspection of the construction could result in damage to the property or injury to the owners. Secondly, the Court found that the Building Code in Ontario was enacted to ensure that uniform standards of construction safety were followed. There, the Court stated that the municipality would escape liability from below standard inspection in the rare case of the owner-builder making it impossible for the inspector to do anything to avoid the danger.

[35] In my reasons following, I have applied the test in Kamloops and Ingles.

[36] It is reasonably foreseeable that by giving the approval to proceed with a project that would fall apart completely years later, the loss would all flow back to the approval of the Chief Building Official together with his neglect to inspect properly the buildings. Weymouth had a small corporation. It is very common that personal guarantees be given to lenders for such projects. Further, it is most common that such projects are not constructed on a cash basis but rather are financed. If the municipality faltered on its approval, it was setting up the developer to have a house of cards that would come tumbling down when the buildings were found to be very much outside the confines of the Ontario Building Code. It is reasonable that when work orders issued requiring remedial work that cost over $1.5 million the owner/developer would not be in a position to meet those requirements. If the project was financed, defects could lead to the lender of the mortgages demanding payment. When an owner is overwhelmed with such financial obligations, all flowing from the negligence of the Chief Building Official, it is also reasonable that the guarantors will be pressed hard financially. All of these problems are reasonably foreseeable as damages flowing from Phelps' negligence.

What is the extent of the financial liability for the municipality?

The total claims of the Plaintiffs total over $10.4 million. The damage claims are broken down into several categories. They are:

[37] Damages composed of lost equity, lost historical income, excess costs incurred, pre-judgment interest rounded off at $3,566,000;

[38] The loss of business reputation sustained by each of the Plaintiffs in the sum of $500,000 each;

[39] The amount of mortgage indebtedness on the Riverside Developments Bobcaygeon Ltd. property as now reflected in a

judgment held by The Bank of Montreal and assigned to the municipality;

[40] Damage to the reputation of Riverside Developments Bobcaygeon Ltd., Gormaw Developments Limited, and Gordon Weymouth personally;

[41] Pain and suffering experienced by Gordon Weymouth personally.

Damages for Lost Equity, Lost Historic Income, Excess Costs and Pre-judgment Interest

[42] Several valuators considered the value of the property. They considered rental property in the area and noted the difficulty in finding comparable properties. The vacancy rate was a significant feature in these valuations. The rate ranged from 4% to 16.5%. I conclude that the 5% vacancy rate recommended by BDO is the more realistic one because it is the median vacancy rate between those used by W.J. Dietrich Ltd. and Veritas who used 4% and 6%. I take into account that this municipality is reported to have had a need for rental accommodations. The only reason that the higher vacancy rates of 10% and 16.5%, used by Colliers and Wilkinson, might be considered is that when the buildings were under work orders and the complaints of deficiencies were at their peak, the vacancy rate was at its highest. This is an artificial consideration flowing from a unique situation with these particular buildings. That means that the vacancy is higher because of the negligence of the municipality. It is inequitable to then use the higher than usual vacancy rate against the injured parties. The valuations vary from $4,650,000 by Mr. Mulvihill of W.J. Dietrich Ltd. to $3,700,000 from Mr. Bender of Colliers. I am satisfied that Mr. Mulvihill has determined a valuation that is the most reasonable because he is more reasonable in his consideration of vacancy rates regarding income projections of the buildings. His valuation does not underscore the value of the project as fully operational residential building complex with a lower than actual value because of the natural drop in sale prices when it comes to forced sales of properties. The lower values address the problems with the buildings and project lower selling prices as bargain hunters approach a vendor in trouble. The reality of the situation is that such lower values do not take into account the fact that buyers will pay lower prices because of the failure of Phelps in allowing the project to get off the ground. The BDO damage calculation is $3,566,000 separate from considerations of the mortgages. The damage assessment takes into account the three appraisals mentioned above. The sum is calculated to November 30, 2003 and increases by $32,000 per month, which included $12,000 in prejudgment interest.

[43] The BDO analysis of the quantum of damages sustained by the Plaintiffs realistically considers the vacancy rate, repairs and maintenance and the management fee structure. The Colliers appraisal allows upwards of 10% vacancy rate is challenged by Mr. Jones of BDO on the basis that it is not realistic for the Bobcaygeon area. Mr. Silverthorn of Wilkinson & Company provides a review of the appraisals and the BDO report. He allows up to 10% and 16.5% for vacancy and bad debt allowance. Mr. Silverthorn is prepared to settle back to the 10% vacancy rate in his analysis. I might add that the means of getting to the higher vacancy rates of 10% and 16.5% vacancy rate arises as the buildings were being constructed and after the alarm arose about the soundness of the buildings. Such higher rates are artificial because they are created through the negligence of Phelps. If the problems with these buildings had not arisen, there would not have been a higher vacancy rate. Another feature of concern in the calculation of damages is the allowance for management fees.

BDO accepts that Weymouth provided a hands-on management service, which did not require him to hire outside a professional manager. I accept that Weymouth could perform such services. To add the recommended sum of $93,000 of Mr. Silverthorn would artificially reduce the damages claimed by the Plaintiffs. I accept Mr. Jones' removal of a management fee because it takes into account the actual way that Weymouth operated the management of the buildings. This falls within the calculation of lost historical income.

[44] The current value of the buildings is calculated as being equal to the present value of the expected future rental income. All the appraisals used an income approach to determine the value of the buildings. Such an approach estimates the anticipated operating income and determines the present value of such income based on an appropriate risk adjusted rate of return, which is a capitalization rate.

[45] The lost equity is made up of the current value of the property without deficiencies and subsequent problems less the amount that would have been owing on the mortgages in the absence of the problems caused by the deficiencies. The total calculation to September 30, 2003 in the BDO reports is $1,508,273.00 together with an increase each month thereafter of $4564.00 per month to January 19, 2004 for a total of $1,524,762.29. I accept these calculations. I do not find any sustainable challenge to them.

[46] I accept the lost historical income calculation of Mr. Jones in the sum of $1,109,503. This is the difference between the income that Riverside Developments Bobcaygeon Ltd. is expected to achieve if there were no deficiencies. Mr. Silverthorn of Wilkinson & Company says that if the vacancy rates were 10% or 16.5%, the figure for this category of claim to July 31, 2003 would be $709,047 and $480,609 respectively. I do not accept Mr. Silverthorn's figures because of my findings above that the vacancy rate should be 5%.

[47] The excess costs claim to September 30, 2003 totals $396,511. These damages cover architectural and engineering fees, handwriting expert, the Dietrich Report, charges on overdue land taxes on properties other than the lands for the apartment buildings, excess repairs, maintenance and upgrades, excess utilities incurred from increased apartment vacancies, legal and accounting costs incurred by the Plaintiffs, photocopying costs. I find that most of these claims are not damage claims but rather are open for consideration of costs in the litigation, if they are awarded to the Plaintiffs. For example, the legal and accounting costs, the architectural and engineering costs, the Dietrich Report, the photocopying fall into this category. The charges on overdue land taxes on other properties have not been substantiated. Mr. Jones' Report shows that he did not perform a cash flow review that Weymouth would have been receiving from his other businesses. The amount shown for charges on overdue land taxes is an estimate. I find that this is not a substantiated damage claim. The only parts of this damage category that might be considered are those for excess repairs, maintenance and upgrades as well as excess utilities resulting from increased vacancies. These totaled $12,861 and $10,450 respectively. This total of $23,311 is a valid damage claim flowing from the negligence of Phelps.

[48] The BDO damage report adds prejudgment interest on lost historical income and excess costs at the arbitrary rate of 12.9% working from 1998 through to September 30, 2003. Mr. Jones does not include such a calculation on the lost equity and receivership features. The Plaintiffs ask the Court to use its discretion in awarding a higher rate that is scheduled in s. 130 of the Courts of Justice Act. I am not persuaded to make an

elevated rate of prejudgment interest because in effect it would amount to punitive damages that have not been claimed. I appreciate that s. 130 of the Act allows the trial court to increase the prejudgment interest rate when considering the circumstances of the case, when looking at the amount claimed and recovered in the trial, and when reflecting on the conduct of a party that tended to shorten or lengthen unnecessarily the duration of the proceedings. There are not sufficient circumstances in this proceeding to draw the decision within these extra features of s. 130 of the Act. Therefore, the prejudgment interest sum of $487,677.00 set out in the BDO Report will not be allowed. The prejudgment interest being allowed when the action was commenced was 5.3%. This will apply to lost equity, lost historical income, excess costs.

[49] With the complaints of deficiencies mounting and with work orders issuing from the Fire Marshal's Office, the outstanding mortgages eventually fell into default. The mortgage debt by Riverside Developments Bobcaygeon Ltd. and guaranteed by Weymouth and Gormaw Developments Limited became a further loss by the Plaintiffs. The amount of the mortgage debt as guaranteed by Weymouth is $4,857,330.11. The guarantee judgment debt for Gormaw Developments Limited is $2,168,449.73 as referred to above. Those monies became judgment debts owing to the mortgage holder by the landowner Riverside Developments Bobcaygeon Ltd. and the guarantors. Because I have found that there is no contributory negligence by the Plaintiffs and further that it is reasonably foreseeable that the mortgage debt and guarantees might fall due because of the deficiencies resulting from the negligence of Phelps both in approving the plans and in failing to inspect the construction in a proper manner, the whole of the mortgage judgment debt is a reasonably foreseeable category of damages for which the municipality should be liable. That liability flows from the negligence of the Chief Building Official.

[50] In this trial, The Bank of Montreal did not participate because it had settled with Phelps and Bobcaygeon with Bobcaygeon paying out the Bank and taking an assignment of the judgment. If The Bank of Montreal had continued in the trial, I do not doubt that Phelps and Bobcaygeon would have been found liable for the amount of the mortgage based on the negligence of Phelps and the fiduciary duty owed to the Bank by the two remaining Defendants. Just because the Bank is now out of the action, it does not mean that the indebtedness is deleted. On the contrary, I find that Riverside Developments Bobcaygeon Ltd. continued to be indebted and is now a judgment debtor because of the negligent conduct of Phelps for whom the municipal employer is vicariously liable. This continues to be a loss to Riverside Developments Bobcaygeon Ltd. flowing from the conduct of Phelps. If he had done his job properly, he would have required additional work to be done so that the buildings complied with the Ontario Building Code. There is nothing to suggest that Weymouth would have avoided the project if those requirements were made. Weymouth in cross-examination testified that it was a matter of satisfaction in what Phelps required rather than being a matter of money. Riverside Developments Bobcaygeon Ltd. relied on the information from Phelps and went ahead with the project. When the deficiencies were detected years later, the municipality issued work orders to correct the deficiencies. As complaints arose from tenants and as rumours arose about the safety of the buildings, tenants left. This affected the income of Riverside Developments Bobcaygeon Ltd. In time, without co-operation from the municipality, Riverside Developments Bobcaygeon Ltd. was unable to do the remedial work and the Bank took over managing the buildings with a court-appointed receiver. Remedial work was done for the receiver and the

costs related to that remedial work amounted to more than $1.5 million. By the time the buildings were down to 50% occupancy and the Bank no longer prepared to lend Riverside Developments Bobcaygeon Ltd. more funds, Riverside Developments Bobcaygeon Ltd. could not do the work. As a result, Riverside Developments Bobcaygeon Ltd. lost the property and became a judgment debtor of the Bank. That is a loss related to the negligence of Phelps. To be awarded a damage claim for this liability is not a windfall for Riverside Developments Bobcaygeon Ltd. It must be remembered that property was sold for a sum that did not retire the whole of the judgment together with the costs of the receiver. The total outstanding on the judgment and remedial works is $4,733,622.11 inclusive of prejudgment interest and costs plus interest from May 25, 2000 to July 31, 2003. The per diem interest charges on the four mortgages totaled $732.00. From August 1, 2003 to January 19, 2004 are a total of 169 for another $123,708.00. That totals $4,857,330.11 for Riverside Developments Bobcaygeon Ltd. The judgment against Gordon Weymouth on the guarantee is for the same amount plus interest from May 25, 2000. The judgment on the guarantee against Gormaw Developments Limited is $1,776,869.80 plus interest from May 25, 2000 being the date of judgment. The interest on the Gormaw Developments Limited judgment from May 25, 2000 has a daily rate of $288.35 for a total of 1358 days running until January 19, 2004 for a total of $391,580.02. The total judgment for Gormaw Developments Limited is $2,168,449.73. Since the interest on the judgments is commensurate with the interest rates on the mortgages, the interest on the award to the Plaintiffs continues at a similar rate until payment.

Should there be any allowance for betterment to the structures resulting from the remediation work of the receiver?

[51] There is an issue of betterment to the buildings by some of the work done by Kleinfeldt, the engineering consultant retained by the receiver. The cost of the remedial work done by Kleinfeldt is $1,154,813.00. That is 38% of the original cost. M.B. Finney Limited assessed that such remedial work would cost about 40% of the original cost when one had to do the work after the structures had been erected. There is some debate about the work of Kleinfeldt bettering the structures. Finney is of the opinion that calculating the betterment features as done by Dr. Southward in his report is not a valid method. The figures of Dr. Southward flow from questions presented to him by counsel for the Defendants and are more related to the value of the structures rather than the costs. Mr. Finney thought that the wrong questions were used as the foundation for the Southward report and that they give an erroneous answer.

[52] The Kleinfeldt report sets out in detail deficiencies in the construction of the four buildings. When reading about these shortfalls in the structures, one is concerned about the quality of the work done when the buildings were put up. Wet crawl space areas that are poorly ventilated, improper doors and ceilings for fire resistance for the time requirements of the Fire Code, the upper levels not being constructed for fire resistance are a few of the headings. As much as one might be critical of the original contracting work, so must one be concerned about the inspection of the work during the course of construction. There is so much faulty work that I find that Phelps and his staff did not conduct proper inspections during construction. Phelps himself never looked at the upper level for fire separations. His only explanation is that there was not a ladder available. This faulty work should have been stopped early in its development. This would have prevented whole buildings being put up only to need so much retrofitting that one would not have been surprised to hear that there was some

discussion of leveling the structures. The remedial work addressed life safety and health issues. The Building Code and Fire Code exist for the protection of the public. Fire rated doors, walls and ceilings to withstand fire for set periods of time are required for life safety. The crawl space areas were not built so as to prevent dampness, sometimes flooding and the development of mould. When some earlier remedial work had been undertaken for the damp and moldy crawl spaces, common ventilation systems were used, but that created a further fire hazard that would allow the spread of fire. I am not surprised that Kleinfeldt Consultants Limited recommended major remedial work as a necessity.

[53] The additional work to make the buildings Code compliant provides a required improvement that the Plaintiffs would have addressed if Phelps had executed his responsibilities correctly. Some of the expenditures incurred by Kleinfeldt are probably outside the original requirements. For example, the mold work totaled $310,041.00. Dr. Southward says he cannot say how much of the mold problem comes from the Building Code problems and how much is due to improper maintenance. However, Kleinfeldt incurred costs to install what should have been in the building to the extent of $676,968.00 plus sprinklers in the tenant storage areas. The total of $676,968.00 should be deducted from the damages awarded because those would be costs that Riverside Developments Bobcaygeon Ltd. would have undertaken initially had Phelps done his job correctly. I have taken into account the Finney and Southward reports regarding the remediation work handled by Kleinfeldt Engineering Consultants.

[54] The Plaintiffs have each claimed damages for loss of business reputation. Each claims $500,000 for such damages. I am not satisfied that these claims have been established. No report has been presented in the trial demonstrating damage to the reputation of the Plaintiffs. Without such information, one cannot measure such a damage claim.

[55] Weymouth has a claim for $500,000 for pain and suffering flowing from the experience of this development failing. He advised that he has been treated for stress over the years. No medical report is before the court on behalf of Weymouth indicating depression as a result of all the negative impact of this failed project. Exhibit 57 is a report from Dr. Oldridge filed during the cross-examination of Weymouth. It is a year 2000 letter. The doctor notes treatment of depression in July 2000 as a new diagnosis with the trigger for this development being the problems from this building project. Dr. Oldridge felt that with the past history of depression and the magnitude of the problems with the development, Weymouth was at risk of recurrent depression. The doctor was not called to give evidence at the trial. The evidence does not establish this claim. At best, it demonstrates a person with a history of experience with stress. Weymouth denied being diagnosed with depression. The evidence does not show that this action and the negligence of the Defendants has enhanced Weymouth's susceptibility to stress.

Issue of Set-off of Judgment Assigned to the Municipality by The Bank of Montreal

[56] The Defendants submit that any damages awarded to the Plaintiffs ought to be set off against the judgment the municipality holds by way of assignment of The Bank of Montreal judgment. Section 111 of the Courts of Justice Act. The Plaintiffs oppose any consideration of set-off because it has not been pleaded nor does it comply with the considerations of s. 111 of the Act. The Bank had obtained judgment. I am advised that the Bank assigned the judgment to

the municipality after the municipality paid out the judgment. I understand that the terms of any settlement between the parties regarding the assignment of judgment are to remain confidential. They should not be revealed to me at this trial.

[57] At the commencement of the trial, counsel for the Defendants made reference to some of the terms of the settlement, and counsel for the Plaintiffs submitted that I should not be apprised of that information. At the conclusion of the trial, the issue arose again with Mr. Millard arguing that I should ignore any details of the settlement. During the written submissions, again Mr. Millard asks that I approach the settlement as if I have no awareness of its contents. Mr. Stieber disagrees on the basis that the assignment of The Bank of Montreal judgment is part of the court record and that I can take it into account. Mr. Stieber also submits that even though the Defence has not pleaded set-off, I can implement a set-off of any damages awarded to the Plaintiffs from the judgment held by the municipality on the basis of s. 111 of the Courts of Justice Act.

[58] S. 111 of the Act provides that set-off may be implemented in an action in which one party claims payment for a debt and the other claims to be able to set off the debt from a debt owed to that party. Mutual debts may be set off even if they are of a different nature. The issue is whether a debt can be set off from a damage claim. Some cases have dealt with equitable set-off between liquidated sums and non-debt obligations such as unliquidated claims when the two obligations are so closely bound up that it would be unconscionable to prevent set-off. See Agway Metals Inc. v. Dufferin Roofing Ltd. (1991), 46 C.P.C. (2d) 133 (Ont. Gen. Div.). In Davis v. Spectrix Microsystems Inc. (1987), 63 O.R. (2d) 151 and affirmed at (1988), 69 O.R. (2d) 639 (Div. Ct.), equitable set-off was not allowed because in that case the claim for unliquidated damages did not arise from the same transaction as the contract in which the plaintiff was suing. There, the court found unliquidated damages could not be a set-off of mutual debts as contemplated by the section in the statute. In Hattori Overseas (Hong Kong) Ltd. v. Phillip Cox Agency Inc. (1985), 2 C.P.C. (2d) 257 (Ont. Div. Ct.), unliquidated damages were set off against liquidated damages if the opposing claims arose out of the same transaction or relationship between the parties.

[59] The parties are not involved in the same transaction in the case before me. The judgment now held by the municipality flows from a mortgage between The Bank of Montreal and Riverside Developments Bobcaygeon Ltd. The issues between the Plaintiffs and the municipality in this trial flow from an unliquidated damage claim arising from negligence of a chief building official in approving plans for buildings as well as negligence in inspecting the buildings during construction. Those issues are distinct from the indebtedness between the Riverside Developments Bobcaygeon Ltd. and The Bank of Montreal. Set-off here would not be legal set-off as addressed in s. 111 of the Courts of Justice. It would not be equitable set-off because they are a mixture of liquidated and unliquidated damages that are not flowing from the same transaction. Further, set-off has not been pleaded.

[60] To allow set-off when they are not pleaded would be unfair to the other party. If a settlement is in effect with a proviso that I not be advised of its details, that agreement between parties to litigation should be honoured. To allow one party to circumvent the settlement would be prejudicial to the other. I accept Mr. Millard's submissions that I should not consider any details of the settlement that have been exposed during the trial and written argument following the conclusion

of the presentation of evidence. Regardless of considerations of pleading set-off or revealing the terms of a settlement, I conclude that set-off does not apply through s. 111 of the Courts of Justice Act. They are claims of liquidated and unliquidated damages that do not have a common transaction as their foundation. That means that both legal and equitable set-off do not apply.

[61] Because the issue of set-off and the settlement continued to come up even during the written argument stage of the proceedings, I had the court office check with counsel to see if there was a concern that my being advised of the contents of the settlement had prejudiced the trial process to the extent that a mistrial ought to be declared. Counsel do not want a mistrial; however, they continue to argue the issue. I conclude that there will not be a set-off, and further that I shall ignore details of the settlement as if I were not informed of them. That retains a level playing field for both sides of the trial.

Conclusion

[62] What are the causes of damages sustained by the Plaintiffs? Phelps' negligence in approving plans that should not have been approved together with his negligence inspecting the buildings as they were constructed are the causes of damages here. Dewhurst may have built poorly, but he and his company are bankrupt. The municipality is vicariously liable for the negligence of its employee.

[63] Is there any money owing to the Plaintiffs? The damages awarded to the Plaintiffs are:

[64] To Riverside Developments Bobcaygeon Ltd. $1,160,449.13 for lost historical income together with prejudgment interest at the rate of 5.3%;

[65] To Riverside Developments Bobcaygeon Ltd. $1,524,762.29 for lost equity together prejudgment interest at the rate of 5.3% ;

[66] To Riverside Developments Bobcaygeon Ltd. $23,311.01 for excess costs together with prejudgment interest at the rate of 5.3%;

[67] Riverside Developments Bobcaygeon Ltd. $4,857,852.53 for the mortgage indebtedness together with post-judgment interest at the rate on the judgment debt assigned to the municipality from January 19, 2004 because interest has been calculated to that date at paragraph 50 in these reasons;

[68] To Gordon Weymouth $4,857,852.53 on the guarantee as reflected in a judgment against him together with post-judgment interest at the rate on the judgment debt assigned to the municipality from January 19, 2004 because interest has been calculated to that date at paragraph 50 in these reasons ;

[69] To Gormaw Developments Limited $2,168,449.73 on the guarantee as reflected in a judgment against it together with post-judgment interest at the rate on the judgment debt assigned to the municipality from January 19, 2004 because interest has been calculated to that date at paragraph 50 in these reasons;

[70] Post-judgment interest on the sums for lost historical income, lost equity, excess costs for Riverside Developments Bobcaygeon Ltd. shall be at the rate allowed by the Courts of Justice Act;

[71] Post-judgment interest on the mortgage indebtedness shall be at the same rate as in the judgment obtained by The

Bank of Montreal and subsequently assigned to the municipality. This applies for Riverside Developments Bobcaygeon Ltd., Gormaw Developments Limited, and Gordon Weymouth.

[72] Should the Plaintiffs have mitigated their damages? If they should have and failed to do so, is there any sanction? The Plaintiffs attempted to mitigate damages by working with the municipality to comply with work orders. They worked for over a year attempting to do so. As the situation became worse with tenants leaving during the process, the Plaintiffs needed a considerable amount of money to do what became the Kleinfeldt remedial work. They could not get it from The Bank of Montreal. There was no chance to get it from another lending source. Then, the Bank took over the property so that the Plaintiffs no longer had control of the buildings to do remediation work. The Plaintiffs did as much as they could, but circumstances beyond their control made mitigation impossible. There is no sanction for not doing what they were unable to do because the Bank took over and precluded mitigation.

[73] If there is money owing, to what extent are the Plaintiffs contributorily negligent? There is no contributory negligence attributed to the Plaintiffs.

[74] Should damages owing to the Plaintiffs be set-off by the sum of the judgment of The Bank of Montreal assigned to the municipality? There should not be any set-off allowed.

[75] There will be an allowance of $676,968 for betterment as referred to in paragraph 53 above. This represents remedial work done by Kleinfeldt that would have been installed initially had proper plans been approved and proper inspection been conducted.

[76] Costs may be addressed by written or oral submissions. Counsel are to advise the Trial Co-ordinator's Office within twenty days if and how they wish to address the issue of costs. If there is no communication, I shall assume that costs have been addressed directly by the parties.

[77] If the mathematical calculations set out above have errors, I invite counsel to bring them to my attention for correction.

Justice B. Glass

COURT OF APPEAL FOR ONTARIO

RE: **RIVERSIDE DEVELOPMENTS BOBCAYGEON LTD., GORDON EDWARD WEYMOUTH and GORMAW DEVELOPMENTS LIMITED (Plaintiffs/Respondents) – and – THE CORPORATION OF THE VILLAGE OF BOBCAYGEON, JOHN PHELPS, SPRINGBANK HOMES LIMITED, DEWHURST BROS. CONSTRUCTION (BOBCAYGEON) LIMITED, BANK OF MONTREAL and CANADA MORTGAGE AND HOUSING CORPORATION (Defendants/Appellants)**

BEFORE: **FELDMAN, GILLESE and LAFORME JJ.A.**

COUNSEL: **Alan Lenczner Q.C. and Ryan Breedon for the appellants**

Geoffrey Adair Q.C. for the respondents

HEARD: **July 18, 2005**

On appeal from the judgment of The Honourable Mr. Justice Glass dated January 19, 2004.

ENDORSEMENT

[1] In this case the respondent built four rental buildings in Bobcaygeon. His contractor proposed plans, which he submitted to the municipality for approval and ultimately for a building permit. Those plans were approved by the Chief Building Officer Mr. Phelps, a building permit was issued, the buildings were constructed and they were inspected and approved by Mr. Phelps. After they were completed and occupied, it came to the attention of the parties that the buildings did not comply with the Building Code in the requirement for firewalls. As a result, the tenants vacated, the bank realized on its mortgage and suffered a shortfall. The owner was responsible for that shortfall and also lost all profits from its investment. At trial, the Town admitted liability for negligence in approving the plans, issuing the building permit and in inspecting the buildings as they were constructed. The town was found 100% responsible for the damages suffered by the owner.

[2] The appellant raises four issues on the appeal. The first is an error made by the trial judge in the amount of the award that has been corrected on consent in the judgment.

[3] The second error alleged is the decision of the trial judge not to order set-off of the amount of the judgment on the Banks' mortgage, as the appellant took an assignment of that judgment from the bank.

[4] During the course of oral argument, issues arose regarding the proper amount of the mortgage judgment and the amount that would be set-off, if set-off were to be ordered. The parties agreed to obtain further details of this amount and to provide them to the court. We have now received the parties' submissions. The parties have now agreed that the appellant is entitled to set off the full amount of the assigned mortgage liability. The amount is corrected from the original judgment to $3,416,261.14 plus pre-judgment interest.

[5] The third issue raised by the appellants is the respondent owners' own responsibility for the error in the plans that caused the problems with the buildings. The appellants make three submissions:

a) The contractor drafted the defective plans and applied for the building permit based on those plans as agent for the owner, making the owner responsible for the negligence of the contractor;

b) The trial judge erred in concluding that the owner and the contractor were not joint venturers on the project, and therefore on that basis, the owner was responsible for the negligence of the contractor;

c) As a matter of law, an owner has the primary responsibility *vis-à-vis* the municipality to ensure that the plans submitted for a building permit are correct, so that as a matter of law, the owner must bear some portion of the liability on that basis of contributory negligence.

[6] The respondents' main answer to these arguments is that there was no evidence led at the trial, including expert evidence, that any action by the contractor in preparing and submitting the plans to the municipality fell below the standard of care of a contractor in Bobcaygeon. Therefore, there was no basis upon which the trial judge could have apportioned any liability to the contractor for which the owner could have been responsible as agent or as joint venturer. We agree with that submission.

[7] The trial judge made a specific finding, after considering all the evidence, that the owner and the contractor were just that, and were not partners or joint venturers in this project. That finding is one of mixed fact and law. The trial judge made no palpable and overriding error in reaching that conclusion.

[8] We are satisfied that the statements made by the court in the case of *Ingles v. Tutkaluk Construction Ltd.* (2000), 183 D.L.R. (4th) 193 S.C.C. regarding the primary responsibility of an owner/builder for the plans were made in the context of a contest regarding apportionment, and not as a statement of law applicable regardless of the evidence presented.

[9] We would not give effect to this ground of appeal.

Conclusion

[10] The appeal on the issue of contributory negligence is dismissed.

[11] The judgment will be amended in accordance with the agreement of the parties as set out in counsels' letter of July 28, 2005.

[12] Costs of the appeal to the respondent on the partial indemnity scale fixed at $30,000 inclusive of disbursements and GST.

ONTARIO
SUPERIOR COURT OF JUSTICE

B E T W E E N:

1218897 ONTARIO LIMITED,
c.o.b. as CASTLE AUTO COLLISION AND MECHANICAL SERVICE

Applicant

- and -

ANN BOROOAH, CHIEF BUILDING OFFICIAL, CITY OF TORONTO and RYDING AUTO BODY LTD.

Respondents

BEFORE: T. Ducharme J.

COUNSEL: R.M. Kanter for the Appellant

R.E. Zuech for the Respondent, Ann Borooah,
Chief Building Official,
City Of Toronto

P. DeMelo for the Respondent, Ryding Auto Body Ltd.

MOTION HEARD: October 3, 2005

ENDORSEMENT

[1] This is an appeal under s. 25 of the *Building Code Act*, 1992, S.O. 1992, c. 23 from the decision of the respondent, Anne Borooah, Chief Building Official ("C.B.O.") of the City of Toronto, to issue Building Permits Nos. 04-105286 and 04-136693 to the respondent, Ryding Auto Body Ltd ("Ryding"), for its property at 1107 Castlefield Avenue (the "Property"). The building permits allow construction of a paint booth and alterations to the interior of the building for an auto body shop at the Property owned by the Ryding. The applicant, Castle Auto Collision And Mechanical Service ("Castle") is a commercial competitor of Ryding and operates an auto body shop at 1117 Castlefield Avenue ("1117 Castlefield") which is located two lots west of the Property. The parties are agreed that since 1987, zoning by-laws have prohibited spray painting and the repair of auto bodies on both the Property and 1117 Castlefield.

[2] Castle takes the position that the C.B.O. issued the building permits in contravention of the relevant zoning by-law. They submit that the building permits were issued on mistaken, false or incorrect information, or in error, since the Property was not continuously used as an auto body shop until March 2005. In the alternative, if the Property was so used, it was not "lawfully used" for this purpose within the meaning of section 34(9)(a) of the *Planning Act*, R.S.O. 1990, c. P. 13 ("*Planning Act*"). Relying on *Saint-Romuald (City) v. Olivier*, 2001 SCC 57 (CanLII), [2001] 2 S.C.R. 898 (S.C.C.) the applicant also claims that Ryder is over-reaching because: (i) the scale or intensity of the proposed activity would bring about a change in the type of use; (ii) the addition of new activities or the modification of old activities is too remote from the earlier activities; and (iii) the new or modified activities create undue, additional or aggravated problems for the municipality, the local authorities or the neighbours, as compared to what went on before.

[3] The respondents take the position that the Property, like the Castle property, enjoys a legal non-conforming use, which allows

them to carry out motor vehicle repairs including spray painting, and the repairing of metal body and fender components. Specifically, they reject the applicant's argument that the pre-existing use was not lawful or was not continuous. They also dispute that the intensification of the activities would change the type of use or is too remote from the earlier activities. Finally, the respondents dispute that the appellant has demonstrated any adverse neighbourhood effects.

ISSUES:

(1) What is the appropriate standard of review of a C.B.O.?

(2) Was the Property used for a non-conforming purpose at the time of the passage of the by-law?

(3) Was the pre-existing non-conforming purpose lawful?

(4) Was the pre-existing non-conforming use continuous?

(5) Does the proposed use violate any of the principles enunciated in *Saint-Romuald*?

(1) What is the Appropriate Standard of Review of a C.B.O.?

[4] On an appeal under section 25 of the *Building Code Act, 1992* the applicant has the burden of demonstrating that the C.B.O.'s decision was not reasonable or that it was wrong in law. There is nothing in the *Building Code Act, 1992* to alter the normal burden upon the applicant to demonstrate error in order to succeed. The burden is on the applicant to prove on a balance of probabilities that the C.B.O.'s decision was not reasonable and that the building permits at issue should be revoked. In attempting to discharge this burden, the applicants may tender additional evidence before the court as may the respondents to the appeal: *William F. White Ltd. v. Toronto (City) Chief Building Official*, (1999), 44 O.R. (3d) 750 at 759 to 760 (S.C.J.).

[5] The more the C.B.O.'s decision is solely an interpretation of law, the closer the standard of review will be to correctness. The more the C.B.O.'s decision is dependant upon factual determinations within the specific expertise of the C.B.O., the more deferential will be the standard. Generally speaking, however, a standard close to correctness will be applied to decisions based on law or jurisdiction and a standard of reasonableness will be applied to questions of fact. Within the standard of reasonableness, the degree of deference or the "weight" to be given to any particular determination will depend on the circumstances. *Runnymede Development Corp. v. 1201262 Ontario Inc.* (2000), 47 O.R. (3d) 374 at 385 to387 (Sup. Ct. Just.)

[6] Municipal planning and zoning are specialized areas that are squarely within the expertise of the C.B.O. This factor supports a greater degree of deference: *Runnymede Development Corp., supra*. In this case, the decision concerning whether the Property enjoys a legal non-conforming use is a question of mixed fact and law and the C.B.O.'s decisions to issue the building permits and not to revoke the building permits are entitled to deference.

[7] A related issue raised by the applicant is whether I should consider only the initial decision or that decision and the subsequent review carried out after the applicant made various inquiries and brought further information to the attention of the C.B.O. Under section 25(4) of the *B.C.A.* the powers of a judge are:

> 25 (4) On an appeal, a judge may affirm or rescind the order or decision and take any other action that the judge considers the chief building official, registered code agency or inspector ought to take in accordance with this Act and the regulations and, for those purposes, the judge may substitute his or her opinion for that of the official, agency or inspector.

As Lane J. put it in *Albert Bloom Ltd v. Bentinck (Township) Chief Building Official*, (1996), 29 O.R. (3d) 681 (G.D.); aff'd, (1996) 29 O.R. (3d) 681 (C.A.) at p. 686, "As to the appeal, the duty of the judge is to do as the chief building official should have done." In my view, one cannot properly assess what the C.B.O. should have done without considering everything he or she did. It would be highly artificial to consider only the initial decision of the C.B.O. – especially since I am to make the decision the C.B.O. should have made based on the amplified record put before me on the appeal. Therefore, I reject the applicant's position and will consider all of the C.B.O.'s actions, both in issuing the permits and in deciding not to revoke them upon review of further evidence.

(2)Was the Property Used for a Non-Conforming Purpose At the Time of the Passage of the By-Law?

[8] The nature of the non-conforming use is not defined by reference to definitions in a by-law. Rather, it must be determined by reference to the use to which the Property was put prior to the enactment of the by-law. This is because the most that Ryder can claim is a right to carry on using the Property for the purpose to which it was in fact previously being put.[1]

[9] Mr. Kanter for the applicant urges me to consider whether or not the Property was previously an auto body shop. This was both explicitly and implicitly a central element of his submissions. However, that is not the proper question. Rather, as Mr. Zuech submits, the proper question is whether or not the activities carried out on the Property before December 7, 1987 were permitted under the terms of the applicable zoning by-law. Under zoning by-law 15955, the Property was located in an "M" Manufacturing District and one of the permitted uses thereunder was as a "motor vehicle repair shop, Class B" which was defined as, "a public garage used as a motor vehicle repair shop, including spray painting and the repairing of metal body and fender components."

[10] Mr. Kanter argues that the prior use did not fall within this definition. First, he challenged the veracity of the two affidavits filed by the previous owner, Mr. Fansabedian. I expressed concern about being asked to make credibility findings based on affidavit evidence alone. All the parties agreed that I could, if I felt it necessary, order a trial of the issue. However, Mr. Kanter was strongly opposed to my ordering a trial of that issue. Ultimately, I decided that it was not necessary to do so. While Mr. Fansabedian's second affidavit is more detailed than the first, it is not inconsistent with the first nor does the greater specificity of the latter provide any cogent reason for disbelieving Mr. Fansabedian.

[11] Mr. Fansabedian deposed in his second affidavit that, after purchasing the Property, his company carried out general auto repairs and engine rebuilding, occasionally changing fenders and hoods and always maintained an area of the building that was dedicated to spray painting. From 1980 to 1992, a municipal licence for "public garage; body and fender work; repairs; spray painting" was renewed yearly. The renewals ceased after the City no longer sent renewal notices. Notwithstanding that a licence was not renewed after 1992, Mr. Fansabedian continued to perform the same operations including the changing of hoods and fenders and spray painting. These operations continued without interruption until a fire damaged the building in 2000. The operations were closed and relocated for nearly a year while the building underwent repairs. At no time was there any intention to abandon any of the previous uses. Normal operations at the Property resumed in 2001 after the building was repaired and they included general auto repairs, engine rebuilding, works related to hoods and fenders as well as spray painting. These operations continued until 2003 when the mortgagee took possession of the Property and sold it to Ryder.

[12] Mr. Kanter submits that "occasionally changing fenders and hoods" is not enough to bring the prior use within the definition of a "motor vehicle repair shop, Class B." First, he argues that that this "occasional" use is only incidental to the principal use of the Property, i.e., general auto repairs. He submits it is necessary to make this decision based on the "principal" use or purpose for which the Property was being used as opposed to any "accessory use."

Second, Mr. Kanter submits that "changing fenders and hoods" is not the same as "repairing metal body and fender components". Third, Mr. Kanter points to the fact that there was no evidence of the following:

(a) spray painting of metal body and fender components;

(b) an enclosed spray booth or exhaust stack as required by the Ministry of Environment;

(c) a Certificate of Approval from the Ministry of Environment;

(d) repairing metal body and fender components;

(e) equipment for straightening auto frames;

(f) invoices to customers for auto body work;

(g) a sign on the premises indicating an auto body shop;

(h) advertisements in the telephone directory or elsewhere; or

(i) any other indicators of auto body work.

I will deal with each of these submissions in turn.

[13] In making his first argument, Mr. Kanter argues that the occasional changing of hoods and fenders and the spray painting carried out by the previous owner amounts merely to an accessory use of a motor vehicle repair shop, Class A. Of course the definition of a motor vehicle repair shop, Class B does not set any minimum levels for such uses – it merely requires that they be done. More seriously, the provisions of the by-law would preclude interpreting these uses as an accessory use. In 1987, the relevant by-law defined an accessory use as " a use … that is naturally and normally incidental, subordinate and exclusively devoted to a principal use." However, the definition of a motor vehicle repair shop, Class A specifically excludes any spray painting or metal fender and body repairs:

> "motor vehicle repair shop, Class A," means a public garage used as a motor vehicle repair shop, exclusive of spray painting and the repairing of metal body and fender components;
> [Emphasis added]

Therefore, in my view, the above uses cannot properly be categorized as accessory uses under the by-law when (1) they are specifically excluded from the definition of motor vehicle repair shop, Class A; and (2) the presence of either use is what distinguishes a motor vehicle repair shop, Class B from a motor vehicle repair shop, Class A. Thus, while the fact this work was only done occasionally is relevant to the question of intensity, discussed at paragraphs 26 to 29, *infra*, it does not mean that the pre-existing use of the Property falls within a motor vehicle repair shop, Class A.

[14] Mr. Kanter's second argument would require the court to draw a distinction between "changing fenders and hoods" and "repairing metal body and fender components". This argument must be weighed in light of the approach to statutory interpretation repeatedly adopted by the Supreme Court of Canada. As Iacobucci, J. noted in *Re Rizzo & Rizzo Shoes Ltd.*, [1988] 1 S.C.R. 27 (S.C.C.) at p. 41:

> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.

Thus, when considering the language of a zoning by-law, the words used should be interpreted in their popular, common and ordinary usage rather than in a narrowly legal or technical sense. The words should be interpreted in this manner unless to do so would lead to some absurdity or inconsistency. The distinction Mr. Kanter urges on the court is a technical one that is unsupported by either the scheme or the history of the by-law. Moreover, it ignores the reality that changing fenders and hoods is one way of repairing damaged automobiles – it is one way of repairing metal body and fender components. For both of these reasons I would reject this argument.

[15] Mr. Kanter's third argument is really a variation of his first. The reason that there was no evidence of many of the factors listed in paragraph 12, *supra*, is because of the undisputed fact that the primary use of the Property was not as an auto body shop. But, as I have already said, that is not the question before the court. The by-law does not require that any of the factors listed in paragraph 12, *supra*, be present for the Property to qualify as a motor vehicle repair shop, Class B.[2] It is not the proper role of the court to import such requirements into the by-law. Thus, this argument fails as well.

[16] On the evidence before the court, I am satisfied that the use made of the Property by the previous owner from 1980 to 2003 fell squarely within the definition of motor vehicle repair shop, Class B:

Zoning Definition Component	Activities of Previous Owner
"public garage used as a motor vehicle repair shop"	- general auto body repairs - engine rebuilding - spray painting - changing of hoods and fenders
"including spray painting"	- spray painting (had dedicated area in building for spray painting)
"and the repairing of metal body and fender components"	- changing of hoods and fenders

As such the previous owner's use of the Property fell within the definition of 'motor vehicle repair shop, Class B' at the time the use was no longer permitted.

(3) Was the Pre-Existing Non-Conforming Purpose Lawful?

[17] A legal non-conforming use is defined in s. 34(9) of the *Planning Act* R.S.O 1990, c. P.13 as follows:

> 34(9) No by-law passed under this section applies,
>
> (a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose;
> [Emphasis added]

[18] As best as I can understand Mr. Kanter's submission here it is that the previous owner's use of the Property was not lawful as the owner did not have the necessary certificate of approval under the *Environmental Protection Act*, R.S.O. 1990, c. E.19 nor did he have the proper facilities such as an enclosed paint booth and an exhaust stack. Mr. Kanter also points to the previous owner's failure to renew the appropriate municipal licence.

[19] This argument depends on an overly broad interpretation of the word "lawfully" in s. 34(9)(a) of the *Planning Act*. I prefer the interpretation of "lawfully" enunciated by Steele J. in *893472 Ontario Ltd. v. Whitchurch-Stouffville (Town)* (1991), 7 M.P.L.R. 296 at 306:

> In my opinion, "lawfully" relates to being lawful under a zoning by-law passed under the *Planning Act*.
> . . .
> any unlawful or illegal matter relating to the use or occupation of the lands outside of the *Planning Act* is irrelevant to the interpretation of section 34 (9) of the *Planning Act*.

Thus, the question of whether the previous owner complied with other statutory requirements, such as those in the *Environmental Protection Act*, is not relevant to the use of the Property under the zoning by-law or the "lawfulness" of the non-conforming use after 1987. Consequently, I find the Property was lawfully used as a motor vehicle repair shop, Class B at the time of the passage of the by-law as well as thereafter.

(4) Was the Pre-Existing Non-Conforming Use Continuous?

[20] To establish a legal non-conforming use under s. 34(9)(a) of the *Planning Act* it is not enough to establish that the Property was used for that purpose when the by-law was passed. Ryding must also demonstrate that the Property "continues to be used for that purpose." Thus, having established that the Property was used as a motor vehicle repair shop, Class B as of December 7, 1987, the respondent must also demonstrate that this use continued from December 7, 1987 to March 2005.

[21] The issue here is whether or not the use has been continuous despite the fire on the Property in 2000 which damaged the building and forced the previous owner to relocate operations for nearly a year. Mr. Kanter points first to the interruption of the non-conforming use caused by the fire. Second he emphasizes what Mr. Fansabedian stated in his first affidavit:

> After we completed the repairs from the fire and restored the Property, we resumed our use of the Property doing general auto repairs and engine rebuilding until I sold the Property to the existing owner.
> [Emphasis added]

The significance of the highlighted portion is the lack of any mention of spray painting or repairing of metal body and fender components after the fire.

[22] If that were all the evidence before me I would agree that the previous use had not been continuous. However, in his second affidavit Mr. Fansabedian elaborated on the impact of the fire as follows:

> We continued to carry on all operations uninterrupted, including spray painting until a fire damaged the building in 2000. The fire resulted in our operations being closed and relocated for nearly a year while we repaired the building so that we could resume operations. At no time did we intend to abandon the Property or to abandon any uses we had enjoyed prior to the fire.
>
> In 2001, after we had completed the necessary repairs to the building, we resumed our normal operations. Those operations included general auto repairs, engine rebuilding, works related to hoods and fenders, as well as spray painting until 2003 when our Mortgagee took possession of the Property and sold same under Power of Sale to the current owners.

Ryding purchased the Property in January 2003 and there is no issue that they intended to use the Property as a motor vehicle repair shop, class B.

[23] As I have already indicated, I do not accept Mr. Kanter's submission that the fact that Mr. Fansabedian's second affidavit is more fulsome suggests that I should view its contents with caution. I accept the contents of both affidavits and do not attach any significance to the fact that spray painting and hood and fender work were not mentioned in the first, very brief, affidavit. Therefore, I will make the determination of continuous use based on the second, more comprehensive affidavit. On the basis of the evidence before me I am satisfied that, during the year when the Property was under repair, Mr. Fansabedian had a *bona fide* intention to continue to use the Property for all the uses it was put to before the fire. Similarly, I accept that after the building was repaired he resumed the same range of uses on the Property.

[24] In *Haldimand-Norfolk (Regional Municipality) v. Fagundes* (2000), 11 M.P.L.R. (3d) 1 (Ont. C.A.) the court dealt with a case where the non-conforming use of a property was interrupted by the extensive damaging of a cottage by a storm. At p. 5 Carthy J.A., for the court, adopted the reasoning in *572989 Ontario Inc. v. North York (City) Committee of Adjustment* (1997), 35 O.M.B.R. 257 (O.M.B.) This is significant in two respects. First, it makes clear that a legal non-conforming use continues even if the use is temporarily prevented or interrupted because of repairs due to a fire. Second, where the previous use has been interrupted by an event such as a fire, a storm or something else beyond the control of the property owners, the requirement of continuity can nonetheless be met where there is a an intention to continue the non-conforming use and that use is continued as far as possible in the circumstances. Applying this test to the present case I find that there was a continuous non-conforming use of the Property.

(5) Does The Proposed Use Violate Any of the Principles Enunciated in *Saint-Romuald*?

[25] In *Saint-Romuald (City) v. Olivier*, 2001 SCC 57 (CanLII), [2001] 2 S.C.R. 898 (S.C.C.) Justice Binnie, for the majority, explained that, in cases such as this, the court's objective "is to maintain a fair balance between the individual landowner's interest and the community's interest." He also made it clear that this type of decision should be grounded in the objective facts of the case. This involves a consideration of both remoteness of the proposed use and its neighbourhood effects. In particular, Binnie J. mentioned three factors to consider suggesting that a landowner would overreach herself or himself if:

> (i) the scale or intensity of the proposed activity can be said to bring about a change in the type of use of the property;
>
> (ii) the addition of new activities or modification of old ones is seen by the Court as too remote from the earlier activities to be entitled to protection; or if
>
> (iii) the new or modified activities can be shown to create undue additional or aggravated problems for the municipality, the local authorities, or the neighbours.

I will consider each of these in turn.

(i) Can The Scale Or Intensity Of The Proposed Activity Be Said To Bring About A Change In The Type Of Use Of The Property?

[26] While I have rejected the applicant's arguments about the scope of the pre-existing non-conforming use, there is no dispute that the proposed use by Ryder will constitute a change in intensity of the use of the Property. However, an increase in intensity alone will not necessarily result in the loss of a legal non-conforming use status. As Binnie J. noted at p. 912 of *St. Romuald*, the previous decision of the Supreme Court in *Central Jewish Institute v. City of Toronto*, [1948] S.C.R. 101 (S.C.C.) has been consistently interpreted to "sanction

increases in intensity of use so long as the same type of use is continued." As a result he concluded at p. 913:

> In general, merely continuing the precise pre-existing activity, even at an intensified level, is clearly protected, but the intensification may be of such a degree as to create a difference in kind.

Indeed at p. 920 Binnie J. stated, "Where the current use is merely an intensification of the pre-existing activity, it will rarely be open to objection." [Emphasis added] The question therefore, is whether the increase in intensification amounts to a change in the type of use on the Property.

[27] In this regard, Mr. Kanter points to the following passage at p. 917 of *St. Romuald*:

> Thus, adding a metal panel beating operation to an automobile repair shop in a residential neighbourhood will probably (despite the logical business affinity) be characterized as a new type of use, whereas a local non-conforming grocer store use that adds an innocuous fax machine -- clearly an activity unrelated to selling groceries -- will likely succeed (assuming someone wished to challenge it) by defining its prior operation as a "convenience store" rather than a "grocery store".

[28] While I appreciate that, given the facts of this case, this passage may seem very felicitous, this argument ultimately fails. In Justice Binnie's example, the addition of a metal panel beating operation is a completely novel use. For the reasons, outlined in paragraphs 11 to 16, *supra*, the aspects of the proposed use that are new are not unprecedented. The current use, colloquially referred to as an auto body shop, is simply the continuation of the previous legal non-conforming use that was made of the Property, albeit on an intensified scale. Moreover, like the previous use it falls within the scope of a motor vehicle repair shop, class B. Thus, applying the principles enunciated by Justice Binnie, it cannot be said that the intensification involved is of such a degree that it changes the essential nature of the use.

[29] I am heartened in this conclusion by Justice Binnie's further comments at p. 920 of *St. Romuald* where he stated:

> Where the current use is merely an intensification of the pre-existing activity, it will rarely be open to objection. However, where the intensification is such as to go beyond a matter of degree and constitutes, in terms of community impact, a difference in kind (as in the hypothetical case of the pig farm discussed above), the protection may be lost.

This clear linkage to community impact suggests that to establish that the intensification has in fact resulted in a change in the kind of use, there must be some evidence of such impact. For the reasons, discussed at paragraphs 31 to 38, *infra*, there is no such evidence before me.

(ii) Are The Proposed Activities Too Remote From The Earlier Activities To Be Entitled To Protection?

[30] The issue of remoteness simply does not arise in this case. The current use is not remote from the previous legal non-conforming use, as it was part of the use made by the previous owner.

(iii) Will The New Or Modified Activities Create Undue Additional Or Aggravated Problems For The Municipality, The Local Authorities, Or The Neighbours?

[31] In assessing the community impact of the proposed use of the Property I am guided by Justice Binnie's direction at p. 921 of *St.*

Romuald, "Neighbourhood effects, unless obvious, should not be assumed but should be established by evidence if they are to be relied upon." Thus in *Watts v. Benvenuti*, [2005] O.J. No. 3254 (S.C.J.) Turnbull J., in dealing with a quarter horse operation, considered affidavit evidence relating to the real impacts of manure piles, ponds of urine, impact on neighbouring wells and the like. Has the applicant demonstrated that the proposed use will have a negative community impact?

[32] In this regard Mr. Kanter has filed three letters written to the municipal planning office from people who operate neighbouring businesses on Castlefield Avenue. The substance of all three letters is identical and they read:

> Re: 1107 Castlefield Avenue
>
> We are business owners/tenants on Castlefield Avenue, west of Dufferin Street. We understand that our area is zoned Prestige Employment which permits retail, office and some industrial uses but does not allow auto body shops.
>
> We object strongly to the apparent attempt to establish a new auto body shop at 1107 Castlefield Avenue. An auto body shop would conflict with our business and clientele and reduce its value.
>
> The City should protect businesses like ours, not permit uses which threaten them. We urge the City to enforce the existing Zoning By-law, which prohibits new auto body shops.

As evidence of adverse impact on the community these letters are not particularly probative for several reasons.

[33] First, they are not under oath. In *Watts v. Benvenuti*, *supra*, the property owner attempted to establish a legal non-conforming use by attaching letters from neighbours attesting to the type of livestock previously kept on the farm. Turnbull J. at para 16 stated, "these letters do no constitute proper evidence before the court on an application and I have disregarded their import in the consideration of this matter." I agree with this approach and, on this basis alone, I would attach no weight to the letters filed by the applicant.[3]

[34] Second, the fact that these letters were word for word identical strongly suggests that they were form letters rather than being an accurate representation of the views of each of the neighbouring businesses.

[35] Third, the letters proceeds on at least one incorrect assumption – that is, that the use by Ryder constitutes a "new" use. It is unclear how informed these neighbouring business people are about either the former use of the Property or, for that matter, the scope of its proposed use.

[36] However, the most glaring deficiency of these letters is that the only suggestion of an adverse community impact is the fact that these owners object to the proposed use and their bald assertion that, "An auto body shop would conflict with our business and clientele and reduce its value". The later assertion is purely conclusory and there are several problems with it. It is not clear what their understanding of the scope of the proposed use is – something obviously relevant to the legitimacy of their complaint. There is also no explanation as to why the owners think there would be such a conflict. This is particularly striking given that the letters come from three very different types of businesses.[4] It is also worth noting that, if this assertion is true, these business owners should be able to explain it by making reference to the operations of the applicant, Castle, who has been operating an auto body shop in their neighbourhood for many years. These limitations, coupled with the fact that the three business owners are obviously working off a

common script, renders these letters virtually useless as evidence of negative community impact.

[37] As to whether or not the proposed use of the property will create undue additional or aggravated problems for the municipality, it is worth noting that the municipal planning office has approved of the proposed use and Ryder has obtained all necessary permits, both municipal and under the *Environmental Protection Act*. While official approval alone may not always be dispositive of this question, in this case it strongly suggests that the proposed use will not cause problems for local authorities.

[38] For all these reasons, I reject the contention that the proposed use will create undue additional or aggravated problems for the municipality, the local authorities, or the neighbours.

CONCLUSION

[39] For all of the foregoing reasons, I find that the decision of the C.B.O. to issue the challenged building permits was reasonable and was not wrong in law. As a result, I would dismiss the applicant's appeal.

COSTS

[40] The respondents are entitled to their costs. If the parties are unable to agree as to the scale and quantum of costs, the respondents shall provide brief written submissions with respect to costs within seven days of the release of this judgment and the applicant shall provide written submissions within seven days of the receipt of the appellant's written submissions.

T. Ducharme J.

Released: October 28, 2005

[1] This right is subject to the caveat that they will be given some flexibility in the operation of that use.
[2] The one exception is "(d) repairing metal body and fender components" but as I have explained in paragraph 14, *supra*, the changing of hoods and fenders satisfies this requirement.
[3] It is worth noting that at para 35 of *Watts v. Benvenuti*, Turnbull J. also rejected evidence tendered in affidavit form as other affidavit evidence led by the respondent rebutted it.
[4] The three companies are Carole's Cheesecake Company, Dalton Engineering and Construction Ltd. and Irpinia Kitchens.

REASONS FOR DECISION

Power J.

Nature of the Application

[1] This application involves an appeal to the court by the Applicants pursuant to s. 25(1) of the *Building Code Act*, S.O. 1992, c. 23. That section reads as follows:

Appeal to court

25(1) A person who considers themself [*sic*] aggrieved by an order or decision made by the chief building official, a registered code agency or an inspector under this Act (except a decision under subsection 8 (3) not to issue a conditional permit) may appeal the order or decision to the Superior Court of Justice within 20 days after the order or decision is made.

…

[2] The jurisdiction of a judge hearing the appeal is set out in s. 25(4) of the Act which states:

Power of judge

25(4) On an appeal, a judge may affirm or rescind the order or decision and take any other action that the judge considers the chief building official, registered code agency or inspector ought to take in accordance with this Act and the regulations and, for those purposes, the judge may substitute his or her opinion for that of the official, agency or inspector.

…

[3] This appeal concerns the issuance of a Stop Work Order dated August 4, 2005.

[4] The project with respect to which the stop work order was made is a shopping mall located at 430 Ottawa Street, in the Town of Almonte or, more accurately, the Corporation of the Town of Mississippi Mills (hereinafter "Mississippi Mills").

[5] On August 3, 2005, William Glen Gordon, Chief Building Official of Mississippi Mills, issued an Order to Comply. The order reads as follows:

1. BUILDING IS NOT CONSTRUCTED IN ACCORDANCE WITH PLANS THAT WERE SUBMITTED FOR THE ISSUANCE OF BUILDING PERMIT 04-380. THIS IS A VIOLATION OF SEC.8.(13) ONTARIO BUILDING CODE ACT, 1992 C. 23 AS AMENDED.

2. RESOLUTION OF COUNCIL THAT OTHER APPLICABLE LAWS: ZONING AMENDMENT APPLICATION TO ALLOW WAS DENIED / THEREFORE NECESSARY CHANGES TO COMPLY WITH THE CURRENT ZONING BY-LAWS MUST BE MADE

The inspection on or about AUG. 03/2005 and the Resolution of Planning Committee on Zoning Requirements at the above-referenced address found the following contravention(s) of the Building code or the *Building Code Act, 1992* and with applicable law being zoning requirements. You are hereby ordered to correct the contraventions itemized below immediately,

Item	Reference	Description & Location	Required Action	Compliance Date
#1	Section 8.(13) B.C.A.	All of the Building	Submit required Revised plans / Permit applications necessary.	Immediately before further construction can continue. Resolution of Planning Committee/Council
#2	Other Applicable law	Contravention of Zoning by-law	Compliance with Zoning by-law #1 Size of structure #2 Front yard setback #3 Second floor addition	Plans Submitted and action taken to comply with zoning by-law and Site plan control agreement

[6] Section 8(13) of the *Building Code Act* reads as follows:

Prohibition

(13) No person shall construct or demolish a building or cause a building to be constructed or demolished except in accordance with the plans, specifications, documents and any other information on the basis of which a permit was issued or any changes to them authorized by the chief building official.

…

[7] Section 12(2) of the Act is the authority for the issuance of the aforesaid Order to Comply. This section reads as follows:

Order

(2) An inspector who finds a contravention of this Act or the building code may make an order directing compliance with this Act or the building code and may require the order to be carried out immediately or within such time as is specified in the order.

…

[8] On the following day, August 4, 2005, Mr. Gordon, again on behalf of Mississippi Mills, issued a Stop Work Order pursuant to s. 14(1) of the Act. That section provides as follows:

Stop Work Order

14(1) If an order made under section 12 or 13 is not complied with within the time specified in it, or where no time is specified, within a reasonable time, the chief building official or registered code agency, as the case may be, may order that all or any part of the construction or demolition cease.

[9] The Stop Work Order ordered that all work cease. The relevant part of the order reads as follows:

1. BUILDING IS NOT CONSTRUCTED IN ACCORDANCE WITH THE PLANS THAT WERE SUBMITTED FOR THE ISSUANCE OF BUILDING PERMIT # 04-380. THIS IS A VIOLATION OF SECTION 8.(13). ONTARIO BUILDING CODE ACT, 1992 C. 23 AS AMENDED.

2. COUNCIL RESOLUTION THAT ZONING BY-LAW REQUIREMENTS WERE NOT COMPLIED WITH AND THAT A FULL STOP WORK ORDER REQUIRED, UNTIL DEVELOPER COMES FORTH WITH AN ACCEPTABLE PLAN/REVISED DRAWINGS AND APPLICATIONS NECESSARY TO CORRECT THE DEFICIENCIES.

The inspection on or about AUG. 04/2005 at the above-referenced address found the following contravention(s) of the *Building Code Act, 1992* or the Building Code have not been rectified as required by the Order(s) indicated below:

☐ Order to Comply number 050803 dated AUG. 03/2005

You are hereby ordered to immediately cease construction and/or demolition as specified below:

Item	Details
#1	FULL STOP WORK ORDER ON ALL OF THE BUILDING, FOR NEW CONSTRUCTION EFFECTIVE 4:30 PM AUGUST 04/2005
#2	(ONE ADDITIONAL DAY PERMITTED TO MAKE SAFE AND SECURE THE BUILDING AND SITE) EFFECTIVE FULL STOP WORK ORDR FOR ALL WORK EFFECTIVE 4:30

	P.M. AUGUST 05/2005

Decision

[10] It is my opinion that the Stop Work Order should be affirmed. It is my further opinion that the Chief Building Officer and Mississippi Mills have acted responsibly and reasonably. In the circumstances of this appeal I see no basis upon which I should substitute my opinion for that of the official and/or Mississippi Mills. I should add that the Applicants concede that the official and the municipality have acted within their statutory powers – i.e., there is no lack of jurisdiction. I reach these conclusions based on a consideration of the following background facts:

(a) On May 17, 2004, the Applicants/Appellants submitted an application for the issuance of a building permit. They also submitted a Site Plan Application. In the Building Permit Application they described the work as follows:

"To construct approx 48,000 sq. ft – Shopping Centre."

Notwithstanding this, the Applicants/Appellants, later submitted architectural plans showing the dimensions of the proposed structures as much larger than was permitted in the existing zoning by-law and Official Plan.

(b) On July 13, 2004, Mississippi Mills passed a resolution adopting Zoning By-law #04-47 establishing a "C4-2 - SHOPPING CENTRE COMMERCIAL EXEMPTION 2" permitting the construction of the structure in accordance with the dimensions set forth in the aforesaid building permit application.

(c) In early August the Applicants/Appellants, at the behest of Mississippi Mills, submitted revised building plans outlining that the structure would comprise 47,000 square feet with an additional 12,000 square feet of walking or mall space, for a total of 59,000 square feet. A final Site Plan Agreement was entered into on October 21, 2004. I find that, notwithstanding these developments, the Applicants/Appellants continued throughout to construct a larger mall than was agreed to – one that was consistent with their earlier, more ambitious, plan.

(d) Without posting the required financial security and securing an issued building permit, the Applicants/Appellants proceeded to build the mall in the fall of 2004. Mr. Gordon, the Chief Building Official of Mississippi Mills, on November 12, 2004, issued an Order to Comply and a Stop Work Order under the authority of the *Building Code Act*. The Applicants/Appellants, notwithstanding these orders, continued their construction efforts. Their non-compliance with these orders resulted in Mississippi Mills seeking an injunction from this Court. On December 10, 2004, Hackland J. released the following endorsement:

"It is not contested that the Respondents (the Applicants in this case) are constructing the foundations of a commercial building without a building permit and in the face of a stop work order. This is a flagrant and, as far as the available evidence discloses, unjustified contravention of the Ontario Building Code Act. The Public Interest in requiring compliance with the law outweighs the particular interests

of this builder in proceeding with the pouring of foundations before the ground freezes. The Respondent has had two months to work out satisfactory arrangements with the Applicant (Mississippi Mills) for the posting of security to obtain a building permit and the current emergency is of the Respondents' own making.

An interlocutory and final injunction will issue requiring the immediate cessation of foundation construction or any other form of construction on the premises until the Applicant issues a building permit. The time for service of this Application is abridged *nunc pro tunc*."

Hackland J. ordered the Respondents in the injunction proceeding to pay Mississippi Mills' legal costs.

I pause here to observe that counsel for the Applicants/Appellants in this appeal argue that I, in exercising my jurisdiction on this appeal, should not consider the aforesaid events or any other wrongful conduct of the Applicants/Appellants other than the facts that existed on August 3rd and 4th. I disagree. In my opinion, in August of 2005, the past conduct of the Applicants/Appellants was relevant in a determination by Mr. Gordon and Mississippi Mills as to whether a Stop Work Order would issue and be enforced. I am also of the opinion that this history is relevant to my determination of whether the appeal should be allowed in whole or in part. In determining what was reasonable, Mr. Gordon was entitled to consider how the Applicants might react to the municipality's efforts to enforce its rights and the public's interests.

(e) On December 30, 2004, following compliance by the Applicants with the order of Hackland J., a building permit was issued. I pause again to note that counsel for the Applicants/Appellants further argue that I should look favourably on this compliance by the Applicants. I have some difficulty with this argument for obvious reasons, especially since the issuance of the building permit was conditional upon the Applicants complying with an Addendum to the permit which, among other things, required the Applicants to file a Real Property Report. The Applicants defaulted in the filing of this report notwithstanding letters of demand from the municipality requesting that this and other obligations be met by the Applicants. The purpose of the Real Property Report was to confirm compliance with the required set backs and the Site Plan Control Agreement. In a January 12, 2005 letter to the Applicants, Mr. Gordon said, "3. "Note" only when the above has been completed, in its entirety, should construction continue with the next phase. See attached inspection schedule which is on the back of Construction Permit given to you." The letter of January 12th said, among other things, that "no footings & foundation inspection has been called for or completed." It went on to say that when a footings and foundation inspection is requested, the municipality will require a number of things which the letter went on to detail.

In a May 5, 2005 letter Mr. Gordon said, ""Note" further requests for inspections can be denied without satisfactory completion of previous inspections. Therefore, to avoid any construction delays, thank you for your prompt attention to this requirement."

On May 27, 2005, another Order to Comply was issued as a result of the Applicants' continued failure to comply with various permit conditions and, in particular, their failure to comply with the need for various inspections. A Stop Work Order was threatened. It seems to me that the Applicants did not take seriously the attempts by

Mississippi Mills to ensure that its laws and agreements were enforced.

(f) On June 17, 2005, as a result of a review of the tardy Real Property Report and a site inspection, Mr. Gordon observed that the gross floor area was 62,183 square feet – 3,183 square feet in excess of the approved Site Plans and the Zoning By-law. Counsel for the Applicants argue that, essentially, this is the only violation of relevance with respect to the plans and agreements which is of any significance on this appeal. He further argues that the discrepancy is *de minimis* and not material enough to justify a complete stoppage of work. I disagree. The Applicants' defaults, according to the evidence, were deliberate and serious. The evidence does not support counsel's argument that this situation resulted from an innocent mistake made by the Applicants – i.e., exceeding the authorized building footprint. I do not accept the argument of counsel for the Applicants that this 3,183 square foot issue is the "central issue" nor do I accept that the offer by the Applicants to construct a demising wall to isolate 32,000 square feet justifies allowing their appeal.

(g) As a result of the aforesaid review of the situation as it then existed, Mr. Gordon also noted, and drew to the attention of the Applicants, that the front yard set back measured 12.48 metres (40.8 feet) notwithstanding a requirement of 15 metres (49.2 feet). He further observed that the building was closer to the lot lines than the distances allowed in the approved Site Plan.

(h) In a Memo dated June 21, 2005, Forbes Symon, the Municipal Planner, reported these developments to the Mayor and council. Mr. Gordon had earlier apprised the Applicants of these concerns. On June 17, 2005, Mr. Gordon asked the Appellants to stop work until all issues were resolved.

(i) On June 23, 2005, the Applicants wrote to the Planner indicating that they had decided to "proceed with all requisite applications to correct any and all discrepancies with respect to the above-noted project." They continued their work on the project in the meantime.

(j) On June 30, 2005, Mr. Gordon issued another Order to Comply requiring the Applicants to cease all work on any part of the north/south wing of the structure and to obtain a revised Site Plan and all necessary variance applications. The order further outlined that a FULL STOP WORK ORDER would be issued in the event of non-compliance.

(k) Notwithstanding this, the Applicants did not cease their construction efforts. Accordingly, on July 4, 2005, Mr. Gordon issued a partial Stop Work Order requiring the Applicants to comply with certain listed items and to cease all work on any part of the north/south wing.

(l) At that point in time, the Applicants retained the services of a leading firm of planning consultants who advised the municipality that they would be proceeding with an application to amend the Zoning By-Law in order to validate the aforesaid breaches. This would involve an application to the Ontario Municipal Board. They also notified the Planner that the application to amend the Zoning By-Law would include an application to allow for a second floor office

and storage area. This latter reference was a surprise to the municipality which quickly learned that construction to this effect had, and was, already taking place (i.e., a second floor office and storage area). The Applicants delivered a modified Site Plan. Mr. Gordon, at this time, noted that two steel columns had been erected in the north/south wing despite the partial Stop Work Order.

(m) Accordingly, on July 28, 2005, Mr. Gordon revoked the building permit. His letter to this effect reads as follows:

"**NOTICE that Building Permit 04-380 is hereby revoked.**

(1) Based on Section 8. (10)(a), Ontario Building Code Act, 1992, c. 23 as amended and based on incorrect information submitted for the issuance of the above building permit.

(2) Based on Section 8-(12), Ontario Building Code Act, 1992, c. 23 as amended in that you failed to provide Notice of Change made to the plans which were submitted for the issuance of Building Permit # 04-380.

(3) Based on Section 8-(13), Ontario Building Code Act, 1992, c. 23 as amended in that you did construct a building not in accordance with the plans which were submitted for the issuance of Building Permit # 04-380.

(4) Based on Section 2.3.2.1 (1), Ontario Building Code Regulation, 1992 as amended requires that an Architect be retained to undertake the general review of the construction of the building. Information revealed that the Architect retained by you for the issuance of the permit is no longer involved in the review of the construction.

The Building By-law #00-75 for the Town of Mississippi Mills allows for the re-submission of plans to make a change to a plan, or specification which was submitted for the issuance of the original permit and that such application shall be made in the same manner as for the original permit. Additional permit fees may also be charged.

Your cooperation in this matter is greatly appreciated."

…

(n) At the same time, Mr. Gordon issued another Order to Comply requiring the submission of revised plans. As well, he issued another Stop Work Order. The Applicants were required to immediately stop work. They did not comply with this. Mr. Gordon then provided a detailed written report of these developments to the municipal council. He explained to council that the Applicants, therefore, would be required to apply for a new building permit addressing the various default issues.

(o) On July 29, 2005, a Conditional Building Permit was issued to allow work to proceed in the east/west wing with regard to items which had previously been approved.

(p) The Planner reported to council on July 28, 2005, with respect to the Applicants' application to amend the Zoning By-law. He recommended that council refuse the proposed amendments on the grounds that the application "has not been proven to have planning merit and is not in the public interest."

(q) On August 2, 2005, at a public meeting, the Planning & Economic Committee (a committee of the council as a whole) recommended denial and council did, indeed, deny the application. The earlier quoted August 3rd Order to Comply and the August 4th Stop Work Order followed. These were followed by the issuance of a further full Stop Work Order on August 10, 2005. The newly retained Planner for the Applicants, on August 10, 2005, advised Mr. Gordon that the Applicants had instructed him to advise that they were willing to enter into an undertaking with the municipality whereby they "would leave the proposed second floor office/storage area as a void with no floor and with no access if the Town would partially lift the Stop Work Order so that he [they] can continue construction on the north wing of the mall as was previously allowed, pending a final resolution of this matter by the Ontario Municipal Board." (I note that the parties estimated that it would take at least six months for the application to reach the Ontario Municipal Board.) Further settlement proposals were made on August 15, 2005, but were not acceptable to the municipality. I can find no fault in the Respondent's rejection of these proposals.

Position of the Applicants/Appellants and the Municipality

[11] In addition to my earlier comments with respect to the position taken by the Applicants on this appeal, they submit that the building is and will continue to suffer damage from exposure to the elements. I heard no detailed evidence concerning the exact degree of completion of the mall. It is obvious, however, that construction has proceeded to a significant degree. The Applicants argue that if they are required to comply with the municipality's demands they will lose a significant amount of money and, indeed, the continuation of the Stop Work Order will threatened the viability of the project. They submit that the costs of demolishing and rebuilding the front wall in order to reduce the size of the shopping centre and eliminate the front yard encroachment will, in and of itself, cost them $251,590.

[12] These "wounds" or injuries, even if completely accurate, are, of course, self-inflicted ones. The evidence shows that, from the beginning, the municipality has sought, unsuccessfully, to persuade the Applicants to comply with their various legal obligations. However, the Applicants proceeded otherwise. I find it difficult to conclude that the negative consequences that flow from the Applicants' conduct should be used as a reason for determining that the municipality has acted unreasonably or that it would be unreasonable for me at this time not to accede to the Applicants' various proposals to mitigate the consequences of their conduct. The Applicants argue that, pursuant to s. 12(2) of the *Building Code Act*, the municipality, or its officials, must exercise a discretion prior to issuing Orders to Comply or Stop Work Orders where there are contraventions of the Act or the *Building Code*. As aforesaid, they argue that the municipality has gone too far and has failed to consider their, [the Applicants'] proposals for a solution. They submit that, at the very least, the Stop Work Order should have been issued only with respect to the excess square footage issue.

[13] On the other hand, the municipality argues that the abuses in this matter have been continuous and flagrant. They note that s. 8(13) of the Act contains a clear prohibition against conduct such as we have in this case – i.e., "no person shall construct or demolish a building or cause a building to be constructed or demolished except in accordance with the plans, specifications, documents and other information on the basis of which a permit was issued or any changes to them authorized by the Chief Building Official." They submit that the issuance of the challenged Stop Work Order was a reasonable act on the part of the Respondent until revisions to the various plans and permit are, if possible, agreed to.

Case Law with respect to s. 25 of the *Building Code Act*

[14] As aforesaid, s. 25(1) of the Act allows for an appeal to the court by "a person who considers themselves aggrieved by an order or decision made by the chief building official." In *Giangregorio v. Hamilton (City)*, [2001] O.J. No. 5670 (Ont. Sup. Crt.), Matheson J. considered s. 25. He noted that the court, under s. 25(1), sits as a Court of Appeal from a decision of the Chief Building Official. At para. 17 of his decision he quoted with approval from the decision of Stinson J. in *William F. White Ltd. v. Toronto (City) Chief Building Official*, 44 O.R. (3d) 750, as follows:

> I conclude that an appellant under s. 25 of the [Building Code Act] has the burden of demonstrating by means of evidence placed before the court that the decision below was not reasonable or that it was wrong as a matter of law. In attempting to discharge that burden the appellant may tender additional evidence before the court, as may the respondents to the appeal. …

[15] Matheson J. went on to note that Stinson J. held that the decision of the Chief Building Inspector would be set aside if it was "wrong as a matter of law." Where issues of legal interpretation are concerned, he would apply a standard of correctness. On other questions, Stinson J. noted that a standard of reasonableness should be applied. As aforesaid, there is no issue in the present case with respect to the jurisdiction to make the Stop Work Order. The issue before me is that of "reasonableness".

[16] Matheson J. said:

> … the customary restraint appropriate for an appellate tribunal should be exercised. In other words, the fundamental issue to be addressed is to determine whether or not the board's decision was reasonable on the evidence having regard to the legal principles applicable. Stated otherwise, it is not this court's role simply to substitute its decision for that of the board's simply because it may, or even would have arrived at a different decision had it been the tribunal of first instance.

…

[17] I pause to repeat my earlier finding that, in my opinion, there was nothing unreasonable with respect to the various decisions of Mississippi Mills and, in particular, with the issuance of the challenged Stop Work Order.

[18] A similar standard of review was propounded by Howden J. in *Rotstein v. Oro-Medonte (Township)*, [2002] O. J. No. 4990 (Ont. Sup. Crt.) and *Runnymede Development Corp. v. 1201262 Ontario Inc.* reflex, (2000), 47 O.R. (3d) 374.

Conclusion

[19] As aforesaid, and for the above reasons, the appeal and this application are dismissed.

Costs

[20] Counsel agreed, prior to the release of this decision, to fix costs at the sum of $7,500 plus GST, subject to each party's right to argue for or against entitlement. I find the amount of $7,500 to be reasonable and, therefore, each party shall have until the end of September 2005 to make brief written submissions regarding entitlement.

Power J.

COURT OF APPEAL FOR ONTARIO

SIMMONS, CRONK and ROULEAU JJ.A.

B E T W E E N :

ESSEX 143 JOINT VENTURE LTD.	**Michael Fleishman**
Applicant (Respondent in Appeal)	**for the appellant**
- and -	
HER MAJESTY THE QUEEN IN RIGHT OF ONTARIO as represented by THE MINISTER OF TRANSPORTATION	**Myron W. Shulgan, Q.C.**
Respondent (Appellant in Appeal)	**for the respondent**

Heard: February 10, 2006

On appeal from the order of Justice Anthony E. Cusinato of the Superior Court of Justice dated April 28, 2005.

ROULEAU J.A.:

[1] This appeal invites this court to consider the scope and application of s. 38(2)(f) of the *Public Transportation and Highway Improvement Act*, R.S.O. 1990, c. P.50 (the *P.T.H.I.A.*).

[2] In March 2005, Essex 143 Joint Venture Ltd. (the developer) applied for an order determining its rights under s. 38(2)(f) of the *P.T.H.I.A.* In particular, it asked whether it had to obtain a permit from the Minister of Transportation before it could proceed with a proposed residential subdivision located within 800 metres of a controlled-access highway.

[3] By order dated April 28, 2005, the application judge granted declarations that a residential development is not a use of land that is subject to the Minister's approval pursuant to s. 38(2)(f) of the *P.T.H.I.A.* and that the developer was permitted to proceed with its residential development without a permit from the Minister under s. 38(2)(f).

[4] The province appeals the order on several bases, including that the application judge erred by incorrectly characterizing the development as being residential when the uncontradicted evidence established that it was the residential phase of a mixed-use (residential/commercial) development.

[5] For reasons that follow, I would grant the appeal, set aside the application judge's order and substitute in its stead, a declaration that the respondent requires a permit under s. 38(2)(f) of the *P.T.H.I.A.* prior to proceeding with the proposed residential subdivision. In my view, the application judge framed the issue too narrowly. The facts of this case required him to consider the context in which the residential development was proceeding. This context included the fact that the residential development was a part of a mixed-use development that had already received a permit allowing the first commercial phase of the development to proceed.

Background

[6] The developer owned a 140-acre parcel of land adjacent to Highway 3 in the Town of Essex. It proposed a mixed-use development for the site. Approximately eighty-three acres would be for residential use and the balance for commercial use.

[7] From the outset, the developer recognized that, in order for it to develop these lands, it would have to obtain amendments to the official plan, zoning changes and permits pursuant to the *P.T.H.I.A.* The relevant sections of the *P.T.H.I.A.*, sections 38(2)(f) and 38(11), read as follows:

38 (2) Despite any general or special Act, regulation, by-law or other authority, no person shall, except under a permit therefor from the Minister,

…

(f) use any land, any part of which lies within 800 metres of any limit of a controlled-access highway, for the purposes of a shopping centre, stadium, fair ground, race track, drive-in theatre or any other purpose that causes persons to congregate in large numbers; or

…

38 (11) The Minister may issue permits under this section in such form and upon such terms and conditions as he or she considers proper and may in his or her discretion cancel any such permit at any time.

38 (2) Malgré toute autre loi générale ou spéciale, un règlement, un règlement municipal ou une autre autorité, nul ne doit, sauf en vertu d'un permis délivré par le ministre accomplir l'un des actes suivants :

…

f) utiliser un bien-fonds dont une partie est située dans les 800 mètres d'une limite d'une route à accès limité, aux fins d'un centre commercial, d'un stade, d'un champ de foire, d'un terrain de courses, d'un ciné-parc ou à d'autres fins qui donnent lieu à un rassemblement nombreux de personnes;

…

38 (11) Le ministre peut délivrer des permis en vertu du présent article dans la forme et aux conditions qu'il estime appropriées et, s'il le juge opportun, annuler ces permis.

[8] In 2000, the developer took steps to secure the approvals required to allow the project to proceed.

[9] In March 2000, the transportation planning consultant retained by the developer advised the Ministry of Transportation about the proposed mixed-use development and asked the Ministry what concerns it may have that should be addressed in the traffic study that the consultant was undertaking.

[10] The Ministry responded, advising that the development came within the Ministry's permit control area and would require Ministry permits and approvals prior to construction.

[11] Also in 2000, the developer sought changes from the Town of Essex to the industrial zoning and official plan designations of the property. The changes were to reflect the proposed mixed residential/commercial use of the land.

[12] On January 15, 2001, the Town of Essex passed a by-law giving its approval to the requested changes to the official plan and directing that the proposed changes be submitted to the Ministry of Municipal Affairs and Housing for its approval.

[13] When official plan amendments are submitted to the Ministry of Municipal Affairs and Housing, they are circulated within the government and, as part of this process, a determination of the need for the issuance of Ministry of Transportation permits pursuant to s. 38(2)(f) of the *P.T.H.I.A.* is made. The potential traffic generation and traffic volumes are significant factors in making this determination.

[14] In this case, upon review of the proposed changes, the Ministry of Transportation determined that "commercial building/land use and sign permits" were required.

[15] The amendments to the official plan and the zoning changes were implemented.

[16] As part of the ongoing communication between the developer and the Ministry of Transportation, the developer advised that it wished to proceed with the development of the property in phases. Phase 1 concerned a commercial use portion of the development, consisting of a grocery store, a Canadian Tire store and an automobile dealership, as well as the associated parking.

[17] In response to the developer's application for a permit under s. 38(2) of the *P.T.H.I.A.* to proceed with phase 1, the Ministry of Transportation advised that, prior to issuing a permit for the phase 1 portion of the development, certain improvements to an intersection had to be carried out. The Ministry indicated to the developer that once an agreement was reached on the required improvements, the Ministry preferred entering into an agreement with the Town of Essex for funding and implementing the improvements and the Town could then recover these costs from the developer.

[18] Agreement was then reached on the needed improvements and, as proposed by the Ministry, it entered into a June 30, 2004 agreement with the Town of Essex to fund and implement the improvements to the intersection required to allow phase 1 to proceed. Significantly, a recital in that agreement stipulated that the development, defined as the entire parcel, came within the permit provisions of the *P.T.H.I.A.* The agreement also provided that the permit that was to be issued authorizing phase 1 would have annotated to it the stipulation that the permit was subject to the terms of the June 30, 2004 agreement. On the record before us, it does not appear that the developer challenged the Ministry's inclusion of this condition to the issuance of the permit for phase 1.

[19] After proceeding with the commercial phase of the mixed-use development, the developer determined to proceed with the residential phase. The residential phase involves approximately 400 residential units on eighty-three acres of the site. Rather than applying for the issuance of a permit pursuant to s. 38(2)(f) of the *P.T.H.I.A.*, the developer brought the present application.

Position of the parties before the application judge

[20] On the application, the developer took the position that s. 38(2)(f) of the *P.T.H.I.A.* has no application to residential uses and that it applies only to land located within 800 metres of a controlled access highway where the land was to be used as "a shopping centre, stadium, fairground, racetrack, drive-in theatre or any other purpose that causes persons to congregate in large numbers". It argued that the phrase "any other purpose that causes persons to congregate in large numbers" should be read in the context of the listed purposes. According to the developer, the common theme of the listed purposes was that they would all cause large numbers of people to exit the premises at the same time, thereby causing traffic congestion. The proposal to build residences on eighty-three acres of the site was therefore outside of the scope of the Act.

[21] The province submitted that the general purpose of the *P.T.H.I.A.* is to control traffic and that the Minister's discretion to refuse or grant a permit must be exercised having regard to traffic planning requirements (see: *Re Multi-Malls Inc. v. Ontario (Minister of Transportation and Communications)* (1977), 14 O.R. (2d) 49 (C.A.)). It then took the position that:

(a) under s. 38(2)(f) of the *P.T.H.I.A.*, the entire 140 acre mixed-use residential/ commercial development proposed by the developer required permits from the Minister of Transportation; and

(b) in any event, the proposed residential sub-division phase of the development, by itself, would cause people to congregate in large numbers as compared to the previous use of the land as a vacant field.

Analysis

[22] In reaching the decision that "a Minister's permit for residential development is not required within the provisions of s. 38(2)(f)" of the *P.T.H.I.A.*, the application judge, in my view, framed the issue too narrowly. The issue before him was not whether s. 38(2)(f) of the *P.T.H.I.A.* contemplated that a residential development in the nature of the developer's proposed residential phase, as a stand alone project, would require a permit from the Minister of Transportation. Rather, the issue was whether, on the facts of this case, the residential phase of the mixed-use development required a permit before the developer could proceed. The residential phase of the project could not be dealt with in isolation. I say this for two reasons.

[23] First, although the application judge found that the developer did not concede that a permit was required for the residential use, it is clear that it was contemplated from the outset that the residential portion of the development would be part of one single mixed commercial/residential project. The conduct of both the developer and the Ministry of Transportation was consistent with this approach.

[24] The developer represented the project as a mixed-use development in the original contact made with the Ministry by its transportation planning consultant in March 2000. The developer continued to take this position throughout the process of amendment to the official plan and in the application for the phase 1 permit.

[25] The Ministry also considered the whole of the development as one project. It is apparent that, from the Ministry's perspective, phase 1 approval was granted on the understanding that the developer would prepare a traffic impact study and apply for permits before proceeding with any further phase of the development. The Ministry did indicate that the actual traffic volumes experienced at the intersection as a result of having proceeded with phase 1 may well impact on the need for additional highway improvements to support further phases.

[26] Further, the Ministry of Transportation consistently responded to the developer on the basis that the whole of the development was subjected to the permit requirements of the *P.T.H.I.A.* This position is reflected in the agreement entered into between the Minister and the Town of Essex that allowed phase 1 to proceed. As I noted previously, this agreement specified that the permit issued to the developer for phase 1 would be made subject to the terms of the agreement.

[27] Second, making the phase 1 permit subject to the terms of the agreement between the Town of Essex and the Ministry served to confirm that the permit requirements of s. 38(2)(f) of the *P.T.H.I.A.* extended to all phases of the mixed-use development. The imposition of terms and conditions on the issuance of a permit is authorized by s. 38(11) of the *P.T.H.I.A.* In my view, by making the permit subject to the terms of the agreement between the Town of Essex and the Ministry, these terms became "terms and conditions" of the permit as contemplated by s. 38(11). The imposition of those terms and conditions was not challenged by the developer and they must therefore be complied with.

[28] Specifically, the recital in the agreement that the "development [meaning the full 140 acres] comes within the scope of the permit provisions of sections 2, 38(2)(a), (b), (c), (d), (e), (f) and 38(11), of the [*P.T.H.I.A.*]", when considered in the light of the Ministry's and developer's consistent position to that point that it was a mixed-use project, clearly indicates that the approval of the permit for phase 1 was given on the understanding and condition that the developer obtain permits for all future phases of that mixed-use development. The developer cannot now seek to disaggregate the mixed development and proceed with each portion of the development as a separate stand-alone project.

[29] Having reached this conclusion, it is not necessary for me to determine whether, standing alone, a residential development of the type proposed by the developer would fall within the terms of s. 38(2)(f) of the *P.T.H.I.A.* or whether, when one phase of a development requires a permit, the Act allows the Minister to require that all phases of the development be subject to permits.

Disposition

[30] In the result, I would allow the appeal, set aside the application judge's April 28, 2005 order in its entirety and substitute in its stead a declaration that the respondent requires a permit under s. 38(2)(f) of the *P.T.H.I.A.* prior to proceeding with the proposed residential subdivision.

[31] Costs should follow the event both here and below. Accordingly, the appellant is entitled to its costs on a partial indemnity basis fixed at $7,000 for the appeal and $10,000 for the proceedings below, inclusive of GST and disbursements.

"P.S. Rouleau J.A."

"I agree J.M. Simmons J.A."

"I agree E.A. Cronk J.A."

RELEASED: May 8, 2006

[2003] O.J. No. 4530
Court File No. 03-DV-857

The Corporation of the City of Ottawa, applicant,
and
The Chief Building Official of the City of Ottawa Ms. Arlene Grégoire, respondent,
and
1479333 Ontario, Inc., intervenor

Ontario Superior Court of Justice
Divisional Court - Ottawa, Ontario
Cusson, Métivier and Linhares de Sousa JJ.

Heard: September 2 - 4, 2003.
Judgment: November 21, 2003.

Counsel:

J. Bruce Carr-Harris and Jane M. Bachynski, for the applicant (appellant on the appeal/respondent on the cross-appeal).
William R. Hunter, for the respondent (respondent on the appeal and cross-appeal).
Ronald F. Caza and Josée Lafontaine, for the intervenor (respondent on the appeal/appellant on the cross-appeal).

The judgment of the Court was delivered by

¶ 1 **LINHARES de SOUSA J.**:— The matter before this Court concerns an appeal and cross-appeal brought pursuant to s. 26 of the Building Code Act, 1992, c. 23 as amended (the BCA). The Appellant, The Corporation of the City of Ottawa (the City of Ottawa) appeals the judgment of Roy J. dated March 18, 2003, [2003] O.J. No. 1945. In that decision, Roy J. dismissed, in part, the City of Ottawa's appeal, brought pursuant to s. 25(1) of the BCA, from the decision of the Respondent, the Chief Building Official of the City of Ottawa, Ms. Arlene Grégoire (the CBO). The CBO's decision that the City of Ottawa wishes overturned is the decision to issue a building permit, dated October 17, 2002, to the Respondent, 1479333 Ontario Inc. (the Intervenor), authorizing renovation/alteration work to proceed on a property located in the City of Ottawa, at 339 Lafleur Road (the Property), in connection with the operation of an intensive commercial pig farm, consisting of 1,045 sows. In its appeal, the City of Ottawa seeks to have the issued building permit rescinded and not issued again until the Intervenor has complied with certain conditions that the City of Ottawa has stipulated in clause (b) of its Notice of Appeal (see Appeal Book, vol. 1, tab. 1).

¶ 2 The Intervenor cross-appeals from the decision of Roy J. in that same judgment whereby he concluded that the CBO was wrong in law in finding that the Intervenor had a legal non-conforming use on the Property, permitting it to conduct a commercial pig farm of a maximum of 1,045 sows. Roy J. amended the building permit issued by the CBO to allow for the operation of a pig farm with a maximum number of 750 pigs, in accordance with an existing interim control by-law passed by the City of Ottawa on September 12, 2001. The Intervenor seeks to have confirmed the building permit issued by the CBO on October 17, 2002 recognizing their right to a legal non-conforming use for the operation of a pig farm with 1,045 sows.

¶ 3 The Intervenor was also seeking leave to appeal the order of Roy J. dated June 10, 2003 dealing with the question of costs of the application before him. However, it was determined that this panel would not deal with that question. Consequently, it was not addressed.

ISSUES

¶ 4 The issues on the appeal brought by the City of Ottawa are the following:

1. What is the appropriate standard of review by this Court on the appeal?

2. Was the Application Judge correct in concluding that a proper interpretation of the term "other applicable law", pursuant to s. 8(2) of the BCA, excluded, as a category, the environmental statutes at issue here, namely, the Ontario Water Resources Act, R.S.O. 1990, c. C.40 (the OWRA), the Fisheries Act, R.S.C. 1985, c. F.14 (the Fisheries Act) and the Environmental Protection Act, R.S.O. 1990, c. E. 19 (the EPA)?

3. Was the Application Judge correct in concluding that, even if any of the three environmental statutes could be considered "other applicable law", they were nonetheless inapplicable to this case on a proper interpretation of their provisions?

¶ 5 The issues on the cross-appeal brought by the Intervenor are the following:

1. What is the appropriate standard of review by this Court on the cross-appeal?

2. Did the Application Judge err in refusing to recognize the right of the Intervenor to a legal non-conforming use on the Property, as the CBO had so determined?

BACKGROUND FACTS

¶ 6 Sylvio Ouellette & Sons Farms Limited operated the Property through four generations as a family dairy farm. In September 2001, Messrs. Mario Cote and Luc Fontaine incorporated the Intervenor, 1479333 Ontario Inc., and through amalgamation, bought out the Ouellette family dairy farm.

¶ 7 Messrs. Cote and Fontaine operate at least one pig farm together in the Province of Quebec. However, Mr. Cote is also involved in a large number of hog producing partnerships and corporations in that Province which collectively produce approximately 500,000 pigs for slaughter annually. Mr. Cote is one of the largest pig farmers in the Province of Quebec.

¶ 8 In July 2001, the Intervenor filed a building permit application with the City of Ottawa to, among other things, renovate three existing barns and construct two additional barns on the Property at a cost of approximately one million dollars. The plan is to operate a farrowing hog farm. It was intended that the renovated buildings would accommodate 2,831 sows. This initiative was to be the first hog operation undertaking in Ontario by Mr. Cote. At the time that the Intervenor filed his building permit application with the City of Ottawa, there was no legal impediment to the commencement of such an agricultural undertaking. The zoning of the Sarsfield farm was agricultural use which included the use of buildings for "the raising, boarding and keeping of all forms of livestock". The zoning by-laws did not regulate the number of livestock permitted on a farming operation.

¶ 9 As part of his plans for the farrowing hog farm operation, the Intervenor began to work voluntarily with the Ontario Ministry of Food and Agriculture (the OMAF) to develop a Nutrient Management Plan to ensure the approved use of the nutrient fertilizer generated by the hogs. This Plan involved state of the art technology (VUUS) including such things as injecting the nutrient fertilizer into the soil as opposed to spreading it on the surface of the land as was done in the previous dairy farm operation and being able to monitor the soil conditions at all times. The most efficient use of the nutrient fertilizer generated by the pigs is to add it to the fields to fertilize the mostly corn crops which, in turn, would be used to feed

the pigs. The Intervenor's Nutrient Management Plan was approved by the OMAF.

¶ 10 At the time of the Intervenor's building permit application, there was no legal requirement to submit a Nutrient Management Plan to the OMAF before starting a hog operation. Since that time, the Nutrient Management Act has been passed, being proclaimed in July 2003. The purpose of this Act is to provide for the management of materials containing nutrients in ways that will enhance protection of the natural environment and provide a sustainable future for agricultural operations and rural development. All users and producers of nutrients in Ontario will have to meet the requirements of this legislation, depending on their size, in one or two years.

¶ 11 Following the Intervenor's first building permit application, dated July 20, 2001, the City of Ottawa passed, on September 11, 2001, an interim control by-law, pursuant to s. 38 of the Planning Act, prohibiting intensive livestock operations in the City which, in the case of the proposed hog operation, meant no more than 750 sows.

¶ 12 In response to the interim control by-law, the Intervenor then attempted to establish a claim for a legal non-conforming use pursuant to s. 34(9) of the Planning Act. The position taken by the Intervenor is that the Ouellette family operated a dairy farm with 209 cows, prior to the interim control by-law. Accordingly, they had 59 dairy cows beyond the limit provided by the interim control by-law and therefore, the Intervenor would be entitled to 209 livestock units, which translates into 1,045 sows.

¶ 13 At the same time, the Intervenor also submitted a new building permit application requesting permission to do renovations and alterations on the Property, now estimated to be in an amount of $200,000, to accommodate 1,045 sows.

¶ 14 In the summer and fall of 2002, the Intervenor's intended hog operation continued to be a hotly contested issue among City of Ottawa residents. The City of Ottawa passed a Resolution, among other things, specifically requesting that the CBO not issue the building permit to the Intervenor. The Intervenor responded with an application for judicial review to compel the CBO to issue the building permit for which they had applied.

¶ 15 It is well established in the jurisprudence that, pursuant to s. 8(2) of the BCA, the CBO, having properly considered the provisions of the BCA, the Building Code and "other applicable law" to ensure they will not be contravened, is required to issue a building permit, even if the will of the City of Ottawa's residents, as expressed through City Council, is otherwise. The independence of the CBO and her lack of discretion in this regard were not contested by the parties. The CBO issued the building permit to the Intervenor on October 17, 2002. The project for which the building permit was issued is described as: "to alter interior of an existing barn to accommodate a hog farm".

¶ 16 The City of Ottawa appealed the decision of the CBO to issue the building permit to the Intervenor. The matter came before Roy J. for a hearing. In view of the fact that the parties required some time to file affidavit material to argue the application and to proceed with discoveries and, in view of the fact that the Intervenor was proceeding with their renovation plans, Roy J. ordered a stay of the building permit on December 20, 2002 until he rendered his decision in the matter.

¶ 17 His decision was released on March 18, 2003. It did not revoke the building permit issued to the Intervenor. Roy J. did, however, overturn the conclusion of the CBO with respect to the Intervenor's claim for a legal non-conforming use on the Property. He limited the maximum number of sows in the pig farm operation to 750 sows in accordance with the interim control by-law passed by the City of Ottawa on September 11, 2001.

¶ 18 On April 16, 20031 the City of Ottawa filed this appeal before the Divisional Court. In view of the pending appeal, the City of Ottawa requested that the Court, once again, stay the building permit issued to the Intervenor until the matter was decided by this Court. The stay was granted on May 27, 2003 by Lalonde J., [2003] O.J. No. 2292, who concluded that the "balance of convenience favours the Appellant [the City of Ottawa], in view of the potential for serious repercussions to arise from the pig farm, and the status quo should be maintained as it presently exists, that is without the pigs" (see Appellant's Book of Authorities, tab. 1). Lalonde J. also expedited the hearing before this Court.

DECISION OF ROY J.

¶ 19 In considering the standard of review with which he was to decide the case before him, Roy J. indicated that the main issues before him rested on matters of law rather than fact. He concluded, with the apparent agreement of the parties, that the appropriate standard of review "would be a blend of two tests, namely a standard of correctness for questions of law, and a standard of reasonableness for the question of fact" (para. 12). He went on to say that because his decision was more a determination of law than fact, then the standard will be closer to correctness than reasonableness.

¶ 20 Roy J. identified the three issues which were before him. The two which are the subject of this appeal are the following:

1. Was the respondent [CBO] correct in concluding that the Intervenor had a legal non-conforming use, because of the prior dairy farm operation on the property, and therefore, was justified in granting the permit for the raising of 1,045 sows?

2. Was the respondent [CBO] correct in concluding that in granting the permit, she did not have to consider the OWRA, the Fisheries Act, and the EPA as "applicable law" pursuant to s. 8(2) of the BCA?

¶ 21 With respect to the first issue, it was not disputed that the statutory basis for a claim to a legal non-conforming use came from s. 34(9) of the Planning Act, clearly applicable law, which reads as follows:

> No by-law passed under this section applies:
>
> a) To prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose.

¶ 22 Roy J. decided that the governing law for determining whether the Intervenor had a claim to a legal non-conforming use was the recent decision of the Supreme Court of Canada in Saint Romuald v. Olivier, [2001] 2 S.C.R. 898 in which the Supreme Court dealt with that very issue involving a property in Quebec. In that case, the Supreme Court discussed in great detail the factors that were to be considered by a Court in coming to a decision on the question of whether such a right existed.

¶ 23 Roy J. concluded, based on his reading of Saint Romuald v. Olivier, supra, that it was important to determine what use was made of the Property before the passing of the interim control by-law, namely the Ouellette family dairy farm, and what use was to be made of the Property after the passing of the interim control by-law, namely the new proposed hog farm operation. If the use to be undertaken in the new proposed hog farm operation was of the "same nature" as that of the Ouellette family dairy farm, then the legal non-conforming right would be protected. Based on a

quotation from the dissenting reasons of Gonthier J. in Saint Romuald v. Olivier, supra, "If, on the other hand, it is even minimally different, the protection will be lost."

¶ 24 Roy J. recognized that because of the Supreme Court's analysis found in Saint Romuald v. Olivier, supra, one could no longer determine whether there had been a change of use by using a broad "category" approach to the question. In other words to simply determine that the use is agricultural is not enough. Rather, one had to consider the facts of the case in light of the numerous factors set out by the Supreme Court in Saint Romuald v. Olivier, supra which is what Roy J did in coming to his conclusion at p. 12 of his decision:

> In this matter, after reviewing the factors set out in the Supreme Court Romuald decision, and the evidence before me, I have no difficulty in concluding that the proposed hog farm operation is not a continuance of the pre-existing dairy farm operation. Its character has been so altered, and in terms of impact on the community, is a very different use.

¶ 25 In coming to that conclusion Roy J. considered the following factors that he took directly from the decision of the Supreme Court of Canada in Saint Romuald v. Olivier, supra at p. 920:

1. The purpose of the pre-existing use and the activities that were carried on the Property prior to the interim by-law of September 11, 2001.

2. Is the new proposed use simply an intensification of the old use or does it go beyond a matter of degree and constitute, in terms of community impact, a difference in kind?

3. How remote is the expansion of the activity from the earlier activity?

4. To what extent are the new activities within the original scope of usage? In this the Court has to balance the community interest against the interest of the landowner. The greater the disruption, the more tightly drawn will be the definition of pre-existing use or acquired right.

5. The neighbourhood effects as established by the evidence.

6. The consideration of the proper balance in the characterization of the legal non-conforming use (not too general so as to liberate the owner from the constraints of what he actually did and not so narrow as to rob him of flexibility).

7. The definition of acquired non-conforming right will always have an element of subjective judgment but it must be grounded on objective facts.

¶ 26 In applying the above factors to the facts of his case as established by the evidence before him, Roy J. came to the following conclusions:

> With respect to factor 1: before the interim control by-law, the activity on the Property was that of a "fourth generation family dairy farm" as compared to the planned activity after the by-law of a highly industrialized and sophisticated hog production".
>
> With respect to factor 2: the change from a family dairy farm to an industrialized, sophisticated hog production operation led one to conclude that this was a difference in kind. The evidentiary basis for this was the evidence

relating to the moratorium that had been imposed by the province of Quebec on such hog operations, the evidence of community impact and the concern of the community about their drinking water and the nuisance of the smell when the nutrients would be spread over the property.

With respect to factor 3: the proposed hog operation represented a "marked departure from the family dairy farm that existed before the passing of the interim control by-law".

With respect to factor 4: the disruption to the neighbours, who had for years lived with a family dairy farm around them and were suddenly faced with a sophisticated pork production enterprise next door, had to be weighed in the balance of considering community interests against the interest of the landowner. Given the Intervenor's original plan, the possibility of future expansion was very strong.

With respect to factor 5: there was considerable evidence of neighbourhood effects, namely, the Quebec moratorium on hog operations, the Lathrop report indicating the neighbours' reaction to the commencement of the pig farm operation, the direct correspondence from the neighbours to City Council and finally, the evidence presented by Mr. Brunet about the increase in the smell that goes with a pig farm operation as opposed to a dairy farm operation.

With respect to factor 6: one cannot accept the characterization of the pig farm operation, as proposed by the Intervenor, as simply a continuance of an agricultural use. To do so would effectively undermine the factors listed by the Supreme Court of Canada in Saint Romuald v. Olivier, supra.

¶ 27 Roy J. concluded his analysis with the following words at para. 38

> [para38] In summary, when all of the factors are taken into consideration, along with the neighbourhood effects and the possible impact on the environment, there is good reason for the courts to balance the landowner's interest against the community interest. Obviously, the proposed pig farm operation of the intervenor is not yet in existence, and therefore, many of the neighbourhood and environmental effects are not considered in a factual setting. Nevertheless, there is sufficient history and notoriety about industrialize [sic] a hog operation for the Court to understand that the neighbourhood concerns are not based on imagination or fiction. The Court has to consider that our neighbouring province of Quebec has imposed a moratorium on such hog operations. The neighbours in that area get their drinking water from wells. Given the existence of unused wells on the property, the existence of streams that feed into neighbouring rivers, given the topography, geology and hydrogeology of the property, all of these factors may have some impact on the drinking water of the neighbours. All of these concerns, of course, are taking place within the context of the report of the Walkerton inquiry and the recommendations of the presiding commissioner about the protection of drinking water sources from agricultural activity.

¶ 28 Not only did Roy J. rely on the decision of Saint Romuald v. Olivier, supra, to come to his conclusion, he also relied on the decision of the Manitoba Court of Queen's Bench, 4310845 Manitoba Ltd. v. Morris (Rural Municipality), [2001] M.J. No. 574.

¶ 29 Roy J. found that the CBO obviously did not consider all of the factors set out in Saint Romuald v. Olivier, supra in coming to her decision that the Intervenor had a claim to a legal non-conforming use. He, therefore, amended the building permit to allow for the operation of a pig farm that complied with the interim control by-law with a maximum number of 750 hogs.

¶ 30 With respect to the second issue and the interpretation to be given to the term "applicable law" as found in s. 8(2) of the Building Code Act, Roy J. found the definition of the term "applicable law" in s. 1.1.3.2. of the Ontario Building Code (1997) as follows:

> For the purpose of s. 8 of the Act, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.

¶ 31 From this, Roy J. concluded that for the purposes of s. 8, "applicable law" referred to laws that prohibited the proposed "construction" or "demolition" of the building that was the subject of the permit.

¶ 32 The two terms "construction" and "demolition" were also defined in s. 1(1) of the Building Code Act. Given the definitions found in that section, namely,

> "construct" means to do anything in the erection, installation, extension or material alteration or repair of a building and includes the installation of a building unit fabricated or moved from elsewhere and "construction" has a corresponding meaning;
>
> "demolish" means to do anything in the removal of a building or any material part thereof and "demolition" has a corresponding meaning;

¶ 33 Roy J. agreed with the CBO's position that there was no logical or real nexus between the Building Code Act and the three environmental Acts in question. He concluded by saying:

> [para55] Therefore, looking at the provisions of s. 8(2) of the Building Code Act, the interpretation of "applicable law" in the light of the definitions set out, both in the code and in the statute would appear that "applicable law" is restricted, or any law dealing with construction and demolition, not with use. It's difficult for me to see how a Court could interpret "applicable law" for the purposes of s. 8(2), to be anything else. Given the Act and the definitions referred to, I don't see how the respondent could have arrived at any other conclusion. A closer look at these various statutes makes their application even more questionable.

¶ 34 Roy J. went on to examine the three environmental Acts separately concluding in each case for the reasons given on pp. 16 and 17 of his decision that they did not apply to the facts of this case. He concluded by saying at para. 60:

> [para60] Accordingly, I see no error in the respondent's decision not to consider the Fisheries Act, the O.W.R.A. and the E.P.A., as applicable law, prior to issuing the building permit.

POSITION OF THE PARTIES WITH RESPECT TO THE ISSUES ON THE APPEAL

1. What is the appropriate standard of review by this court on the appeal and on the cross appeal?

City of Ottawa

¶ 35 The City of Ottawa takes the position that all of the issues on the appeal deal with conclusions of law and that there are no material issues of fact in dispute. The standard of review is therefore one of correctness.

CBO

¶ 36 The CBO does not dispute that the standard of review on conclusions of law is that of correctness. However she takes the position that this appeal involves a consideration of mixed fact and law which involves applying a legal standard or principle to a set of facts. The standard of review is therefore on a spectrum going from correctness to palpable and overriding error. In this case, the standard of review is closer to the "palpable and overriding error" end of the spectrum.

¶ 37 The CBO argues that, on the application before him, Roy J. had to decide whether the decision of the CBO to issue the building permit to the Intervenor was reasonable or whether it was wrong as a matter of law. On this appeal, the onus is on the City of Ottawa to show that some aspect of the proposed construction would contravene the relevant statute and thus would contravene "applicable law".

Intervenor

¶ 38 The Intervenor does not appear to have taken a position on the question of the standard of review on the appeal.

2. Was the application judge correct in concluding that a proper interpretation of the term "other applicable law", pursuant to s. 8(2) of the Building Code Act excluded, as a category, the three environmental statutes at issue here?

City of Ottawa

¶ 39 The City of Ottawa submits that the application judge was in error in concluding that the term "other applicable law" is restricted to only those laws, "dealing with construction ... not with use". The broader context of use must be considered and is supported by the case law.

¶ 40 The City also relied on two recent decisions of the Ontario Court of Appeal, R. v. Cranbrook Swine Inc., [2003] O.J. No. 1433 (QL) (C.A.) and Pedwell v. Pelham (Town), [2003] O.J. No. 1774 (QL) (C.A.), both of which were released after the decision of the application judge in this case was released.

CBO

¶ 41 The CBO takes the position that for a law to be "other applicable law" within the meaning of s. 8(2) of the BCA, it must relate to the construction or demolition of a building and have a logical and real nexus to the subject and purpose of the BCA. The statutory responsibility and authority of the CBO is solely guided by that purpose of the BCA, which, as has been well established, is to protect the public from unsafe design and construction. In essence, it is to establish and guarantee standards for the construction and the demolition of buildings. It is not to make decisions about or based on agricultural practices.

¶ 42 Consequently, by any accepted principle of legislative interpretation, purposive or via the ejusdem generis rule, the law to be applied must relate to matters of construction or demolition of buildings. The three environmental laws in question do not. The case law relied on by the City of Ottawa is easily distinguishable from the facts of this case.

Intervenor

¶ 43 The Intervenor supports the position of the CBO on this issue. The Intervenor agrees that an examination of the statutory

definitions of "other applicable law" necessarily limits it to laws that relate solely to the construction and demolition of buildings and not use. The Intervenor also argues that there must be a real and logical nexus between the applicable law and the construction and demolition of buildings.

¶ 44 The three environmental statutes in question do not have that connection and are not applicable to questions of agricultural use. Furthermore, the structure of the Intervenor that is in dispute here is well within the usage that is foreseen by the applicable zoning by-laws.

3. Was the application judge correct in concluding that, even if any of the three environmental statues could be considered "other applicable law", they were, nonetheless, inapplicable to this case on a proper interpretation of their provisions?

City of Ottawa

¶ 45 With respect to the OWRA, the City of Ottawa takes the position that the Intervenor's proposed hog farm enterprise comes within the operation of that statute by virtue of its farm waste disposal plan that comes with the definition of "sewage" and "sewage works" as defined in the OWRA. The application judge, therefore, erred in concluding that s. 53 of the OWRA does not apply to agriculture.

¶ 46 The City of Ottawa maintains that, in view of the fact that there is no statutory exemption for farm sewage works, the Intervenor is obligated, under the OWRA, to obtain a Certificate of Approval from the Ministry of the Environment, which enforces s. 53 of the OWRA. The City of Ottawa concedes that it does appear to be the practice that the Ministry of the Environment does not require compliance with this requirement in the case of farm sewage works. Nonetheless, for the reasons given, the clear provisions of the OWRA remain the applicable law.

¶ 47 The application judge also erred in not considering in his reasons, although addressed by the parties in their arguments, Regulation 903 of the OWRA that deals with unused wells. The evidence indicated that there were a number of abandoned wells on the Property where the pig manure would be spread. Because of this, Regulation 903 of the OWRA would logically be "applicable law".

¶ 48 With respect to the Fisheries Act, the City of Ottawa submits that ss. 35 and 36 of the Fisheries Act prohibits anyone from harming fish habitats or from depositing any deleterious substances into water frequented by fish. The Fisheries Act applies to all internal waters of Canada including those which are found on the Property or within a reasonable vicinity of the Property such as Becketts Creek, the North Indian Creek, the South Nation River and the Ottawa River, all of which are or flow into fish habitats.

¶ 49 The Intervenor's plan to spread large quantities of liquid pig manure on the Property, and the presence on the Property of tile drains and "French drains", could impact adversely on the nearby watercourses and their fish habitats. Consequently, ss. 35 and 36 of the Fisheries Act are clearly applicable to the "work" and "undertaking" proposed by the Intervenor in his building permit application. The CBO clearly erred in not even considering the possible application of the Fisheries Act.

¶ 50 The City of Ottawa further argues that the application judge erred in his interpretation of certain case law in concluding that the Fisheries Act would have no application, unless the construction or demolition of the building was in the area of a flood plain. There was no evidence before him that made that comment relevant to this case.

¶ 51 With respect to the EPA, the City of Ottawa takes the position that the proposed hog operation of the Intervenor with its accompanying plan to spread animal waste on the Property, could be in contravention of ss. 6, 9 and 14 of the EPA that prohibits any

person from discharging into the natural environment any contaminant. Based on the following declared facts, the presence of unused wells on the Property, the presence of streams intersecting the Property which feed into the Ottawa and South Nation Rivers and the topography, geology and hydrology of the Property, the EPA should have been considered "applicable law" by the CBO prior to issuing the building permit.

¶ 52 The City of Ottawa further argues that, even though ss. 6 and 14 of the EPA provide for an exemption for "animal wastes disposed of in accordance with normal farming practices", the exemption for agriculture only applies to such discharge of contaminants where there will not be, or there is not likely to be, harm to humans, animals or plants. As the City of Ottawa states at p. 28 of its Factum,

> In short, agriculture operations, including construction or renovations, are exempted up to but not beyond the point where harm of this kind will result or is likely to result.

¶ 53 The City of Ottawa maintains that the application judge erred in concluding from his reading of Burns v. Perth South (Township) Chief Building Official, (2001), 54 O.R. (3d) 266, that there was no nexus between the purpose of s. 14 of the EPA, which is meant to prevent the discharge of harmful contaminants, and s. 8 of the BCA which deals with construction of structures. The decision of Burns v. Perth South (Township) Chief Building Official, supra, is wrong insofar as it purports to extend an exemption to agricultural operations which does not exist in the statute. In the view of the City of Ottawa, Burns v. Perth South (Township) Chief Building Official, supra is clearly wrong in law. In support of this, the City of Ottawa relies on two recent Ontario Court of Appeal decisions, Pedwell v. Pelham (Town), supra and R. v. Cranbrook Swine Inc., supra.

CBO

¶ 54 With respect to the Fisheries Act, the CBO takes the position that there is no logical and real nexus between the Fisheries Act and the subject and purpose of the BCA. The only possible way that the Intervenor might breach the Fisheries Act is if he does not follow his approved Nutrient Management Plan, once the hog operation commences. This has nothing to do with the construction in question. There is nothing in the Fisheries Act that prohibits against the construction of a building. The statutory responsibility of the CBO is only with regard to construction and demolition and not with farming practices.

¶ 55 With respect to the EPA, the CBO puts forward the same argument as was made by her with respect to the Fisheries Act concerning the lack of logical and real nexus between the EPA and the BCA. Furthermore, the CBO argues that ss. 6 and 14 of the EPA grants an unambiguous exemption for agricultural operations or normal farming practices. It is a normal farming practice to spread manure nutrient on fields.

¶ 56 With respect to the OWRA, the CBO argues that the manure trenches proposed for the inside of the barns do not fit the definition of "sewage works" as found in the OWRA and therefore do not require a certificate of approval under s. 53 of the OWRA. Specifically, animal or farm wastes are not specified in the regulations, nor are they included in the definition of "sewage" as found in the OWRA, namely, "drainage, storm water, commercial wastes and industrial wastes and such other matter or substance as is specified by the regulations."

¶ 57 The CBO further submits that even if the Court finds that the proposed manure trench system is a sewage system within the meaning of the OWRA, the uncontradicted evidence was that it is the joint practice of the Ministry of the Environment and the OMAF to not require a Certificate of Approval for farm waste disposal systems. In light of this, for the CBO to request that the Intervenor

obtain this approval before issuing the building permit would be completely beyond the CBO's jurisdiction and authority.

¶ 58 Finally, the CBO argues that the evidence indicated that the Nutrient Management Plan of the Intervenor has been approved by the OMAF after Mr. Brunet reviewed it. Assuming this plan is followed by the Intervenor, the environmental concerns raised by the City of Ottawa will have been addressed. There is no evidence that the proposed construction, in this case, will cause any breaches of the provisions of the three environmental statutes in question.

¶ 59 According to the CBO, all three of the environmental statutes in question have potent enforcement measures should there be any infraction within their specific area of regulation and control, such as wells, fisheries, watercourses and the release of contaminants into the environment. The Legislature cannot have intended to abdicate its responsibilities for regulating these matters to the CBO by having her consider whether or not these Acts are "applicable law" in the context of s. 8 of the BCA.

¶ 60 The CBO argues, lastly, at p. 28 of her Factum:

> As a matter of policy ... it is not appropriate that the chief building official, in each municipality in Ontario, be required to make decisions respecting construction matters as well as potential uses that could be made of the buildings. The result would be a patchwork of standards for approval of the issuance of building permits for farm buildings across Ontario rather than a uniform standard.
>
> Intervenor

¶ 61 With respect to the OWRA, the Intervenor supports the CBO in advancing the position that there is no real and logical nexus between this statute and the planned renovations. If there were any evidence, and the Intervenor maintains that there is not, that the Intervenor was in breach of the OWRA, it would be the responsibility of the Ministry of the Environment to enforce against such breaches and not the CBO.

¶ 62 The Intervenor points out that the language in s. 53 of the OWRA is problematic in that there appears to be a difference in the terms used in the French and English versions of the law. However, that apart, the Intervenor takes the position that the application judge was correct in concluding that s. 53 excludes agricultural operations from the definition of "sewage" and "sewage works". The evidence relating to how the proposed manure trenches will work confirms this.

¶ 63 With respect to Regulation 903 of the OWRA, the application judge did not mention it in his reasons because it cannot be considered "applicable law" for the same reasons that the OWRA is not "applicable law". The evidence indicated that the unused wells referred to by the City of Ottawa are not a real concern and "not a significant threat to groundwater quality at the subject property" in the opinion of one hydrology expert. In addition to this, the Intervenor's Nutrient Management Plan, approved by the OMAF, will avoid the potential risks that have been identified by the City of Ottawa.

¶ 64 The Intervenor's approved Nutrient Management Plan also addresses the speculative risks raised by the City of Ottawa with respect to a possible infraction of the Fisheries Act. The Intervenor submits that there is nothing in ss. 34 or 35 of the Fisheries Act to lead one to conclude that the proposed renovations would come within the regulation of that statute. There is no real or logical nexus between the purpose and provisions of the Fisheries Act and s. 8(2) of the BCA so as to make it "applicable law".

¶ 65 With respect to the EPA, the Intervenor agrees with the CBO that s. 14 of the EPA exempts agricultural operations that carry

out normal agricultural practices. The Intervenor's plans to spread the nutrient fertilizer on the Property is a normal agricultural practice and was done in the dairy farm operation that preceded the planned hog farm operation.

¶ 66 The Intervenor argues that the application judge was correct in concluding, as was concluded in Burns v. Perth South, (Township) Chief Building Official, supra and in Welwood v. Huron-Kinloss (Township) Chief Building Official (2002), 29 M.P.L.R. (3d) 1 (Ont. S.C.J.), that there was no real or logical nexus between the purpose of s. 14 of the EPA, which is to prevent the discharge of harmful contaminants into the environment, and s. 8 of the BCA, which deals with the construction of structures.

¶ 67 The Intervenor further argues that the cases of Pedwell v. Pelham, supra and R. v. Cranbrook Swine Inc., supra can be distinguished from this case on their facts.

POSITION OF THE PARTIES WITH RESPECT TO THE ISSUES ON THE CROSS-APPEAL

1. What is the standard of review to be applied by the Divisional Court?

Intervenor

¶ 68 The Intervenor submits that the application judge correctly stated the standard of review by which he was to decide the application before him; namely, correctness for questions of law and reasonableness for questions of fact. He also correctly concluded that his revision of the decision of the CBO, with respect to whether the Intervenor had a claim to a legal non-conforming right under s. 34(9) of the Planning Act, involved a question of mixed fact and law.

¶ 69 However, the application judge erred in applying the standard of correctness to the decision of the CBO. The analysis of the facts on which he embarked in his decision was a question of fact and not of law. He should only have overturned the decision of the CBO if the application judge could have come to the conclusion that the decision of the CBO, in light of the factors enumerated by the application judge, was not reasonable.

¶ 70 The Intervenor also takes the position that the application judge, in arriving at his decision, considered several irrelevant facts such as: the fact that the Intervenor had the intention of eventually increasing his hog operation to include 2,800 pigs; the fact that the province of Quebec had declared a moratorium on pig farm operations; and, the fact of the Walkerton Report and the events that had led up to the Walkerton Inquiry. In so doing, the application judge committed an error in law. The Intervenor relies on Housen v. Nikolaisen, [2002] 2 S.C.R. 235 in support of this position.

City of Ottawa

¶ 71 The City of Ottawa takes the position that Roy J. applied the proper legal test of correctness with respect to the CBO's approach to the determination of the Intervenor's non-conforming use rights. It was not disputed by the parties that the governing law relating to whether a claim to a legal non-conforming right is justified or not is the test established in Saint Romuald v. Olivier, supra. It was also not disputed on the evidence, including the CBO's own admission, that she failed to consider the factors set out in Saint Romuald v. Olivier, supra. By not applying the proper legal test, the decision of the CBO was a clear error of law and was not reasonable.

¶ 72 Pursuant to s. 25(4) of the BCA, by which the application came before Roy J., the application judge was empowered and entitled to overturn the decision of the CBO, apply the correct legal test established in Saint Romuald v. Olivier, supra and substitute his own opinion for that of the CBO.

¶ 73 With respect to the findings of fact made by Roy J., the City of Ottawa relies on the Housen v. Nikolaisen, supra and submits that this Court ought not to interfere with the application judge's findings of fact or inferences of fact unless this Court finds that he made a palpable and overriding error, or one that is "plainly seen". Based on Housen v. Nikolaisen, supra, the test is the same with respect to issues of mixed fact and law. Only in the event that the Intervenor can establish an erroneous finding of fact which can be traced to an error of law, will the standard of correctness be applicable.

¶ 74 The City of Ottawa disputes the Intervenor's assertions that the application judge's consideration of irrelevant facts amounted to an error of law that is reviewable according to the standard of correctness. The trial judge was rightly entitled to consider those facts in reaching his conclusion on the issue of non-conforming use rights because they were relevant in the context of the approach and the factors to be considered as set out in the Planning Act and the Saint Romuald v. Olivier, supra case. It is also clear from the reasons of Roy J. that those facts did not form the sole basis for his conclusion.

2. Did the application judge err in refusing to recognize the right of the Intervenor to a legal non-conforming use on the Property as the CBO had so concluded?

Intervenor

¶ 75 The Intervenor submits that the application judge made his conclusion of fact, that the Intervenor did not have a claim to a legal non-conforming use, without any evidence to support that conclusion. Consequently, he made a palpable and overriding error.

¶ 76 Firstly, the Intervenor submits that the "use" protected by s. 34(9) of the Planning Act is agricultural use. By virtue of the applicable zoning by-laws, agricultural use includes "the raising, boarding and keeping of all forms of livestock". In this context, whether the livestock is pigs or cows is irrelevant. At the time that the interim control by-law was passed, the buildings on the farm were used for this agricultural purpose and had 209 animal units which translate into 1,045 pigs. This claim to a legal non-conforming use to have 1,045 pigs should stay with Intervenor as long as he had the intention of using the farm for an agricultural purpose. The Intervenor relies on the very case cited by Roy J. 4310845 Manitoba Ltd. v. Morris (Rural Municipality), [2001] M.J. No. 574 (Man. Q.B.) in support of his position.

¶ 77 Secondly, there is no dispute that the Supreme Court decision in Saint Romuald v. Olivier, supra determines the legal approach to the question in issue. It establishes the seven factors to be considered by the Court. The Intervenor submits that the application judge erred in his analysis of the criteria and in the findings of fact on which he relied in arriving at his decision as follows:

> Factor 1: The purpose of the pre-existing use. The purpose of the pre-existing use and the proposed use were not different. In conformity with the zoning by-laws, both were agricultural use for the purpose of raising livestock. The number of animal units was the same.
>
> Factor 2: The intensification of the previous agricultural operation and the degree of comparison between the previous and proposed use. In reality, the application judge came to his conclusion that the Intervenor did not have a claim to a legal non-conforming right because of the proposed renovations to the buildings of the Property, (that were necessary to convert a dairy farm operation into a hog farm operation), amounted to a change, different "in kind" and a "marked departure" from the previous dairy farm operation. In fact, both were agricultural operations and almost identical, with the same number of animal units, and the same amount of animal waste, the same method of storage for the manure

and the same spreading of the manure, but, in the view of the Intervenor, with less impact on the environment as in the past dairy farm operation.

¶ 78 The Intervenor submits that the application judge erred in his analysis of the applicable factors because, as is obvious from his reasons, he was under the wrong impression that the proposed hog operation was of a scale considerably bigger than the pre-existing dairy farm operation. In fact the evidence showed that the number of animal units were the same.

¶ 79 The application judge erroneously considered the previous building permit application of the Intervenor for 2,831 pigs which has nothing to do with the matter now before the court. The application judge erred in concluding that the proposed hog farm operation was more industrialized and sophisticated than the previous dairy farm operation. In essence, it only proposed to use more modem agricultural practices that are more mindful of the environment.

¶ 80 The Intervenor takes the position that the application judge also erred in concluding that the proposed hog farm operation could create harmful effects for the neighbourhood and the environment. The risks raised by the City of Ottawa were both speculative and far from conclusive. The evidence relating to the Intervenor's approved Nutrient Management Plan addressed all of these risks and concerns. In fact, the Intervenor submitted that the evidence indicated the impact on the environment of the hog farm operation would be less than the impact caused by the previous dairy farm operation because of the advanced technology that would go with the pig farm operation.

¶ 81 Finally the Intervenor submits that the application judge, contrary to factor 6 and 7 as described in the decision of Saint Romuald v. Olivier, supra characterized the Intervenor's right to a legal non-conforming use too narrowly in coming to his decision. He also erroneously relied on a "preuve subjective" rather than make a decision on a factual basis.

The City of Ottawa

¶ 82 The City of Ottawa argues that the submissions of the Intervenor characterizing the usage of the Property as agricultural in accordance with the zoning by-laws and the Planning Act is totally contrary to the directive found in the Supreme Court decision, Saint Romuald v. Olivier, supra to not determine questions of existing rights to legal non-conforming use on a property by a "category" approach.

¶ 83 The City of Ottawa takes the position that the application judge correctly rejected the "category" approach and correctly applied the factors to the evidence he had before him. There was ample evidence before the application judge to support his findings and inferences of fact. The decision of the application judge was made after a due consideration of all of this evidence and not on a misunderstanding of the previous use made of the land and a false impression of the proposed pig farm operation.

¶ 84 The City of Ottawa submits that, contrary to the Intervenor's assertions, Roy J. correctly relied on the case of 4310845 Manitoba Ltd. v. Morris (Rural Municipality), supra to support his findings based on the evidence before him with respect to neighbourhood effects and in the difficult task of balancing the community interests with the individual interests.

¶ 85 The City of Ottawa maintains that, in the face of the substantial objective evidence before him, the decision of Roy J. cannot be said to be a primarily subjective one. Although, as the Supreme Court of Canada pointed out in the Saint Romuald v. Olivier, supra decision,

> While the definition of the acquired right will always have an element of subjective judgment, the criteria mentioned above constitute an attempt to ground the Court's decision in the objective facts.

¶ 86 As Roy J. correctly pointed out, the balancing process between community and individual interests is not an exact science. The application judge was in the best position, having had the benefit of examining all of the evidence and having heard the arguments of the parties, to make the findings of fact that he did and in the absence of a palpable and overriding error, this Court ought not to interfere with that decision.

¶ 87 The City of Ottawa submits that, in the face of all of this evidence, Roy J. correctly concluded that the Intervenor's proposed pig farm operation constituted "a very different use" from the pre-existing dairy farm operation and, as a result, the Intervenor did not have a legal non-conforming use pursuant to the Planning Act, entitling it to operate a pig farm consisting of 1,045 sows. In coming to this conclusion, Roy J. correctly considered and applied s. 34(9) of the Planning Act and the approach and factors set out in the Supreme Court decision of Saint Romuald v. Olivier, supra. Based on this and based on the evidence before the application judge, no "palpable and overriding error" can be found in his decision on this issue.

ANALYSIS

Standard of Review

¶ 88 The issue of the standard of review effectively raises two questions. The first concerns what standard of review is to be applied by the Divisional Court on the various issues raised in the appeal and cross-appeal before this court. The second relates to what standard of review was to be applied by the application judge on the appeal before him from the decision of the CBO and to whether he applied that standard of review correctly.

¶ 89 The relief granted under s. 26 of the BCA, pursuant to which the appeal and cross-appeal come before this court, is not the retrial of the case but an appeal of the decision of Roy J. The applicable standard of review then is that of an appellate court on the various issues that arise on the appeal and cross-appeal. The correct standard of review of an appellate court was comprehensively discussed by the Supreme Court of Canada in its decision of Housen v. Nikolaisen, [2002] 2 S.C.R. 235. In that decision, the Supreme Court examined the standards of review relevant to the following types of questions:

1. Questions of law;
2. Questions of fact;
3. Inferences of fact; and
4. Questions of mixed fact and law.

¶ 90 The factual context of the Supreme Court's discussion was its review of a decision of a trial judge who had found contributory negligence against a municipality for failing to post signs at an accident site. What it was reviewing, effectively, was the judge's application of the legal standard of care to the particular facts of the case.

¶ 91 In addition to explaining in detail why, the Supreme Court enunciated the following principles with respect to the applicable appellate standards of review at pp. 247 to 258:

> [para8] On a pure question of law, the basic rule with respect to the review of a trial judge's findings is that an

appellate court is free to replace the opinion of the trial judge with its own. Thus the standard of review on a question of law is that of correctness:

...

[para10] The standard of review for findings of fact is that such findings are not to be reversed unless it can be established that the trial judge made a "palpable and overriding error": Stein v. The Ship "Kathy K", [1976] 2 S.C.R. 802, at p. 808; Ingles v. Tutkaluk Construction Ltd. [2000] 1 S.C.R. 298, 2000 S.C.C. 12, at para. 42; Ryan v. Victoria (City), [1999] 1 S.C.R. 201, at para. 57 ...

[para19] We find it necessary to address the appropriate standard of review for factual inferences because the reasons of our colleague suggest that a lower standard of review may be applied to the inferences of fact drawn by a trial judge. With respect, it is our view, that to apply a lower standard of review to inferences of fact would be to depart from established jurisprudence of this Court, and would be contrary to the principles supporting a deferential stance to matters of fact.

[para25] ... We conclude, therefore, by emphasizing that there is one, and only one, standard of review applicable to all factual conclusions made by the trial judge -- that of palpable and overriding error.

[para26] At the outset, it is important to distinguish questions of mixed fact and law from factual findings (whether direct findings or inferences). Questions of mixed fact and law involve applying a legal standard to a set of facts: Canada (Director of Investigation and Research) v. Southam Inc., [1997] 1 S.C.R. 748, at para. 35. On the other hand, factual findings or inferences require making a conclusion of fact based on a set of facts. Both mixed fact and law and fact findings often involve drawing inferences; the difference lies in whether the inference drawn is legal or factual.

[para27] Once it has been determined that a matter being reviewed involves the application of a legal standard to a set of facts, and is thus a question of mixed fact and law, then the appropriate standard of review must be determined and applied. Given the different standards of review applicable to questions of law and questions of fact, it is often difficult to determine what the applicable standard of review is. In Southam, supra, at para. 39, this Court illustrated how an error on a question of mixed fact and law can amount to a pure error of law subject to the correctness standard: ...

> ... if a decision-maker says that the correct test requires him or her to consider A, B, C, and D, but in fact the decision-maker considers only A, B, and C, then the outcome is as if he or she had applied a law that required consideration of only A, B, and C. If the correct test requires him or her to consider D as well, then the decision-maker has in effect applied the wrong law, and so has made an error of law.

Therefore, what appears to be a question of mixed fact and law, upon further reflection, can actually be an error of pure law.

[para28] However, where the error does not amount to an error of law, a higher standard is mandated. Where the trier of fact has considered all the evidence that the law requires him or her to consider and still comes to the wrong conclusion, then this amounts to an error of mixed

> law and fact and is subject to a more stringent standard of review: Southam, supra, at paras. 41 and 45. While easy to state, this distinction can be difficult in practice because matters of mixed law and fact fall along a spectrum of particularity.

¶ 92 With those legal principles in mind, the issues on the appeal and cross-appeal before this court clearly touch on both questions of law and questions of mixed fact and law. Whether the application judge was correct in concluding that the three environmental statutes cannot be considered "applicable law" for the purpose of s. 8(2) of the BCA is a question of law and the standard of correctness is to be applied. However, whether a particular set of facts relating to a structure or building actually demonstrates a contravention of one of those particular statutes, assuming that it maybe considered "applicable law" within the meaning of s. 8(2), raises questions of mixed fact and law. The standard of review, therefore, is on a spectrum going from correctness (relating to the correct consideration and application of the legal principles in question) to "palpable and overriding error" (relating to the findings of fact or inferences of fact on the evidence to which the legal principle in question is applied to come to the decision under appeal).

¶ 93 Similarly, whether the application Judge erred in refusing to recognize the right of the Intervenor to a legal non-conforming use on the Property raises questions of mixed fact and law. Was the legal principle by which such a right is recognized correctly stated and applied by the application judge? Was there palpable and overriding error in the findings of fact and inferences of fact made by the application judge on the evidence and to which he applied such legal principle. The standard of review, therefore, is on the same spectrum that was discussed in the previous paragraph; namely, from correctness to "palpable and overriding error".

¶ 94 On the question of the standard of review to be applied by the application judge when reviewing the decision of the CBO and whether or not he applied the standard correctly, I can find no error in the decision of the application judge. The test stated by him as being a "blend of two tests, namely a standard of correctness for questions of law, and a standard of reasonableness for the question of fact", with the standard being "closer to correctness than reasonableness" is a correct one and supported by the case cited by him as well as by other jurisprudence.

¶ 95 In Burns v. Serpa, Acting Alternate Chief Building Official, Township of Perth South et al., supra, Killeen J. pointed out that, in view of the generous jurisdictional language found in s. 25(4) of the BCA, pursuant to which the matter came before Roy J, ("the judge shall hold a hearing ... take such action as the judge considers the inspector or chief building official ought to take ... may substitute his or her opinion for that of the inspector or chief building official"), and in view of the fact that the judge may and often will entertain evidence from a variety of sources that were not directly before the CBO, it may be tempting to treat the appeal as a full de novo hearing. Nonetheless, it remains an appeal from the decision of the CBO to which an appellate standard of review is to be applied.

¶ 96 Killeen J. went on to state that the direction for the correct appellate standard of review must be taken from the recent landmark decision of the Supreme Court of Canada in Canada (Director of Investigation and Research) v. Southam Inc., [1997] 1 S.C.R. 748. Killeen J. refers to the decision of Molloy J. in Runnymede Development Corp. v. 1201262 Ontario Inc. (2000), 47 O.R. (3d) 374 in which Molloy J. applied to the s. 25 appeal process under the BCA the teaching of the Supreme Court in Canada (Director of Investigation and Research) v. Southam Inc., supra. The appropriate standard should be a blend of two tests; namely, a standard of correctness for questions of law and a standard of reasonableness for questions of fact, as was recognized by Roy J.

¶ 97 The fact that the standard of review is not necessarily static and can move along the spectrum of correctness to reasonableness and, for example, be closer to correctness as opposed to reasonableness, as was found by Roy J in his decision, was also recognized by Molloy J. in Runnymede Development Corp. v. 1201262 Ontario Inc., supra. At p. 386 she states:

> [para29] ... The standard to be applied to decisions of the Chief Building Official will always be less deferential than the patently unreasonable test. The broad powers on appeal, particularly the power to do what the official "ought to have done", the nature of the decision maker and the decision making process (i.e., the decision of a municipal employee rather than an expert tribunal after a full hearing) are factors which suggest a degree of deference on the lower end of the scale, towards correctness. On the other hand, municipal planning and zoning are specialized areas that are squarely within the expertise of the Chief Building Official, a factor that supports a greater degree of deference. It is not possible to say where on the continuum between "patently unreasonable" and "correct" the appropriate standard will fall for all cases involving a Chief Building Official, as the level of deference to be accorded will vary depending on the nature of the issue before the tribunal. Indeed, the apparent differences in the standard applied by the various decisions of this court to date can largely be explained by the differences in the nature of the question being determined. The more the Chief Building Official's decision is a determination of law, the closer the standard will be to correctness. The more the initial decision is dependent upon factual determinations within the special expertise of the Chief Building Official, the more deferential will be the standard. Generally speaking, however, a standard of correctness will be applied to decisions based on law or jurisdiction and a standard of reasonableness will be applied to questions of fact. Within the standard of reasonableness, the degree of deference or the "weight" to be given to any particular determination will depend on the circumstances.

¶ 98 This is a correct statement of law and accepted by this Court. See also on this point the decisions of William F. White Limited v. Uzumeri, in his capacity as Chief Building Official of the City of Toronto et al.; A. Mantella & Son's Limited et al., Intervenors (1999), 44 O.R. (3d) 750 (S.C.J.) and Welwood v. Huron-Kinloss (Township) Chief Building Official (2002), 29 M.P.L.R. (3d) 1 (S.C.J.).

¶ 99 I can find no error in Roy J.'s application of the standard of review that he adopted. The substantial issues before him did raise questions of law and questions of mixed facts and law and, therefore, were "more a determination of law". On those issues, the standard would be on the spectrum closer to correctness than reasonableness, which is the standard that he applied to the issues before him. In doing this, he concluded that the only correct interpretation that a court could give to "applicable law" in s. 8(2) of the BCA was the decision of CBO to exclude the three environmental statutes from her consideration in deciding to issue the building permit.

¶ 100 With respect to the CBO's decision to grant to the Intervenor a legal non-conforming use to the Property permitting him to have 1,045 hogs, as opposed to 750 hogs permitted by the interim control by-law, it is clear on the evidence that she committed an error in law, therefore raising a question of law before Roy J. It was not disputed that the CBO had not considered the test established by the Supreme Court of Canada in Saint-Romuald v. Olivier, supra before deciding to grant the Intervenor his claim to a legal non-conforming use on the Property. Rather the evidence

indicated undisputedly that she arrived at that conclusion simply by confining her analysis of change of use to the livestock units contained in the interim control by-law. In particular, it was not disputed that her evidence was that, because the previous dairy farm had 209 cows, the Intervenor was entitled to have 1,045 sows based on the 5 to 1 livestock unit ratio contained in the interim control by-law.

¶ 101 Roy J. recognized the error in legal principle made by the CBO in not considering the factors set out in Saint- Romuald v. Olivier, supra, in coming to her decision and applied the correctness standard by applying those factors himself to the facts of the case in order to come to his own decision. I can see no error in this application of the standard of review. Based on the analysis found in Runnymede Development Corp. v. 1201262 Ont. Inc., supra, an error in law made by a CBO is neither correct nor reasonable.

Was the application judge correct in concluding that a proper interpretation of the term "other applicable law" pursuant to s. 8(2) of the BCA. excluded, as a category, the environmental statutes in question?

¶ 102 The interpretation that is to be given to a particular legislative provision, such as the term, "other applicable law" found in s. 8(2) of the BCA is a question of law. The starting point is clearly to commence with the statute in question, to examine any definitions provided by the statute itself and to examine the statute's subject matter and purpose. On this point, I can find no error in the approach taken by Roy J. Nor can I find any error in his conclusion that,

> the interpretation of "applicable law" in the light of the definitions set out, both in the code and in the statute [definitions of the words "applicable law", "construct" and "demolish'] [it] would appear that "applicable law" is restricted [to] any law dealing with construction and demolition, not with use.

¶ 103 The CBO and the Intervenor advance the purposive approach to the interpretation of the term "other applicable law". The reason for a purposive analysis of a piece of legislation is "to clarify the scope of general language" (See R. Sullivan, Statutory Interpretation (Toronto: Irwin Law, 1997). There is no question that the term "other applicable law" qualifies as general language.

¶ 104 The purposive approach advanced by the CBO and the Intervenor agrees with the textual and definitional analysis made by Roy J. as described in the preceding paragraph. It requires, for a law to be relevant and applicable, a real and logical nexus between the applicable law and the essential purpose of the BCA, which is the construction, and demolition of buildings.

¶ 105 This restricted and rather specialized perception of the BCA was recognized by MacPherson J. in Greater Toronto Airports Authority v. Mississauga (City) (1999), 43 O.R. (3d) 9. Macpherson J. had to decide on the facts of that case whether a redevelopment project at a federally owned international airport came within the operation of the BCA to which he answered no. At p. 10 of that decision, Macpherson J. had the following to say about the subject-matter of the BCA:

> The subject-matter of the Building Code Act is, in my view, as its title suggests, buildings. The Act is a relatively short and general one. However, its essence is, per s. 34, "standards for the construction and demolition of buildings". The Act provides municipalities with extensive powers to regulate property development, such as by specifying rules for the construction, demolition, use and occupation of buildings and requiring the submission of plans to a municipal building department for approval before construction may proceed. The Act

> provides municipal building officials with the power to remove buildings from land and to have them demolished. Those officials are also empowered to make assessments of the structural adequacy of buildings for the purpose for which they are to be used, and they have broad powers to enter and search property and to make orders against both owners of buildings and many other persons who have dealings with buildings, thus affecting the property rights of anyone with an interest in the property. The Act also provides for a number of liens which may be visited on the land itself. In short, the subject-matter of the Act is buildings and the land on which they are placed.

¶ 106 It is interesting to note that Macpherson J., in his last statement, extended the subject matter of the Act not only to the buildings but also to the land on which they are placed.

¶ 107 Killeen J., in Burns v. Serpa, Acting Alternate Chief Building Official, Township of Perth South et al., supra, in his discussion of the scope and purpose of the BCA, recognized the Act's limited purpose but saw it as having a broader scope due to its "obvious interrelationships with other statutes". He states at p. 272 of his decision:

> [para19] The BCA is a complex piece of legislation which is, in general terms, aimed at setting and enforcing standards for all manner of construction and building projects in Ontario. It cannot, because of its nature, be considered in splendid isolation because it has obvious interrelationships with other statutes, provincial and even federal, as well as a variety of municipal regulations under local by-laws. Examples of such interplays would be with the provincial Planning Act, R.S.O. 1990, c. P.13, and a local zoning by-law.

¶ 108 Despite this recognition, Killeen J., at p. 273, still concluded that the scope of s. 8 of the BCA and the term "applicable law" were "clarified" and "limited" by the definitions of the terms "construct" and "demolish" set out in the definitional section of the BCA; a conclusion that Roy J. accepted, it being consistent with his own textual analysis of the BCA.

¶ 109 There was no dispute among the parties that the term "other applicable law" found in s. 8(2) of the BCA required the CBO to consider such things as the Planning Act and any relevant local zoning by-laws in force before issuing a building permit. I agree with the City of Ottawa that, therefore, strictly speaking, this necessarily mandates the CBO to consider not only the proposed constriction and buildings but also the intended use of such construction and buildings before issuing a building permit. Accepting this fact, one must logically ask the question, how broad or narrow are these considerations of use by the CBO under "other applicable law" to be? Is it to be broad, with the CBO taking on the role of "gatekeeper" of the environmental statutes, as the City of Ottawa argues? Or, is to be more qualified, restricted to those uses that have a real and logical nexus to the construction and demolition of buildings as the CBO and the Intervenor argue and as Roy J. so found in his decision? An examination of the jurisprudence provides answers to these questions.

¶ 110 The parties' agreement that "other applicable law" includes such laws as the provincial Planning Act and local zoning by-laws is supported by the case law. In Phi Delta Beta of London Inc. v. London (City) Chief Building Official (1995), 25 M.P.L.R. (2d) 140 (Ont. Gen. Div.), the chief building official refused to issue a building permit to the applicant fraternity on the basis that the intended use contravened the relevant zoning by-law. The renovations were to increase the number of living units allowable under the zoning by-law (eleven units as opposed to the allowable three). The fraternity applied for an order rescinding the chief building official's decision not to process its application and an order

to issue the building permit. Leitch J. refused the application, ruling that the chief building official was entitled to consider the "intended use" of the property in exercising his statutory authority under s. 8(2) of the BCA. In coming to this conclusion, Leitch J. relied on the following words of Saunders J. in Axelrod v. Toronto (City), (1981), 15 M.P.L.R. 143 (Ont. Div. Ct.), p. 148:

> [para8] ... It would be irrational to hold that he was so precluded. Such a holding would mean that he could not refuse to issue a permit for a factory in a residential zone if the Building Code and all other applicable laws were complied with.

¶ 111 In Walton v. Lincoln (Town) (1997), 43 M.P.L.R. (2d) 291 (Ont. Gen. Div.), the applicants applied for a building permit to rebuild an outbuilding that had burned down. The intended use of the building was to house a large number of guinea pigs for the purpose of breeding such guinea pigs. The building was to include a heat pump, insulation and air conditioning to facilitate the breeding operation. The chief building official refused to issue a permit to rebuild the structure on the basis that the proposed use, guinea pig breeding, did not comply with the existing zoning byelaw. When the matter came before Quinn J. on appeal pursuant to s. 25(1) of the BCA, counsel for the applicant argued that the definition of "applicable law" as found in s. 8 of the BCA speaks of "construction and demolition" and therefore considerations of "use" as the chief building official undertook in the decision to refuse the building permit, were precluded. Quinn J. refused this argument stating at pp. 324 and 325:

> [para58] ... The matter is more than one of bricks and mortar. The definition of "applicable law" allows a chief building official, when assessing a Permit Application, to consider "by-laws ... which prohibit the proposed construction ... of the building." This definition does not exclude "use" as a consideration. By way of example, can it not be said that a residential zoning bylaw would, effectively, prohibit the proposed construction of a factory?
>
> ...
>
> [para60] Accordingly, in the case at bar, I hold that the chief building official, in the course of issuing the building permit, was entitled (indeed, required) to consider whether the intended use of the barn would violate the provisions of the new by-law. It would have been wrong for him to have restricted his review of the Permit Application to a consideration of whether the building itself structurally complied with the by-law.

¶ 112 After examining the by-law in question, Quinn J. ordered that the building permit be issued on the grounds that the intended use did not contravene the by-law and that if the City wished to control the number of guinea pigs they were able to do so, but had not done so.

¶ 113 It is easy to see in these cases, as with any zoning by-law, how the consideration of use dictated by the zoning by-law is directly related to the nature of the construction or building in question. There is a real and logical nexus between the building and the exigencies of the zoning by-law.

¶ 114 In other cases, the term "other applicable law" in s. 8(2) of the BCA has been used to draw into its net a wide variety of laws. In Leeds and Grenville v. Gerard, [1991] O.J. No. 1825, the issue before Cosgrove J. was whether on the facts of the case, persons proposing to build pumps for the purpose of pumping toxic chemical into pipes that could leak into the ground water, the chief building official should act to require a certificate of approval under the EPA. Relying on the fact that the chief building official had a duty of care

to persons in close proximity of the proposed project to not issue a permit where the result might be to cause damage to others, Cosgrove J. found that such an approval was required.

¶ 115 However, for reasons that I find very persuasive, the decision in Leeds and Grenville v. Gerrard, supra, was not followed by Lane J. four years later in Alaimo v. North York (City) (Chief Building Official), [1995] O.J. No. 862 (Ont. Gen. Div.). On the appeal before him, the chief building official had refused to issue a building permit on the grounds that the proposed construction, because of the proximity and height of chimneys on adjacent buildings, might cause a nuisance. The issue was whether the chief building official could refuse to issue a building permit pursuant to s. 8(2) on such common-law considerations as nuisance.

¶ 116 At para. 21 of his decision, Lane J. took a very restrictive view of the question, based on his legislative interpretation of the term, "applicable law", as he found it in the BCA. He rightly observed that the Leeds and Grenville v. Gerrard, supra was decided prior to the Building Code being amended to define "applicable law" in terms,

> that confine it to statutes, regulations or by-laws which prohibit the proposed construction of the building unless complied with. This definition excludes common law considerations such as nuisance. It also confines the relevant enactments to those prohibiting the erection of buildings unless complied with. It seems to me that the decision in Leeds has not survived this statutory change.

¶ 117 He ruled that the chief building official did not have the discretion to refuse to issue a permit when all the statutory requirements, which did not include considerations of common law nuisance, had been fulfilled. He ordered that the building permit be issued.

¶ 118 In both Mayhew v. Hamilton (Township) (Chief Building Official), [2002] O.J. No. 1962 and Rotstein v. North York (City) (Chief Building Official) (1995), 29 M.P.L.R. (2d) 305 (Ont. Gen. Div.), the Court was faced with the question of whether "other applicable law" in s. 8(2) of the BCA could be interpreted to include a subdivision agreement entered into between a municipality and a developer relating to the use of the land in question. On the facts of those cases, the proposed constructions, if allowed to go forward, would be in breach of those agreements. In both cases, the Court ruled such subdivision agreements could not be brought within the purview of the words "applicable law". Subdivision agreements were nothing more than a contract between the City and a developer and did not have the force of law or the effect of converting such contracts into a regulation or by-law.

¶ 119 MacDonald J. in Mayhew V. Hamilton (Township) (Chief Building Official), supra, provides a very useful survey of the case law dealing with the interpretation of the term "other applicable law", some of which were clearly considered by Roy J. in coming to his conclusions. An examination of that case law leads one to conclude that, for the most part, the term has been restrictively interpreted and found to include consideration of other laws when those laws have been found to have, as the CBO and Intervenor argue, a real and logical nexus to the proposed construction in question. The following are some examples of this.

¶ 120 In Upper Thames River Conservation Authority v. London (1989), 67 O.R. (2d) 784 (Ont. Dist. Crt.) and Stacey v. Oxford-On-Rideau (1989), 46 M.P.L.R. 15 (Ont. Gen. Div.), the proposed construction was to be right on a flood plain. As a result, the Conservation Authorities Act and its regulations were held to be "applicable law" requiring the consent of the authority. It is hard to see how the very foundation of the building is not directly related to the construction itself.

¶ 121 The Ontario Heritage Act and a Heritage Easement Agreement registered under that Act, was held to be "applicable law" for purposes of the BCA in the case of Roman Catholic Episcopal Corp. v. Cobourg (1998), 46 M.P.L.R. (2d) 195. It is important to note that the decision in this case rests solely on its very specific facts. The municipality, under the Heritage Act, was empowered to pass by-laws designating property as having a historic or architectural value and for providing historical easement agreements. On the facts of this case the municipality had passed such a designation by-law which thereby incorporated the easement agreement into the statutory scheme. It was, in essence, the existence of the local zoning by-law that determined the application of the Ontario Heritage Act in this case.

¶ 122 In William F. White Limited v. Toronto (City) Chief Building Official (1999), 44 O.R. (3d) 750, the Court was directly faced with the question of whether, the EPA could be considered "applicable law" for the purposes of issuing a building permit. On the facts of that case, tenants of a building sought a building permit to construct a health and fitness club on the second floor of a building. The appellants were the first floor tenants who ran a business dealing with camera and other equipment that was very sensitive to dust, dirt and vibrations. When the building permit was issued to the second floor tenants allowing them to go ahead with the renovations to create the health and fitness club, the appellants brought the appeal under s. 25 of the BCA. They argued that the proposed construction was in contravention of the EPA. In particular, they argued that the operation of the health and fitness club would discharge sound and vibrations from human activities and this would constitute discharge of a contaminate into the natural environment that would interfere with the normal conduct of the appellant's business. There was no question on the facts of the case that the chief building official had not even considered the EPA before issuing the building permit.

¶ 123 Stinson J. found that the EPA "may" fall within the scope of the "applicable law" under s. 8(2) of the BCA. It was not an automatic thing in each case. In some cases, it would be apparent that the EPA is relevant or irrelevant law. Stinson J. left it to the chief building official, in the first instance, to assess whether a particular application for a building permit falls within the ambit of the EPA or any other legislation. If that decision is wrongly made by the chief building official then, as a matter of law, it could become the subject of an appeal pursuant to s. 25 of the BCA.

¶ 124 Relevant to an aspect of this appeal, Stinson J. went on to say that, in his view, in order to succeed on an appeal from a decision of the chief building official who issued a building permit without considering the EPA it was not enough to show that there had been a failure to consider the EPA as "applicable law". The relevancy of the EPA to the particular facts of the case, namely that some aspect of the proposed construction would contravene the relevant statute, must be shown.

¶ 125 After examining the provisions of the EPA and applying it to the facts before him, Stinson J. concluded that the EPA was not engaged by the particular construction in question and no error had been committed by the chief building official. Put another way, I think what Stinson J. was doing was determining whether there was a real and logical nexus between the EPA as applicable law and the construction or building in question. Finding that there was none, Stinson J. rightly concluded that the CBO's failure to consider it did not constitute an error in law.

¶ 126 At this juncture I observe that, the approach to the question before him taken by Stinson J., is very similar to that taken by Roy J. in this case. After determining, on a contextual and definitional analysis, that the three environmental statutes cannot be considered in the interpretation of "applicable law", Roy J. did not end his examination there. He went on in paras. 56, 57 and 58 of his decision to examine whether the proposed construction breached any of the three statutes. I cannot find any error in this approach which appears to be very consistent with the jurisprudence.

¶ 127 In a decision whose facts are much closer to the facts found in this case, Burns v. Serpa, Acting Alternate Chief Building Official, Township of Perth South et al, supra, Killeen J. also concluded that the EPA cannot be considered "applicable law" for the purposes of s. 8(2) of the BCA. On the facts of that case, the acting chief building official issued a building permit for the construction of two hog-raising barns on the property in question. A representative of a ratepayers' association of neighbouring landowners appealed the decision to issue the building permit on the grounds that after the barns were constructed, the spreading of liquid manure on the property, under the Nutrient Management Plan, would cause a discharge of contaminants into the environment in contravention of s. 14 of the EPA.

¶ 128 As has already been mentioned, Killeen J., in the first instances interpreted the scope of s. 8(2) of the BCA as limited by the definition of the terms "construct" and "demolish" set out in the definitions section of the BCA. After examining the purpose of the EPA, in general, and sections 6, 9 and 14 of the EPA, in particular, he determined that the EPA exempted agricultural operations from its ambit because it "does not apply" to adverse effects caused by "animal wastes disposed of in accordance with normal farm practices" (see para. 54). Killeen J. concluded at pp. 281 and 282 of his decision as follows:

> [para59] In my view, a finding that s. 14 is "other applicable law" for the purpose of regulating the construction of buildings and structures within s. 8 of the BCA would not give effect to the clear intent of the legislature to regulate and control the construction of structures from an environmental perspective under s. 9 of the EPA. Section 9, as I have already emphasized, calls for a certificate-of-approval process for structures which may discharge harmful contaminants but -- and this is an important but -- para. 9(3)(c) exempts farm structures such as the Cold Springs Barns. Further, a finding that s. 14 is applicable law will not give effect to the stated statutory policy of the legislature and government not to regulate the construction of structures used in agriculture under the EPA.
>
> ...
>
> [para67] When read together as I think they must [be] to get at an articulate commonality of meaning -- the answer must again be that s. 14 of the EPA cannot logically be construed as an applicable law against which to measure whether a building permit should be issued for the construction of these barns. There is simply no rational and necessary nexus between the purpose of s. 14, which is to prevent the discharge of harmful contaminants and s. 8 of the BCA which deals with the construction of structures.

¶ 129 Browne J. followed the decision of Killeen J. in Welwood v. Huron-Kinloss (Township) Chief Building Official, supra because he saw the facts of the case before him as indistinguishable from those before Killeen J. in Burns v. Serpa, Acting Alternate Chief Building Official, Township of Perth South et al., supra. A building permit was issued for the construction of two barns that were intended to house 4,000 hogs from which operation there would be generated annually some 1.75 million gallons of liquid hog manure to spread on the township and adjoining township lands. On the appeal taken from that decision, Browne J. had to decide whether the EPA was "applicable law" within the scope of s. 8 of the BCA that he saw as a question of law. In coming to his conclusion that it was not, Browne J. took the same approach that Stinson J. took in William F. White Limited v. Toronto (City) Chief Building Official, supra. He did not interpret Killeen J.'s decision in Burns v. Serpa, Acting Alternate Chief Building Official, Township of Perth South et al., supra as standing for the proposition that s. 14 cannot, in all

cases, be applicable law within s. 8 of the BCA but rather that, in that case, it is not applicable law for the construction of the hog barns for intensive agricultural use in issue.

¶ 130 The City of Ottawa relies on two recent decisions from the Ontario Court of Appeal in support of its position. In R. v. Cranbrook Swine Inc., [2003] O.J. No. 1433 (C.A.), the defendant, Cranbrook Swine Inc. (Cranbrook) had been issued a building permit by the chief building official under the Building Code to construct two barns and a liquid manure storage tank which he proceeded to do. He was subsequently charged with violating the Conservation Authorities Act, because his liquid manure storage tank had been build within a wetlands which was a water resource area in contravention of the Conservation Authorities Act. The specific question before the Court was not the issue before this Court. Rather it was whether Cranbrook could succeed on the defence of officially induced error to the charge, by virtue of the fact that the chief building official had issued a building permit for the construction of the liquid manure storage tank.

¶ 131 In a dissenting decision, Abella J.A. concluded that the Defendant could succeed on such a defence stating as follows at para. 20:

> [para20] The appellants acknowledge that the Conservation Authorities Act and the construction regulations enacted under it are "applicable law" within the meaning of s. 8(2) of the Building Code Act. That makes compliance with its provisions part of what the chief building official is required to consider in deciding whether to grant a building permit. The granting of the permit is, therefore, on its face, a determination by the chief building official that, among other statutes, the relevant provisions of the Conservation Authorities Act have been complied with.

¶ 132 Later on in her decision, Abella J.A. went on to suggest that the same conclusion might apply to a variety of other statutes that affect the use of land in Ontario, among which were included two of the environmental laws in question in this case, the EPA and the OWRA, (see paras. 30 to 36 inclusive).

¶ 133 I have difficulty in accepting that R. v. Cranbrook Swine Inc., supra supports the position of the City of Ottawa to the extent that it argues or that the case can be taken to overturn the preceding jurisprudence on the question. Firstly, whether the statute in question, namely the Conservation Authorities Act was "applicable law" within the meaning of s. 8(2) of the BCA was not in issue in that case. It was the subject of an agreement between the parties so that the Court of Appeal was not dealing head on with the issue before this Court. Secondly, the context of the decision concerned a quasi-criminal case which puts the focus of the discussion, and rightly so, on the strict rights of the defendant. Thirdly, any comments by Abella J.A. regarding the status of statutes, other than the Conservation Authorities Act, as "applicable law" within the meaning of s. 8(2) of the BCA is obiter. Fourthly, the decision of Abella J.A. is a dissenting one. The majority decision clearly rejected not only her disposition but also her "analysis concerning the reliance component of the defence" which included the obiter part of her reasons.

¶ 134 In Pedwell v. Pelham (Town), [2003] O.J. No. 1774 (C.A.), by a mechanism known as a testamentary devise, Mr. Pedwell was able to avoid certain provisions of the Planning Act and the intent, at least, of the applicable zoning by-laws. In an attempt to stop the development, the Town enacted an interim control by-law that effectively stalled any development on the land. On an application to challenge the interim control by-law, the trial judge found that the Town had acted in bad faith, declared the interim control by-law a nullity and directed the chief building official to issue a building permit for the lots.

¶ 135 On appeal from the judgment of the trial judge, the Town argued that the judge had made a palpable and overriding error on the facts and that he had misdirected himself with respect to the applicable law. One of the alleged misdirections was that the EPA is "other applicable law" for the purposes of s. 8 of the BCA.

¶ 136 With respect to the argument that the trial judge had committed a palpable and overriding error on the findings of fact, one of which was that the Town had acted in bad faith, Rosenberg J.A. stated at para. 23 that while he might not have made all of the same findings as the trial judge, nor drawn the same inferences, he was not satisfied that the trial judge was "palpably in error".

¶ 137 With respect to whether the EPA is "other applicable law" for the purposes of s. 8 of the BCA, because the evidence showed that the septic system proposed by Pedwell would release nitrates into the soil in such quantities as to violate the Act, Rosenberg J.A. had the following rather qualified statement to say at para. 47:

> [para47] I accept that in the circumstances of this case, the Environmental Protection Act can be considered other applicable law within the meaning of s. 6(1) of the Building Code Act. See Welwood v. Huron-Kinloss (Township) Chief Building Official (2002), 29 M.P.L.R. (3d) 1 (Ont. S.C.J.). Although compare Burns v. Perth South (Township) Chief Building Official (2001), 54 O.R. (3d) 266 (Ont. S.C.J.).

¶ 138 On the facts of that case, it is not hard to relate directly by way of a clear and logical nexus, the construction in question, in particular the construction of the septic system, with the environmental law in question, the EPA, that is necessarily concerned with the release of nitrates into the soil. I understand from the results of and reasons given in Pedwell v. Pelham (Town), supra, that whether the EPA is to be considered "applicable law" will depend on the individual "circumstances of [each] case" and whether a real and logical nexus exists between the facts of the case and the EPA.

¶ 139 The ratio of Pedwell v. Pelham (Town), supra is consistent with the preceding jurisprudence, which I find to have been stated particularly well in the decision of Stinson J. in William F. White Limited v. Toronto (City) Chief Building Official, supra.

¶ 140 In sum, and based on the analysis of the preceding case law, I cannot find that Roy J. erred in concluding that a proper interpretation of the term "other applicable law" pursuant to s. 8(2) of the BCA excluded, as a category, the three environmental statutes in issue. Whether such environmental statutes can be considered "applicable law" in any individual case is left to the CBO in the first instance and to the application judge on an appeal pursuant to s. 25 of the BCA as a question of law.

¶ 141 Furthermore, the decision of whether any of the EPA, the OWRA and the Fisheries Act are engaged by the construction, that is the subject-matter of the building permit, must be based on whether there is a real and logical nexus between the applicable law and the erection of the building in question. The relevancy of the three environmental laws as "applicable law" is not shown by the mere failure to consider them, but upon proof that the proposed construction, that is the subject of the building permit, would contravene any of their provisions. Roy J. did not err in failing to consider whether the proposed construction for the hog farm operation on the facts of this case would contravene any of the provisions of the three environmental statutes in question. In fact, he considered all three statutes individually in his decision in paras. 56 to 58. Did he err in this examination is the third issue on the appeal.

¶ 142 Before going on to consider the third issue on the appeal before this Court, the following comments are justified. The law relating to the interpretation of the term "applicable law", for the purposes of s. 8 of the BCA, as I have just enunciated it in the

previous paragraphs, is a reasonable, measured and workable one that is consistent with the statutory language chosen by the Legislators. There is no question that the environmental concerns raised in this appeal are significant to the well being of the Ottawa community. They should be pursued, regulated and enforced, if necessary. However, the power to do that lies elsewhere, than in the limited powers of the CBO and the legislation governing those powers. I agree with the sentiments expressed by Roy J. in his decision that to designate the CBO as the gatekeeper to the concerns of the environmental statutes, in the way suggested by the City of Ottawa, is asking this Court to legislate law rather than interpreting it. It is not for this Court to do. It is not justified by the language found in the BCA and the jurisprudence relating to that language.

Was the application Judge correct in concluding that, even if any of the three environmental statutes could be considered "other applicable law", they were, nonetheless inapplicable to this case on a proper interpretation of their provisions?

¶ 143 I can find no error in the application judge's interpretation of the provisions of the three environmental statutes in question. Roy J. applied the correct test to those provisions and found that there was no rational and necessary nexus between those provisions and s. 8(2) of the BCA. He also examined those provisions in light of the substantial evidence that he had before him and could not find that the proposed construction would, in any way breach those provisions.

¶ 144 With respect to the OWRA, based on the evidence before Roy J., one can take serious issue with his statement in paragraph 56 that "Sewage, as defined in the statute, appears not to apply to agriculture". An examination of the relevant sections of the OWRA and the evidence presented in this case, (see Compendium Supplementaire De L'Intervenante, tab 21), supports the conclusion that farm waste and farm waste disposal systems do come within the definition of "sewage" and "sewage works" and would technically come within the certificate of approval process provided for in s. 53 of the OWRA. Section 30 of the OWRA also does not provide an exemption for agricultural operations, (see Peacock v. Norfolk (County) Chief Building Official, [2003] O.J. No. 2771 (S.C.J.).

¶ 145 Nonetheless, Roy J. had ample evidence before him, evidence that was not disputed by the parties, to conclude that, as a result of discussions between the Ministry of the Environment and the Ministry of Agriculture and Food, certificates of approval for farm waste disposal were not required. As a matter of practice, sanctioned by the two enforcing Ministries in question, Roy J. did not err in finding that the proposed construction, along with its renovations relating to the manure collection, transmission and storage system, would not contravene the OWRA and, hence, had no real or logical nexus to it.

¶ 146 Regulation 903 of the OWRA, which deals with unused wells, was not specifically mentioned by Roy J. in his reasons. However, the evidence concerning the unused wells was extremely conflicting. There was nothing in the evidence to show that the proposed renovations would contravene Regulation 903 of the OWRA. I can find no error in Roy J. treating Regulation 903 of the OWRA in the same way that he dealt with the rest of the provisions of the OWRA.

¶ 147 In his discussion of the Fisheries Act in para. 57 of his decision, Roy J.'s reference to a "flood plain" and Cold Springs Farms Limited v. Serpa, 54 O.R. (3d) 266 is confusing. That decision did not deal with the construction of a building in the area of a flood plain. The case of Upper Thames River Conservation Authority v. London (1989), 67 O.R. (2d) 784 (Ont. Dist. Crt.) deals with the construction of buildings on a flood plain. In that case, the Conservation Authorities Act and its regulations were found to be applicable law.

¶ 148 Nonetheless, with respect to the Fisheries Act, there was no evidence before Roy J. to establish a real and logical nexus

between that Act and the proposed construction. There was no evidence to show that the farm waste from the proposed operation would go into any of the surrounding watercourses. I cannot find that Roy J. erred in finding on the evidence before him that the proposed construction would not contravene ss. 35 and 36 of the Fisheries Act and hence render it applicable law.

¶ 149 Finally, with respect to the EPA, I can find no error in Roy J.'s conclusion that there was no rational and necessary nexus between the purpose of s. 14 of the EPA and s. 8 of the BCA in the circumstances of this case. Roy J. did not accept without reservation Killeen J.'s interpretation of s. 14(1) and (2), that there was an absolute and complete exemption for agricultural activities from the operation of those sections. On my reading of those provisions of the EPA, I can find no such absolute exemption. I agree with the submissions of the City of Ottawa that, on a proper reading of those provisions of the EPA, normal farming practices may be exempt, but not beyond the point where harm results or is likely to result from such activity. However, I cannot find that Roy J. erred in finding that the proposed construction would not, on the evidence before him, in any way breach the provisions of the EPA. It was, therefore, not relevant as applicable law.

¶ 150 The last issue to be dealt with is the second issue on the cross-appeal; namely,

Did the application judge err in refusing to recognize the right of the Intervenor to a legal non-conforming use on the property as the CBO had so concluded?

¶ 151 For the reasons given earlier, this is clearly a question of mixed fact and law. It can be likened to the issue that was before the Supreme Court of Canada in Housen v. Nikolaisen, supra. In that case, the trial judge had to apply the legal principle of duty of care to the facts of the case, grounded on the evidence, to determine whether the party was negligent. As was pointed out in Housen v. Nikolaisen, supra, the finding of negligence made by the trial judge is entitled to the highest deference and should only be overturned by an appeal court if it can be shown that the trial judge made a "palpable and overriding error". So in this case, Roy J. had to apply the accepted legal principle, with respect to a claim for a legal non-conforming use, as established by the Supreme Court in Saint-Romuald v. Olivier, supra, to the facts of the case, grounded on the evidence, to determine whether there has been a change in use. That finding is entitled to the highest deference and should be overturned only if this Court can find that Roy J. has made a "palpable and overriding error".

¶ 152 It was not disputed by the parties that the legal test to be applied to the facts of the case to determine whether there is a change in use is that established by the Supreme Court in its recent decision, Saint Romuald v. Olivier, supra. At an earlier part of this decision, I reviewed in some detail Roy J.'s enunciation and application of the test to the facts of this case. Upon having made that review, I can find no error in the application judge's understanding and enunciation of the test. It was correctly stated.

¶ 153 In his submissions, the Intervenor put great emphasis on the fact that the intended hog farm operation was nothing more than the continuation of the previous agricultural use, that had been made of the farm in the preceding dairy farm operation, with respect to the number of animal units, the volume of animal waste and the farm practices relating to the processing and use of that waste. Clearly, this had to be considered, as Roy J. did, given the evidence before him. However, to have considered that alone would clearly have rendered the analysis merely a "category" approach to deciding whether a claim to a legal non-conforming use existed or not. This broad "category" approach was specifically rejected by the Supreme Court in Saint-Romuald v. Olivier, supra, and correctly not followed by Roy J.

¶ 154 I now consider Roy J.'s application of that test to the facts and evidence presented before him. Just as this Court has had, so too did Roy J. have a substantial amount of evidence presented before him. Without limiting the full inventory of the evidence placed on record, the following is an example of the scope, volume and substance of that evidence:

* Maps and charts relating to the location and identification of the Property, including any near-by creeks and watercourses.

* Information about the historical and current farming usage of the Property and its surrounding land and neighbourhood.

* A number of professional reports and studies commissioned by both the City of Ottawa and the Intervenor relating to the topography, geology and hydrology of the Property. Those reports, among other things, dealt with the soil type, the presence and condition of abandoned wells and the tile drainage and "French drains" on the Property, as well as the significance of all of this for the water resources associated with the Property and the surrounding land.

* Information about the nature and magnitude, both with respect to livestock numbers and financial operation, of the pre-existing dairy farm operation on the Property.

* Information about the nature and magnitude of the proposed hog farm operation. This included, among other things, information about livestock numbers, the new technology to be used in the care and breeding of the hogs, the number of employees and other professionals that would be used on a regular basis in the operation, the delivery system and other details of the day to day operation of the hog farm.

* Information and photographs of the realized and proposed renovations to the buildings in question, including the cost of those renovations. This information also included details relating to the Intervenor's proposed manure transmission, storage and spreading system.

* Detailed information about the Intervenor's proposed Nutrient Management Plan, including the constituent parts of its operation in the hog farming as well as the details of the process by which it was approved by OMAF. There was even information about how the Intervenor's Nutrient Management Plan met, perhaps even more than legally required, the recently passed Nutrient Management Act. Based on their opportunity to question various professionals involved in Nutrient Management Planning relating to agricultural operations, there was also information about the alleged deficiencies and the alleged strengths of Nutrient Management Plans, in general, and the Nutrient Management Plan of the Intervenor, in particular, and how it may impact on the environment and the surrounding farming community.

* The views and evidence of such professionals as Dr. Murray S. McQuigg of the Walkerton Inquiry and Mr. Luc Brunet, and Mr. Robert Chambers about the environmental protections and concerns of the proposed hog farm operation. The CBO provided her own affidavit concerning her perception of certain aspects of the proposed hog farm operation and the process of this litigation.

* Information about the findings and recommendations of the Walkerton Inquiry.

* Information comparing dairy farm operations with pig farm operations from the point of view of livestock numbers, volume of manure production and processing and odour to the community.

* Details of the concerns raised by the City of Ottawa relating to the risks to the environment and the surrounding lands that they anticipated, if the proposed hog operation were to go ahead as well as the Intervenor's reply to the concerns raised.

* Affidavits, as well as the transcripts of the questioning that took place on those affidavits, and letters from neighbours to the Property and Ottawa citizens, relating to the concerns about the environmental and community impact of the proposed hog farm in their midst. There were also affidavits from individuals who supported the Intervenor's proposed plans and these were before the Court too.

* Information about the Quebec moratorium on hog farm operations and the reasons for such moratorium.

* Information about the subject matter, enforcement procedures and practices followed by the various Ministries responsible for the three environmental statutes in question, the OWRA, the Fisheries Act and the EPA.

¶ 155 With all this evidence plus more before him, Roy J. applied the correct legal test, considering all of the seven factors enunciated by the Supreme Court, and came to the conclusion that the proposed hog operation constituted a change in use from the previous dairy-farm operation.

¶ 156 In examining the analysis made by him and the reasons stated in his decision, I cannot find that Roy J. considered irrelevant evidence, in coming to his final decision, as alleged by Intervenor. While Roy J. makes reference to such things as the Quebec moratorium, the Walkerton Inquiry and the original intention of the Intervenor to operate with a much larger number of livestock, when one examines the whole of his decision, one cannot conclude that his decision was based on these few isolated facts.

¶ 157 Furthermore, those facts cannot be considered completely irrelevant. They provide important contextual and narrative information, logically connected to the nature of the factors that the Supreme has mandated be considered in the Saint-Romuald v. Olivier, supra decision. (See also Peacock v. Norfolk (County) Chief Building Official, supra.)

¶ 158 As is evident from his reasons, Roy J considered all of the evidence before him. His findings of fact and inferences of fact are supported by the evidence before him. His findings of fact and inferences of fact are grounded on the evidence before him and are not speculative. Based on the evidence, he did not characterize the legal non-conforming use in question too narrowly nor inflexibly, but dealt with it in a fair and measured manner in his attempt to deal with the interests of the farmer and the community in a balanced way, as directed by the Supreme Court. I can find no basis on the evidence or in Roy J.'s reasons for concluding, as the Intervenor submits, that he came to his conclusion based on "l'utilisation de la preuve subjective".

¶ 159 As Rosenberg J.A. pointed out in Pedwell v. Pelham (Town), supra, while I might not have made all of the same findings as the application judge or drawn the same inferences from the very substantial and oftentimes conflicting evidence, that is not the

standard. I am not satisfied that the application judge was palpably in error. For this reason, the answer to this issue on the cross-appeal is in the negative.

¶ 160 Counsel directed the Court's attention to some jurisprudence on the issue of legal non-conforming use. Some of this case law pre-dated the final crystallization of the test by the Supreme Court of Canada decision in Saint-Romuald v. Olivier, supra. (See Glenelg (Township) v. Davies (1992), 10 M.P.L.R. (2d) 260 (Ont. C.A.); Heutinck v. Oakland (Township) (1997), 42 M.P.L.R. (2d) 258 (Ont. C.A.); Nepean (City) v. D'Angelo, [1998] O.J. No. 5299 (Ont. Gen. Div.).

¶ 161 The few cases that have been decided since the Supreme Court released its decision in Saint-Romuald v. Olivier, supra, to the extent that comparisons can be drawn between the cases on their different facts, appear to support the conclusion of Roy J. In Peacock v. Norfolk (County) Chief Building Official, supra, Taliano J. found, relying on the Supreme Court decision, that even the proposed expansion of an existing hog farm operation could constitute a change in character and not enjoy a legal non-conforming use. He states at p. 13 of his decision:

> [para76] ... Put another way, the doctrine of legal non-conforming use cannot be used to protect expansion that necessarily entails such grave environmental and public safety dangers. I am fortified in this view by the decision of the Supreme Court of Canada in Saint-Romuald (Ville) v. Olivier ...

¶ 162 In 4310845 Manitoba Ltd. v. Morris (Rural Municipality), supra, like the facts in this case, the proposed hog farm operation had not yet commenced. The Court, in dealing with the legal test enunciated by the Supreme Court in Saint-Romuald v. Olivier, supra, dealt with the fact that the hog operation had not yet commenced and that therefore the Municipality could not argue adverse neighbourhood effects from a factually founded position. Despite this, the Court found that, on the evidence, the residents of the community had "expressed reasonable concerns". The Court concluded that there was not a continuation of the pre-existing non-conforming use.

¶ 163 As can be seen from his reasons, Roy J. took the same approach to this issue. I can see no error in this. Given the evidence before him, it did not render his treatment of the factor of community effects and the balancing that he had to do with respect to the community interests and the farmer's interests speculative and any less grounded in the evidence.

¶ 164 In Rolstein v. Oro-Medonte (Township) (2002), 34 M.P.L.R. (3d) 266 (Ont. S.C.J.), the Court had to decide whether a legal non-conforming use continued after renovations were made to a boathouse on a severed property. The appeal was refused by Howden J. who found that he lacked the evidence to conduct the measured approach and analysis, grounded on the evidence, as required by the Supreme Court in Saint-Romuald v. Olivier, supra. The facts of that case are very different from the facts of the case at bar. In this case, the evidence was substantial. Roy J. was able and did carry out the measured analysis grounded on the evidence, as mandated by the Supreme Court in Saint-Romuald v. Olivier, supra.

¶ 165 By way of summary, for all of the reasons given above, the second and third issues on the appeal brought by the City of Ottawa are answered in the negative. The appeal is therefore dismissed. The second issue on the cross-appeal is answered in the negative. The cross-appeal is therefore dismissed.

¶ 166 If the parties cannot reach an agreement on the question of costs, with respect to both the appeal and cross-appeal, the Court will receive the short written reasons of the parties on the question of costs. The City of Ottawa shall have three weeks from the release

of this decision to file and serve its written submissions on costs, with respect to both the appeal and cross-appeal. The CBO and the Intervenor shall have two weeks from that time to file and serve their submissions on costs with respect to the appeal and cross-appeal. The City of Ottawa, if it so chooses, shall have one further week from that date to reply. If the Court deems it necessary, it may ask the parties to supplement their written submissions on costs with brief oral arguments on a date to be fixed by the trial coordinator.

REGIONAL SENIOR JUSTICE J. F. McCARTNEY

[1] The Applicant herein seeks an order confirming the emergency order issued by the Applicant February 4, 2005, and for recovery of the costs expended by the Applicant, all pursuant to the Building Code Act, 1992.

[2] Initially confusion arose over the section of the Act under which the building inspector purported to act, it seems clear to me that the reference in the order of February 4, 2005 to Section 15.10(1) is a reference to the Section 17, Section 15 being the replacement section for Section 17 in the amended Act which was not yet in force at the time of the order.

[3] The facts are as follows:

On February 2, 2005, a 26-foot section of a building in the Applicant municipality caved in, apparently due to snow load. On that date the building inspector, Karl Kopf, attempted to notify the owner of the situation.

[4] As a result of the inspection Kopf determined that the building posed an immediate danger to health and safety because of the following:

1. Another roof collapse was possible or probably, and

2. The building protected an old mine shaft which was now exposed.

[5] On February 4, 2005, Kopf prepared the order under Section 17, indicating the danger and requesting the owner to demolish the building and remove all debris, which work had to begin by February 7, 2005 – three days hence. The order was served on the owner by regular mail and a copy was sent to the tenant.

[6] On February 8, 2005 the municipality commenced to do the work as ordered, and on May 24, 2005 the owner was sent a bill for the costs of the work i.e. $5,111.08, with attached invoices.

[7] The Respondent argues that even though the order is entitled "emergency order under Section 17" what it really is is an unsafe building order under Section 15 because it didn't require the work to be done "immediately" as set out in Section 17. Under Section 15, goes the argument; all the inspector can do is to require remedial work to be done by the owner. The Respondent also argues that since the tenant was moving his chattels by February 7, the order was in fact being complied with, and the municipality should not have proceeded with the demolition on February 8th as they did.

[8] The standard of review here is to my mind one of reasonableness. As was said by Ducharme J. in 1218897 Ontario Ltd. V. Toronto:

> "The more the C.B.O.'s decision is solely an interpretation of law, the closer the standard of review will be to correctness. The more the C.B.O.'s decision is dependant upon factual determinations within the specific expertise of the C.B.O., the more deferential will be the standard. Generally speaking, however, a standard close to correctness will be applied to decisions based on law or jurisdiction and a standard of reasonableness will be applied to questions of fact. Within the standard of reasonableness, the degree of deference or the "weight" to be given to any particular determination will depend on the circumstances. Runnymede Development Corp. v. 1201262 Ontario Inc. , (2000), 47 O.R. (3d) 374 at 385 to 387 (Sup.Ct.Just.)

Here the question of what constituted "an immediate danger to the health and safety of any person" in our situation is much more a question of fact then it is of law.

[9] And so, applying the standard of reasonableness to the evidence before me, I cannot come to the conclusion that the building inspector's decision and resulting order were unreasonable. Furthermore, the fact that the tenant had begun moving items from the building could hardly be determinative of compliance with the order, since the basic premise of the order was to correct a danger to the public and not to remove stored items.

[10] Under all the circumstances, the emergency order of February 4, 2005 is confirmed, and the Respondent owner Shetterly Enterprises Ltd. is ordered to reimburse the Applicant for the amount spent to terminate the danger -$5,111.08.

[11] Costs may be spoken to if required within the next 15 days.

Regional Senior Justice J. F. McCartney

Between

Rexlington Heights Ltd. (9, 11, 25 & 27 Bergamot Avenue),
appellant
and
Her Majesty the Queen
respondent

P.A. Cumming J.

Heard: September 21-22, 2005.
Judgment: October 5, 2005.

Counsel:

David Tang, for the Appellant

Lisa Solish, for the Respondent

REASONS FOR DECISION

¶ 1 **P.A. CUMMING J.**:— This is an appeal by Rexlington Heights Ltd. ("Rexlington") pursuant to s. 15.3(4) of the Ontario Building Code Act, 1992 S.O. 1992, c. 23 as amended (the "Act"). This appeal involves an issue of first instance.

¶ 2 Do certain standards relating to guards and handrails in stairwells and stairways in the Ontario Building Code, 1997 O. Reg. 403/97 (the "Code"), being a regulation to the Act, apply to apartment buildings in the City of Toronto (the "City") whose construction pre-dates the introduction of these standards in the Code?

¶ 3 The issue is whether all buildings constructed prior to the coming into force of the provisions of the Code relating to handrails and guards must be brought into conformity with those provisions. The Crown asserts that City of Toronto Municipal Code by-law 629 relating to "Property Standards" ("by-law 629") requires that this be done.

Background

¶ 4 The amalgamation of several municipalities into the City came into force January 1, 1997.

¶ 5 An Order was made by a Property Standards Officer for the City on December 4, 2004. The Order sets forth in its Schedule "A" required repairs and maintenance in respect of four residential apartment buildings, being #9, #11, #25 and #27 Bergamot Ave. in Toronto; properties owned by the appellant, Rexlington. Two of the buildings are four stories high and have 73 apartments each, while two buildings are seven stories high and have 130 apartments each. There are a total of 406 apartment units. Each building has two interior stairwells. The Order asserts that Rexlington is in violation of the City of Toronto's by-law 629 relating to "Property Standards" in respect of the stairwells.

¶ 6 The subject buildings were constructed and first occupied in 1958, some 47 years ago. The guards and handrails in the multiple stairwells are not in disrepair. They simply do not comply with the standards now seen in current ss. 3.4.6.4 and 3.4.6.5 of the Code. The handrails and guards did comply with all applicable building

standards at the time of construction in 1958. (The buildings are located in what was known, pre-amalgamation, as the City of Etobicoke. The evidence suggests that Toronto and Etobicoke had substantially the same handrail and guard standards in 1958.)

¶ 7 It is common ground that there are hundreds, perhaps thousands, of pre-Code buildings in the City in the same position as Rexlington.

¶ 8 The Order of the Property Standards Officer was first appealed by Rexlington, pursuant to s. 15.3 of the Act, to the Property Standards Committee. The Committee confirmed the Order in a decision dated March 8, 2005.

¶ 9 Rexlington now appeals to this Court, as allowed under s. 15.3(4) of the Act. The matter is heard as a trial de novo.

¶ 10 Rexlington does not dispute the factual findings in the Property Standards Officer's Order. The Crown asserts that the factual findings in the Property Standard Officer's Order, and the Committee's confirmation, substantiate a finding that Rexlington has not complied with the requirements of s. 19.C of the Code.

¶ 11 Section 15.1(3) of the Act provides for "Municipal Property Standards", inter alia:

> Standards for maintenance and occupancy
>
> (3) The council of a municipality may pass a by-law to do the following things if an official plan that includes provisions relating to property conditions is in effect in the municipality or if the council of the municipality has adopted a policy statement as mentioned in subsection (2):
>
> 1. Prescribing standards for the maintenance and occupancy of property within the municipality or within any defined area or areas and for prohibiting the occupancy or use of such property that does not conform with the standards.
>
> 2. Requiring property that does not conform with the standards to be repaired and maintained to conform with the standards or the site to be cleared of all buildings, structures, debris or refuse and left in graded and levelled condition.

¶ 12 Given the clear language of this provision, it is undisputed that the City has the right to legislate property standards for the City. As well, it is undisputed that the City can legislate so that the new property standards apply to pre-existing buildings: George Sebok Real Estate Ltd. v. Woodstock (City) (1978), 21 O.R. (2d) 761 (C.A.) at 762-763.

¶ 13 The definition of "property" in s. 15.1(1) of the Act is applicable to municipal property standards, and includes a building "heretofore or hereafter erected". It therefore provides authority that all property in a municipality can be covered by its by-laws. The definition of "repair" includes "the making of additions or alterations or the taking of any other action that may be required to ensure that a property conforms with the standards established in a by-law passed under this section". (These definitions of "property" and "repair" are the same as seen in s. 1 of by-law 629 and are substantially the same as seen in s. 36(3) of the Planning Act S.O. 1972, c. 118 which governed the predecessor to by-law 629, being by-law 5245-77: Sebok, supra at 761-762.)

¶ 14 The section 15.1 enabling provision provides the authority for the City's by-law 629 relating to "Property Standards". Section 2 of by-law 629 states that the property standards therein apply to all property in Toronto.

¶ 15 Under the heading, "Stairs, guards, handrails and other structures", s. 19.C of this by-law requires that:

> All required guards and handrails shall be installed in accordance with and maintained to comply with the Ontario Building Code.

¶ 16 Section 3.4.6.4 of the Code provides inter alia:

> 3.4.6.4 Handrails
>
> (1) An exit ramp or stairway shall have a handrail on at least one side, and if 1 100 mm (3 ft 7 in) or more in width, shall have handrails on both sides.
>
> ....
>
> (4) Handrails on stairs and ramps shall be not less than 865 mm (2 ft 10 in) and not more than 965 mm (3 ft 2 in) high, measured vertically from a line drawn through the outside edges of the stair nosing or from the surface of the ramp, except that handrails not meeting these requirements are permitted provided they are installed in addition to the required handrail.

¶ 17 Section 3.4.6.5 of the Code provides inter alia:

> 3.4.6.5 Guards
>
> (1) Every exit shall have a wall or a well-secured guard on each side.
>
> ....
>
> (5) Except as provided in Sentence (6), openings through any guard which is required by Sentence (1) shall be of a size which will prevent the passage of a sphere having a diameter more than 100 mm (4 in) unless it can be shown that the location and size of openings which exceed this limit do not represent a hazard.

The Evidence

¶ 18 Mr. David Giezen, the Property Standards Officer who issued the Order for the City, and Mr. Gino Vescio, the Acting Coordinator for the City for the enforcement of property standards, testified for the Respondent.

¶ 19 Mr. Tony Alexander, a professional engineer and founder of Construction Control Inc., testified on behalf of the appellant Rexlington as an expert civil engineer in respect of the subject buildings.

¶ 20 As stated above, Rexlington does not dispute the factual findings of the Order of the Property Standards Officer. These findings establish non-conformity with ss. 3.4.6.4 and 3.4.6.5 of the Code.

¶ 21 For example, the stairways are generally 43 inches in width from the wall or one inch more than the maximum width allowable for only one handrail. The handrails are generally one and a half inches shorter than required (about 32.5 inches rather than the standard of 34 inches). The openings within the ornamental ironworks between the guards are between four and ten inches rather than the maximum of four inches.

¶ 22 Section 15.2(2) of the Act stipulates that when an Officer "finds that a property does not conform with any of the standards prescribed in a by-law passed under s. 15.1" s/he may make an order requiring compliance.

Analysis

¶ 23 Section 19.C of by-law 629 requires that guards and handrails will "comply with the Ontario Building Code". The Crown argues that this requirement is met by simply looking at the straightforward provisions of ss. 3.4.6.4 and 3.4.6.5 of the Code.

¶ 24 I disagree. The requirement of s. 19.C is compliance with the Code as an entirety. Section 19.C does not simply refer to ss. 3.4.6.4 and 3.4.6.5 of the Code. Therefore, how the by-law applies these provisions will depend upon how they have meaning within the context of the Code.

¶ 25 In my view, therefore, the Code must be considered in its entirety to discern the correct application of ss. 3.4.6.4 and 3.4.6.5. This examination requires an exercise of statutory interpretation.

¶ 26 The rules formulated for the construction of statutes are also applicable to interpreting the meaning of municipal by-laws: McLear v. Mason (1988), 65 O.R. (2d) 228 (H.C.J.) at 237. In that case at 237 and 238, Justice Sutherland refers to excerpts from E.A. Driedger, Construction of Statutes, 2nd ed. (Toronto: Butterworths, 1983) at 33-7 and 89-92, and from Maxwell on the Interpretation of Statutes, 12th ed. (London: Sweet & Maxwell, 1969) at 58-64 and 105-8 to summarize the general rules of, or factors in, statutory interpretation as follows:

> (a) ... regard should be had to the whole of the statute or by-law;
>
> (b) ... in making a choice between alternative meanings, the court should favour the meaning that is in harmony with the purpose and the other provisions of the enactment;
>
> (c) ... a construction that avoids absurdity, injustice, anomaly, hardship and inconvenience should be preferred;
>
> (d) ... regard must be had to the scheme of the legislation, and each provision construed in a way that will, where possible, place a consistent, rational, and probable meaning on all of the provisions when read together;
>
> ....
>
> (g) ... if there are two reasonable meanings to the language of a provision, the interpretation that will avoid penalty is to be adopted.

See now Ruth Sullivan, Sullivan and Driedger on the Construction of Statutes, 4th ed. (Markham: Butterworths, 2002).

¶ 27 Of specific relevance in interpreting the correct meaning of the by-law and the Code is the recognition that the Code and by-laws

must balance private interests and public interests in planning and safety concerns. In Bayshore Shopping Centre Ltd. v. Nepean (Township), [1972] S.C.R. 755 at 764, Spence J. recognized that by-laws which are restrictive of rights should be strictly constructed as a "man's property is his own which he may utilize as he deems fit" but that modern zoning provisions should be construed more liberally due to the public interest. Given these conflicting values, neither strict nor liberal interpretation is mandated and a more balanced approach is appropriate: Rotstein v. Oro-Medonte (Township), [2002] O.J. No. 4990 (Sup. Ct.) at para. 22.

¶ 28 Section 2.1.1.2 of the Code provides, inter alia, that Part 3 of the Code applies (with some exceptions) to all buildings with certain uses and exceeding certain areas and heights. It is common ground that the subject buildings are all within the ambit of s. 2.1.1.2. The Code applies to the buildings of Rexlington. But do ss. 3.4.6.4 and 3.4.6.5 of the Code apply to the buildings as they stand at present?

¶ 29 A consideration of the entirety of the Code's provisions establishes that the Code's provisions are generally intended to apply only in respect of new building construction, building extensions, and material alteration or repair.

¶ 30 Section 2.1.1.6 provides that Part 11 of the Code relating to "Renovation" generally does not apply to buildings in existence for less than five years. Part 11 deals with existing buildings that are subject to an extension, material alteration or repair. See ss. 11.1.2.1, 11.3.1.1, and 11.3.2.1. Thus, for example, if a building of less than five years is undergoing a material alteration, compliance with Part 11 is unnecessary (presumably the drafters felt that recently constructed buildings would already meet the Code's standards and need not trigger the requirements of Part 11 (such as an evaluation of the performance level of the building and compensating construction: s. 11.1.2.1)).

¶ 31 Section 2.1.1.7 provides that where an existing building is extended, or subject to material alteration or repair, the Code is applicable only to the design and construction of the extension and those parts of the building that are subject to the material alteration or repair. (In the situation at hand, Rexlington is not constructing an extension or carrying out an alteration or repair.) Only the areas or portions of a building being renovated, or other parts of a building adversely affected by that renovation, need comply with the requirements of the Code. All other areas or portions need not comply with ss. 3.4.6.4 and 3.4.6.5 of the Code and may remain unchanged: see s. A.2.1.1.7 of Appendix A, providing "Explanatory Material" for the Code.

¶ 32 Sections 3.15 and 9.41 of the Code impose additional requirements where the proposed construction in respect of an existing building will result in significant changes to use of all or part of a building.

¶ 33 Together these provisions indicate that in the case of buildings that pre-date the Code, the provisions of the Code are only triggered upon the commencement of constructing an extension or making a material alteration or repair. In the absence of such activity, the building is subject to the standards in place at the time that it was built.

¶ 34 Moving to the by-law itself, section 19.C of by-law 629 could have been drafted to refer directly to ss. 3.4.6.4 and 3.4.6.5 to make it clear the standards therein apply to pre-existing buildings. But instead s. 19.C refers to the Code as an entirety. By referring simply to the Code as an entirety, the by-law is in effect stating that the Code covers the field of applicable regulation in this area. As the Code does not require handrails and guards to meet current standards unless an old building is undergoing an extension, major alteration or repairs, then they are also not required in the situation at hand. If the clause had been written, "guards and handrails shall be installed in

accordance with ss. 3.4.6.4 and 3.4.6.5 of the Code", then it would be necessary to read the by-law to determine what buildings are covered by these standards. The by-law would define the scope, being "all property", to which the requirements would apply.

¶ 35 It is a principle of statutory interpretation that when an act, or by-law, is read as a whole, one can assume that the legislature intended a coherent piece of legislation, with consistency of patterns of expression: Sullivan and Driedger, supra, at 165. Therefore, further clarity can be achieved by reading the by-law in its entirety, and comparing the different provisions. The by-law has several provisions that set out precise standards that clearly apply to all buildings, whenever they were built. See for example, s. 5.1.B as to the lettering size of "Emergency contact signs"; the manner of "firewood storage" required by s. 10.E; the manner of drainage of roofs and roof structures provided for in s. 20.C; and security measures in respect of vacant properties as required by s. 24.B. See also s. 25 dealing with occupancy standards and habitable areas and rooms; s. 29.D proscribing dead bolt locks on certain doors; and s. 38.B establishing heating standards for habitable rooms. Had the City similarly intended that all buildings, whenever built, comply with the standards seen in ss. 3.4.6.4 and 3.4.6.5 of the Code, clear language could have been employed.

¶ 36 By-law 629 does not often refer to specific standards of the Code in specifying its "Property Standards". It is not necessary to do so as the standards of the Code will apply to all buildings irrespective of their incorporation by reference in by-law 629. Therefore, where by-law 629 refers specifically to the Code, as for example in ss. 36.B and 19.C, it seems to be for the purpose of confirming that the Code provides the complete regime applicable to that aspect of buildings in the municipality. Sometimes the standards of the Code are referred to in by-law 629 (see for example ss. 41.D.(5)a, J. and L.) as one element of the by-law, suggesting that the by-law serves to provide additional, supplementary standards to those requirements found in the Code. By-law 629 is careful in stating that where there may possibly be a conflict between it and the Code, the provisions of the Code prevail. See ss. 29.F and 41.I.

¶ 37 The purpose of by-law 629 is both to provide property standards in respect of maintenance and occupancy where the Code is silent, and to supplement the Code provisions as to construction by imposing additional, but not inconsistent, standards. The by-law is therefore not intended to replace the Code and should not be read as expanding on the Code unless this intent is expressly stated. It is a presumption of statutory interpretation that when there is doubt as between two meanings, a judge is justified in choosing the construction which encourages continuity with existing law over an interpretation that departs from it: Pierre-André Côté, The Interpretation of Legislation in Canada, 3rd ed. (Toronto: Carswell, 2000). On the basis of this principle, the preferred interpretation of by-law 629 is that it adopts the Code and does not expand upon its application.

¶ 38 It is also appropriate for courts to rely on social context, and a particular mischief that the legislation is intending to cure, in determining meaning: Sullivan and Driedger, supra, at 460-462. Clearly, many of the provisions in by-law 629 that refer to all buildings, whenever constructed, deal with matters of safety, such as regulating emergency signs and proscribing dead bolt locks on fire exits. A purposive interpretation may suggest it is appropriate to adopt a broader reading of s. 19.C. However, in this case, no evidence was presented as to a particular concern that all old buildings not in strict compliance with the standards of ss. 3.4.6.4 and 3.4.6.5 are a hazard to public safety and that such standards are thereby intended by s. 19.C to be imposed notwithstanding there is not a building extension, major alteration or repair. In the absence of such evidence, it would be inappropriate to attempt to make policy.

Disposition

¶ 39 In my view, and I so find, ss. 3.4.6.4 and 3.4.6.5 of the Code do not apply to pre-existing buildings except in certain limited circumstances, as set forth in the other provisions of the Code (ss. 2.1.1.7, 3.15 and 9.41, discussed above).

¶ 40 In my view, and I so find, section 19.C of by-law 629 does not require buildings that pre-exist the Code to comply with ss. 3.4.6.4 and 3.4.6.5 of the Code except when other provisions of the Code impose such requirements (such as in the case of an existing building being extended, or subject to major alteration or repair).

¶ 41 For the reasons given, I must rescind the Order to repair.

¶ 42 There is an alternative basis for rescission of the Order. The Court has all of the powers and functions of the Property Committee on an appeal (s. 15.3(6) of the Act). Under s. 15.3(3.1):

> ... the committee may do any of the following things if, in the committee's opinion, doing so would maintain the general intent and purpose of the by-law and of the official plan or policy statement:
>
> 1. Confirm, modify or rescind the order to ... repair.
>
> ....

Thus, in its discretion, the Court is not obliged to require absolute compliance with the Order. See generally McAllister Investments Ltd. v. North York (City), [1997] O.J. No. 1435 (Ont. Gen. Div.). Given all of the circumstances of this case, and given the minimal risk associated with the non-conforming variances of the subject buildings, notwithstanding the interpretation of s. 19.C, I would exercise my discretion to rescind the order to repair.

¶ 43 Implementation of the Order at issue would result in an expenditure of tens of thousands of dollars by Rexlington. Given that the variances at issue are reportedly typical of residential buildings of this age, size and type, implementation of a similar requirement throughout the City by all owners of pre-existing buildings would undoubtedly be at a cost of tens of millions of dollars.

¶ 44 Ultimately, it is, of course, up to the legislative body, City Council, to determine the appropriate standards for guards and handrails of buildings. As I have found, the subject buildings are in compliance with the Code. If the standards of ss. 3.4.6.4. and 3.4.6.5 of the Code are seen by City Council to be appropriate for the subject buildings, which were constructed prior to the passage of such provisions of the Code, then City Council can, of course, amend by-law 629. Any such policy determination should be signified explicitly and clearly. City Council could amend by-law 629 to make it explicit that the Code's standards for handrails and guards under ss. 3.4.6.4 and 3.4.6.5 apply to all buildings even when the Code itself does not require compliance. The perceived benefits and costs of such a policy can best be weighed after interested persons have given their views through the legislative process. That is the appropriate approach in accordance with the normative standards of a democratic society.

¶ 45 For the reasons given, the appeal is allowed and the Order is rescinded.

P.A. CUMMING J.

Saint-Romuald (City) *v.* Olivier, [2001] 2 S.C.R. 898, 2001 SCC 57

City of Saint-Romuald
Appellant

v.

Claudette Olivier, Louise Bolduc, Roger Bolduc, all three carrying on business as "Les Immeubles Jancloroc enr.", and 9010-4407 Québec Inc.
Respondents

Indexed as: Saint-Romuald (City) *v.* Olivier

Neutral citation: 2001 SCC 57.

File No.: 27210.

2000: December 5; 2001: September 27.

Present: McLachlin C.J. and L'Heureux-Dubé, Gonthier, Major, Bastarache, Binnie and Arbour JJ.

on appeal from the court of appeal for quebec

Municipal law – Zoning by-laws – Scope of acquired rights – Legal non-conforming use – Definition of purpose of a pre-existing use – Variation, extension or alteration of a use – Nightclub substituting nude dancers for western signers – Whether change in form of entertainment constitutes illegal replacement of original non-conforming use with other non-conforming use – Whether change in form of entertainment amounts to forfeiture of acquired right to operate nightclub.

The individual respondents are owners of a building located within the territory of the appellant City where country and western entertainment had been presented since 1990. In 1991, a new zoning by-law came into force under which uses "restaurant or bar with entertainment" and "restaurant or bar with erotic entertainment or films" are not permitted although they are not expressly prohibited. The by-law also provides that a non-conforming use protected by acquired rights may not be replaced by another non-conforming use. In 1994, the respondent corporation bought out the business and began operating a bar which presented entertainment involving nude dancers. The appellant tried to obtain an order requiring the cessation of what it regarded as the unlawful replacement of one non-conforming use by another. The Superior Court dismissed the appellant's application on the ground that the respondents enjoyed acquired rights. The Court of Appeal affirmed that decision.

Held (L'Heureux-Dubé, Gonthier and Bastarache JJ. dissenting): The appeal should be dismissed.

Per McLachlin C.J. and Major, Binnie and Arbour JJ.: The *Act Respecting Land Use Planning and Development* allows Quebec municipalities to regulate acquired rights, prevent their substitution by other non-conforming uses, and prohibit their extension and alteration. The municipality may not, however, order the cessation of such uses unless they have been abandoned or interrupted for "a reasonable period" no shorter than six months. Here the municipality did not purport to prohibit the alteration of acquired rights nor did it purport to suppress nude dance bars under the *Cities and Towns Act.* The general language of s. 9 of the by-law is not sufficient to constitute an express prohibition sufficient to overcome the respondents' acquired rights.

Under the doctrine of "acquired rights", while the respondents are not entitled to use the premises for any use within a

category previously permitted under the by-law but only to continue to use the premises as they were when the new by-law was passed, they are given some flexibility in the operation of that use. In general, merely continuing the precise pre-existing activity, even at an intensified level, is protected unless the intensification is of such a degree as to create an altogether different use. Both remoteness and neighbourhood effects have a role to play in the proper disposition of this type of case. Each contributes to the real and natural expectation of the landowner. The landowner overreaches itself if (i) the scale or intensity of the activity can be said to bring about a change in the type of use, or if (ii) the addition of new activities or modification of old ones is seen by the Court as too remote from the earlier activities to be entitled to protection, or if (iii) the new or modified activities can be shown to create undue additional or aggravated problems for the municipality, the local authorities, or the neighbours. The factors are balanced against one another.

The issue of limitations on the respondents' acquired right should therefore be approached as follows: (1) It is firstly necessary to characterize the purpose of the pre-existing use actually carried on at the site. (2) Where the current use is merely an intensification of the pre-existing activity, it will rarely be open to objection unless the intensification is such as to constitute a different use altogether. (3) To the extent a landowner expands its activities beyond those it engaged in before, the added activities may be held to be too remote from the earlier ones to be protected under the non-conforming use. In such a case, it is unnecessary to evaluate "neighbourhood effects". (4) To the extent activities are added, altered or modified within the scope of the original purpose, the Court has to balance the landowner's interest against the community interest, taking into account the nature of the pre-existing use, the degree of remoteness and the new or aggravated neighbourhood effects. The greater the disruption, the more tightly drawn will be the definition of the pre-existing use or acquired right. (5) Neighbourhood effects, unless obvious, should be established by evidence if they are to be relied upon. (6) The resulting characterization of the acquired right should not be so general as to liberate the owner from the constraints of what he actually did, and not be so narrow as to rob him of some flexibility in the reasonable evolution of prior activities. (7) While the definition of the acquired right will always have an element of subjective judgment, the criteria mentioned above constitute an attempt to ground the Court's decision in the objective facts. The outcome of the characterization analysis should not turn on personal value judgments.

Substitution of nude dancers for western singers is not such an extreme variation in the nightclub or cabaret formula as to constitute a wholly different and therefore unprotected use. The respondents' pre-existing use can appropriately be characterized as the commercial offering of a combination of food, drink, ambiance and lawful entertainment to the public. The switch to a different form of entertainment is within this general nightclub purpose.

Per L'Heureux-Dubé, Gonthier and Bastarache JJ. (dissenting): Acquired rights confer immunity on the actual use of land being exercised before a change to the by-law, while merely contemplated use will not enjoy the same immunity. If the use undertaken after the change to the by-law is of the same nature as the actual use under the former by-law, it will be protected by acquired rights. In order to determine whether the nature of the use has changed, the use that was actually exercised prior to the prohibition created by the by-law must first be defined. Whether a change in the nature of the use has occurred must be determined on the basis of the real and natural expectations of the user and the extent to which the amendments serve the purposes of land-use by-laws. Nevertheless, each case turns on its own facts and the nature of the use protected by acquired rights must be determined by the court having regard to the unique facts of each situation.

The appellant prohibited uses "restaurant or bar with entertainment" and "restaurant or bar with erotic entertainment or films" by not expressly permitting them. The requirement for such an express prohibition on presenting erotic entertainment, which the lower courts sought to impose, is unnecessary, since it is based directly on the erroneous use of the "category" approach, which holds that the exercise of a use that falls within a category prescribed by the enacting authority creates an acquired right that extends to any use that falls within that category.

The real and natural expectations of the owner of a country and western bar do not include operating a bar with nude dancers, there being a significant difference in the nature of the two types of entertainment. However, that distinction becomes even more germane when we examine it with the objectives of harmonious development and welfare, which land use legislation is intended to advance, in mind. Efforts to advance those objectives may indeed be informed by considerations of a moral nature, as long as those considerations relate to the primary purposes of the by-laws. In the instant case, one use has indeed been illegally replaced by another, rather than the same use being continued. This change results in loss of the protection conferred by acquired rights.

APPEAL from a judgment of the Quebec Court of Appeal, [1999] Q.J. No. 215 (QL), affirming a decision of the Superior Court dismissing the appellant's application for an order

requiring the cessation of a non-conforming use. Appeal dismissed, L'Heureux-Dubé, Gonthier and Bastarache JJ. dissenting.

Jacques Tremblay and *Bertrand Gobeil*, for the appellant.

François Marchand, for the respondents.

The judgment of McLachlin C.J. and Major, Binnie and Arbour JJ. was delivered by

1 BINNIE J. – The Court's objective on this appeal is to find the proper balance between an individual's right to the continued use and enjoyment of his or her property and the power of the community, expressed through the local municipality, to enhance, by changing the land use regulations, the amenities of surrounding and other affected landowners. As the case arises in Quebec, the specific issue raised is the limitation of previously acquired rights under the *Civil Code*. However, as this is a *public* law matter, the principles of land use regulation applicable in the common law provinces concerning legal non-conforming uses are also relevant.

2 The facts are straightforward. The respondents' country and western cabaret was renamed *L'Extase* ("Ecstasy") and the singing cowboys and cowgirls were replaced by nude dancers. Business improved. The bar was said to be [TRANSLATION] "very busy". The police increased surveillance, but their heightened interest seemed related to a concern over potential impaired drivers (a concern they have with other bars and nightclubs as well) and the opportunity to look for people against whom warrants were outstanding or who were thought to be in breach of court orders. The evidence was that there was no problem of discipline within the bar itself. Further, there was no evidence that nude floor shows attract more clients in trouble with the law than regular bars or that *L'Extase* in fact attracted a more problematic clientele than it did when it was a country and western bar.

3 My colleague Gonthier J. takes the view that by changing the form of entertainment the respondents forfeited their acquired right to operate the nightclub. With respect, I believe such a result would tilt the balance too far in favour of the municipality. I agree with the conclusion of the unanimous Quebec Court of Appeal and would dismiss the appeal.

I. The Issue

4 The facts and applicable enactments are outlined in my colleague's reasons for judgment. I fully agree with his rejection of the "categorical" approach. This is the theory under which an owner, whose use of land does not conform to a new by-law, nevertheless has an "acquired right" to expand, alter or modify an existing use to include anything and everything permitted on that land under the "use category" defined in the prior law (if indeed there was a prior law). While the "categorical" approach may produce a fair result on the facts of this case, it does so only because the categories of use created by the prior by-law were quite narrow. The word "*cabaret*", which was the operative "use" category in the previous by-law, is quite precisely defined in *Le Grand Robert de la langue française* (2nd ed. 1986), vol. 2, at p. 242, *inter alia*, as:

> [TRANSLATION]
> **2.** Establishment presenting satirical, musical or other types of entertainment where patrons may drink, dine or dance. ⇨ **Café concert; nightclub**.

and in *Grand Larousse de la langue française* (1971), vol. 1, at p. 551:

[TRANSLATION]

> **2.** Small establishment presenting artistic or satiric entertainment where patrons may drink, sometimes dine, dance ....

5 However, as my colleague Gonthier J. demonstrates, the "categorical" approach is wrong in principle and will often deliver a result that unduly favours individual landowners at the expense of the community interest. The protected "acquired right" properly relates only to the *status quo*. It does not protect a potential or contemplated use that has never materialized. A similar rule prevails in the common law provinces: see *Heutinck v. Oakland (Township)* (1997), 42 M.P.L.R. (2d) 258 (Ont. C.A.), at para. 6:

> Central to this analysis is our reliance upon the well established rule that the nature of a non-conforming use is not defined by reference to definitions in the by-law. Rather, it must be determined by reference to the use to which the property was put at the time the by-law was passed.

To the same effect, see: *Vancouver (City of) v. Victoria Block Ltd.* (1964), 45 D.L.R. (2d) 118 (B.C.C.A.), at p. 121; *Glenelg (Township) v. Davis* (1992), 10 M.P.L.R. (2d) 260 (Ont. C.A.); *Nanaimo (City) v. Brickyard Enterprises Ltd.*, [1993] B.C.J. No. 992 (S.C.) (QL), at para. 20. The acquired right is no more than a right to carry on using the land for the purpose to which it was *in fact* previously being put. The issue, of course, is how widely or narrowly to circumscribe the description of the purpose of that "pre-existing use".

II. The Pre-Existing Use

6 As stated, the premises in question here have been used as a nightclub (or "cabaret") for many years. Such use is no longer permitted in the relevant zone under the revised provisions. Choice of a broad definition ("nightclub") or a narrow definition ("*country and western* nightclub") of the pre-existing use will largely determine the outcome of the appeal.

7 The necessity of making a careful choice of definition requires us to look realistically at the business being conducted on the premises prior to the new zoning by-law. Nightclubs or "cabarets" constitute a fickle industry. They rise and fall on swings of popularity. Their operators are forever in search of a "winning formula". Location, we are told, is basic, but beyond that the elements of food, drink, ambiance and entertainment are endlessly varied to generate customer interest. A few years ago, customers may have flocked to hear western singers accompanied by steak and potatoes. Some still do. Irish pubs usually offer Irish melodies, but may have to be transformed next season into a different ambiance offering Karaoke. Last year's successful disco may give way to this year's Texas line dancers. Land used for these purposes serves merely as a platform for a business offering a marketable mix of food, drink and lawful entertainment to the public.

8 The appellant takes the position that substitution of nude dancers for western singers is such an extreme variation in the nightclub or cabaret formula as to constitute a wholly different use. I do not agree. It is open to the municipality as a legislator to introduce such value judgments into its land use controls (as it did here under the new by-law), but I do not think the landowner's "acquired right" to continue to carry on business can retroactively be truncated in this way on the present state of the law.

III. The Role of Zoning

9 Private law has long protected adjoining owners in the enjoyment of the amenities of their land. Article 947 of the *Civil Code of Québec*, S.Q. 1991, c. 64, protects that enjoyment, as does the tort of nuisance at common law. Thus neighbours obtained an injunction in nuisance against a tobacco factory that emitted "noxious odours" in *Appleby v. Erie Tobacco Co.* (1910), 22 O.L.R. 533 (Div. Ct.), and on the same basis successfully opposed the establishment of a dog hospital in a residential area in *Macievich v. Anderson*, [1952] 4 D.L.R. 507 (Man. C.A.). The doctrine of *Rylands v. Fletcher* (1868), L.R. 3 H.L. 330, imposes virtually absolute liability on owners who bring on their land "anything likely to do mischief if it escapes" and causes damage to a neighbour, unless the escape was due to the neighbour's default (pp. 339-40). These private law remedies were designed, in a general sense, to protect neighbourhood amenities.

10 The objectives of modern zoning were also accomplished to some extent by private arrangement using restrictive covenants as in *Re Daly and City of Vancouver* (1956), 5 D.L.R. (2d) 474 (B.C.S.C.), and building schemes as in *Re Lorne Park* (1913), 30 O.L.R. 289 (H.C.). These earlier developments in the law are noted in *Boykiw v. Calgary (City) Development Appeal Board* (1992), 90 D.L.R. (4th) 558 (Alta. C.A.), at p. 563, and described in some detail in J. B. Milner, *Community Planning* (1963), at p. 357 *et seq*. Initially, local government occupied itself with noxious uses, and established building standards in the interest of fire prevention and safety.

11 The objection to more sophisticated land use controls, when they emerged as an instrument of good government, was that they were to some extent confiscatory of the owner's rights: see *Re Dinnick and McCallum* (1913), 28 O.L.R. 52 (C.A.), at p. 58, *Regina Auto Court v. Regina (City)* (1958), 25 W.W.R. 167 (Sask. Q.B.), at pp. 168-69; and *Canadian Occidental Petroleum Ltd. v. District of North Vancouver* (1983), 148 D.L.R. (3d) 255 (B.C.S.C.), at p. 269.

12 To counter the concern about confiscation without compensation, lawful existing uses came to be protected under the concept of "acquired rights" both under the *Civil Code* in Quebec, and by judicial interpretation in the common law provinces: *Toronto (City of) v. Wheeler* (1912), 4 D.L.R. 352 (Ont. H.C.), *per* Middleton J., at p. 353:

> [I]t is, I think, a sound principle that the Legislature could not have contemplated an interference with vested rights, unless the language used clearly required some other construction to be given to the enactment.

See also *R. v. Howard* (1884), 4 O.R. 377 (Q.B.), at p. 381, and *R. v. Clark Bros. & Hughes Ltd.*, [1925] 1 D.L.R. 49 (Man. C.A.), at pp. 51 and 53.

13 It is against that background that the modern regime of land use controls, with their inherent tension between the owner's interest in putting its own property to what *it* regards as the optimal use and the municipality's interest in having all of the land within its boundaries organized in a plan which *it* thinks will maximize the benefits and amenities for all inhabitants, should be interpreted.

IV. The Applicable Legislation

14 *An Act Respecting Land Use Planning and Development*, R.S.Q., c. A-19.1, authorizes Quebec municipalities to regulate the use of land by dividing their territories into zones to which are allocated various groups and classes of uses. This is to be done: [TRANSLATION] "based on common characteristics of land

occupation relating to volume, nuisance, compatibility, use and aesthetics" (s. 16 of the new zoning by-law). The impact of a particular land use on neighbouring lands is clearly a key concern, which is shared by common law jurisdictions. The loss of amenities by noise and air pollution, increased traffic, increased demands on municipal services, or other disruptions, may conveniently be referred to as "neighbourhood effects". The minimization of such adverse effects on surrounding owners or the community as a whole is one of the principal objectives of zoning controls.

15 With respect to acquired rights (or legal non-conforming uses), s. 113(18) of the provincial Act allows Quebec municipalities to regulate them, prevent their substitution by other non-conforming uses, and to prohibit their extension and alteration. The municipality may not, however, order the *cessation* of such uses unless they have been abandoned or interrupted for "a reasonable period" no shorter than six months. In other words, the provincial legislation not only respects the doctrine of acquired rights, but makes it clear that municipalities must do so as well.

16 Here the municipality did not purport to prohibit the alteration (or "*modification*") of acquired rights, although it was empowered to legislate in that regard under s. 113(18)(*c*) of the provincial Act. Nor, as the Court of Appeal pointed out, did it purport to suppress nude dance bars under the *Cities and Towns Act*, R.S.Q., c. C-19, whether under s. 414 ("decency and good morals") or s. 410 ("general welfare in the territory of the municipality"). We therefore do not need to decide whether such a prohibition would have been valid or effective under the existing law.

17 Exercising its statutory powers of delegated legislation, the City of Saint-Romuald did enact zoning by-law No. 273-90, which came into force on May 22, 1991. The appellant places weight on s. 9 of the by-law which provides:

> [TRANSLATION]
>
> 9. Permitted Uses
>
> The uses listed in the specification grid correspond to the description of uses set out in chapter IV. A line appearing opposite a class of uses means that all principal uses in that class are permitted, to the exclusion of all other uses. [Gonthier J.'s emphasis.]

18 In the appellant's submission, the underlined words constitute a specific prohibition of the respondents' non-conforming use. Read in that way, of course, it is a prohibition of *all* non-conforming uses, and if applied in derogation of acquired rights would serve to nullify them. On this point, I prefer the view taken by the Quebec Court of Appeal that the general language of s. 9 is not sufficient to constitute an express prohibition sufficient to overcome the respondents' acquired rights.

V. Scope of the "Acquired Right"

19 Under the doctrine of "acquired rights", the respondents were not only entitled to continue to use the premises as they were when the new by-law was passed, but was given some flexibility in the operation of that use. My colleague Gonthier J. notes that regard is to be had in such cases to "the real and reasonable expectations" of the landowner caught by changes in the zoning (para. 63 (emphasis deleted)). Gonthier J. also acknowledges (at para. 62) that "normal evolution" may occur in some uses with the passage of time, and that "a use protected by acquired rights may be exercised more intensively (*Anjou (Ville d') v. Vanier*, C.A. Montréal, No. 500-09-001305-788, J.E. 83-325; *Huot v. L'Ange-Gardien (Municipalité de)*, [[1992] R.J.Q. 2404 (C.A.)]; *Soudure Mobile D. Pilon Inc. v. Larose*, [1990] R.L. 93 (C.A.)) and adapt to

the demands of the market or the technology that are relevant to it (*Chutes-de-la-Chaudière* [*(Municipalité régionale de comté des) v. Compagnie 1846-0832 Québec Inc.*, [1994] R.J.Q. 618 (C.A.)], at p. 624, Tourigny J.A. dissenting)". In my view, that is what happened here.

20 Similar flexibility also exists at common law. Thus in *Central Jewish Institute v. City of Toronto*, [1948] S.C.R. 101, a legal non-conforming use (private school) previously carried on only in part of the building was lawfully extended throughout the entire building, *per* Kellock J., at p. 114:

> I do not think that the use made of the premises by the appellant after the school term recommenced in September was for a different purpose within the meaning of the statute from the use being made of them on July 24th. [Emphasis added.]

21 At this point, a distinction should be drawn between the *type* of legal non-conforming use and the *intensity* of such use. A legal non-conforming nursing home, for example, may want to double its 15 beds. The type of use would remain the same, but the intensity of that use would be substantially increased.

A. *Intensity of Use*

22 The respondents' nightclub has substantially increased its business since switching from cowboy singers to nude dancers. There are more customers. More cars. More noise. Assuming for the moment that the "type" of use has not changed, is this increased intensity of use a basis for objection?

23 In *Central Jewish Institute*, *supra*, this Court concluded that so long as the *type* of use was continued (private school facilities), the owner was not limited to the then existing *intensity* (at the relevant time only the kitchen and a ground floor room of the building were used for school purposes). Rather, the appellant was entitled to expand the non-conforming use throughout its building. To some extent, the Court's treatment of intensity of use was tied to the specific text of the provincial Act (which extended the immunity to the building itself), but the case has subsequently been applied more generally (I think correctly) to sanction increases in *intensity* of use so long as the same *type* of use is continued. My colleague, Gonthier J., has referred to the Quebec authorities. A similar principle operates in the common law provinces: see *Canadian Occidental Petroleum*, *supra*, at p. 268 (expanded manufacture of hazardous substances); *O'Sullivan Funeral Home Ltd. v. City of Sault Ste. Marie*, [1961] O.R. 413 (H.C.) (infrequent use of a funeral parlour no bar to expanded activity); *Kiss v. Phil Dennis Enterprises Ltd.* (1974), 46 D.L.R. (3d) 196 (Ont. H.C.) (where, at p. 202, the court noted approvingly that "the proposed change is one of degree, and not of kind of use"); *Perth (Town) v. Perth Mews Ltd.* (1991), 7 M.P.L.R. (2d) 259 (Ont. Ct. (Gen. Div.)) (the legal non-conforming right to use pinball machines in one part of the building was extended to all of it); *Magdalena's Rest Home Ltd. v. Etobicoke (City)* (1992), 12 M.P.L.R. (2d) 316 (Ont. Ct. (Gen. Div.)) (rest home expanded from 15 to 17 beds); *Moncton (City) v. Como* (1990), 103 N.B.R. (2d) 286 (Q.B.) (expansion of existing equipment storage and repair business); *Borins v. Toronto (City)* (1988), 50 R.P.R. 43 (Ont. Dist. Ct.) (conversion of office space); *382671 Ontario Ltd. v. London (City) Chief Building Official* (1996), 32 M.P.L.R. (2d) 1 (Ont. Ct. (Gen. Div.)) (addition of a unit in an apartment building).

24 There are, however, some limitations at the outer boundaries of increasing the intensity of use. This appears from the decision of Cory J.A. (as he then was) in *R. v. Grant* (1983), 23

M.P.L.R. 89 (Ont. C.A.), where the court refused to allow a legal non-conforming two-unit apartment building to be further subdivided into four units. While the precise result may to some extent conflict with this Court's decision in *Central Jewish Institute*, *supra* (which was not cited by Cory J.A.), even *Central Jewish Institute* proceeded on the basis that the expansion of school activity would be reasonable and limited – in that particular case limited to the existing building.

25 In general, merely continuing the precise pre-existing activity, even at an intensified level, is clearly protected, but the intensification may be of such a degree as to create a difference in kind. A family farm which has a few pigs on the fringe of a town may continue as a legal non-conforming use, but the result may be otherwise if it is sought to expand its pork operation into "factory in the country" type intensive pig farming. While in one sense the "use" has continued, in another sense its *character* has been so altered as to become, in terms of its impact on the community, an altogether different use.

26 In the more usual type of situation, a non-conforming commercial use in a residential neighbourhood that enjoys increasing business should not ordinarily be penalized for its success by losing its "acquired right" to operate, even if a by-product of that success is some increased traffic and noise.

27 The analogous U.S. principle is succinctly stated in McQuillin, *The Law of Municipal Corporations* (3rd ed. rev. 1994), vol. 8A, at p. 126:

> The distinction is between an increase in the amount of business, even a great increase, which does not work a change in use, and an enlargement of a nonconforming business so as to be different in kind in its effect on the neighborhood. [Emphasis added.]

28 This is a high threshold which it is unnecessary to explore on this appeal. Based on the evidence here, no valid objection could be taken to the respondents' nightclub based on increased intensity of use.

B. *Type of Use*

29 The appellant argues that a nightclub offering western music is a different *type* of use than a nightclub presenting nude dancers. This is the real battleground between the appellant and the respondents.

30 A "use" may include a number of activities. A nightclub, as stated, serves food and drink and provides entertainment. The question here is how many of these activities, and of what nature, can be added, subtracted or modified before it can no longer be called the same "type" of use?

31 In *Regina ex rel. Skimmings v. Cappy* (1952), 103 C.C.C. 25 (Ont. C.A.), Oakwood Stadium in Toronto, a general venue for sports activities, was modified to accommodate stock car racing. The neighbours complained about the increased noise and disruption. The municipality launched a by-law prosecution. The stadium owners defended on the basis of a legal non-conforming use. The majority of the Court of Appeal, *per* Laidlaw J.A., acquitted the stadium owners on the basis that they operated a "general purpose" stadium whose permissible program (which presumably accorded with the owners' "real and natural expectation") was not limited to the type of specific events on "the day of the passing of the by-law" but included "public exhibitions and performances of all kinds" (p. 32). The dissenting judge concluded that the pre-existing use had been limited to certain types

of exhibitions and performances, and stock car racing was obviously not included because the owners had been required to undertake a "substantial expenditure of money and complete reconstruction of the facilities so as to enable motor-racing to be carried on" (p. 29). The interesting question is why the majority took a broad view of the existing use and the dissent took a narrow view. Both of these views were sustainable on the facts. The majority seemed influenced by the idea of *remoteness*, i.e., that the new activity, while different, was *not* remote but was closely related to what had gone before. Although "neighbourhood effects" were not mentioned by the dissenting judge, I think it fair to say that if the facts were reversed so that the stadium had been reconstructed to *eliminate* stock car racing in favour of less noisy exhibitions such as walk-a-thons or lawn tennis, the neighbours (and the dissenting judge) might have taken a more expansive view of the pre-existing use.

32 The more recent common law jurisprudence on "non-conforming uses" is no less divided than the Quebec jurisprudence on "acquired rights": see I. T. Kagan, "But I Do Not Want to Be Legal" (1993), 13 M.P.L.R. (2d) 252. The more restricted end of the definitional spectrum is illustrated by *R. v. Kelly Landscape Contractors Ltd.* (1980), 13 M.P.L.R. 67 (Ont. Co. Ct.), where it was held that a legal non-conforming business which grew flowers for sale could not lawfully sell the flowers (or fertilizers, etc.) from its premises. The added business, while closely related, was not the same.

33 The more generous end of the definitional spectrum is illustrated by *Campbellton (City) v. Thompson* (1994), 151 N.B.R. (2d) 1 (C.A.), where a landowner was permitted to add a rock-crusher to its existing non-conforming quarry operation. The trial judge had concluded that crushing rock was a different activity than extraction, and upheld the municipality's objection. This was reversed by the Court of Appeal which applied its previous decision in *Lordon v. Pitman* (1980), 33 N.B.R. (2d) 23, in asking itself whether the introduction of the "new element" changed "the essential general use of the land" (para. 10). The added activity, it decided, did not do so. Again, the trial judge's narrower view of the pre-existing use (extraction and sale of rock) was as open on the facts as the broader view taken by the Court of Appeal (a quarry operation includes an activity reasonably incidental thereto). The trial judge was worried about the neighbourhood effects of the added activity. The Court of Appeal seems to have decided the case on considerations of remoteness.

34 In my view, both remoteness and neighbourhood effects have a role to play in the proper disposition of this type of case. Each contributes to what Gonthier J. refers to as the real and natural expectation of the landowner. The Court's objective is to maintain a fair balance between the individual landowner's interest and the community's interest. The landowner overreaches itself if (i) the scale or intensity of the activity can be said to bring about a change in the type of use, as mentioned above, or if (ii) the addition of new activities or the modification of old activities (albeit within the same general land use purpose), is seen by the court as too remote from the earlier activities to be entitled to protection, or if (iii) the new or modified activities can be shown to create undue additional or aggravated problems for the municipality, the local authorities, or the neighbours, as compared with what went before. The factors are balanced against one another. Thus, adding a metal panel beating operation to an automobile repair shop in a residential neighbourhood will probably (despite the logical business affinity) be characterized as a new type of use, whereas a local non-conforming grocer store use that adds an innocuous fax machine – clearly an activity unrelated to selling groceries – will likely succeed (assuming someone wished to challenge it) by defining its prior operation as a "convenience store" rather than a "grocery store".

35 The relevance of remoteness is self-explanatory, but the relevance of neighbourhood effects perhaps requires some

discussion. The balancing of interests takes place in the framework of zoning control. The Quebec law, as mentioned, expressly takes neighbourhood effects into account in the *legislative* establishment of use categories. The by-law in this particular case speaks of [TRANSLATION] "volume, nuisance, compatibility, use and aesthetics", and see *Val-d'Or (Ville de) v. 2550-9613 Québec Inc.*, [1997] R.J.Q. 2090 (C.A.)). It stands to reason that in attempting to accommodate the landowner's real and natural expectation of the continuation of the *status quo*, and to properly maintain the balance between the interests of the landowner and the community, the Court should also have these "neighbourhood effects" in mind in considering the situation of a landowner who has somewhat modified or extended pre-existing activities within the same general use category. The adverse impact of neighbourhood effects generated by added or modified activities constitutes one of the guiding principles under the somewhat different regulatory systems in Britain (see, for example, *East Barnet Urban District Council v. British Transport Commission*, [1962] 2 Q.B. 484, and *Thames Heliports PLC v. London Borough of Tower Hamlets* (1996), 74 P. & C.R. 164 (C.A.), and in the United States (see *Bridgewater (Town of) v. Chuckran*, 217 N.E. 2d 726 (Mass. 1966), at pp. 727-28, *Conforti v. City of Manchester*, 677 A.2d 147 (N.H. 1996), at p. 150, *Belleville (Town of) v. Parrillo's Inc.*, 416 A.2d 388 (N.J. 1980), and *Cape Resort Hotels, Inc. v. Alcoholic Licensing Board of Falmouth*, 431 N.E.2d 213 (Mass. 1982), at p. 217). In those jurisdictions, as in Canada, planning is concerned not only with the physical use of land but also with any adverse effects of such uses on the surrounding area. It is appropriate to carry that concern forward into the Court's consideration of added, altered or modified activities which are claimed to be protected by the prior existing use.

36 This approach is implicit in some of the Quebec cases. In *Soudure Mobile D. Pilon Inc. v. Larose*, [1990] R.L. 93 (C.A.), the repair of cars was the legal non-conforming use on the original lots. The owner then intensified this use, in part by extending it to a newly acquired adjacent lot (one which had not previously been used for car repairs). In addition, the owner began to store snow plowing and excavation vehicles on the property. The court issued an order essentially restricting the intensity of the activity and prohibiting the storage of the snow plowing and excavation vehicles. Beauregard J.A. – who dissented in part but not on this point – demonstrated his awareness, at pp. 105-6, of the impact of the increased activity on the complainant neighbours:

> [TRANSLATION] The neighbours, who had never really been bothered by the Laurentide operation, soon realized that the Soudure Mobile operation was causing a variety of problems for them: continual comings and goings on the site, excessive noise; word done outside normal business hours and on weekends; accumulation of garbage on the property; storing and cutting of wood on the property; repairs done outside the workshop building; using the property for parking heavy equipment that belonged to a logging company and a snow removal company; using an adjacent lot (lot 488-49) that did not enjoy "acquired rights" for additional parking, and clearing the property of trees that had served as a screen between the workshop and some of the neighbouring homes . . . .

Thus neighbourhood effects appear to have been factored into the view taken by Beauregard J.A. that the current property use was not fully protected by acquired rights. This seems also to be the underlying factor in the decision of Chamberland J.A. in *Val-d'Or (Ville de) v. 2550-9613 Québec Inc.*, *supra*, quoted by Gonthier J. at para. 82.

37 A concern for the twin criteria of remoteness and neighbourhood effects is also, I think, implicit in *Prince Edward*

Island Museum and Heritage Foundation v. Charlottetown (City) (1998), 161 Nfld. & P.E.I.R. 56 (P.E.I.S.C.). A museum and heritage foundation had for many years used its parcel of land, which included several buildings, for museum-related activities. In 1979, its operation became a legal non-conforming use. Subsequently, the owners began to expand the activities in one of the buildings ("the Carriage House") to include receptions and dinners catered by a local hotel. Some of these *soirées* were for fundraising purposes. The neighbours objected to the added noise and commotion. Notwithstanding the owner's ingenious efforts to tie its hospitality activities to museum functions (e.g., it argued it would "make heritage more palatable by concealing it in another activity such as a concert" (para. 15)), DesRoches J. concluded that the hospitality functions were too remote from the prior non-conforming use to be permitted.

38 At the same time, though, he permitted other added or altered museum activities, including a gift shop, a genealogy centre for research and facilities for public lectures. Although the rationale is not articulated in his reasons, it is apparent that the activities he upheld created fewer adverse neighbourhood effects than those he found to be prohibited, and were, indeed, not the subject of public complaint.

C. *Summary of Approach*

39 I therefore approach the issue of limitations on the respondents' acquired right as follows:

1. It is firstly necessary to characterize the purpose of the pre-existing use (*Central Jewish Institute*, *supra*). The purpose for which the premises were used (i.e., "the use") is a function of the activities actually carried on at the site prior to the new by-law restrictions.

2. Where the current use is merely an intensification of the pre-existing activity, it will rarely be open to objection. However, where the intensification is such as to go beyond a matter of degree and constitutes, in terms of community impact, a difference in kind (as in the hypothetical case of the pig farm discussed above), the protection may be lost.

3. To the extent a landowner expands its activities beyond those it engaged in before (as where a custom picture-framing shop attempted to add a landscaping business in *Nepean (City) v. D'Angelo* (1998), 49 M.P.L.R. (2d) 243 (Ont. Ct. (Gen. Div.)), the added activities may be held to be too remote from the earlier activities to be protected under the non-conforming use. In such a case, the added activities are simply outside any fair definition of the pre-existing use and it is unnecessary to evaluate "neighbourhood effects".

4. To the extent activities are added, altered or modified *within* the scope of the original purpose (i.e., activities that are ancillary to, or closely related to, the pre-existing activities), the Court has to balance the landowner's interest against the community interest, taking into account the nature of the pre-existing use (e.g., the degree to which it clashes with surrounding land uses), the degree of remoteness (the closer to the original activity, the more unassailable the acquired right) and the new or aggravated neighbourhood effects (e.g., the addition of a rock crusher in a residential neighbourhood is likely to be more disruptive than the addition of a fax machine). The greater the disruption, the more tightly drawn will be the definition of the pre-existing use or acquired right. This approach does not rob the landowner of an entitlement. By definition, the

limitation applies only to added, altered or modified activities.

5. Neighbourhood effects, unless obvious, should not be assumed but should be established by evidence if they are to be relied upon.

6. The resulting characterization of the acquired right (or legal non-conforming use) should not be so general as to liberate the owner from the constraints of what he actually did, and not be so narrow as to rob him of some flexibility in the reasonable evolution of prior activities. The degree of this flexibility may vary with the type of use. Here, for example, the pre-existing use is a nightclub business which in its nature requires renewal and change. That change, within reasonable limits, should be accommodated.

7. While the definition of the acquired right will always have an element of subjective judgment, the criteria mentioned above constitute an attempt to ground the Court's decision in the objective facts. The outcome of the characterization analysis should not turn on personal value judgments, such as whether nude dancing is more or less deplorable than cowboy singing. I am unable, with respect, to accept as legally relevant my colleague's observation that "[w]hereas erotic entertainment seeks to sexually arouse the audience by the stripping and suggestive behaviour engaged in by the performers, country and western shows seek to entertain by providing a showcase for the special talents of singers, musicians and dancers" (para. 76). Serious music is also commonly thought to arouse the passions profoundly, but in terms of acquired rights, music stores should not be differentiated by whether they offer Muzak or Mozart.

VI. Application to the Facts

40 As stated earlier, I believe the respondents' pre-existing use can appropriately be characterized as the commercial offering of a combination of food, drink, ambiance and lawful entertainment to the public.

41 The switch to a different form of entertainment, as in the change from western-style concerts to nude dancers, is within this general nightclub purpose. The substitution of nude dancers is no more remote in law than would be the substitution of karaoke singing. My colleague Gonthier J. takes the view that nude dancing raises "considerations of a moral nature" (para. 77) that presumably would not be raised by karaoke singing, but in my view, with respect, it is not our function to create a moral hierarchy of different forms of entertainment. Objectively speaking, there is no problem of remoteness. There is no replacement of one use by a different use.

42 While it appears that the substitution of nude dancing has improved the business, the municipality does not rely on an *intensification* of the existing use as a disqualification.

43 There is no serious evidence of adverse neighbourhood effects. My colleague Gonthier J. relies on the comment of Constable Gelly about increased police surveillance, but the municipality made no effort to demonstrate a link between criminal elements and nude dancing. The police themselves did not make much of a point of added surveillance and the trial judge went out of his way to say that there was no problem of discipline within the premises. In my view, if the appellant's case were to rest on adverse

neighbourhood effects, a better evidentiary base ought to have been provided.

44 In terms of "added" activities, my colleague Gonthier J. points out that the respondents created five private viewing booths in which a customer and the dancer were distanced from the general audience. This, he points out, is a form of private entertainment. The uncontradicted evidence, however, was that there was no sexual touching and that nothing occurred in the booth that did not occur in the general viewing area. Admission to the booths was open to any member of the public. Morality apart, I do not see how this changes the legal nature of the use, any more than would be the case if an ordinary restaurant sought to upgrade its facilities by offering private dining-rooms.

VII. Conclusion

45 In my view, the change in entertainment offered by the respondents did not constitute the illegal replacement of the original non-conforming use with a different and therefore unprotected non-conforming use.

46 If nude dancing is thought to be objectionable on moral or other grounds, the topic could be further considered by legislators rather than by judicial curtailment of acquired rights.

47 I would therefore dismiss the appeal with costs to the respondents.

English version of the reasons of L'Heureux-Dubé, Gonthier and Bastarache JJ. delivered by

GONTHIER J. (dissenting) —

I. Introduction

48 This appeal deals primarily with the extent of the protection conferred by acquired rights in Quebec municipal law. The issue to be determined is the limits of the protection where the use initially exercised has been transformed. Specifically, the Court must decide in the instant case whether acquired rights continue to exist when a bar that had been presenting country and western entertainment subsequently becomes a bar that presents erotic entertainment.

II. Facts

49 The respondents Claudette Olivier, Louise Bolduc and Roger Bolduc are owners of a building located within the territory of the appellant City of Saint-Romuald. Since 1990, several tenants in succession have operated a bar in the building, presenting country and western entertainment. At the time, the City's zoning by-law (C-600) permitted the operation of [TRANSLATION] "cabarets" in the zone where the building is located. However, a new zoning by-law, No. 273-90, came into force on May 22, 1991. Like a number of other by-laws of its type, it sets out the authorized and prohibited uses for a given zone, using a grid known as the [TRANSLATION] "specifications grid" (s. 7). Different uses are first divided into "groups" and then into "classes". Uses are allocated to the various classes [TRANSLATION] "based on common characteristics of land occupation relating to volume, nuisance, compatibility, use and aesthetics" (s. 16). This type of classification enables the City to authorize or to prohibit an entire class of uses or a specific use, at its option. To this end, ss. 9 to 11 of the by-law state:

[TRANSLATION]

9. Permitted Uses

The uses listed in the specifications grid correspond to the description of uses set out in chapter IV. A line appearing opposite a class of uses means that all principal uses in that class are permitted, to the exclusion of all other uses. [Emphasis added.]

10. Other Permitted Use

Where a principal use is specifically permitted, this means that even if the class corresponding to that use is not permitted, that particular use is permitted.

11. Prohibited Use

Where a principal use is specifically prohibited, this means that even if the class corresponding to that use is authorized, that particular use is prohibited.

50 In the new by-law, uses [TRANSLATION] “restaurant or bar with entertainment” (585) and [TRANSLATION] “restaurant or bar with erotic entertainment or films” (586) — which correspond to the former use “cabaret” — are in the [TRANSLATION] “commercial services” class (s. 22). For the zone in which the building is located, there is no line opposite “commercial services” on the specifications grid. Moreover, uses 585 and 586 are not shown on the grid as expressly permitted. Although use [TRANSLATION] “hotel, motel, guest house” (181) is also part of the “commercial services” class, it is shown on the grid as expressly prohibited. The new by-law also governs the issue of acquired rights, in part. It specifically provides, *inter alia*, that a non-conforming use protected by acquired rights may not be replaced by another non-conforming use (s. 204).

51 In the fall of 1994, after buying out the business from the owner of the country and western bar, the respondent 9010-4407 Québec Inc. began operating a bar which presented entertainment involving nude dancers. The appellant then decided to apply to the Superior Court under s. 227 of the *Act Respecting Land Use Planning and Development*, R.S.Q., c. A-19.1, for an order requiring the cessation of what it regarded as the unlawful replacement of one non-conforming use by another.

III. Relevant Statutory Provisions

52 *Act Respecting Land Use Planning and Development*, R.S.Q., c. A-19.1

CHAPTER IV

MUNICIPAL PLANNING BY-LAWS

DIVISION I

ZONING BY-LAWS

113. The council of a municipality may adopt a zoning by-law for its whole territory or any part thereof.

A zoning by-law may include provisions regarding one or more of the following objects:

. . .

(3) to specify, for each zone, the structures and uses that are authorized and those that are prohibited, including public uses and buildings, and the land occupation densities;

. . .

(18) to regulate non-conforming structures and uses protected by acquired rights,

(*a*) by requiring that a non-conforming use protected by acquired rights cease if such use has been abandoned, has ceased or has been interrupted for such period of time as it may define, which must be a reasonable period, taking into account the nature of the use, but must not in any case be shorter than six months;

(*b*) by stipulating that a non-conforming use or structure protected by acquired rights shall not be replaced by another non-conforming use or structure;

(*c*) by prohibiting the extension or alteration of a non-conforming use or structure protected by acquired rights, or by establishing conditions under which a non-conforming use or structure protected by acquired rights may be extended or altered; [Emphasis added.]

TITLE III

SANCTIONS AND RECOURSES

227. The Superior Court may, at the request of the Attorney General, the regional county municipality, the municipality or any other interested person, order the cessation of

(1) a use of land or structure incompatible with a zoning by-law, subdivision by-law, building by-law, a by-law provided for in section 116 or 145.21 or an interim control by-law, or with a plan approved in accordance with section 145.19 or with an agreement under section 145.21;

IV. Judgments under Appeal

A. *Superior Court*

53 Bergeron J. relied on the Quebec Court of Appeal decision in *Chutes-de-la-Chaudière (Municipalité régionale de comté des) v. Compagnie 1846-0832 Québec Inc.*, [1994] R.J.Q. 618, in which Baudouin J.A. held that in zoning matters, where the issue is whether there has been a change in use, the reference point to be used is the categories created by the enacting authority. Bergeron J. added that in this case, three of the four judges found in favour of preserving an acquired right where the new use was not specifically prohibited and where it was in the same category under the by-law as the prior use.

54 Applying these principles to the case between the parties, he held: (i) that the respondents enjoyed acquired rights to operate a "cabaret"; (ii) that a bar that presents entertainment with erotic dancers is a cabaret; and (iii) that neither the *Cities and Towns Act*, R.S.Q., c. C-19, nor the new by-law expressly prohibits entertainment with erotic dancers. He therefore dismissed the City's application.

B. *Court of Appeal (Michaud C.J.Q. and LeBel and Dussault JJ.A.)*, [1999] Q.J. No. 215 (QL)

55 The court agreed, *per* Dussault J.A., with the trial judge's finding that the extent of the acquired rights is determined by the

categories set out in the by-law. Like the trial judge, he was therefore of the view that, absent an express prohibition in the new by-law, the respondents enjoyed an acquired right to operate a "cabaret".

56 After reviewing the specifications grid, Dussault J.A. found that although no line had been entered opposite the "commercial services" category, which meant that the principal uses in that class were not permitted, nonetheless use "restaurant or bar with erotic entertainment or films" (586) was not shown on the grid as expressly prohibited. There was nothing to prevent the municipality from enacting such a prohibition; in fact, it had expressly prohibited the use "hotel, motel, guest house" (181) which is part of the same class. Stating that this factor was [TRANSLATION] "a decisive factor in the outcome of the case" (para. 17), Dussault J.A dismissed the municipality's appeal.

V. Issues

57 The issues are as follows:

A. What is the extent of the protection conferred by acquired rights in municipal zoning matters?

B. Is the change from a bar that presents country and western entertainment to a bar that presents erotic entertainment a replacement of one non-conforming use by another, resulting in the loss of acquired rights?

VI. Analysis

A. *Acquired Rights*

58 Quebec municipal law is based both on the principles developed by the common law courts and on the relevant provincial legislation. We also know that the rules governing the protection of acquired rights *vis-à-vis* land use by-laws were first developed by the courts and that the law was later "codified", to some extent, by the *Act Respecting Land Use Planning and Development*, s. 113 of which refers to "acquired rights".

59 The protection conferred by acquired rights reflects a compromise between the principle that a statute takes immediate effect and the rights of ownership, as pointed out by Chouinard J.A. of the Quebec Court of Appeal in *Huot v. L'Ange-Gardien (Municipalité de)*, [1992] R.J.Q. 2404, at p. 2409:

> [TRANSLATION] Although it is not easy to define " acquired rights" with precision, let us say that it is a necessary compromise that limits rational land development while protecting the equity of the property owners and possibly of others who have made some non-conforming but legal and legitimate use prior to a statute or regulation.

60 If these rights were not recognized, the provisions of the municipality's land use by-law would apply in their entirety, without regard for whatever use of the land had been exercised prior to the by-law coming into force. If the use being made of the land were to be prohibited, the user would be unjustly deprived of the tangible exercise of his or her rights of ownership by the stroke of a pen.

61 Acquired rights therefore confer immunity on the actual use being exercised before the change to the by-law, while merely contemplated use will not enjoy the same immunity (E. McQuillin, *The Law of Municipal Corporations* (3rd ed. rev.), vol. 8A, at p. 37; *Toronto v. Board of Trustees of R.C. Separate Schools for Toronto*, [1925] 3 D.L.R. 880 (P.C.); *Central Jewish Institute v. City of Toronto*, [1948] S.C.R. 101). This distinction between a prior actual use and a potential use that has not yet materialized, between a right

that exists and is being exercised and a mere ability, is a decisive factor in delineating acquired rights in municipal zoning matters. The distinction has in fact been recognized many times by the Quebec courts (see, in particular, *Syndics des écoles protestantes de la Cité d'Outremont v. Cité d'Outremont*, [1951] Que. K.B. 676, and *Lafontaine (Municipalité du Village) v. Ouellette*, [1976] C.S. 1488, referring to *Toronto v. Board of Trustees* and *Central Jewish Institute*, *supra*; see also *Montréal (Ville de) v. Bijouterie Lucien Gervais Inc.*, [1981] J.M. 21 (C.A.), and *Bernard v. Belœil (Ville de)*, C.A. Montréal, No. 500-09-000857-896, November 29,1990, J.E. 91-20).

62 This does not mean, however, that the doctrine of acquired rights fails to take into account the normal evolution that will occur in some uses with the passage of time. Accordingly, a use protected by acquired rights may be exercised more intensively (*Anjou (Ville d') v. Vanier*, C.A. Montréal, No. 500-09-001305-788, J.E. 83-325; *Huot v. L'Ange-Gardien (Municipalité de)*, *supra*; *Soudure Mobile D. Pilon Inc. v. Larose*, [1990] R.L. 93 (C.A.)) and adapt to the demands of the market or the technology that are relevant to it (*Chutes-de-la-Chaudière*, *supra*, at p. 624, Tourigny J.A. dissenting). However, its original nature must always remain the same.

63 If the use undertaken after the change to the by-law is of the same nature as the actual use under the former by-law, it will be protected by acquired rights. If, on the other hand, it is even minimally different, the protection will be lost. That is, I reiterate, because any use that has not yet materialized must, as a general rule, be excluded from the sphere protected by acquired rights. Therefore, in order to determine whether the nature of the use has changed, the use that was actually exercised prior to the prohibition created by the by-law must first be precisely defined. Based on that preliminary determination, the real and reasonable expectations flowing naturally from the exercise of that concrete use can be taken into account. On that point, in *Syndics des écoles protestantes de la Cité d'Outremont*, *supra*, at p. 692, Bissonnette J. held:

> [TRANSLATION] It is well known that acquired rights are part of our patrimony and cannot be taken away without causing a grave injustice and depriving us of what we had a right to expect in their regard. In order to know and understand the extent of these rights, we need only ask what the real and natural expectation of the school board was prior to 1925, before the municipal by-law was enacted. [Emphasis added.]

64 While this part of the analysis of the nature of the use relates mainly to the protection of individual rights of ownership, it will also have to be determined whether the changes in the use of the land are relevant, having regard to the primary purposes of zoning by-laws, such as harmonious land development and the well-being of the inhabitants (McQuillin, *supra*, at p. 99). An affirmative response to this question will tend to demonstrate that the nature of the protected use has been altered and will mean the loss of the acquired rights. In my view, this approach allows a balance to be struck between individual rights and the collective interests that the zoning by-law is designed to further.

65 In addition, although s. 113 of the *Act Respecting Land Use Planning and Development* allows municipalities to regulate certain aspects of acquired rights, it is still up to the courts to determine whether those rights are lost when an initial prohibited use is replaced by a different prohibited use. Because that question, by its very nature, can arise only out of a precise fact situation, only a court will be in a position to resolve it. A municipality may of course decide to override the protection provided by acquired rights by passing a by-law for that express purpose. Very different questions will then arise. In this case, however, the only question that is

presented is whether one use has been replaced by another, and it is inevitably up to the courts to determine the outcome of that question.

66 That being said, it is then apparent that the lower courts erred in suggesting that acquired rights must be determined on the basis of categories or classes of uses created by by-laws. The approach taken by those courts derives from the reasons of Baudouin and Proulx JJ.A. in *Chutes-de-la-Chaudière*, *supra*. In that case, the issue was whether there had been a loss of acquired rights when the protected use, the manufacture of heating systems, boilers and burners, had subsequently been replaced by the manufacture of prefabricated sections of acrylic polymer concrete. In the meantime, any industrial use had been prohibited by the Regional County Municipality's interim control by-law. That by-law, and documents from the municipal affairs department, grouped those two uses together in the same categories, that is, in [TRANSLATION] "metal product manufacturing industries" and [TRANSLATION] "manufacturing industries". Noting how strict the Quebec courts are on the question of protecting acquired rights, Baudouin J.A. held (at p. 625):

> [TRANSLATION] . . . while that strict approach can be understood where there is no statute or by-law governing the matter, it seems to me that the situation must be different when the enacting authority has specifically provided rules dealing with acquired rights and changes in use. I am then of the view that reference must be made to the statute or by-law itself. [Emphasis added.]

67 Concurring with this analysis, Proulx J.A. was of the view that the earlier case law, which applied the test of the nature of the operation or the type of product manufactured, could not be applied because the context of the by-law had to be considered in order to interpret the word "use". Tourigny J.A., dissenting, rejected that methodology, stating that she was in favour of holding to a factual analysis.

68 This approach, which I would describe as the "category" approach for the purposes of this discussion, suggests that the protection conferred by acquired rights extends to any use included in the by-law category to which the use exercised prior to the change in the by-law belongs. Accordingly, the implementation of one use would trigger a protection that extends to all potential uses included in the same category. It seems plain to me that this analysis misses the mark because it deviates from the factual source from which the protection of the acquired rights derives. Although s. 113, para. 18 of the *Act Respecting Land Use Planning and Development* delegates to municipalities the power to make certain rules concerning acquired rights, that provision cannot have operated to change the very nature of these rights. Rather, the judicial definition of those rights has been recognized and incorporated by the legislature.

69 Moreover, in the absence of any previous zoning by-law, it seems to me that this approach cannot be used to determine the extent of acquired rights. In that situation, we must either fall back on the traditional concrete analysis or recognize acquired rights to whatever use is being exercised on the land, which will make any attempt at land use planning quite futile. Even if a prior by-law exists, the "category" analysis automatically, and without applying any other consideration, uses categories created for a specific purpose (establishing authorized and prohibited uses for a part of a territory) for a completely different purpose (determining the protection conferred by acquired rights). Relying on categories such as these, which are sometimes overly general or even residual, creates a risk both of granting disproportionate protection to those who enjoy the acquired rights and significantly fettering municipal planning powers. Tourigny J.A. sounded that warning in *Chutes-de-la-Chaudière*, *supra*, at p. 624, when she observed:

> [TRANSLATION] If we review the list drawn up by the Department, we find, for example, that group 39 is entitled "miscellaneous manufacturing industries". I cannot imagine that a category such as this can confer any right whatsoever, in terms of determining identity of use, or that someone can claim to have acquired rights based on belonging to a sub-group that is described so vaguely and is so insignificant.
>
> The provisions of the interim control by-law classifying industries have been enacted so that permits may be issued in zones where industrial use is permitted. In my view, therefore, this classification also cannot be the basis for claiming identity of use for the purpose of establishing acquired rights in zones where the use is non-conforming.

70 In general, those comments reflect the criticism of the "category" analysis made by Professor Lorne Giroux in his article "Questions controversées en matière de droits acquis" published in *Développements récents en droit municipal (1994)*, 131, at pp. 148-52 (see also *Girard v. St-Irénée (Municipalité de)*, [2000] R.J.Q. 2689 (Sup. Ct.)).

71 In the instant case, the lower courts first recognized, based on the "category" analysis, that the respondents enjoyed acquired rights to operate a "cabaret", and then went on to consider whether bars that present erotic entertainment were expressly prohibited by the new zoning by-law. In my view, the requirement for such an express prohibition is unnecessary, since it is based directly on the erroneous use of abstract categories to determine the extent of the protection conferred by acquired rights.

72 In any event, after reviewing the specifications grid for the zone in question, I am satisfied that the appellant in fact prohibited uses "restaurant or bar with entertainment" (585) and "restaurant or bar with erotic entertainment or films" (586) by refraining from inserting a line opposite the "commercial services" class. In fact, in *St-Michel-Archange (Municipalité de) v. 2419-6388 Québec Inc.*, [1992] R.J.Q. 875, at p. 883, the Quebec Court of Appeal held:

> [TRANSLATION] Although the *Act Respecting Land and Use Planning and Development* requires municipal corporations to provide for authorized and prohibited uses in each zone within the municipality, it does not require a zone by zone listing of all prohibited uses. The exercise of the power to prohibit may be exercized by implication, if certain authorized uses are listed, or expressly, if specific uses are prohibited.

73 Both the respondents and Dussault J.A., for the Court of Appeal, observed that use "hotel, motel, guest house" (181) is expressly prohibited on the grid, although it belongs to the same class. They concluded that if the municipality had really wanted to prevent establishments that present erotic entertainment from being protected by acquired rights, it could have done the same thing in respect of use 586. It seems, however, that the specific prohibition of use 181 only became necessary because of the express authorization of use [TRANSLATION] "restaurants and places where meals and beverages are served" (581), which could have been relied on as authority to operate a hotel, motel or guest house. Accordingly, the fact that this was specified leaves no room for an interpretation *a contrario* of the by-law, whereby the appellant would be required to expressly isolate use 586 in order to prohibit it.

74 Since I am satisfied that zoning by-law 273-90 prohibits uses 585 and 586, the issue that remains to be determined is whether replacing a country and western bar by a bar that presents erotic

entertainment constitutes the replacement of a non-conforming use by another non-confirming use, which is prohibited by both the doctrine of acquired rights and s. 204 of the appellant's zoning by-law.

B. *Replacement of Use*

75 As indicated above, a change in the nature of the use actually made prior to the zoning amendment will result in loss of the immunity conferred by acquired rights. Whether such a change has occurred must be determined on the basis of the real and natural expectations of the user and the relevance of the changes as regards the purposes of land use by-laws. Nevertheless, each case turns on its own facts and the nature of the use protected by acquired rights must be determined by the court having regard to the unique facts of each situation.

76 In the instant case, a country and western bar was replaced by a bar that presented erotic entertainment. The respondents contend that the building has never housed anything but a bar with entertainment and that the nature of the entertainment provided should not have any effect on acquired rights. With respect, I am unable to agree with that assertion. First, I do not believe that the real and natural expectations of the owner of a country and western bar include operating a bar with nude dancers. There is a significant *prima facie* difference in the nature of the entertainment being presented. Whereas erotic entertainment seeks to sexually arouse the audience by the stripping and suggestive behaviour engaged in by the performers, country and western shows seek to entertain by providing a showcase for the special talents of singers, musicians or dancers. That difference is further apparent in some of the physical alterations made to the building and the business it houses because of the transformation from a country and western bar to a bar with nude dancers. Among other things, five closed booths were added so that customers could be offered erotic dances in a private setting. I further find it relevant to note the contrast between private dances performed in booths and country and western entertainment presented in public. In my view, these factors provide further support for the impression that one use has indeed been replaced by another, rather than that the same use has been continued.

77 The foregoing exercise therefore plainly leads me to finding that there is an obvious difference between a bar that presents country and western entertainment and a bar that presents erotic entertainment, even if we disregard individual opinion about the moral value of erotic entertainment. However, that distinction becomes even more germane when we examine it with the objectives of harmonious development and welfare, which land use legislation is intended to advance, in mind. Efforts to advance those objectives may indeed be informed by considerations of a moral nature, as long as those considerations relate to the primary purposes of the by-laws. For example, it would obviously be proper, for the purposes of those by-laws, to distinguish between establishments that serve liquor and establishments that do not. *A fortiori*, it should be apparent that there is a fundamental difference between an establishment that presents country and western entertainment and another establishment that presents entertainment of an erotic nature. As well, the observation that both types of entertainment are legal does nothing to advance the analysis, since by definition, land use planning presupposes a classification of legal uses for the purposes of dividing and organizing the territory.

78 Nonetheless, the nature of an activity must be defined in reference to the perception and values of the society. Accordingly, while it may be legal to operate establishments that present erotic entertainment, those establishments have a particular social and moral connotation that justifies treating them as distinct for land use planning purposes. First, the kind of entertainment presented involves an increased possibility of indecent excesses and illegal acts

(see, for example, s. 163(2)(*b*) of the *Criminal Code*, R.S.C. 1985, c. C-46: exhibiting an indecent show; s. 167: immoral theatrical performance; and s. 173(1): indecent act). Second, that kind of entertainment tends to condone the violation of respect for and the dignity of the performers, whose sexuality and persons are then subservient to and exploited for lewd and commercial purposes. And third, it is worth noting that the police officer, Gelly, testified at trial that the opening of an establishment presenting erotic entertainment prompted the police service to tighten its surveillance in the surrounding neighbourhood, and that it was attracting a criminal element.

79 The decisive question of whether the conversion of an establishment that presents entertainment that is devoid of any sexual or erotic aspect into an establishment that presents erotic entertainment means that the protection offered by acquired rights is lost has only seldom been addressed by the courts. In Quebec, there is only *Saint-Raymond (Ville) v. Entreprises Benoît Demers Inc.*, [1996] Q.J. No. 4387 (QL) (Sup. Ct.), in which Goodwin J. held that a transformation of this sort had resulted in replacement of one prohibited use by another, and led to the loss of the acquired rights. The courts of the other provinces of Canada do not seem to have had occasion to deal specifically with this question. The American courts, however, have examined it on a few occasions.

80 In *Squillante v. Zoning Board of Appeals of the City of Hartford*, 1997 Conn. Super. Lexis 2612, the plaintiffs had obtained a certificate of occupancy from the municipality to operate a "Café Liquor" (p. 2). At the time the certificate was issued, it would have been open to them to present "adult" entertainment under the by-laws then in force. However, there was nothing in the evidence to show that they had done any such thing. The city then amended its zoning by-laws, and "adult" entertainment establishments were prohibited in the zone where the plaintiffs' business was located. The plaintiffs subsequently began to operate an establishment of that nature. The city had issued a notice of violation to the plaintiffs, who then claimed that their activities were protected by acquired rights. The court rejected that argument, stating, at pp. 12-13:

> [T]he simple fact is that the record reflects that no adult entertainment was actually being provided on the premises prior to the time the municipal code was amended on May 9, 1994, to exclude adult entertainment from a B-1 zone.

Accordingly, because a "Café Liquor" and an adult entertainment establishment are entirely different in nature, operation of the former could not mean that operation of the latter was protected by acquired rights.

81 In *Marzocco v. City of Albany*, 629 N.Y.S.2d 847 (App. Div. 1995), the petitioner had purchased a tavern featuring male strippers as entertainment, which catered primarily to the area gay population. That use was prohibited by the zoning by-laws in force, but was protected by acquired rights. The petitioner first replaced the male strippers with topless female dancers. He then decided to surrender his liquor licence and establish a "juice bar", and present totally nude female dancers and other forms of erotic entertainment. He therefore applied to the City of Albany Board of Building, Zoning and Housing Appeals for permission to change the use of the premises. When the request was denied, he turned to the courts, which affirmed the Board's decision. The Appellate Division of the New York State Supreme Court held, at p. 848:

> Initially, we agree with Supreme Court that there is rational basis and substantial evidence in the record to support respondent's factual determination that petitioner's change in the character of his property was sufficient to require a use variance. . . . Notably, the abandonment of petitioner's tavern trade and surrender of his liquor license freed him from the restrictions (and the public from the protections)

> of the Alcoholic Beverage Control Law and the rules of the State Liquor Authority. In the same connection, the primary purpose and profit motive of the business changed from the sale of food and beverages, with adult entertainment a mere incidental attraction, to the exhibition of nude dancing, thereby effecting a fundamental change in the character of the clientele and, as a consequence, the impact of the business on the neighborhood. [Emphasis added.]

82 The dissimilarity between a country and western bar and a bar that presents entertainment involving nude dancers is also revealed by a line of more general cases concerning the validity of land use planning provisions governing establishments that present erotic entertainment. In *Val-d'Or (Ville de) v. 2550-9613 Québec Inc.*, [1997] R.J.Q. 2090 (C.A.), it was argued that the distinction made by the municipality between [TRANSLATION] "taverns, bars and night clubs" and establishments that present entertainment with male and female nude dancers was discriminatory, as that term is understood in administrative law. Chamberland J.A., writing for the Court of Appeal, rejected that argument and stated in his reasons, at p. 2095:

> [TRANSLATION] It is clear from the evidence in this case that the adoption of the zoning by-law (June 7, 1993) and the decision to refuse the [respondent's] request to amend the by-law (July 17, 1995) were based on considerations involving the proximity of a church and an elementary school, child protection, crime prevention and the safety and welfare of the public, as well as the improvement of the image of downtown Val-d'Or. These are relevant considerations in zoning and urban planning matters.

The distinction was therefore held to be permitted under the *Act Respecting Land Use Planning and Development*. As well, in *Moncton (City) v. Steldon Enterprises Ltd.* (2000), 225 N.B.R. (2d) 11 (Q.B.), it was concluded that a by-law adopted under the *Community Planning Act*, R.S.N.B. 1973, c. C-12, prohibiting the operation of "adult cabarets" within the city, was valid. Those cases are also consistent with the opinion stated by the United States Supreme Court regarding the validity of similar zoning ordinances (*Young v. American Mini Theatres, Inc.*, 427 U.S. 50 (1976); *Renton (City of) v. Playtime Theatres, Inc.*, 475 U.S. 41 (1986)).

83 As a final point, I consider it worth noting that in Ontario, the *Municipal Act*, R.S.O. 1990, c. M.45, specifically delegates to municipalities the power to regulate "adult entertainment parlours" (see, for example, *538745 Ontario Inc. v. Windsor (City)* (1988), 64 O.R. (2d) 38 (C.A.)). Section 225 of that Act provides:

> (1) By-laws may be passed by the councils of local municipalities for licensing, regulating, governing, classifying and inspecting adult entertainment parlours or any class or classes thereof and for revoking or suspending any such licence and for limiting the number of such licences to be granted, in accordance with subsection (3).
>
> . . .
>
> (3) Despite subsection 257.2 (4), a by-law passed under this section may define the area or areas of the municipality in which adult entertainment parlours or any class or classes thereof may or may not operate and may limit the number of licences to be granted in respect of adult entertainment parlours or any class or classes thereof in any such area or areas in which they are permitted.

84 To conclude, I believe that these are significant indications that the distinction between a bar that presents country and western entertainment and a bar that presents entertainment involving nude dancers is relevant in the exercise of general land use planning powers.

85 I am of the view therefore that operating a bar that presents erotic entertainment constitutes the illegal replacement of the original non-confirming use by a different non-conforming use. Replacing the one with the other accordingly results in loss of the protection conferred by acquired rights.

VII. Conclusion

86 For these reasons, I would allow the appeal, set aside the judgment of the Court of Appeal, and order the respondents to immediately cease using the premises located at 643 4th Avenue in Saint-Romuald as a bar that presents erotic entertainment, with costs throughout.

Appeal dismissed with costs, L'HEUREUX-DUBÉ, GONTHIER *and* BASTARACHE JJ. *dissenting.*

Solicitors for the appellant: Pothier Delisle, Sainte-Foy.

Solicitors for the respondents: Daignault & Associés, Québec.

THE HONOURABLE MR. JUSTICE J.R.TURNBULL

REASONS FOR JUDGMENT

[1] This is an application brought under rule 14.05(3) of The Rules of Civil Procedure.

[2] At the outset of the proceedings the parties agreed that the style of cause of these proceedings should be amended to name only Shawn Benvenuti as the named Respondent. I so order.

[3] The Applicants seek a declaration that the Respondent is in violation of By-Law NW-1-2000 for the former City of Nanticoke because he is boarding and exercising up to eight horses on his lands known municipally as 1991 Regional Road 24. They seek a mandatory order requiring the removal of all horses from the subject lands forthwith. They further seek an injunction precluding the keeping of horses and livestock on the Respondent's lands in contravention of the by-law.

Chronology

[4] On August 5th, 1986 by-law number 1-NA86 for the former City of Nanticoke was passed and it was approved by the Ontario Municipal Board on February 10th, 1987. The parties agree that the Respondent's lands which were closest to Regional Road 24 (the most easterly portion) were zoned for residential use and the rear of the property (the most westerly portion) making up most of the 5.03 acres of the Respondent's lands was zoned agriculture. Under the by-law, permitted uses of agriculturally zoned agricultural included the following:

1. Air strip and hanger, one each per farm.
2. Animal kennel or hospital
3. Bed and breakfast
4. Bunkhouses, provided occupants are employed by the farm operation where the bunkhouse is located.
5. Commercial greenhouse
6. Farm
7. Farm processing
8. Farm produce grading and distribution station

9. Farm produce outlet

10. Farm vacations

11. Home occupation

12. Home industry

13. Seasonal storage of recreational vehicles and recreational equipment as a secondary use to a farm

14. Single detached dwelling

15. Storage of operational school buses

[5] It was agreed between the parties that at all material times a single family residence and two barns were on the Respondent's property. The two barns were close to the zoning line separating the agricultural portion from the residential portion of the Respondent's property. There seems to be no issue that the barns are located on what were at all times the agricultural portion of the Respondent's property. On the portion of the Respondent's lands zoned for residential purposes, there has been at all material times a single family residence which has been used for that purpose. Counsel indicated that to the Court during submissions.

[6] The Applicants purchased their property, which is a single family residence two doors removed to the north from the residence of the Respondents, in the spring of 2000.

[7] By-law NW-1-2000 (hereinafter also referred to as "the new by-law") was passed by the council of the City of Nanticoke on November 10th, 2000 and approved by the Ontario Municipal Board on March 27, 2001. Under the new by-law, the Respondent's property in it's entirety became designated RH which is a residential hamlet designation. Permitted uses under the RH zoning are:

1. Single detached dwelling

2. Home occupation

3. Home industry

4. Bed and Breakfast

[8] The Applicant Gregory Watts has deposed in his affidavit that when he and his wife took possession of their home in 2000, the Respondent's property did not house any horses and or livestock. The Respondent's property in 2000 was used for the purpose of growing corn. Corn was likewise grown in 2001. In 2002, the Respondent's property was used for growing pumpkins. In the spring of 2003, an area for a corral was fenced and when the fencing was completed the subject property became occupied by horses.

[9] On the 7th day of August, 2003 the Respondent's offer to purchase the lands and premises at 1991 Regional Road #24 was accepted by the executor for the former owner of the property. Sale price was $145,000.00 and the closing of the transaction took place on the 12th day of September, 2003.

[10] After the date of purchase new activity then began occurring on the Respondent's property. The evidence indicates that the barns began to be used, horses were brought onto the property and construction of the fencing completed. The applicant also swore in paragraph 7 of his affidavit, that the Respondent's property currently provides accommodation for eight horses.

[11] At the outset of the hearing, counsel for the Respondent conceded that the last time livestock were kept on the property was sometime in the mid 1990's. This was the testimony of his client Mr. Benvenuti on his cross-examination transcript at page 7, question 36 to question 46. Those questions and answers form part of the exhibit one on the application. There seems to be no issue that the property was

continuously used for residential and agricultural purposes up to and including the time the Respondent acquired the property.

[12] The Respondent purchased his lands from Claude Robert Hill a farmer who retired after living on the farm for approximately 26 years. Mr. Benvenuti swore in his affidavit that he purchased the lands in question solely for the purpose of raising quarter horses. He had looked in many locations in Norfolk County for a suitable farm property and the property owned by Mr. Hill seemed to meet his needs. He knew that sheep were being raised on the property immediately to the north of the former agricultural portion of his land. That sheep farming operation backs onto the entire west side of the Applicants' property. Ginseng was being planted in the field immediately to the south of the Respondent's property.

[13] At exhibit A to the Respondent's affidavit there is a copy of the Agreement of Purchase and Sale by which the Respondent contracted to buy the property. It contained a condition which provided as follows:

> "Seller agrees to provide written verification that the zoning for the property is agricultural at the rear, residential at the front of the subject land prior to closing. If the seller is unable to obtain such then this agreement shall be terminated."

[14] Unfortunately the real estate agent for the Respondent appears to have advised him that the property at the rear was zoned "agricultural". The Respondent's affidavit indicates that the agent provided him with schedule A1A to by-law 1-NA86 for the City of Nanticoke which displayed the rear (or westerly) portion of the farm as being agricultural. His real estate agent also provided him with a letter signed by the owner, Claude Hill who confirmed that during his period of owner ship, he kept livestock on the property. The Respondent understood this livestock to be cattle as well as chicken and pigeons and rabbits. This was all averred to in the affidavit of Mr. Benvenuti. Unfortunately the schedule A-1A to by-law 1-NA86 for the City of Nanticoke was not the relevant schedule as the new by-law had been passed by the Municipality in late 2000 .

[15] The Respondent deposed that he engaged a law firm to represent his interests on the purchase and prior to closing, he made inquiries of the building/zoning department of Norfolk County concerning the zoning of the property. He satisfied himself that the rear of the property was zoned agricultural. Clearly he was wrong in that respect.

[16] Immediately after closing Mr. Benvenuti erected a 100 foot by 200 foot outdoor riding pen to temporarily house three horses until he could fence the pasture adequately. This caused some concern with the nearby neighbours. Shortly thereafter, a complaint was made against him by the local by-law enforcement officer regarding the fence and the housing of horses on his property by the municipal enforcement officer. Mr. Benvenuti was advised the property was zoned residential and that he could only keep horses on the farm if in fact there was a legal non-conforming use that could be established from prior to the establishment of the new by-law. In order to establish that there was a legal non-conforming use Mr. Benvenuti spoke to certain neighbours who knew Mr. Hill and were able to confirm that he kept approximately six to eight beef cattle, chickens, pigeons and rabbits on the property and in the barns. Letters from neighbours verifying that fact were next entered as exhibit D to the affidavit of Mr. Benvenuti. However, these letters do no constitute proper evidence before the court on an application and I have disregarded their import in the consideration of this matter. I further place no weight on the reasons given by the municipal by-law enforcement officer in rendering his decision that this was a legal non-conforming use.

THE LEGAL ISSUE:

[17] The legal issue in this matter is relatively straightforward. Was the legal non conforming use of the lands for a farming purpose

terminated by virtue of the Respondent commencing a quarter horse operation on the subject lands?

[18] The Applicants contend that the legal non-conforming use which existed at the time of the enactment of the new by-law was that of an agricultural cash crop farm and nothing more. They argue that the change to a horse farm for the training and boarding of quarter horses is a change in use and therefore the legal non-conforming designation which formerly attached to the Respondent's property has been lost. As a result, the quarter horse operation on the Respondent's property violates the existing zoning by-law and should not be allowed to continue.

[19] The Respondent on the other hand argues that the use of the property for agricultural purposes has continued on an uninterrupted basis since the enactment of the new by-law and it is simply the type of farming which has been changed.

Argument of the Applicant

[20] The applicants note that there is a statutory basis to the position they are taking on this application. Section 34 of The Planning Act provides as follows:

34(1) Zoning by-laws may be passed by the councils of local municipalities:

1. For prohibiting the use of land, for or except for such purpose as may be set out in the by-law within the municipality or within any defined area or areas or abutting on any defined highway or part of a highway.

Section 34(9) provides as follows:

> No by-law passed under this section applies, (a) to prevent the use of any land building or structure for any purpose prohibited by the by-law if such land building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose.

[21] The applicants contend that the land and buildings on the Respondent's land were not used for a horse farming operation on the day of the passing of the by-law and therefore the Respondent is in contravention of The Planning Act. It is trite law to note that there is an onus on the Respondent to prove he has an exemption to a by-law, which proof must not only go to the use of the lands at the time of the amendment of the by-law but also to it's continued use until the time of the issuance of the proceedings. See Corporation of the City of Toronto v. San Joaquin Investments Ltd. et. al., 5 M.P.L.R.113 at 123.

[22] The Applicant Gregory Watts swore in paragraph 16 of his affidavit that an inquiry about the legality of the horse farming operation of the Respondent had been made by his solicitor to the solicitor for Norfolk County. The Solicitor for Nofolk County responded as follows:

> "The use that predates the current by-law and the prior by-law in 1986, as well, is broader than the keeping of horses in the barn. The use to be considered is the "agricultural uses" (i.e. those uses permitted in an agricultural zone) within the by-law which includes a farm as one of such uses. The definition of farm includes the boarding of livestock and as such definition allows a variety of farming activities to be undertaken. The definition is not restrictive, in

> that only one of the elements listed within it can be undertaken at any point in time, to the exclusion of any other elements within the definition. The information we have is to the effect that the property has consistently been used for agricultural purposes and therefore, the boarding of horses is permitted under the by-law."

[23] This evidence was adduced by the Applicant in his own affidavit. In addition, counsel for the applicants candidly acknowledged that the boarding of livestock would include under any definition the boarding of horses, as is being done by the Respondent.

[24] In support of that contention, the Applicants rely on Dennis v. The Township of East Flamboro et. al., 1956 O.W.N. 282. In that case , the Court of Appeal was dealing with a property that had ceased to be used for a gas station or for any other commercial purposes. After the cessation of such usage, a by-law of the respondent corporation was passed prohibiting the use of the property for a gas station. Subsequent to the enactment of the by-law an application was made by the appellant to the clerk of the municipality for a license to operate a gasoline station on the premises. The application was refused on the ground that the operation of a gasoline station on the premises was contrary to the provisions of the newly enacted by-law. The concrete base for the pumps and the underground gas tanks still remained on the premises at the time the appellant applied for a license. The Appellant argued that a legal non-conforming use existed because the property at all material times was available for usage as a gas station. The court disagreed with the Appellant and at page 285 of the decision The Honourable Mr. Justice J. A. Hogg wrote:

> "It's obvious that the by-law cannot alter or extend the purpose or intention of the statute upon which the authority to act the bylaw rests. The building involved in the appeal may have been arranged designed and intended as a gasoline station but on the day of the passing of the by-law it was not used nor had it been used for that purpose for approximately the preceding three years. Even if it had been so used it did not continue to be used for that purpose after the by-law had been enacted. The premises therefore did not fall within the ambit of the exemption provision contained in Section 390(6) of The Municipal Act (the equivalent of Section 34(9) of The Planning Act.) ."

[25] Thus, in the Dennis decision, the Court held there was no legal conforming use. This case is distinguishable from the one at bar as the commercial usage had terminated prior to the enactment of the by-law. In the case before this Court, the use of the property for farming purposes had not terminated at the time of the passage of the new by-law and I so find on the basis of paragraph 9 of the Applicants' supporting affidavit.

[26] Counsel for the Applicant further referred the Court to the decision of Gayford v. Kolodziej, 1959 O.W.N. 341 at 343 (a decision of the Ontario Court of Appeal). This involved a property on Lake Simcoe in Gwillinbury Township. The defendant's property at the relevant time was used as a tourist home. A by-law was enacted by the municipality which changed the zoning and made the defendant's tourist home a legal non-conforming use. After the enactment of the by-law the owner of the property leased the property for most of the summer season to a lessee who used the property for private residential purposes only i.e. not as a tourist home. The Plaintiffs sought an injunction restraining the defendants from using the property as a tourist home again. The Plaintiffs were granted an injunction at trial as claimed and the Defendants appealed to The Court of Appeal. One of the grounds of appeal was that use of the property as a tourist home was a legal non-conforming use and permitted under The Municipal Act Section 390(6). The Court of Appeal agreed that the discontinuance of

user as a lodge or tourist home catering to the public during the major part of the summer season was tantamount to a discontinuance for the whole year of the use of the property as a legal non-conforming use. In the Court's opinion

> "There was such a lapse in or discontinuance of the nonconforming user so as to remove the property from the cloak that under Section 390(6) up to that time exempted it from the by-law".

[27] The applicant contends that this case is applicable to the case before this court as there has been a discontinuance of the use of the property which existed at the time of passage of the new by-law (cash crop farming) and thus the legal non conforming status has been lost. For reasons I will elaborate on hereafter, I find that there has not been a discontinuance of the use of the property for agricultural purposes.

[28] The applicant further relies upon the case of Heutinck v. Oakland 42 M.P.L.R. (2d) 258 (O.C.A.). In that case the Appellant property owner sought to use the barn on his property for raising emu but was advised by the Respondent municipality that such use was not allowed. The Ontario Court of Appeal clearly held in this case that the nature of a non-conforming use is not defined by references to the definition in a by-law but must be determined by reference to the use which the property was put at the time the by-law was passed. The court held at paragraph 4 of its endorsement that as the property owner's barn "was not being used for the purpose of raising emu or, indeed, for any agricultural purpose" at the time of the enactment of the relevant by-law, it did not fall within the definition of non-complying use, building or structure within the meaning of the by-law. At page 260 of the report The Court of Appeal stated as follows:

> "Central to this analysis is our reliance upon the well established rule that the nature of a non-conforming use is not defined by reference to definitions in the by-law rather it must be determined by reference to the use to which the property was put at the time the by-law was passed. In this case, the activity now engaged in by the Appellant is fundamentally different from that which had occurred at the time of the passage of the by-law: Glenelg (Township) v. Davis (1992), 10 .M.P.L.R. (2d) 260 (Ont. C.A.) at page 265.

[29] The Appellant further referred the Court to Re O'Riley,(1991) 8M.P.L.R.(2d) 190 which is a decision of the Ontario Municipal Board. The Appellants owned two properties in Oshawa, Ontario. There was a single family dwelling located on each of the properties at the time that the municipality enacted a by-law rezoning the properties commercial. The Appellants attempted to renovate their buildings to establish two family residential dwellings on each property. When the City opposed their application, the Appellants sought a minor variance from the by-law before the Committee of Adjustments. The issue before the Board was whether the Appellants' legal non conforming uses were lost through the conversion of the two buildings to dual-family dwellings. The Board applied a strict and narrow interpretation to the definition of use and held that "use" consisted of a precise function. At page 199, the Board made the following statement of principle which is urged on this court in this application:

> "Following on this, the Board cannot accept the contention of the counsel for the appellants that the 'use' need only be a residential use in order to be a continuing legal non-conforming use. It must be the same residential use, that of a single family dwelling. Therefore, it follows that at the time occupation of the buildings as dual dwellings took place,

> their occupation as single-family dwellings ended, since no part of the two buildings could, in these circumstances, remain occupied by single-family dwellings."

[30] However, that strict and narrow definition of use was not absolutely accepted the following year by the Ontario Court of Appeal in Glenelg (Township) v. Davis (supra). After finding that the status of legal non conforming use had been lost by the appellant changing the use of his business from primarily one of the wrecking and storage of vehicles to a scrap metal processing operation, Doherty J.A., writing for a unanimous Court stated :

> "This is not a situation where a subsequent owner merely expands on a pre-existing use, or engages in a different activity which is within the generic description of the pre-existing use: see Central Jewish Institute v. The Corporation of the City of Toronto, [1948] S.C.R. 101 at 105, 113-114; [1948] 2 D.L.R. at 4-5, 12; R.v. Cappy and Smith (1952), 103 C.C.C. 25 at 32-33, (1953) 1D.L.R. 28 at 35-36. Instead, this is a case where Davis engaged in a fundamentally different activity than that which had occurred on the property prior to 1981."

[31] It appears that the position of the Court of Appeal is to not apply a strict and narrow approach to the matter but to look more broadly at the generic use, among other things, and to determine if the activity involved is fundamentally different than that which occurred at the time of the passage of the by-law.

Respondent's Argument

[32] The respondent's position is that the pre-existing use of the lands and premises was for agricultural purposes. Black's Law Dictionary , 8th edition, defines agriculture as "the science or art of cultivating soil, harvesting crops, and raising livestock". The respondent argues that the change in use to farming horses or livestock, in the context of the information before the court falls within the fair definition of agriculture. He contends that his raising and boarding eight quarter horses has not changed "the essential use of the land". The Respondent argues that the essential use of the land at all material times was for agricultural purposes and the only thing that has changed is the type of farming which is taking place.

[33] In support of that contention the Respondent relies largely on The Supreme Court of Canada decision in Saint Romuald (City) v. Olivier, 2001 SCC 57 (CanLII), [2001] 2 S.C.R. 898. In that case the Respondents were the owners of a building located within a commercial zoned area of the city of Saint Romuald. They had provided country and western entertainment in a bar/restaurant environment since 1990. In 1991, a new zoning by-law came into effect which prevented the Respondents from allowing nude dancers as live entertainment. After the enactment of the by-law, the Respondent began using nude dancers instead of western singers to attract patrons to the night club. The municipality argued that this was a contravention of the new by-law. The Respondents argued that expansion of the use was within their rights as a legal non-conforming use and that the by-law did not apply to their establishment.

[34] The Supreme Court of Canada held substitution of nude dancers for western singers is not such an extreme variation in the nightclub or cabaret formula so as to constitute a wholly different and therefore unprotected use. In other words, a user could, in certain circumstances alter the use of the property and still claim a legal non-conforming exemption from the by-law. The Court held that the respondent's pre-existing use could appropriately be characterized as a commercial offering of a combination of food, drink, ambience and lawful entertainment to the public. The change to a different form of

entertainment was within the protected use. Applying the operative terminology of Section 34 of the Planning Act of Ontario, the use of the land and buildings was for the same purpose despite the fact that some of the activities in effecting that purpose had changed

[35] At paragraph 34 of the decision of the majority in the Saint – Romuald decision, the Honourable Mr. Justice Binnie writing for the majority suggested a series of factors that a court should consider in determining if there has been a change of use so as to terminate a previously existing legal non-conforming use. The use of these factors by the court hearing the original application was approved by the Divisional Court in Ottawa (City) v. Ottawa (City) Chief Building Official, [2003] O.J. No. 4530 at paragraphs 25 and 26 . These include the following:

1. The purpose of the pre-existing use and the activities that were carried on the property prior to the enactment of By-law NW-1-2000 (the new by-law). I find that in this case, the pre-existing use of the property was residential and agricultural.

2. Is the new proposed use simply an intensification of the old use or does it go beyond a matter of degree and constitute, in terms of community impact, a difference in kind? I find that the new use of buying, selling training, boarding and exercising quarter horses is simply a change of activities within the old use of the property for agricultural purposes with little community impact. It is noteworthy, but not at all determinative of the issue, that such usage by the Respondent would clearly have been allowed under the former by-law which permitted the use of the lands as a farm.

3. How remote is the change of the activity from the earlier activity? This is the most difficult of the considerations for this court. . In the case of Regina XREL.Skimmings v. Cappy (1952), 103 C.C.C. 25 (Ontario C.A.), the Ontario Court of Appeal had to deal with the issue of whether or not owners of a stadium which allowed stock car racing on the property had violated a by-law. The stadium owners defended on the basis of a legal non-conforming use. The majority of The Court of Appeal per Laidlaw J. A. acquitted the stadium owners on the basis they operated a "general purpose" stadium whose permissible program was not limited to the type of specific events on "the day of passing of the by-law." The majority seemed influenced by the idea of remoteness, meaning that the new activity of stock car racing, while a different activity, was not remote but was closely related to what had gone on before. I find this consideration of use is relevant in the context of this case.

I have carefully considered the evidence before the court and had the opportunity to look at the photographs presented to the court. The house, the barns and the lands continue to be used for farming purposes in conjunction with residential living. The setting is a rural one with nothing more than a few horses living on the property. The property is immediately adjacent to a sheep farm. There is no evidence that the intensification of use of the lands and buildings has been significant nor that it has caused disruption to anyone other than the applicants. There has been no added construction of buildings on the lands. I find the usage of this property as it presently is being used is not remote from the former usage.

4. To what extent are the new activities within the original scope of usage? The greater the disruption,

the more tightly drawn will be the definition of the pre-existing use or acquired right. As stated above, I find the new activities are within the original scope of usage. I find the disruption to the neighborhood to be minimal. In every one of these cases, when someone complains (as is their right) about a new activity not permitted under a new zoning by-law, the court must consider not just the impact on the complainant but on other people in the neighborhood and in the greater community. There has been no such evidence brought before this Court aside from the concerns of the applicants and I find the impact on the neighborhood and the greater community to be minimal.

5. The neighborhood effects as established by the evidence. I have carefully considered the evidence led by the Applicants with respect to the neighborhood effects of the respondent's use of his property. There was an allegation by the Applicant Gregory Watts in his affidavit that manure piles were smelly and urine was allowed to accumulate on the property. The Respondent rebutted such information and in fact in his responding affidavit indicated the manure pile had been moved to an area approximately 650 feet form the Applicant's property. In addition there was no evidence of ponds of urine on the property other than a photocopy of a piece of property showing water on it. There was no evidence that this was urine. There was some vague evidence in the Applicants' affidavit that a neighbor's well water was non potable. There was no evidence though that this was in any way related to the Respondent's farming operation and I discount that evidence. The applicants contended that there were more flies in the vicinity since the horse operations commenced and combined with the odour from the Respondent's operation, it made it difficult and unenjoyable to entertain guests at their home. The respondent has produced evidence from the By-law enforcement officer of the County of Norfolk confirming that as of April 18, 2005, the storage of solid waste manure on the Respondent's property is in compliance with the required minimum distance setbacks. I have further reviewed the decision of Taliano J. in Peacock v. Norfolk (County) Chief Building Official [2003] O.J. No. 2771 and Roy J. in Ottawa (City) v. Ottawa (City) Chief Building Official, [2003] O.J. No. 1945 where the considerations relative to neighbourhood and community impact on expanded hog farming operations were considered extensively. I find in this case, the impact of the Respondent's use of his property on the neighbourhood and the community to be minimal.

6. The Court must consider the proper balance in the characterization of the legal non-conforming use (not too general to liberate the owner from the constraints of what he actually did and not so narrow as to rob him of flexibility). In considering this issue, the decision of the Supreme Court in Saint-Romuald v. Olivier, supra, dictates that the Court can not any longer determine there has been a change of use by using a broad "category" approach to the question. Hence, a categorization of his activities as being "agricultural" within the meaning of the former by-law is not appropriate. The Court must look at the essential purpose for which the property is being used to determine if the change of activities is beyond the scope of that purpose. At paragraph 19 of his reasons for the majority, Binnie J. wrote:

> "Under the doctrine of "acquired rights", the respondents were not only entitled to continue to use the premises as they were when the new by-law was passed, but was given some flexibility in the operation of that use. My colleague Gonthier J. notes that regard is to be had in such cases to "the real and reasonable expectations" of the landowner caught by changes in the zoning by-law. (paragr.63 (emphasis deleted)."

[36] In the circumstances of this case, I am satisfied that this change in use from crops to horses is one that a landowner might reasonably undertake within the context of a legal non-conforming use, provided the number of horses and intensity of use is not excessive. A landowner who farms his property would have "a real and reasonable expectation" that such a change in farming activity as found in this case would be lawful and not terminate his legal non conforming status of his property.

[37] Counsel for the Applicants further relied on the decision of Mr. Justice Quinn of this court in Walton v. Lincoln, 43 M.P.L.R. (2d) 291. At page 319 of that decision, Mr. Justice Quinn was required to consider the wording of Section 34(9)(a) of The Planning Act. He found that the key feature of that section is that the non-conforming use must be a "continuing use" if it is to survive a subsequent prohibitory by-law. He cited with approval Laidlaw J. A. in Wilmot v. Kingston (City) [1946] O.R. 437 (Ont. C.A.). He noted that the Court analyzed Section 406 (2) of The Municipal Act, R.S.O. 1937, C. 266 as re-enacted by The Municipal Amendment Act, 1941 S.O. 1941, C. 35, S 13. That section was an early predecessor to Section 34(9)(a) of The Planning Act. At page 446 Laidlaw J. A. said:

> "Thus if land is used on the day of the passing of a by-law for a purpose prohibited thereby that use may continue and such by-law by express statutory provision is not applicable to that land so long as it continues to be used for that purpose. If the use for that purpose ceases the by-law thereupon becomes applicable and the land cannot thereafter be used for a prohibited purpose in the same manner, and to the same extent, the use of any building in existence at the time a by-law is passed for a purpose prohibited by the by-law may continue."

[38] Quinn J. found no reason why Section 34(9)(a) should not be interpreted literally. I concur with him. If the land or building was used for such purpose on the day of the passing of the by-law and so long as it continues to be used for that purpose the by-law passed under Section 34 does not apply to the property.

[39] In the circumstances of this matter I find that the Respondent's lands were being used for agricultural purposes at the date of the enactment of by-law NW-1-2000 passed by the council of The City of Nanticoke. I find that the use of that property for agricultural purposes has continued to and including the present date and while the type of farming has changed, the use of the property and the buildings for farming purposes has not substantially changed so as to no longer consider the lands of the Respondent as a legal non-conforming use.

[40] In conclusion of argument counsel for the Respondent requested that if his client was successful in this matter I would award costs to his client. However, the court is cognizant of the fact that the Respondent is somewhat the author of his own misfortune in that he, his lawyers or his real estate agent failed to properly check the zoning by-laws of the municipality prior to closing his purchase of the property. The case has raised a relatively novel point in that as noted by the Supreme Court in the Saint-Romuald v Olivier decision (supra), many of these cases will turn on their own facts. I find that this matter has been a very troublesome and difficult matter for both parties and in

the circumstances this Court will not award the Respondent his costs of this application despite his success in these proceedings.

[41] The application is therefore dismissed without costs.

The Honourable Mr. Justice J. R. Turnbull

Released: JULY 25, 2005

44 O.R. (3d) 750; [1999] O.J. No. 2461; Court File No. 99-CV-167381

William F. White Limited v. Uzumeri, in his capacity as Chief Building Official of the City of Toronto et al.; A. Mantella & Sons Limited et al., Intervenors

[Indexed as: William F. White Ltd. v. Toronto (City) Chief Building Official]
Ontario Superior Court of Justice

Stinson J.

June 29, 1999

Christopher J. Williams, William A. Chalmers and Patricia A. Foran, for applicant.

David Leibson, for Yaman Uzumeri and the Corporation of the City of Toronto.

Bernard L. Eastman, Q.C., for A. Mantella & Sons Limited and 1040 Islington Avenue Holdings Limited.

Timothy Pinos and Arthur Hamilton, for 1037423 Ontario Inc., carrying on business under the trade name and style of Premier Fitness Club.

STINSON J.: — This appeal under s. 25(1) of the Building Code Act, 1992, S.O. 1992, c. 23 (the "BCA") raises issues concerning the standard of review on such an appeal, and the interplay between the BCA and the Environmental Protection Act, R.S.O. 1990, c. E.19 (the "EPA"). The appeal is brought by an existing tenant of an industrial building who seeks to rescind a building permit issued to a new fellow tenant who plans to operate a fitness club in part of the building. Questions also arise whether, on the facts of this case, the issuance of the building permit by the City of Toronto should be rescinded under s. 25(4) of the BCA and whether this is an appropriate case for a reference to the Building Code Commission under s. 25(5) of the BCA.

The Facts

The applicant/appellant William F. White Limited ("White") is a company that leases, tests and repairs cameras and other types of equipment used in the production of television programs and motion pictures. Through a sublease arrangement, White is a tenant of ground floor premises located at 1040 Islington Avenue, Toronto, a large, two-storey building constructed for industrial purposes in the mid-1950s. The zoning of the building is light industrial. It is owned by A. Mantella & Sons Limited through 1040 Islington Avenue Holdings Limited ("Mantella").

White has been a tenant of the ground floor premises since late 1996. When White first took possession, a significant portion of the premises was in an office-like configuration, with an acoustic tile ceiling that was suspended many feet below the concrete slab that formed the underside of the floor of the second storey of the building. The space immediately beneath the second storey slab also contained a variety of ducts and pipes, some of which passed through the concrete slab to the floor above. White carried out extensive renovations to its premises that included the removal of the acoustic tile ceiling to give the premises a more "industrial-type look". Additional work carried out by White included installation of light fixtures attached to the underside of the concrete slab and, in due course, installation of sound absorbent baffles, since the premises were found to be quite "reverberant" following the removal of the original ceiling.

White configured its premises to include office and sales space, camera storage and maintenance space, as well as camera testing space. Camera testing is said to be an important aspect of White's business since the reliability and accuracy of the equipment that it leases to customers is vital. Part of the work carried out by White included the installation of specialized camera testing facilities utilizing metal framework bolted to and suspended from the underside of the concrete slab that forms the second floor of the building. White estimates that in all it spent approximately $2.5 million in renovating the premises to suit its requirements.

The evidence of White indicates that the high precision camera equipment that it rents to its customers is extremely sensitive to dust, dirt and vibrations. The evidence further indicates that this equipment must be precisely adjusted and cleaned after each rental in order to ensure its effectiveness. Although there is no express provision in its written lease arrangements concerning White's particularly sensitive use for the premises (apart from the usual covenant for quiet enjoyment), White claims that it made its requirements known to the owner before it moved in. There is some dispute about this on the evidence, but this point is not material for resolution of the issues before me.

Prior to September 1998 the second storey of the building was vacant. In August 1998, the owner leased the second storey premises to 1307423 Ontario Inc. ("Premier") which is one of a group of affiliated health and fitness clubs operating under the Premier Fitness Club name. The use permitted in the Premier lease is the operation of a "health and fitness club", without restriction. A substantial portion of the premises leased to Premier on the second storey of the building is located directly above White's ground floor premises.

Premier began demolition work in September 1998, removing partitioning in its premises in preparation for the construction of a health and fitness club. At that time, White began complaining to Mantella about the prospect of a fitness club on the second storey. White asserted that it had a right to a "complete dust and noise free environment" and also complained about the noise and dust from the work being done to remove the existing partitioning. Mantella responded that the fitness club was an acceptable use in an industrial building and that White's sensitive use was not contracted for in its lease. Mantella further informed White that if White wished to take any measures to protect its special sensitivities, it should do so at its own expense.

The demolition work by Premier continued through the fall of 1998 and into early 1999. The evidence indicates that, on a number of occasions, White's employees and operations were disturbed by noise coming from the second floor immediately above White's premises, and by various types of debris (such as dust, chips of concrete, pieces of metal and some fluids) that fell from above.

Discussions among the parties failed to resolve White's complaints and in December 1998, White commenced an action against, among others, Mantella and Premier, seeking damages for nuisance, as well as injunctive relief. In that action White brought a motion for an interlocutory injunction to restrain Mantella as landlord and Premier as tenant from constructing or operating a fitness club above White's premises. That motion was adjourned from time to time over the course of several months. During that time the demolition work was completed and construction work for the fitness club commenced. White continued to experience and complain about problems arising from noise, falling debris and dust.

In connection with the court proceedings and the injunction motion, the various parties retained consultants and experts who prepared reports concerning the suitability of the second storey of the building for use as a fitness club and the potential effect of that use on White and its operations. Among other things, these experts reviewed the structure of the building and in particular the second

floor slab, and considered such matters as noise and sound transmission, vibration and the like. Among the specific topics considered was the potential impact on White's operations from the operation by Premier of an aerobics exercise studio, a general gymnasium and a weight room in various locations above White's premises.

Premier's plans for the second storey of the building did not require any structural changes to be made. The use of the second floor as a fitness centre was not going to exceed the live load of the original design of the building. The renovation work necessary to convert the space to a fitness club did, however, require Premier to apply to the City of Toronto for a building permit. No permit would have been required had Premier simply moved its equipment into the premises and conducted its business, including aerobics classes and weightlifting, without performing interior renovations.

The permit application was made February 1, 1999 by an architect on behalf of Premier. With the application, the architect submitted plans for the construction prepared by himself and a professional engineer, for review and approval by the respondent Yaman Uzumeri, in his capacity of chief building official of the City of Toronto and the Corporation of the City of Toronto (collectively "the City"). Since there were no structural changes being made to the building, the Ontario Building Code, O. Reg. 403/97, did not require Premier to retain a structural engineer to submit structural drawings.

In the months prior to the permit application (and in parallel to the then ongoing litigation), White's solicitors had forwarded several reports to the City which raised concerns about the potential impact upon White arising from the use of the second storey premises as a fitness club. The particular concerns mentioned in those reports related to sound transmission and floor vibration.

When the application for the building permit was received by the City, it was first reviewed to determine whether the use complied with the relevant zoning. A fitness club is a permitted use. The application was then reviewed by a plan examiner/building engineering who performed a cursory review of the plans to determine whether they generally conformed to those parts of the Building Code addressed by the application. The examiner also reviewed the plans to confirm that they met the life-safety requirements of the Building Code. The examiner was given the reports from White's experts that raised the issues of sound transmission and floor vibration.

Due to White's concerns, the examiner requested Premier's architect to have consulting engineers respond to the expert reports submitted by White. In response to that request Premier submitted three reports from consulting engineers. These reports were reviewed by the City, which was satisfied that the reports addressed the issues raised by White and, further, that the proposed construction did not contravene the Building Code.

White then forwarded additional experts' reports, in response to those submitted on behalf of Premier. The City in turn forwarded these reports to Premier with a request that its consulting engineers respond, in order to assist in the evaluation of the permit application. This request was confirmed by an examiner's notice which asked for a statement from the Premier's consulting engineers "confirming that the floor with or without improvements satisfies the design criteria stipulated in Part IV of the Ontario Building Code . . .".

In response to the examiner's notice, the City received three further reports from Premier. These reports addressed the examiner's notice and reported that even without the improvements to be made by Premier, the second floor complied with Part IV of the Building Code, including s. 4.1.1.6(1), which deals with vibration.

Based upon the professional opinions provided in response to the examiner's notice, the City was satisfied that there was no contravention of the Building Code in respect of vibration. In particular, through their approach and the results of the tests they described, these reports satisfied the City that the floor was sound.

On March 23, 1999 the City issued a building permit to Premier. On April 12, 1999 White commenced this proceeding by way of an appeal from the decision of the City to issue the building permit, pursuant to s. 25 of the BCA.

In light of the extensive factual interconnection between White's motion for an interlocutory injunction in its action commenced in December 1998 and the issues raised in the s. 25 BCA appeal, both matters were argued before me together, during four days in May and June 1999. Following the conclusion of the argument, I delivered oral reasons dismissing White's motion for an interlocutory injunction. These written reasons deal with White's s. 25 BCA appeal with respect to the City's issuance of the building permit to Premier.

The Issues

White's s. 25 BCA appeal raises four issues, as follows:

(1) What is the standard of review to be applied by a court hearing an appeal under s. 25 of the BCA?

(2) Are the provisions of the EPA which prohibit the discharge of a contaminant into the natural environment "applicable law" that should have been considered by the City when assessing Premier's building permit application under the relevant provisions of the BCA?

(3) On the facts of this case, should the issuance of the building permit by the City be rescinded under s. 25(4) of the BCA?

(4) Is this an appropriate case to refer questions "respecting the interpretation of the technical requirements of the Building Code or the sufficiency of compliance with the technical requirements of the Building Code to the Building Code Commission" for a hearing and report to the court under s. 25(5) of the BCA?

The Legislative Scheme of the Building Code Act

Section 8(1) of the BCA prohibits the construction or demolition of a building unless a permit has been issued. Section 8(2)(a) of the BCA provides as follows:

> 8(2) The chief building official shall issue a permit under subsection (1) unless,
>
> (a) the proposed building, construction or demolition will contravene this Act or the building code or any other applicable law;

The duty of the chief building official to issue the permit once compliance is shown is absolute: see Alaimo v. York (City) Chief Building Official (1995), 26 M.P.L.R. (2d) 69 (Ont. Gen. Div.) at pp. 73-74.

The BCA provides for an appeal from a decision to issue or not to issue a building permit, pursuant to s. 25, the relevant provisions of which are as follows:

> 25(1) Any person who considers themselves aggrieved by

an order or decision made by an inspector or chief building official under this Act or the regulations . . . may, within twenty days after the order or decision is made, appeal the order or decision to a judge of the Superior Court of Justice.

. . . . .

(4) If an appeal is made under this section, the judge shall hold a hearing and may rescind or affirm the order or decision of the inspector or chief building official or take such action as the judge considers the inspector or chief building official ought to take in accordance with this Act and the regulations and, for such purpose, may substitute his or her opinion for that of the inspector or chief building official.

(5) A judge may refer a question respecting the interpretation of the technical requirements of the building code or the sufficiency of compliance with the technical requirements of the building code to the Building Code Commission for a hearing and report to the judge.

As a neighbouring tenant on the ground floor of the building, White considered itself aggrieved by the decision to issue the building permit to Premier. White therefore commenced this proceeding naming the City and its chief building official as respondents. Mantella as owner/landlord and Premier as the adjoining tenant/permit grantee sought and were granted status as intervenors. The respondents and the intervenors all opposed the appeal.

Issue 1 -- What is the Standard of Review To Be Applied by a Court Hearing an Appeal Under s. 25 of the BCA?

Where an appeal is commenced under s. 25(1) of the BCA, s. 25(4) requires the judge to hold a hearing. Counsel for White submitted that the powers conferred upon the judge to "substitute his or her opinion for that of the . . . chief building official" indicate that the appeal should, in effect, be a new hearing. She conceded however, that the appellant does bear some onus, but contended further that there should be no automatic deference given to the decision below.

By contrast, counsel for Premier and for Mantella submitted that the onus is on the appellant to demonstrate error in the initial decision to issue the permit. They went further and submitted that where the decision below appears on its face to be a reasonable one which a responsible building official could have made on the basis of the information placed before him or her, the court should not interfere with the decision.

In Griffen v. Teplitsky, [1999] O.J. No. 1552 (Gen. Div.), Justice Hoilett dealt with an analogous issue when considering an appeal made pursuant to s. 80 of the Health Care Consent Act, S.O. 1996, c. 2. Section 80(9) and (10) of that statute prescribe the powers of the court on an appeal as follows:

80(9) The court shall hear the appeal on the record, including the transcript, but may receive new or additional evidence as it considers just.

(10) On the appeal, the court may,

(a) exercise all the powers of the board;

(b) substitute its opinion for that of a health practitioner, an evaluator, a substitute decision-

maker or the board;

(c) refer the matter back to the board, with directions, for rehearing in whole or in part.

While the above provisions are not identical to those found in s. 25 of the BCA, both statutes contemplate an appeal process in which the court may receive additional evidence. (On the admissibility of evidence on an appeal under s. 25 of the BCA, see Albert Bloom Ltd. v. Bentinck (Township) Chief Building Official, [1995] O.J. No. 2425 (Gen. Div.), per Sharpe J.).

In Griffen, Justice Hoilett had the following to say (at para. 13):

> Concerning this court's jurisdiction, it is worth noting that although the court may treat this appeal as a hearing de novo the court's fundamental role as an appellate tribunal has not changed. That fact is particularly germane, where as here, no new evidence has been adduced. It is my view, in those circumstances, that the customary restraint appropriate for an appellate tribunal should be exercised. In other words, the fundamental issue to be addressed is to determine whether or not the board's decision was reasonable on the evidence having regard to the legal principles applicable. Stated otherwise, it is not this court's role simply to substitute its decision for that of the board's simply because it may, or even would have arrived at a different decision had it been the tribunal of first instance.

Unlike the matter I am considering, the Griffen case was one in which no new evidence was tendered on the appeal. Nevertheless, I agree with Justice Hoilett's conclusion that the issue to be addressed on the appeal is whether the decision below was reasonable. In my view, the same test is appropriate on an appeal under s. 25 of the BCA.

I am reinforced in this conclusion by the decision of Justice Sheard in Lofaro v. North York (City) Chief Building Official, [1992] O.J. No. 1493 (Gen. Div.) (reported at 11 M.P.L.R. (2d) 278). In that case, the affidavits and transcripts before the court disclosed factual conflicts. Justice Sheard said the following [at p. 283 M.P.L.R.]:

> It is clear that there was evidence presented to Mr. Uzumeri that can justify the conclusion he reached, and accordingly justified his revocation of the building permit.
>
> It is not possible for me, on the basis of affidavits, even including transcripts of cross-examination on those affidavits, to reach factual conclusions as to matters that remain in factual conflict.
>
> The decision reached by Mr. Uzumeri appears to me to have been made responsibly in the discharge of his duty as chief building official, and on the basis of evidence which reasonably led to his conclusion.

I also agree with the following comment of Justice D. Lane in the full decision in Albert Bloom Ltd v. Bentinck (Township) Chief Building Official (1996), 29 O.R. (3d) 681 at p. 686:

> As to the appeal, the duty of the judge is to do as the chief building official should have done: s. 25(4). In my view, there is nothing in the Act to alter the normal burden upon any appellant to demonstrate error in order to succeed.

I conclude that an appellant under s. 25 of the BCA has the burden of demonstrating by means of evidence placed before the court that the decision below was not reasonable or that it was wrong as a matter of law. In attempting to discharge that burden the appellant may tender additional evidence before the court, as may the respondents to the appeal.

Issue 2 -- Are the Provisions of the EPA Which Prohibit the Discharge of a Contaminant into the Natural Environment "Applicable Law" that Should Have Been Considered by the City When Assessing Premier's Building Permit Application Under the Relevant Provisions of the BCA?

Under s. 8(2)(a) of the BCA the chief building official cannot issue a building permit where the proposed construction will contravene "applicable law". It was not disputed that the term "applicable law" refers to other statutory provisions that may apply to the proposed construction, as well as municipal zoning bylaws. In an appropriate case the EPA may fall within the rubric of "applicable law": see Leeds & Grenville Board of Education v. Gerrard (1991), 8 C.E.L.R. (N.S.) 266 (Ont. Gen. Div.).

In the present case the appellant (White) contended that the construction of the fitness club contravenes applicable law because its operation will result in the discharge of sound and vibration into the natural environment that may cause interference with the normal conduct of the appellant's business, in violation of the EPA. The appellant also complained that the City acted improperly in issuing the building permit because it failed to consider whether the EPA had any application to the circumstances of this case. It further argued that the City had an obligation to defer to the Director under the EPA, who has authority under s. 9(1) of that statute to decide whether or not to issue a certificate of approval for the discharge of a contaminant.

Dealing with the second point first, I agree that the EPA may fall within the scope of "applicable law" under s. 8(2)(a) of the BCA. It is for the chief building official to assess whether a particular application for a building permit falls within the ambit of the EPA or any other legislation. In some cases it may be apparent that a particular statute is relevant or irrelevant. That is a decision for the chief building official to make in the first instance. If that decision is wrong as a matter of law, then, subject to the discussion below, a judge may substitute his or her own decision under s. 25(4) of the BCA.

In the present case, one of the appellant's complaints was that the City failed to consider whether or not a particular statute was relevant. That failure by itself is insufficient to overturn the decision to issue a permit. Rather, in addition to demonstrating that a particular statute is relevant, an appellant must show that some aspect of the proposed construction would contravene the relevant statute and thus would "contravene . . . applicable law". Unless the appellant can establish such a contravention on the evidence, then the appeal cannot succeed on this ground.

It is apparent in the present case that the City did not consider the possible applicability of the EPA. That does not end the matter, for the further necessary inquiry is whether some aspect of the proposed construction would contravene the EPA.

Dealing briefly with the third point, I do not agree that it is necessary to involve the Director under the EPA in the decision-making process. In the first instance, the chief building official must decide whether the EPA is applicable. If no such decision is made by the chief building official, then the court may be asked to decide the question. This requires an examination of the reasons advanced by the appellant in support of its contention that the EPA has been contravened in this situation. Only if a contravention of the EPA is established would the Director under the EPA come to be involved.

In that event (presumably) the party whose activities offend that statute could attempt to regularize matters by seeking a certificate of approval under s. 9(1) of the EPA.

I turn now to the submissions of the appellant regarding the alleged contravention of the EPA. It contended that the aerobics and weightlifting activities contemplated by the proposed occupancy of the second storey of the building as a fitness club will result in the emission of sound and vibration into its ground floor premises. The appellant submitted, therefore, that the sound and vibration will be "discharged" into the atmosphere, as that term is defined in s. 1 of the EPA. It further submitted that the sound and vibration emitted from the fitness club will result directly or indirectly from human activities and, therefore, the sound and vibration are "contaminants" if they cause an "adverse effect" as those terms are defined in s. 1 of the EPA. Finally, it submitted that the interference with the normal conduct of its business arising from the operation of the fitness club is an "adverse effect" under the EPA.

To summarize, the appellant submitted that the proposed operation of the fitness club will contravene "other applicable law" as denoted by s. 8(2)(a) of the BCA, because it may result in, and/or may permit the discharge of sound and vibration from human activities (included in the definition of contaminants under the EPA) into the natural environment that may cause interference with the normal conduct of the appellant's business (an adverse effect as defined under the EPA).

Both the Premier premises and the White premises are located in the same building, one above the other. Assuming that sound and vibration will be transmitted from the Premier premises through the second floor slab to the White premises once the fitness club begins operation, the question remains whether this activity can properly be construed as the discharge of a contaminant into the natural environment as provided in and prohibited by the EPA and in particular s. 14(1) of that Act.

The term "natural environment" is defined in s. 1(1) of the EPA to mean "the air, land and water, or any combination or part thereof, of the Province of Ontario". The term "air" is defined to mean "open air not enclosed in a building, structure, machine, chimney, stack or flue" (emphasis added). Ordinarily, therefore, the discharge of a contaminant from one part of a building to another part of the same building would not constitute a violation of the EPA.

Counsel for the appellant relied on s. 2 of the EPA which provides as follows:

> 2. A contaminant that is discharged into the air within a building or structure as a result of the discharge of the same or another contaminant in another building or structure shall be deemed to be discharged into the natural environment by the owner or the person who has the charge, management or control of the contaminant discharged in the other building or structure.

(Emphasis added)

In the commentary following s. 2 in her Ontario Environmental Protection Act Annotated (Canada Law Book Inc., 1999) Dianne Saxe says the following (at p. A-45):

> The Act does not generally apply to discharges which occur and remain indoors, i.e., which never reach the "natural environment". In response to the facts of a particular case in which toxic gases believed to originate in one building passed through a sewer into a neighbouring building, s. 1a [now s. 2] deems an air contaminant present in one building as a result of a discharge of any contaminant in another building, to have been discharged into the natural

environment. There have been no decisions as to when adjacent structures, such as units in an industrial mall, constitute "another building or structure".

In light of the fact that both the Premier premises and the White premises are located within the same building, counsel for the appellant conceded that the alleged discharge in the present case was not from one building into another building. He did contend, however, that the transmission of sound and vibration from one storey of the same building through to another storey of the same building did amount to a discharge from one "structure" into another "structure", thus triggering the application of s. 2.

I reject that argument. In Superior Pre-Kast Septic Tanks Ltd. v. R., [1978] 2 S.C.R. 612, 86 D.L.R. (3d) 35, the Supreme Court of Canada considered the interpretation of s. 26(4)(a) of the Excise Tax Act, R.S.C. 1970, c. E-13. In particular, the court considered the interpretation of the word "structure". The court accepted that "structure" meant something other than a building. In a more recent case, M.N.R. v. Plastibeton Inc., [1986] 2 C.T.C. 211, Justice Marceau of the Federal Court of Appeal commented on the analysis contained in Superior Pre-Kast as follows (at p. 214):

It seems to be that in this analysis Martland J. endorses three criteria for determining the existence of a structure:

(1) it must be built or constructed;

(2) it must rest on or in the ground; and

(3) it must not be "a part" of another structure.

Applying the foregoing analysis to the terminology in the EPA, I conclude that two adjoining storeys of the same building, one immediately above the other, are not separate "structures" within the meaning of s. 2 of the EPA. It follows that, regardless whether noise or vibration may be transmitted through the second floor slab from the Premier premises to the White premises, this activity would not amount to a contravention of the EPA.

I therefore conclude that the EPA is not engaged in this situation and the chief building official made no error in not considering that statute. In any event, the proposed construction of the fitness club by Premier for which it submitted its application for a building permit to the City will not contravene "applicable law" by reason of the provisions of the EPA. The Director under the EPA has no role to play here.

Issue 3 -- On the Facts of this Case, Should the Issuance of the Building Permit by the City Be Rescinded Under s. 25(4) of the BCA?

The appellant advanced several further grounds upon which it argued that the decision by the City to issue the building permit was improper. The appellant contended that the proposed construction will contravene the Building Code by reason of vibration problems. The appellant further contended that the building permit was issued on the basis of erroneous information in several respects.

With respect to the alleged breach of the Building Code, the appellant relied on s. 4.1.1.6(1) of the Building Code, which provides as follows:

4.1.1.6 (1) Floor systems susceptible to vibrations shall be designed so that there will be no significantly adverse effect on the intended occupancy of the building from

vibrations.

This provision forms part of Part IV of the Building Code, entitled Structural Requirements.

Section 4.1.1.6(1) does not contain any express minimum requirements for vibration resistance. The appellant argued that the Ontario Building Code calls up certain minimum requirements for vibration resistance that are referenced in the National Building Code. The appellant further contended that the second floor of the building, when utilized for fitness club activities, will not meet those minimum requirements.

The real concern of the appellant in relation to the subject of vibration emerged during the cross-examination of one of its experts. That concern does not relate to the structural integrity or ability of the second floor slab to bear the load and impact to which it may be subjected. Rather, the appellant's concern is that the vibration caused by the operation of the aerobics studio and other aspects of the fitness club may cause things attached to the underside of the second floor slab to vibrate. In turn, this may create noise (from rattling) which may cause annoyance to persons working in the space below. It was further argued that the sensitive procedures used to test and calibrate cameras will be adversely affected by the vibration being transferred to the metal framework.

The position of Premier was that the vibration complaint was not a Building Code issue. I agree. Section 4.1.1.6(1) requires that there be no significantly adverse effects on the intended occupancy of the building from vibrations. The term "occupancy" is defined in s. 1.1.3 of the Building Code to mean "the use or intended use of a building or part thereof for the shelter or support of persons, animals or property" (emphasis added).

The complaint advanced by the appellant is not that the vibration arising from the fitness club on the second floor will cause significant adverse effects on the use of the building for the shelter or support of persons. I accordingly conclude that there is no contravention of the Building Code.

Even if I am wrong in the foregoing analysis and s. 4.1.1.6(1) is somehow engaged, the evidence before me falls short of satisfying me that the use of the second storey of the building will contravene s. 4.1.1.6(1) in relation to the vibration that may result. When the issue of vibration was raised by White's experts, the City sought input from consulting engineers on behalf of the other respondents, as it was entitled to do: see Hilton Canada Inc. v. Magil Construction Ltd. (1998), 47 M.P.L.R. (2d) 182 (Ont. Gen. Div.). As noted in that case (at p. 216), "[i]t is not unreasonable for the City to adopt a policy in reliance upon [the] expertise" of outside professionals.

In the present case, the City officials received and weighed submissions from experts retained by both White and by the other respondents. The City concluded that there were no true concerns relating to vibration, notwithstanding the contentions of White and its experts. In all the circumstances, I find that the City acted responsibly and that its conclusion in relation to the vibration issue was a reasonable one. I am not prepared to disturb that decision or to rescind the issuance of the building permit on this ground.

The appellant further argued that the permit should be rescinded because certain recommendations made by experts retained by Premier and/or Mantella were not added to the plans. On the evidence before me I am unable to accept that argument. More significantly, at least one of the respondents' experts provided his opinion, under his professional seal that "the second floor at 1040 Islington Avenue, without tenant improvements, complies with Part IV of the Ontario Building Code" (emphasis added). Acting

responsibly, the City was reasonably entitled to rely upon that opinion.

The appellant further submitted that the plans submitted by Premier in support of its permit application did not address the subject of sound transmission, and that the City erred in issuing the building permit when sound transmission problems were not adequately addressed. There are two answers to this ground of complaint. First, the issue of sound transmission is not addressed by the Building Code in respect of buildings other than those that are residential. The City could not decline to issue a building permit by reason of non-compliance with the Building Code in relation to a subject that the Building Code does not address.

Second, it would appear that the true thrust of the appellant's complaint in relation to noise transmission is that the noise that the appellant anticipates will be emitted from Premier's premises will be an actionable nuisance. On an appeal under s. 25 of the BCA, this argument is without merit. A building permit cannot be refused on the grounds that the building may be used in such a manner as to become a nuisance: see Alaimo v. York (City) Chief Building Official, supra, at pp. 73-75.

Finally, the appellant contended that the building permit was issued by the City on the basis of mistaken or incorrect information. In particular, it submitted that the City erroneously believed that the building permit drawings had been reviewed by one of the respondents' experts in order to determine compliance with s. 4.1.1.6 of the Building Code.

The appellant relied upon the case of Centre City Capital Ltd. v. Mississauga (City) (1984), 30 M.P.L.R. 96. In that case a building permit was revoked five months after it was issued, when it was discovered that the minor variance that was a prerequisite for the issuance of the permit was still under review in the courts and thus not final. Absent the minor variance, the plans in that case could not comply with "applicable law" and thus the permit could not stand. This was so even though the permit had been issued on the honest but mistaken belief that there was compliance with all applicable law: noncompliance was proven.

In the present case, the fact that the City may have wrongly assumed that the final version of the building permit plans had been reviewed by a particular expert does not necessarily undermine the validity of the City's decision to issue the permit. In order for the appellant to rely on this alleged shortcoming as a basis for requesting the court to rescind the decision to issue the building permit, the appellant would need to show that the City's decision was not reasonable and that the erroneous information was material.

In the Centre City case, the erroneous information was central to the question whether the proposed construction did or did not contravene applicable law. In the absence of the minor variance, the work could not have complied with the relevant zoning bylaw. In the present case, by contrast, the evidence falls well short of establishing that the expert's opinion was deficient in any material way due to the fact that he may not have reviewed a certain version of the plans. I therefore cannot conclude that the allegedly erroneous information was material or that the City's decision to issue the building permit was unreasonable.

For the foregoing reasons I have concluded that on the facts of this case the building permit issued by the City should not be rescinded.

Issue 4 -- Is this an Appropriate Case to Refer Questions "Respecting the Interpretation of the Technical Requirements of the Building Code or the Sufficiency of Compliance with the Technical Requirements of the Building Code to the Building Code Commission" for a Hearing and Report to the Court Under s. 25(5) of the BCA?

The issues in this case are not ones that require a reference to the Building Code Commission for technical assistance under s. 25(5) of the BCA. The evidence before the court is sufficiently comprehensible to resolve any questions.

Conclusion

For these reasons the appeal under s. 25 of the BCA must be dismissed.

Costs

In relation to costs, these should follow the event. At the conclusion of my oral reasons for decision in respect of the injunction motion, I directed that submissions regarding the costs of that procedure be deferred until the disposition of this appeal. If the parties are unable to resolve the question of costs of both procedures, I direct that brief written submissions (no more than three pages each) be filed with the court no later than July 19, 1999.

Order accordingly.

BY THE COURT

[1] This an appeal by the Corporation of the City of London (the "City") from a decision of Mr. Justice Killeen dated February 28, 2005. In that decision, Killeen J. granted the application of Ayerswood Development Corp. ("Ayerswood") and 1510231 Ontario Inc. ("1510231") to overturn the decision of Rocky Cerminara, Chief Building Official (the "CBO"). The CBO had refused to issue unconditional building permits in respect of 28 townhouse units in Blocks 1-4 (also described as Blocks A-D), on lands owned by 1510231, located at 1203 Hamilton Road, London, Ontario (the "Property").

[2] The CBO issued the permits with a condition that, prior to occupancy, the owner would repair or replace the defective gabion wall on the Property.

[3] Upon hearing submissions and reading the materials filed, Killeen J. concluded that the owner had complied with all statutory requirements and that, in imposing the condition, the CBO was attempting to use the powers in the legislation for his own purposes. Accordingly, Killeen J. ordered that the permits be granted unconditionally.

[4] With respect, we are all of the view that the learned trial judge erred in finding that the CBO acted outside the scope of the powers and authority granted to him in the relevant legislation; and therefore, the appeal should be allowed.

BACKGROUND

Site Plan Control

[5] The entire City of London is designated as a site plan control area. The Property is subject to site plan control and the City's site plan control by-law.

The First Phase of Development

[6] The respondent 1510231 is the current owner of the Property. The respondent Ayerswood performed the role of general contractor. On August 31, 1989, the City entered into a site plan agreement with the previous landowner, Trenlon Developments Corporation ("Trenlon"), pursuant to what is now s. 41 of the *Planning Act*, R.S.O. 1990, c. P.13 ("*Planning Act*") for the construction of 156 townhouse units on Hamilton Road, in London, Ontario ("Phase I"). The agreement was registered on title to the property.

[7] The agreement called for Trenlon to perform at no expense to the City, a number of things, including the installation of a sanitary pumping station, a special access road running through the property along the top of the bank of Pottersburg Creek, and a special gabion mesh wall along the bank of the creek to stabilize it and protect it from erosion.

[8] Trenlon constructed the gabion wall in 1989. Between its construction in late 1989 and about the spring of 1998, the gabion wall performed satisfactorily and without incident.

[9] On or about April 20, 1998, the City's building division received a complaint concerning the deterioration of the gabion wall, which resulted in a letter from the City to the respective owners of the property on which the gabion wall was built.

[10] In the spring of 1998, the gabion wall collapsed partly in the area owned by 1510231 and partly on an adjacent parcel owned by Middlesex Condominium Corporation 229.

[11] By letters dated May 22, 1998, and August 10, 1998, Development Engineering, the engineering consultant for Trenlon, stated that additional gabions had been installed in late November 1989. In particular, the gabion wall had been modified to accommodate a guardrail that was placed around the curve in the roadway. There was no evidence that the City was consulted at that time or told about the modifications which involved the construction of additional gabion baskets.

The Second Phase of Development

[12] On October 2, 1997, the City approved a site plan for 28 townhouse units along Hamilton Road ("Phase II").

[13] On March 5, 1998, Trenlon entered into an amending agreement with the City to provide for an additional 28 townhouse dwelling units to be located along the north part of the original property, now owned by the respondent, 1510231. The 1998 amending agreement incorporates the 1989 agreement into its framework.

[14] On May 7, 1998, the amending development agreement and site plan were registered in respect of Phase II. However, the new owner did not pursue the permits for the second phase of construction at this time.

Application for Building Permits

[15] On August 28, 2003, 1510231 applied for 4 building permits to construct 28 townhouses in four separate blocks (Blocks A-D) as detailed in the 1998 amending agreement.

[16] In the fall of 2003, as agent of the owner and its contractor, Ayerswood applied to the City to amend the existing site plan approval to remove plans for a fence in favour of a "noise barrier berm".

Conditional Building Permits

[17] On October 27, 2003, the CBO agreed to issue 2 conditional permits permitting the construction of Blocks A and D at either end of the project. These permits were subject

to a condition that there be no connect, that is no occupancy of the units, until the owner entered into another amending agreement requiring that the gabion wall be repaired and a slope stabilization report completed with respect to the slope on the Property.

[18] On December 9, 2003, the City forwarded a draft amending development agreement and revised site plan which approved the noise berms, as requested, but was made subject to the condition that, prior to occupancy, 1510231 repair or replace the gabion wall on its lands in accordance with sound engineering principles. Subsequently, an engineering study submitted on behalf of the owner concluded that the four proposed new blocks would not be affected by any deterioration of the creek bank.

[19] In March 2004, a City building inspector observed construction on Blocks B and C, for which no building permit had been issued.

[20] On March 17, 2004, an order to comply was issued to Ayerswood, and on March 18, 2004, a stop work order was issued. The City later issued additional conditional permits for Blocks B and C subject to the same "no occupancy" condition.

[21] The special access road, which is a fire access road to the Phase I development, is currently barricaded. Part of the failed road and part of the gabion wall are located on the Property.

JURISDICTION AND STANDARD OF REVIEW

[22] Pursuant to s. 26 of the *Building Code Act, 1992*, S.O. 1992, c. 23 ("*BCA*"), this Court has jurisdiction to hear the appeal "on any question that is not a question of fact alone". The powers of the Divisional Court on appeal are broad and include confirming or altering the judge's decision, referring the matter back to the judge for reconsideration and substituting its opinion for that of the CBO or the judge.

[23] The standard of review for appeals from the order of a judge is widely accepted to be whether or not the decision of the judge was "clearly wrong". Deference to a trial judge's findings of fact is a well-established principle of appellate review. An appellate court should not interfere with the trial judge's findings of fact unless the trial judge makes a "palpable and overriding error, or a "manifest error" or a "clear error". *Equity Management of Canada v. Corporation of the Town of Halton Hills* 1997 CanLII 2742 (ON C.A.), (1997), 35 O.R. (3d) 321 (C.A.).

[24] In other words, an appellate court will be justified in disturbing a trial judge's findings of fact only if a specific and identifiable error made by the judge convinces it that the conclusion of fact reached is unreasonable: see *Schwartz v. Canada* 1996 CanLII 217 (S.C.C.), (1996), 133 D.L.R. (4th) 289 at 305-306 (S.C.C.). On questions of law, however, the standard of review is correctness: See *Housen v. Nikolaisen* 2002 SCC 33 (CanLII), (2002), 211 D.L.R. (4th) 577 at para. 8 (S.C.C.).

[25] In this case, the key issue before Killeen J. was whether the CBO acted beyond the authority provided to him by statute in rendering his decision not to issue full building permits. This is a question of law, attracting the standard of correctness.

THE STATUTORY FRAMEWORK

The *Building Code Act, 1992*, S.O. 1992, c. 23 as amended (the "*BCA*")

[26] Section 8(1) of the *BCA* provides, in part, that:

> No person shall construct…a building…unless a permit has been

issued therefore by the chief building official.

[27] Section 8(2) states, in part, that:

> The chief building official shall issue a permit under subsection (1) unless,
>
> (a) the proposed building, construction or demolition will contravene this Act or the building code or any other applicable law.

[28] At the relevant time, under O. Reg. 160/93, "applicable law" was defined, for the purposes of s. 8 of the *BCA*, as "any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed *construction or demolition of the building* unless the Act, regulation or by-law is complied with."

The *Planning Act*, R.S.O. 1990, c. P-13, as amended (the "*Planning Act*")

[29] Section 41(2) of the *Planning Act* provides as follows:

> **Establishment of site plan control area**
>
> (2) Where in an official plan an area is shown or described as a proposed site plan control area, the council of the local municipality in which the proposed area is situate may, by by-law, designate the whole or any part of such area as a site plan control area.

[30] Section 41(4) provides, in part, as follows:

> **Approval of plans or drawings**
>
> (4) No person shall undertake any development in an area designated under subsection (2) unless the council of the municipality or, where a referral has been made under subsection (12), the Municipal Board has approved…:
>
> 1. Plans showing the location of all buildings and structures to be erected and showing the location of all facilities and works to be provided in conjunction therewith and of all facilities and works required under clause (7) (a).

[31] As a condition to the approval of the plans referred to in subsection (4)1, a municipality may require the owner of the land to provide to the satisfaction of and at no expense to the municipality, a number of things pursuant to s. 41(7)(a), including:

> 2. …facilities to provide access to and from the land such as access ramps and curbings and traffic direction signs;
>
> 3. off-street vehicular loading and parking facilities, either covered or uncovered, access driveways, including driveways for emergency vehicles, and the surfacing of such areas and driveways;

> 6. walls, fences….or facilities for the landscaping of the lands or the protection of adjoining lands; and
>
> 9. grading or alteration in elevation or contour of the land and provision for the disposal of storm, surface and waste water from the land and from any buildings or structures thereon.

[32] As a further condition to the approval of the plan and drawings referred to in subs. 41(4), a municipality may, pursuant to ss. 41(7)(b) and (c), require the owner of the land to maintain to the satisfaction of the municipality and at the sole risk and expense of the owner, any of the facilities mentioned in s. 41(7) and enter into one or more agreements with the municipality dealing with and ensuring the provision of such facilities.

[33] Pursuant to s. 41(10), any such agreement may be registered against the land to which it applies and the municipality is entitled to "enforce the provisions thereof against the owner… and any and all subsequent owners of the land".

[34] Finally, s. 41(13) provides for the delegation of powers as follows:

> Where the council of a municipality has designated a site plan control area under this section, the council may, by by-law,
>
> …
>
> (b) delegate to either a committee of the council or to an appointed officer of the municipality identified in the by-law either by name or position occupied, any of the council's powers or authority under this section…

THE RELEVANT CASE LAW

[35] As previously noted, pursuant to s. 8(2) of the *BCA*, the CBO has no discretion to refuse a building permit if all legal requirements for its issue have been met. Nevertheless, as a general rule, a building permit should not be issued for a development in a site plan control area to which s. 41 of the *Planning Act* applies until site plan approval for the development has been obtained. Without such approval, the proposed building would contravene s. 41(4) of the *Planning Act* and the permit should be refused: see *Quay West v. Toronto (City)*(1989), 47 M.P.L.R. 109 (Ont. Div. Ct.) and *Shell Canada Products Ltd. v. Barrie (City) Chief Building Official*, [1992] O.J. No. 1572 (Gen. Div.).

[36] In the case of *723 Rymal Ins. V. Hamilton (City) Chief Building Official*, [2001] O.J. No. 832 (Sup. Ct.), the land proposed to be developed included a house, which had been listed as heritage property. The building permit application was approved on the basis that the house was to be used as a restaurant, and that measures would be undertaken to preserve and maintain the building. After the construction proceeded, the owner applied for a demolition permit in respect of the house. The Court held that the *Planning Act* is "applicable law" and the demolition would contravene the applicable law; that is, demolition of the house would have prevented Rymal from completing the development in accordance with the approved site plan submitted pursuant to s. 41(4) of the *Planning Act* and the *Planning Act* itself.

[37] Clearly, building permits have been issued in some cases in the absence of site plan approval. See, for example, *Sixteenth Warden Ltd. v. Markham (Town) Chief Building Official* (1993), 18 M.P.L.R. (2d) 70 (Gen. Div.); *Foster v.*

Waterloo (City), [1993] O.J. No. 415 (Gen. Div.); and *Re Revenue Properties Co. and Toronto (City)* (1984), 26 M.P.L.R. 165 (Ont. Co. Ct.), aff'd. (1984), 46 O.R. (2d) 60 (Div. Ct.).

[38] However, these cases were fact specific. The weight of judicial authority has interpreted the relevant legislation as requiring site plan approval as a pre-condition for the issuance of a building permit except when the municipality is acting in bad faith or refuses development approval for an obviously unlawful reason.

[39] In *Dominion Stores Ltd. v. Etobicoke (Borough)* (1982), 19 M.P.L.R. 88 (Ont. Div. Ct.), the municipality attempted to interfere with the owner's lawful use of a public road to access its property by refusing site plan approval, even though the municipality had no statutory authority to prohibit access from the public road in the first place. The conduct of the municipality was found to be clearly "unlawful".

[40] Likewise, in *Polla v. Toronto (City) Chief Building Official* (2000), 15 M.P.L.R. (3d) 103 (Ont. Sup. Ct.), where the City attempted to interfere with Polla's lawful construction of a retaining wall by refusing site plan approval though it had no statutory authority to prohibit its construction, the condition requiring it to tear down the wall was found to be unlawful.

[41] The Ontario Court of Appeal conducted a historical analysis of the planning legislation and its objectives in *Re Hi-Rise Structures Inc. v. Scarborough (City)*, (1992), 10 O.R. (3d) 299, stating at para. 13:

> This historical analysis demonstrates that the provisions of s. 40 are essentially an extension of planning controls. It is the fine tuning of the zoning by-laws. To the extent that agreements are contemplated, they are to assure that facilities such as walkways or landscaping are maintained on an ongoing basis. To the extent that registration is contemplated, it is to assure that successors in title will be bound to observe the covenants. The agreements are unique in that there is no contemplation of an obligation of performance on the part of the municipality….

[42] The court concluded at para. 17 that:

> "…in terms of the broad purposes of the statute and its development over the years, a site plan agreement must be viewed primarily as a planning instrument, remaining a contract for enforcement purposes from time to time, but amenable on the change which is inherent in all planning."

[43] In interpreting the relevant legislative provisions, the courts have generally adopted a liberal approach, taking into account the interests of the community. In *Bruce v. Toronto (City)*, [1971] 3 O.R. 62 (C.A.) the court reviewed the strict interpretation of municipal by-laws and then stated, at p. 66:

> Notwithstanding this, it is my belief that Ontario Courts now accept that the obligation imposed on the municipal council to plan for the growth and development of the community demands recognition of the necessity for means to compel the observance of the rights of the community to determine and enforce

> the direction in which the community should be shaped, and in that regard the rights of the community are paramount to the rights of the owner.

THE DECISION OF KILLEEN J.

[44] On June 9, 2004, Killeen J. heard the application brought by 1510231 and Ayerswood for an order requiring the CBO to issue four unconditional building permits referable to the second phase of the development and the building of the 28 townhouses.

[45] Based on the submissions of counsel and the documentary evidence filed, he found that the applicants had complied with all of the statutory requirements, and as such, the CBO was under an obligation to issue the permits unconditionally pursuant to s. 8 of the *BCA*.

[46] Killeen J. held that the owner was bound by and entitled to rely upon the original development agreement and the 1998 amending agreement, and that these agreements only required that Trenlon maintain the wall for a period of one year following construction. In addition, the 1998 amendment, which was not revoked by the City, bestowed upon the owner the right to construct the envisaged four blocks.

[47] Though the owner had requested some "rather simple" modifications to the site plan, the learned justice refused to accept the City's argument that the owner had abrogated the entire agreement. While the City was within its right to impose conditions relating to the minor modifications requested, it could not impose unrelated conditions with respect to the gabion wall.

[48] Thus, in tacking on a duty to repair the gabion wall, the CBO was attempting to use the s. 41 powers in the *Planning Act* "for his own purposes". Further, he had "no right to turn himself into a surrogate for the council or Municipal Board under the building permit process as prescribed by s. 8 of the *BCA*" (para. 69). The court found that, in doing so, Mr. Cerminara "arrogated to himself an *unlawful* authority in purporting to act under s. 8(3)" of the *BCA* and the conditional permits he issued were "all without legal effect" (para. 78, emphasis in original).

ANALYSIS

[49] The first error of the trial judge, according to the City, was his finding at para. 5 that the gabion wall had been constructed "according to specifications approved of by the City". Moreover, the learned judge erred in reaching the conclusions that there was "not a shred of evidence to show that the proposed building work in question would contravene the *BCA*, the building code or any other applicable law" (para. 65); that the owner's maintenance obligation was limited to one year by the 1989 agreement (para. 25); and that the City had no power in 2003 to re-open or amend the earlier agreements (paras. 60-63). The City also submits that the trial judge failed to give sufficient deference to the CBO's exercise of power pursuant to the relevant provisions in the *Planning Act*.

[50] The position taken by the City, in a nutshell, is that the CBO issued the conditional permits properly and lawfully. In doing so, he was attempting to ensure compliance with the owner's continuing obligations in the 1989 and 1998 agreements and the provisions of s. 41 of the *Planning Act*.

[51] We agree and find that the learned trial judge erred in reaching the conclusions he did.

[52] First, the judge's assertion at para. 5 that the gabion wall was constructed "according to the City's specifications" ignores the fact that, once the as-constructed drawings were

approved in November 1989, the owner unilaterally modified the gabion wall without the City's authority or approval.

[53] In a letter dated May 22, 1998, the engineering consultant for Trenlon, Development Engineering, stated in part:

> Development Engineering was involved in the original design and construction of the gabion wall in 1989. We sought and received the advice of a geotechnical consultant in this matter. The plans were prepared and submitted for approval to the City of London and the Upper Thames River Conservation Authority. The drawings were approved and construction was completed in September of 1989. *As-constructed drawings were completed and submitted to the City on November 3, 1989. Late in November of 1989, some additional gabions were installed upstream of the distress location to accommodate a change in the site plan at that time.* (emphasis added)

[54] In explaining the reason underlying the modification to the wall, the consultants in a further letter dated August 10, 1998, stated that "the wall was modified in late November 1989 when, during the course of site servicing, a guardrail was proposed to be placed around the curve in the roadway".

[55] In the result, the approved drawings which showed a gabion wall having a uniform height of four gabion baskets, were modified unilaterally by the owner to include three additional layers of gabion baskets without foundation.

[56] In light of this, it would be clearly wrong, in our view, to conclude that the wall was *constructed* in 1989 pursuant to the approved specifications. It was not. With respect, in finding that the gabion wall was constructed according to the City's specifications, the learned judge reached a conclusion that was not substantiated by the evidence.

[57] This may have led him to err in reaching the legal conclusion that there was "no shred of evidence" to show that the proposed buildings would contravene "any other applicable law".

[58] Based on settled case law that site plan approval constitutes "other applicable law" (see *Quay West, supra*), and the fact that no such approval was given pursuant to s. 41 of the *Planning Act*, the proposed construction of Phase II would contravene the relevant legislative provisions. Indeed, when the City agreed to the amending agreement in March 1998, it was not aware of the defective wall, or the modifications made to it by the owner in 1989. Yet, by the time the owner applied for building permits for the second phase of development in 2003, all parties were well aware that the gabions had collapsed.

[59] This case can be likened to the situation in *Rymal, supra*, in which the building permit had been approved on a certain basis and the owner subsequently applied for a demolition permit. The court in that case held that since the demolition of the house would have prevented Rymal from completing the development in accordance with the approved site plan, it would contravene the *Planning Act* which is "applicable law".

[60] Since the construction of Phase II would, in this case, mean that the completion of the development would not be in accordance with the originally approved site plan, it would contravene s. 41 of the *Planning Act*. In our view, the learned trial judge erred in finding otherwise.

[61] We agree with the judge's finding at para. 27 that the 1998 agreement is not a free-standing agreement replacing or rescinding the 1989 agreement, but rather, it amends the earlier one to allow for the construction of the new phase of the work.

[62] We do not agree with his holding at para. 25 that the provision for a one year maintenance guarantee on bank stabilization works in para. 13(c)(i) was "the legal limit of the owner's obligation to the City for the wall, nothing more and nothing less". On the contrary, a reading of the agreement as a whole demonstrates that there were ongoing maintenance obligations placed upon the owner.

[63] The development agreement of 1989 provided, among other things, for a sanitary pumping station to pump sewage from the project up to Hamilton Road, a special access road running through the project and a special gabion mesh wall along the bank of the creek to stabilize it and protect it from erosion.

[64] Para. 9 thereof refers to joint use of the driveways and services and calls for original and ongoing obligations by Trenlon referable to the road system, sewer system and the gabion wall. It states as follows:

> Joint Use of Common Internal Driveways and Services:
>
> The owner(s) of each phase of the development shall enter into agreement(s) with the owner(s) of the other phase(s) to provide for the joint use *and maintenance* of common internal driveways and services. (emphasis added)

Para. 10 creates ongoing obligations for fire route accesses; and para. 13 contains the special provisions obliging the owner to construct a sanitary pumping station and a riverbank stabilization undertaking which involved the gabion wall. The particular provisions in issue are:

> Paragraph 13 (a) The sanitary sewer pumping station shall be constructed and maintained in perpetuity entirely at the sole expense of the owner such that there is no overflow provision.
>
> (c) Prior to issuance of a building permit the developer shall obtain written approval by the City Engineer and the U.T.R.C.A. for any works to be done adjacent to the Pottersburg Creek with respect to riverbank stabilization and storm sewer outlets. *In addition* the developer shall provide….
>
> (i) a one year maintenance guarantee on bank stabilization works upon final inspection approval.
>
> (ii) "as constructed" drawings of works along the riverbank.

(emphasis added)

[65] Pursuant to para. 14, upon request of the City Engineer, the owner shall deliver a fully registerable grant of easement to the City "for the maintenance of the Pottersburg Creek located at the west limit of this site". We understand that this provision was never put into effect.

[66] Paragraph 24 provides the City with an ongoing right to enter the lands and premises for the purposes of inspecting the facilities, works and matters to be provided and maintained under the agreement and for the purpose of providing *or*

maintaining at the owner's expense any facility, work or matter where the owner is in default of doing so for 30 days or more.

[67] In his reasons, the learned trial judge mentioned Trenlon's consulting engineer's report which stated that the installation of additional gabions by the City in late 1997 "may be a factor in the change of flow characteristics that may have contributed to the undermining of the gabions". The trial judge also made specific reference at para. 15 to a report from an expert indicating that "the proposed townhouse/condominium units are outside the zone of influence of potential slippage connected with the existing or future slope failures". We understand that legal proceedings are pending to determine the issues surrounding the defective gabion wall.

[68] With respect, in our view, the real question is whether the condition imposed by the CBO bears a real and logical nexus to the use of the property. See, for example: *Ottawa (City) v. Ottawa (City) Chief Building Official*, [2003] O.J. No. 4530 at para. 109 (Div. Ct.).

[69] One of the conditions for site plan approval was that the owner construct, among other things, a gabion retaining wall on the property. A fair interpretation of the whole of the agreement discloses an ongoing obligation of the owner for maintenance of the property, including the gabion wall.

[70] This is not a case such as in *Alaimo v. North York (City) (Chief Building Official)*, [1995] O.J. No. 862 (Gen. Div.) where the chief building official had refused to issue a building permit on the grounds that the proposed construction might cause a nuisance due to the proximity and height of chimneys on adjacent buildings. The court, in that case, held that the CBO could not refuse to issue a building permit pursuant to s. 8(2) of the *BCA* on common law considerations of nuisance.

[71] *Alaimo* involved a condition based on speculation; that is not the case here. Indeed, shortly after the granting of site plan approval for Phase II, the gabion wall collapsed.

[72] Prior to the issuance of a building permit, the CBO is mandated by s. 8(2) of the *BCA* to consider not only the proposed construction but its intended use. The condition imposed by the CBO before issuing the building permits for Phase II, that the owner "repair or replace the gabion wall," bore a real and logical connection to the agreement, the property and its uses.

[73] Given the pronouncements of the Court of Appeal in *Bruce*, *supra*, and *Hi-Rise Structures*, *supra*, a site plan agreement is viewed as a planning instrument that remains a contract for enforcement purposes, but is amenable to change, which is inherent in all planning. Overall, the rights of the community are paramount to the rights of the owner.

[74] The access road, which is a fire route, is now closed. 1510231 and Ayerswood proceeded to build and occupy the second phase townhouses without permission. In our view, in granting the building permits for Phase II conditionally, the CBO was acting within the scope of authority provided to him by the legislation.

[75] It makes logical sense that the development should not proceed unconditionally where requirements on the owner relating to a portion of the Property integral to the agreement have not been fulfilled, for whatever reason.

[76] It follows that, in our opinion, the trial judge erred in holding at para. 78 that the CBO arrogated to himself an unlawful authority in purporting to act under s. 8(3) of the *BCA*.

[77] Moreover, the judge's statement at para. 69 that the CBO had "no right to turn himself into a surrogate for the

council or the Municipal Board", is incorrect in that s. 41(13) of the *Planning Act* permits delegation of the authority to the CBO.

[78] In the result, the learned trial judge erred in finding that the CBO exceeded his authority in attaching conditions to the issuance of the said building permits. In our view, the CBO properly and lawfully issued the permits in accordance with the legislation and the community interest.

CONCLUSION

[79] The appeal is allowed. The order of the Honourable Mr. Justice Killeen, dated February 28, 2004, is rescinded, along with the order for costs.

[80] The appellant is entitled to his costs of the appeal and of the hearing before Killeen J., each assessed in the all-inclusive sum of $10,000 for a total amount of $20,000 including G.S.T. and disbursements.

Pierce J.

Reasons For Judgment On Application

Introduction

[1] The applicant is a manufacturer of "sandwich panels" that are used in the construction of solariums or sunrooms. Craft-Bilt appeals the refusal of the Chief Building Officer for the City of Toronto to issue building permits for three properties. These properties feature sunrooms that are to be built with sandwich panels manufactured by the applicant.

[2] The City's position is that the panels don't comply with the *Ontario Building Code*, and requires that each application be approved by the Building Materials Evaluation Commission.

[3] The applicant asserts that its sandwich panels comply with the *Building Code*, such that the permits should issue. If the court does not order the permits issued, the applicant asks for an order, in the alternative, referring the applications to the Building Code Commission under s. 25(5) of the *Ontario Building Code Act*.

The Court's Jurisdiction

[4] The court's jurisdiction to hear this appeal is found in s. 25(1) of *The Ontario Building Code Act:*

> "A person who considers themself [sic] aggrieved by an order or decision made by an inspector or chief building official, a registered code agency or an inspector under this Act (except a decision under subsection 8(3) not to issue a conditional permit) may appeal the order or decision to the Superior Court of Justice within twenty days after the order or decision is made."

[5] By way of relief, the court may, pursuant to s. 25(4) of the Act:

> "…affirm or rescind the order or decision and take any other action that

the judge considers the chief building official, registered code agency or inspector ought to take in accordance with this Act and the regulations and, for those purposes, the judge may substitute his or her opinion for that of the official, agency or inspector."

[6] Section 24(5) permits the judge to refer to the Building Code Commission a question dealing with interpretation of technical requirements or sufficiency of compliance with the Code. The Commission is obliged to hold a hearing and report to the judge.

Standard of Review

[7] The appropriate standard of review from a decision of the chief building official varies depending upon the nature of the question the court is asked to review. An articulate analysis of this jurisprudence can be found in the decision of Madam Justice Molloy in *Runnymede Development Corp. v. 1201262 Ontario Inc.* 47 O.R. (3d) 374; [2000] O.J. No. 981 (S.C.J.). As Molloy J. explains at par. 29, "The standard may be different not only from one tribunal to another, but also for different kinds of decisions by the same tribunal." The continuum of review ranges from correctness for errors of law or jurisdiction to reasonableness where an appeal is fact-driven and involves expertise.

[8] Because the standard of review for each case turns on its facts, it is necessary to embark on an analysis of the issues.

[9] The Supreme Court of Canada established a framework for analyzing the standard of review in *Law Society of New Brunswick v. Ryan* 2003 SCC 20 (CanLII), (2003) 1 S.C.R. 247 at par. 27, and *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, 1998 CanLII 778 (S.C.C.), (1998) 1 S.C.R. 982 at par. 29 – 38. The reviewing court is directed to make an analysis based on four contextual factors:

1. the presence or absence of a privative clause or statutory right of appeal;
2. the expertise of the tribunal relative to that of the reviewing court on the issue in question;
3. the purpose of the legislation; and
4. the nature of the question.

This framework, known as the pragmatic and functional analysis approach, will be considered below.

[10] By virtue of the *Ontario Building Code Act*, a judge hearing an appeal is given full scope to substitute his decision for that of the chief building official. There is no privative clause; the right of appeal is statutory. This signals a lesser standard of deference to the decision-maker generally.

[11] While the chief building official has some expertise in determining whether a building permit should issue under the Act, this expertise is qualified by these factors: first, the chief building official is an employee of the municipality. She is not an independent decision-maker or tribunal.

[12] Second, the *Building Code Act* generally compels the chief building official to issue a building permit unless the application for a permit does not comply with the building code, or is inadequate for other reasons set out in the statute. Thus, the discretion of the chief building official in deciding whether to issue a building permit is very narrow. If the application complies with the Code, a permit shall issue.

[13] Third, the chief building official does not hold hearings when deciding whether to issue a permit. The official does not,

therefore, have the advantage over the appeal court of hearing witnesses, weighing their evidence and drawing inferences. In fact, the reverse is true: the reviewing court may receive additional evidence that was not before the original decision-maker.

[14] Fourth, the fact that the judge may order a reference to the Building Code Commission suggests that the court does not owe great deference to the chief building official on matters of a technical nature.

[15] The purpose of the legislation is to establish a regulatory scheme throughout the province for safe construction and demolition of buildings. Necessarily, this involves the complexities of design and standards for materials used in construction.

[16] The principal question that arises in this appeal is whether load testing is sufficiently described in the building code. Load testing refers to the proof that a building material, such as sandwich panels, or a design can withstand snow, rain, or wind.

[17] It is the City's position that, although load testing is referred to in the code, there is no direction as to how it is to be conducted. Therefore, the City submits, it cannot determine whether the applicant's sandwich panels comply with the code because it does not have the resources to do its own testing to determine compliance.

[18] The City also contends this is a factual decision which is technical in nature. For this reason, it advocates that the standard of review on this appeal should be that of reasonableness.

[19] I do not agree with this submission. The City's approach to issuing building permits involving the applicant's sandwich panels is based on an interpretation of the *Building Code Act*. It is grounded in statutory interpretation, which is a traditional function of the courts. Thus, the court need not defer to the chief building official as the substance of the matter is legal, not factual or technical. I conclude that the standard of review in this case is one of correctness.

The Legislative Framework

[20] Subsection 8(2) of *The Ontario Building Code Act* sets out six criteria for the issuance of a building permit when a building is being constructed or demolished. Only two are relevant for the purpose of this appeal:

> "The chief building official shall issue a permit referred to in subsection (1) [for construction or demolition of a building] unless,
>
> (a) the proposed building, construction or demolition will contravene this Act, the building code, or any other applicable law…;
> (b) a person who prepared drawings, plans, specifications or other documents or gave an opinion concerning the compliance of the proposed building or construction with the building code does not have the applicable qualifications, if any, required by the building code…"

[21] Section 9(1) of the code gives the chief building official discretion to allow materials or designs not authorized by the building code in certain circumstances. It provides:

> "The chief building official or a registered code agency may allow the use of materials, systems and building

> designs that are not authorized in the building code if, in the opinion of the chief building official or registered code agency, the proposed materials, systems and building designs will achieve the level of performance required by the building code."

[22] Many building materials are approved by regulation under the Act. However, the advent of new materials makes it impractical for each one to be incorporated into the code by regulation in a timely way. For this reason, section 28 of the Act sets up the Building Materials Evaluation Commission (B.M.E.C.). The powers and duties of this commission are set out in subsection 28(4). It may:

> "(a) conduct research on, and examine, construction materials, systems and building designs or cause such research to be conducted and examinations to be undertaken;
> (b) upon application therefore, authorize the use, subject to any conditions that may be set out, of any innovative material, system or building design in respect of any building or part thereof; and
> (c) Make recommendations to the Minister respecting changes in this Act or the building code."

[23] By virtue of subsection 28(5), the code is deemed not to be contravened when any innovative material, system or building design is approved by the B.M.E.C. Unfortunately, the Commission's approvals are site-specific. A manufacturer of a building material would have to apply for B.M.E.C. approval each time a customer wished to use the manufacturer's material in his construction.

[24] The applicant argues that this honeycomb style of sandwich panels, (without "H" stiffeners) has been in use for twenty years, and thus is not an innovation. It also notes that these materials have been approved for use under the building code in other municipalities.

[25] Section 29 of the Act also gives the Minister powers to approve innovative materials, systems and designs for inclusion in the building code.

The Building Code

[26] The parties agree that if the applicant's sandwich panels are not specified in Part 9 of the building code, the materials must conform to Part 4 requirements of the code. It is common ground that Part 4 of the building code applies in this case.

[27] The City takes the position that the applicant's sandwich panels with a honeycomb interior construction, are a finished product, and are not among the approved building materials listed in s. 4.3 of the code. It submits that because the applicant's panels are made of an aluminium skin bonded to a core material, they represent a proprietary product which has not been approved. For that reason, the City recommends the panels be approved by the B.M.E.C. It is noteworthy that the City, by inadvertence, has issued building permits for a few dwellings using the honeycomb sandwich panels. Sandwich panels with "H" stiffeners have previously been judged acceptable by the City.

[28] The applicant submits that aluminium, which is the principal material for the manufacture of the panels, is incorporated by reference in the code. In the course of this appeal, the City agreed that sandwich panels such as manufactured by the applicant, are governed by Part 4, clause

4.3.5.1 of the code, and that the standard for aluminium applies.

[29] The key issue arises from Part 4 of the Code, which deals with structural design, rather than the prescribed structural elements found in Part 9 of the Code. Section 4.1.1.3(1) deals with design requirements:

> "(1) Buildings and their structural members including formwork and falsework shall be designed to have sufficient structural capacity and structural integrity to resist safely and effectively all loads and influences that may be reasonably expected, having regard to the expected service of life of buildings, and shall in any case satisfy the requirements of this Section."

[30] Design features are described in s. 4.1.1.4(1):

> "Design basis – Buildings and their structural members shall be designed by one of the following methods:
>
> (a) standard design procedures and practices provided by this Part and any standards and specifications referred to therein, except in cases of conflict the provisions of the building code shall govern, or
>
> (b) one of the following three bases of design:
>
> (i) analysis based on generally established theory,
>
> (ii) evaluation of a given full-scale structure or prototype by a loading test, or
>
> (iii) studies of model analogues,
>
> provided the design is carried out by a person qualified in the specific method applied and provided the design ensures a level of safety and performance at least equivalent to that provided for or implicit in design carried out by the methods referred to on Clause (a)."

The applicant submitted to the City a design for sunrooms using its sandwich panels, and supplied load test results under a testing standard promulgated by the American Society for Testing Materials. The testing standard is identified as ASTM E72. The A.S.T.M. is a credible body that tests building materials and designs. The sunroom design was sealed by a professional engineer, as complying with the building code.

[31] The effect of the engineer's seal affixed to a document is to indicate that the design is a product of professional discipline and responsibility. This issue was canvassed in *Hilton Canada Inc. v. Magil Construction Ltd.* 47 M.P.L.R. (2d) 182; [1998] O.J. No. 3069 (Gen. Div.) at par. 61:

> "It is generally agreed that the stamp and seal of an engineer communicates to the building official and to the public that the contents of the document sealed reflect professional knowledge and care; and that applicable statutes, standards, codes and regulations have been followed…."

[32] In this case, the City refuses to examine the applicant's load test results, or the supporting data. No issue is taken with the qualifications of the professional engineer who supplied and sealed the design; nor is it suggested there are errors in the load chart. It is not even argued that the panels will not sustain the loads. Rather the City maintains it does not have the manpower to review the load test data and refuses to do so.

[33] The nature of construction is that it is evolving. New methods and materials are introduced into the construction site on an on-going basis. The *Ontario Building Code* recognizes some flexibility is required, therefore, in evaluating the suitability of design and materials. The code achieves this by allowing for approval of accepted or standard designs, or by allowing for designs that are not yet accepted, but meet the tests of safety and performance of a standard equivalent to accepted standards. The code requires that the design be prepared by a qualified person. There is no issue here that an engineer possesses such qualifications.

[34] The City can take comfort from the professional qualifications of the designer, who is required by virtue of s. 4.1.1.4(1)(b) to back up his or her design with test data such as a loading test. The plain reading of s. 4.1.1.4 requires that subsections (1)(a) and (1)(b) be read disjunctively. Subsection (1)(b) is not intended to be read as an adjunct to s. (1)(a).

[35] The City submits that if the code does not prescribe how load testing must be conducted, it cannot evaluate the test results, or indeed, the test data. It argues that the chief building official has a discretion under s. 9(1) of the Act to refuse applications for building permits that are not prescribed in the code.

[36] With respect, I do not agree. Such an interpretation is incorrect in law. If adopted, it would render meaningless the provisions of s. 4.1.1.4(1) (b) (ii) which is an alternate means of establishing compliance with the code. The City cannot simply disregard the provisions of the building code that it dislikes and enforce the ones that it does.

[37] Subsection 9(1) of the Act gives a discretion to the chief building officer to accept materials, systems and designs that are *not* authorized in the building code. This discretion cannot act to defeat applications under s. 4.1.1.4 of the code.

[38] Section 4.1.1.4 prescribes that certain buildings can comply with the building code by virtue of meeting design criteria that are set out in the section. Once the alternative criteria in s. 4.1.1.4(1) are satisfied, the applicant is, by definition, in compliance with the building code.

[39] The chief building official cannot chose to disregard this section of the code because it requires her officials to exercise more judgment in processing applications for building permits. It cannot be rendered nugatory by the chief building official's discretion in subsection 9(1).

[40] The city relied on a bulletin, B-8, developed within its building department that purported to clarify the requirements of sandwich panels. The first point in this bulletin states:

> "1. Panels without built-in structural members is [sic] deemed not in compliance with the *Ontario Building Code* subsection 9.4.1 and subsection 9.4.2 structural requirements, unless tested and approved by BMEC or CCMC…."

[41] This directive is not in accordance with the provisions of the building code that mandate an alternate opportunity for compliance under Part 4. A bulletin does not have the binding effect of law; at best, it is advisory. See *Mattabi Mines Ltd. v. Ontario (Minister of Revenue)* 1988 CanLII 58 (S.C.C.), [1988] 2

S.C.R. 175 (S.C.C.). While a directive may be helpful for the better administration of applications for building permits, such a directive cannot substitute for the provisions of the code.

[42] This issue was considered in *Minto Construction Ltd. v Gloucester (Township)* 8 M.P.L.R. 172; 23 O.R. (2d) 634 (Ont. S.C., Divisional Court). In *Minto*, the municipality passed by-laws that were not in direct conflict with the building code, but imposed stricter standards for the purposes of fire control. At par. 19, the court observed that the building code is exclusive legislation for uniform regulation of building construction throughout the province. The court concluded that by-laws attempting to impose more stringent standards were *ultra vires* the municipality.

[43] I have reached the same conclusion in this case. There is no power in the municipality to circumvent the provisions of the building code by administrative directive. In this case, the advisory bulletin more narrowly interprets the building code, eliminating a means of approval for materials and design that is mandated by the Legislature. Such a directive derogates from the consistency that the Legislature seeks in passing *The Building Code Act* in order to regulate building in the province.

[44] For these reasons, the application is granted. An order will issue as follows:

1. The Respondents shall issue building permits for:

   (a) 63 Braywin Drive, Etobicoke;
   (b) 4 Conifer Drive, Etobicoke; and
   (c) 36 Hearst Circle, North York, with this building permit to be subject to zoning compliance.

2. That all future applications by Craft-Bilt for approval of its honeycomb sandwich panels be evaluated without regard to Bulletin B-8.

3. That load test data under Clause 4.1.1.4 (1)(b) (ii) of the Building Code shall be considered on its merits with regard to the load bearing requirements of the Code only.

4. If the parties cannot agree on costs, an appointment may be obtained from the trial coordinator at Thunder Bay to argue same by teleconference.

	William J. Manuel and Lise Favreau **for the intervenor** **Ministry of the Attorney General for Ontario**

Heard: March 10, 2006

On appeal from the order of the Superior Court of Justice (Divisional Court) (Justice Edward F. Then, Justice P. Theodore Matlow and Justice Helen M. Pierce) dated January 14, 2005.

WEILER J.A.:

Overview

[1] This appeal concerns the jurisdiction of the Normal Farm Practices Protection Board under the *Farming and Food Production Protection Act, 1998*, S.O. 1998, c. 1 (the *FFPPA*) to grant relief from the application of a zoning by-law. Pursuant to subsection 6(3) and 6(6) of the *FFPPA*, the Board is empowered to determine whether an agricultural operation or proposed operation that is directly affected by a municipal by-law is a normal farm practice[1]. If so, then, pursuant to s. 6(1) of the Act:

No municipal by-law applies to restrict a normal farm practice carried on as part of an agricultural operation

[2] A central issue on this appeal is whether, as the Divisional Court held, the definition of the term "municipal by-law" in s. 6(1) of the FFPPA is narrower than the commonly understood meaning of the term so as to exclude a zoning by-law or whether, as the Board implicitly held, "municipal by-law" includes a zoning by-law. If the Divisional Court's interpretation is correct, the Board has no jurisdiction to determine whether a zoning by-law restricts a normal farm practice.

[3] For the reasons that follow, I am of the opinion that the Divisional Court erred in law in adopting an

interpretation of the words "municipal by-law" that excluded a zoning by-law. Thus, the Board had jurisdiction to determine whether the zoning-by-law in issue here restricted a normal farm practice.

[4] My conclusion requires me to go on and review the decision of the Board. I am of the opinion that the Board's decision should be reviewed on a standard of reasonableness. Pursuant to section 6(15) of the FFPPA, one of the four factors the Board is required to consider in determining whether a practice is a normal farm practice is whether the by-law reflects a provincial interest as set out in a policy statement. The Board held that its decision did not contradict the provincial policy statements issued under Section 3 of the Planning Act. The provincial policy statements require that new or expanding livestock facilities comply with the minimum distances separation formulae. Inasmuch as the Board's decision cut the required minimum distance separating Hill's proposed operation from the Stanley Complex in half, the Board's conclusion that its decision was in compliance with the provincial policy statements is simply not tenable and is unreasonable.

[5] More importantly, s.9 of the *FFPPA*, requires that," …the Board's decisions under this Act must be consistent with [the Minister of Agriculture's] directives, guidelines or policy statements." The exercise of the Board's power was therefore limited by s. 9. All that By-law 22 -1985 of the Township of Stanley did was enact the Minimum Distance Separation (MDSII) guidelines of the Ministry of Agriculture for the siting of livestock facilities from other uses. The Board's decision that Hill need not comply with the minimum distance specified in the by-law for siting his barns is not consistent with the MDSII guidelines. The Board's decision is therefore unreasonable; it surpasses the limitation imposed by s. 9 and therefore cannot stand.

[6] As a result, I would dismiss the appeal.

History of the Proceedings

[7] Hill owns and operates a pig farm located within the geographic Township of Stanley, Huron County. The former Township of Stanley is now part of the amalgamated Municipality of Bluewater. The by-law in issue here is Stanley Township's zoning by-law #22-1985 and it continued to apply.

[8] In 2001, the appellant applied to the respondent Municipality for a building permit in order to increase the capacity of their pig farm from 700 pigs to 1,350 pigs. Hill also applied to the local Committee of Adjustment for three minor variances to accommodate the proposed construction. Section 4.5 of this by-law provides that the erection or expansion of a livestock facility must comply with the minimum distance separation (MDS II) for new or expanding livestock facilities set out by the Ontario Ministry of Agriculture, Food and Rural Affairs. Section 29 of the by-law stipulates how the MDS II requirements are to be calculated. Two of the variances sought by Hill were for relief from the MDS II requirements. MDS II requires that a new or expanding agricultural operation that is located in the vicinity of an institutional use be

sited double the distance required from an ordinary neighbour, a requirement known as " the doubling factor".

[9] Hill's farm is located next to the Stanley Township Municipal Complex, a community centre and institution. The evidence appears to be undisputed that the land upon which the Complex is located had been used for municipal purposes for a number of years before the Stanley Complex was built in 1984. It was often used for picnics and ball diamonds most evenings from May until September each year. The complex houses municipal offices and an auditorium that is rented for weddings and used for other community events on a regular basis.

[10] Following a hearing, the Municipality dismissed Hill's application for variances. Hill then reduced the size of its proposed expansion plans and the number of animal units, and made a fresh application for minor variances but this application was also dismissed. Hill did not appeal that decision to the Ontario Municipal Board within the time limits for appeal.

[11] Hill next applied to the Normal Farm Practices Protection Board on the basis that its proposed expansion was a "normal farm practice" that the by-law restricted. The Board, whose decision will be discussed in greater detail, held that the proposed expansion was not a normal farm practice. The Board held, however, that Hill's proposed operation would be a normal farm practice if he were relieved of the doubling factor and in effect held he did not have to comply with the by-law.

[12] The Municipality appealed the board's decision to the Divisional Court. The essence of the Court's reasons, reported at 75 O.R. (3d) 352, is contained in the following passages:

[21] A " municipal by-law", as used in section 6, does not include a zoning by-law. Rather, section 6(1) and (2) are intended to refer to municipal by-laws which deal with matters prohibiting or regulating nuisances and disturbances of the type referred to in the preamble of FFPPA. This is one of those rare instances in which a court should not give effect to the literal meaning of a word where the context shows overwhelmingly that the Legislature intended that it should be given a more restricted interpretation.

….

[30] Accordingly, it is our view that the jurisdiction of the Board is confined generally to matters involving the protection of farmers who cause inevitable nuisances and disturbances to others by giving farms the right to do so provided that their farming operations fall within the definition of 'normal farming practice'. The Board has no jurisdiction to interfere with matters pertaining to land use such as arose in the circumstances of this case. Minor variances and spot rezoning are matters that fall exclusively within the various processes recognized by the Planning Act [R.S.O. 1990, c. P.13]. Moreover, section 71 of the Planning Act provides that, in the event of conflict between the provisions of that Act and any other general or special Act, the provisions of the Planning Act prevail.

[13] The Divisional Court gave several reasons in support of its conclusion. 1) Nothing in the preamble or *FFPPA* itself confers authority on the Board to deal with matters involving land use planning. 2) Minor variances and spot rezoning are matters that fall exclusively under the *Planning Act* which provides that in the event of conflict between the provisions of that Act and any other Act the provisions of the *Planning Act* prevail. 3) Land use matters, especially those which involve zoning issues, can have enormous ramifications not only for owners of the land involved but also for the community as a whole. Therefore, they ought to be considered not by the Board, but rather by those persons who have expertise in areas of law and land planning and who are required to safeguard the public interest (*e.g*. Committees of Adjustment or municipal councils).

[14] The appellants sought and obtained leave to appeal the decision of the Divisional Court. The issues I propose to address on this appeal are:

(1) Did the Divisional Court err in determining that the term "municipal by-law" as it is used in s. 6 of the FFPPA does not include a zoning by-law? In other words, did the Divisional Court err in determining that the Board did not have jurisdiction to decide whether a practice is a normal farm practice when the by-law that allegedly restricts the practice is a zoning by-law.

(2) If the Divisional Court erred and the Board did have jurisdiction to consider Hill's application, what is the appropriate standard of review of the Board's decision.

(3) On a proper application of the standard of review can the decision of the Board be upheld?

Analysis

1. Did the Divisional Court err in determining that the term "municipal by-law" as it is used in s. 6 of the FFPPA does not include a zoning by-law?

[15] The reasons that lead me to conclude that the Court erred in its interpretation are derived from the application of the modern approach to statutory interpretation that is set out by E.A. Driedger in the *Construction of Statutes* (2d ed. Toronto: Butterworths 1983), at p. 87:

Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.

[16] Driedger's modern approach has been cited and relied on by the Supreme Court of Canada on numerous occasions: See *e.g. Rizzo v. Rizzo Shoes Ltd. (Re),* [1998] 1 S.C.R. 27, at para. 21; *Bell Express Vu Limited Partnership v. Rex*, [2002] 2 S.C.R. 559 at para. 26; *H.L. v. Canada (Attorney General),* [2005] 1 S.C.R. 401, at paras. 186-187; *Chieu v. Canada (Minister of Citizenship and Immigration),* [2002] 1 S.C.R. 84 at para. 27; Contino *v. Leonelli-Contino,* [2005] 3 S.C.R. 217, at para. 19 and *Canada 3000 Inc., Re,* 2006 S.C.C. 24 at para. 36.

[17] As I have indicated, a central issue on this appeal is the Divisional Court's interpretation of the term, "municipal by-law" in s. 6(1) as excluding a zoning by-law. That interpretation led the court to conclude that the Board lacked jurisdiction to decide whether the Municipality's zoning by-law restricted a normal farm practice. Applying Driedger's approach to statutory interpretation, there are five reasons why the Divisional Court erred in its interpretation.

[18] First the ordinary meaning of the words "municipal by-law" includes a zoning by-law and the Divisional Court acknowledged as much.

[19] Second, regard to the object of the Act and the legislator's intent in enacting the Act as a whole means consideration must be given to the preamble of the *FFPPA*. The preamble of the *FFPPA* makes clear that it is not simply intended to address nuisances arising from agricultural operations but, more broadly, to address issues that arise from the competing interests of agricultural operations and adjacent properties. The preamble states:

It is desirable to conserve, protect and encourage the development and improvement of agricultural lands for the production of food, fibre and other agricultural or horticultural products.

Agricultural activities may include intensive operations that may cause discomfort and inconveniences to those on adjacent lands.

Because of the pressures exerted on the agricultural community, it is increasingly difficult for agricultural owners and operators to effectively produce food, fibre and other agricultural and horticultural products.

It is in the provincial interest that in agricultural areas, the agricultural uses and normal farm practices be promoted and protected in a way that balances the needs of the agricultural community with provincial health, safety and environmental concerns.

Because the *FFPPA* is intended to address competing land uses, an inference can be drawn that the legislature intended the Board to have the power to consider zoning by-laws which regulate the use of land in a municipality.

[20] Third, Subsection 2(5) states that the *FFPPA* is subject to the Environmental Protection Act, the Pesticides Act and the Ontario Water Resources Act. It does not state that the *FFPPA* is subject to the *Planning Act*.

[21] Fourth, the scheme of the Act is fleshed out by subsection 6(15) of *FFPPA* which requires the Board, in deciding whether a practice is a normal farm practice for purposes of the non-application of a municipal by-law, to consider, among other things, "[t]he effect of the practice on abutting lands and neighbours" and "[w]hether the by-law reflects a provincial interest as established under any other piece of legislation or policy statement". Viewed in combination, sections 2(5) and 6(15), lend strong support to the conclusion that the Board is empowered to consider

competing land use issues and any provincial planning policies.

[22] Fifth, because meaning is derived from context, statutory interpretation requires us to determine whether the ordinary meaning of the words is rationally related to the purpose of the legislation. According to Ruth Sullivan, in *Sullivan And Driedger on the Construction of Statutes*, 4th ed. (Toronto: Butterworths, 2002) at p. 223, modern drafters of legislation tend to write provisions using general language applicable to a number of situations, as opposed to drafting narrow, precise provisions. The result, in her opinion, is a legislative style that is often vague and over- rather than under- inclusive. When the ordinary meaning of legislation is too broad, Sullivan states that judges employ purposive analysis to narrow its scope, "by excluding applications within the ordinary meaning that are not rationally related to the purpose." *Canada 3000, supra*, is an example where the Supreme Court employed a purposive analysis to adopt a narrower interpretation of the word "owner" in s. 55(1) of the *Civil Air Navigation Services Commercialization Act*, S.C. 1996, c. 20 so as to exclude legal titleholders from being liable to pay for civil air navigational services rendered. Binnie J. held that the intent of that Act was to create a "user-pay" scheme for civil air navigational services, and that the only "users" of the civil air navigational services within the contemplation of the Act were the airlines who lease the aircraft from the legal titleholders, not the legal titleholders themselves.

[23] Here, having regard to the history of the legislation, another factor that comprises the "entire context" of the legislation, a narrow interpretation of the term "municipal by-law" would not accord with the purpose of the legislative scheme. The Act that preceded the existing legislation was the *Farm Practices Protection Act, 1988*, S.O. 1988, c.62 which was repealed by the *FFPPA* effective May 11, 1998. The predecessor legislation protected a farmer from claims in nuisance for any odour, noise or dust resulting from the farmer's agricultural operation due to a normal farm practice provided that the farmer complied with "any land use control law", as well as with the *Environmental Protection Act*, the *Pesticides Act*, the *Health Protection and Promotion Act*, and the *Ontario Water Resources Act*. A "land use control law" under the 1988 Act was defined in s. 1 as " any Act and any regulation, plan or by-law made under the authority of an Act that restricts or prescribes the use to which land or premises may be put or the nature of business or activities that may be carried on on any land or premises." That definition captures a zoning by-law. The current *FFPPA* no longer requires compliance with these specified statutes before a farmer can bring an application for protection from nuisance claims: *Pyke v. Tri Gro Enterprises Ltd.* (2001), 55 O.R. (3d) 257, at para. 19. However, in the event a farmer has a charge pending relating to a nuisance or disturbance due to his alleged non-compliance with the *Environmental Protection Act, The Pesticides Act, the Health Protection and Promotion Act*, or the *Ontario Water Resources Act* a court may issue an injunction or order that prohibits the farmer from carrying on the agricultural operation allegedly in contravention of the specified statutes. A "land use control law" has been omitted from the list of specified statutes for which an injunction may issue. Moreover,

subsection 2(5) now makes the *FFPPA* expressly subject to the *Environmental Protection Act, Pesticides Act* and the *Ontario Water Resources Act.* Again a "land use control law" has been omitted from the list. At the same time, the 1998 *FFPPA* introduced section 6(1) which states that a municipal by-law does not apply if it restricts a normal farm practice. Assuming without deciding that the term "municipal by-law" was ambiguous and could be read either as including a zoning by-law or not, the reading that best gives effect to the intention of the legislator on a consistent basis is to be preferred over one that results in interpretations going in different directions. Here, the legislator's intention is that a "land use control law" no longer takes precedence over the *FFPPA* and consistency requires us to interpret municipal by-law as including a zoning by-law. For these reasons, the Divisional Court erred in interpreting the term "municipal by-law" so as to exclude zoning by-laws passed by municipalities.

[24] In omitting a "land use control law" from the *FFPPA*, the legislator's intention was not, however, to give the Board *carte blanche* to determine what constitutes a normal farm practice. The Board is required to consider four factors in determining whether a practice is a normal farm practice: s. 6(15). One of the factors is whether the by-law that allegedly restricts a normal farm practice reflects a provincial interest contained in other legislation or a policy statement: s. 6(15). Further, the Board's decision must be consistent with guidelines or policy statements of the Minister of Agriculture or those of another Ministry adopted by the Minister: s. 9. Thus, if a zoning by-law adopts a provincial policy statement of the Ministry of Agriculture, the Board's decision must be consistent with it. In addition, if a farm practice is consistent with a regulation under the *Nutrient Management Act, 2002*,the Board must determine that the practice is a normal farm practice: s. 6.1.

[25] Before turning to the next issue in this appeal, further brief comment must also be made on the reasons the Divisional Court gave for its conclusion that a zoning by-law was not included in the definition of municipal by-law.

[26] In support of its conclusion that the Board did not have jurisdiction to consider zoning by-laws under s. 6(1) of the *FFPPA*, the Divisional Court observed that minor variances and spot rezoning were matters coming exclusively within the various processes recognized by the *Planning Act.* Section 6 of the *Planning Act* implies that other boards will be involved in considering aspects of the *Planning Act* since it requires any government board or agency to consult with, and have regard for, the planning policies of the municipality.

6.(1) In this section,

"ministry" means any ministry or secretariat of the Government of Ontario and includes a board, commission or agency of the Government.

Planning policies

(2) A ministry, before carrying out or undertaking that the ministry considers will directly affect authorizing any any

municipality, shall consult with, and have regard for, the established planning policies of the municipality.

Thus, the legislature has contemplated that other administrative bodies may apply planning policies. To the extent that the Divisional Court was concerned that the Board lacked the expertise of other decision-making bodies, such as Committees of Adjustment or municipal councils, in land use matters, that fact is not, in itself, a reason for concluding that the Board should not decide the issue before it. See by analogy *Tranchemontagne v. Ontario (Director, DisabilitySupport Program)* [2006] S.C.J. No. 14.

[27] The Divisional Court also relied on section 71 of the *Planning Act* which provides that, in the event of conflict between the provisions of that *Act* and any other general or special Act, the provisions of the *Planning Act* prevail. As Blair J.A. observed in dissent, but not on this point, in *Peacock v. The Corporation of Norfolk County,* (Ont. C.A.), June 28, 2006, at para. 82, s. 71 is not dispositive because,"… the conflict is not between the provisions of the two Acts…". Insofar as the Divisional Court relied on the supremacy of s. 71 of the *Planning Act* as a basis for holding that the Board did not have jurisdiction, the conflict is not between the provisions of the *Planning Act* and the *Farming and Food Production Protection Act*.

[28] The Divisional Court supported its conclusion that the term municipal by-law as used in s. 6(1) did not include a zoning by-law because nothing in the preamble or elsewhere in the *FFPPA* conferred authority on the Board to deal with matters that traditionally fell within the traditional scope of land use planning. Having made the determination that the Act did not expressly empower the Board to deal with matters involving land use planning, the Divisional Court, in accordance with administrative law principles, did not end its analysis there. The Divisional Court was required to go on and determine whether the Board had implied jurisdiction to deal with the zoning by-law, a land use planning matter. Assuming that the term, "municipal by-law" is ambiguous, if a tribunal is empowered to decide questions of law, a presumption arises that it has implied jurisdiction to deal with other enactments that arise in the course of a case properly before it: *Nova Scotia (Workers' Compensation Board) v. Martin* [2003] 2 S.C.R. 504, at paras 33 and 45; *Paul v. British Columbia (Forest Appeals Commission)*, [2003] 2 S.C.R. 585 at paras.8 and 41. The rationale for the presumption is that it is undesirable for a tribunal to shut its eyes to some of the law when deciding a legal issue and that doing so could ultimately lead to a denial of justice or other protracted proceedings. The presumption may be rebutted if the legislature has restricted the tribunal's jurisdiction because tribunals are creatures of statute.

[29] There can be no doubt the *FFPPA* gives the Board the implied power to determine questions of law. Section 8(2) of the *FFPPA* provides for an appeal from the decision of the Board on any question of fact, law or jurisdiction to the Divisional Court. As well, the Board may dismiss an application if it is of the opinion that the application is frivolous or vexatious. A further consideration is whether the Board fulfills a function that

is adjudicative in nature. When, as here, the Board holds a hearing, and gives reasons for its decision, it is fulfilling a function that is adjudicative in nature. Nothing in the *FFPPA* specifically restricts the Board's power to deal with a zoning by-law enacted pursuant to the *Planning Act*, in determining what constitutes a normal farm practice. Thus, in addition to the modern approach to statutory interpretation, the application of administrative law principles would lead to the conclusion that the Board, in considering a question properly before it, namely, whether a farm practice was a normal farm practice, had jurisdiction to deal with the Municipality's zoning by-law.

[30] It is possible to read the Divisional Court's reasons as holding that s. 6(3) did not authorize the Board to consider whether a proposed expansion of a farming operation would be a normal farm practice as opposed to whether a proposed new operation would be a normal farm practice and that, as a result, the application was not properly before the Board. If so, I would respectfully disagree.

[31] For ease of reference s. 6(3) is reproduced below:

(3) An application may be made by,

(a) farmers who are directly affected by a municipal by-law that may have the effect of restricting a normal farm practice in connection with an agricultural operation; and

(b) persons who want to engage in a normal farm practice as part of an agricultural operation on land in the municipality and have demonstrable plans for it.

[32] In relation to s. 6(3)(b), the Board held, "We interpret this to mean that an Applicant may come to this Board with demonstrable plans for an expansion and ask the Board to determine whether or not the proposed expansion will be a normal farm practice for purposes of a non-application of a Municipal by-law." I agree with the Board's conclusion.

[33] Subsection 6(3)(b) empowers the Board to decide if a farm practice not yet engaged in would be a normal farm practice. Both new farming proposals and proposals for expansion are encompassed by the wording of the section, "want to engage in a normal farm practice" and there is no principled reason to distinguish between them. Whether the proposed swine operation is a new operation or an expansion of an existing operation, the effect in terms of nuisance would be the same if the total number of animals is the same. In addition to the wording of the subsection, the preamble to FFPPA also supports the interpretation that the Legislature intended to give the Board jurisdiction to deal with a proposed expansion. The preamble provides, in part, that "It is desirable to conserve, protect and encourage the development and improvement of agricultural lands …". The use of the word "improvement" would clearly apply to expansions.

[34] My conclusion that the Divisional Court erred in holding that the Board did not have jurisdiction to consider whether the proposed expansion was a normal farm practice restricted by the zoning by-law is not, however, dispositive of this appeal. I must now go on to review the Board's decision. That exercise in turn

requires me to determine the standard of review applicable to the Board's decisions, the second issue in this appeal.

2. What is the appropriate standard of review of the Board's decision?

[35] There are three standards for judicial review of administrative decisions: correctness, reasonableness and patent unreasonableness. In order to determine which standard applies, and therefore the extent of deference to be accorded to the decision of an administrative tribunal, a court must employ the pragmatic and functional approach. Pursuant to this approach, four factors are considered: a) the presence or absence of a privative clause or statutory right of appeal (although the absence of a privative clause or existence of a broad right of appeal is not, in itself, determinative that less deference may be due to the tribunal's decisions); b) the expertise of the tribunal relative to that of the reviewing court on the issue in question; c) the purposes of the legislation and the provision in particular; and d) the nature of the question, namely, law, fact, or mixed fact and law: see *Law Society of New Brunswick v. Ryan,* (2003), 223 D.L.R. (4th) 577 (S.C.C.) , [2003] 1 S.C.R. 247 at paras, 20, 27, 29.

[36] Applying those factors to the instant case, I conclude that the standard of review is reasonableness. FFPPA contains no privative clause. Rather, as noted pursuant to s. 8(2), there is a broad right of appeal to the Divisional Court on any question of fact, law or jurisdiction.

[37] However, the expertise of this Board was the subject of judicial comment by Charron J.A. in dissent, in *Pyke v. Tri Gro Enterprises, supra,* whose comments in this regard were adopted by the majority Sharpe and Abella JJ.A. Charron J.A. observed at para. 56 of her reasons that, "The [Normal Farm Practices Protection] Board is an administrative tribunal that has been constituted with the particular expertise to achieve the purposes of the legislation. It also has the power to appoint experts to assist it in performing any of its functions: s. 8(3)." She went on to note that the Board's power to inquire into and resolve a dispute in an informal manner could present significant advantages over the traditional court system. In this regard, she pointed to the fact that all but about 1% of the total complaints received by Ministry staff respecting nuisances under the *FFPPA* end in a Board hearing and even where a hearing does take place, the less formal hearings resulted in the entire process being more accessible to the unrepresented litigant. She also observed that the Board's extensive powers of relief could, in certain cases, be more suitable to the needs of the parties. Although the Board does not have exclusive jurisdiction over complaints created by agricultural operations, having regard to the expertise of the Board, the Court was unanimous in its opinion that, absent special circumstances, such complaints should generally first be brought before the Board before any action in nuisance is brought in court.

[38] With regard to expertise, it is also important to note that the Board consists of not fewer than five members appointed by the Minister of Agriculture for a term not exceeding three years and those members of the

Board who are not public servants of Ontario are paid for their services: see s. 3 generally and s. 3(7) in particular of the *FFPPA*. Thus, the Board is not necessarily an independent tribunal. The members of the Board need not be legally trained. They may, however, be in a better position than a court to understand how a particular agricultural operation will affect the local residents. In addition, as noted in *Tri-Gro* at para 58, the Board has extensive powers of relief that may be more suitable to the needs of the parties. The Boards procedures are governed by the *Statutory Powers and Procedures Act*, R.S.O. 1990, c. S. 22: *FFPPA* s. 3(8). Thus, the Board's expertise favours a standard of deference on matters within its jurisdiction.

[39] Insofar as the nature of the question is concerned, the question of whether a farm practice is a normal farm practice is a question of mixed law and fact, since it involves the application of a legal standard to a set of facts: *Housen v. Nikolaison*, [2002] 2 S.C.R. 235 at para 26.

[40] Adopting the pragmatic and functional approach, I would conclude that although there is a statutory appeal from decisions of the Board, the nature of the question before the Court, a question of mixed fact and law, the expertise of the Board and its broad power to stipulate what would be a normal farm practice, suggest a more deferential standard of review than correctness. Thus, the appropriate standard of review of the Board's decision is reasonableness and this Court may only intervene if the decision is shown to be unreasonable.

3. On a proper application of the standard of review, can the decision of the Board be upheld?

The Board's decision

[41] The Board considered whether Hill's proposed expansion would be a normal farm practice, and it concluded that it would not be. The Board concluded that:

Having reviewed the site specific circumstances it is our opinion that locating the swine barns where proposed by the Applicant, would not be a normal farm practice, because alternate suitable locations for the new barns are available which locations would provide an acceptable separation distance from the institutional use and at the same time be cost efficient in terms of construction, labour and management.

[42] The Board held that although the locating of the swine barns proposed by Hill would not be a normal farm practice, he should not have to bear an increased cost to expand his farming operation because of the MDS requirements in the by-law. The reasons expressed by the Board include the following: Hill was engaged in swine farming at the time the complex was built; he had no way of objecting to the by-law; it was foreseeable a conflict would develop; the purpose of the by-law was to minimize disturbance from institutional use and there had been no complaints from the existing operation.

[43] The Board also held that compliance with MDS II did not appear to be the sole determining factor as to whether a farmer was carrying on a normal farm practice. Pursuant to s. 6(15) of the *FFPPA*, the Board is required

to consider four factors in determining whether a practice is a normal farm practice. They are:

1. The purpose of the by-law that has the effect of restricting the farm practice

2. The effect of the farm practice on abutting lands and neighbours.

3. Whether the by-law reflects a provincial interest as established under any other piece of legislation or policy statement

4. The specific circumstances pertaining to the site.

[44] Having already commented on the specific circumstances pertaining to Hill, the Board commented on the other three factors. It concluded that the purpose of requiring compliance with MDS II in the zoning by-law was to minimize the disturbance to institutional use, in this case, the odour from the expanded swine operation. As there was no evidence of complaint due to odour from Hill's existing operations, the Board "anticipated" that its decision would not have a negative effect upon the abutting land, that is, the complex, despite the increased size of the operation. The Board indicated an awareness of MDS II as being part of the agricultural code of practice as well as the 1996 Provincial Policy statement under s.3 of the *Planning Act*. Section3 of the *Planning Act*, required that the Board, " shall have regard to policy statements…". The MDS II guidelines are an example of such a provincial policy statement. The Board also noted that in 1995, when MDS II was being adopted as a by-law, some local governments had adopted bylaws that lessened the setback distance for some institutional uses to a factor of 1.0. The Board further observed that municipal officials could grant a minor variance from MDS II after consulting with the Ontario Ministry of Agriculture, Food and Rural Affairs when considering a variance application.

[45] The Board held that its decision did not contradict the Policy statement.

[46] Under the heading, "Decision", the Board stated:

Having considered all of the evidence, it is the opinion of this Board that the proposed expansion of the Applicant's present hog operation is not a Normal Farm Practice, but the proposed expansion would be consistent with Normal farm Practices if the *Applicant* makes the following specific modifications to the Practice (emphasis added). The Board does hereby order as follows:

1. The proposed expansion must comply with (MDSII) without regard to the doubling factor with respect to the location of the institutional and recreational use, i.e. the lands of the Municipality of Bluewater, notwithstanding the provisions of the Township of Stanley Consolidated Zoning By-Law 22-185, as amended.

Comments respecting the Board's decision

[47] As noted, the Ontario Ministry of Agriculture, Food and Rural Affairs directive entitled "Minimum Distance Separation II (MDSII)" sets out minimum distance separation requirements for new or expanding livestock facilities from existing (or approved)

development. In this case, compliance with MDS II guidelines required a setback of 604 metres (302 metres multiplied by a factor of 2 or double the distance that would ordinarily be required from the nearest neighbour). The Municipality enacted the provincial guidelines into its by-law. Section 9 of the *FFPPA* requires that the Board's decisions be consistent with Ministry of Agriculture directives, guidelines or policy statements.

[48] In commenting that certain municipalities had enacted bylaws requiring a lesser setback from institutional uses, the Board appears to have ignored the fact that, at the time the municipalities passed those by-laws, s. 9 did not exist.

[49] The fact that municipal officials may grant a minor variance to a by-law is irrelevant to the Board's jurisdiction. Administrative bodies only have the jurisdiction conferred on them directly or implicitly. The Board paid no heed to the limitation on the exercise of its power imposed by jurisdiction in s. 9 of the *FFPPA*.

[50] Moreover, the Board was engaged in determining whether an agricultural operation, which was directly affected by a municipal by-law, was a normal farm practice. The Board purported to make its order pursuant to s. 5(4)(c) of the *FFPPA* which gives it the power to order a farmer to modify his "practice" so that it is consistent with "normal farm practice". I have serious reservations as to whether the exercise undertaken by the Board resulted in the modification of a "normal farm practice". Both the comments of Sharpe J.A. for the majority at paras 80 and 81, and Charron J.A., in dissent at para 59, in *Tri-Gro*, *supra*, support the conclusion that a normal farm practice and, consequently, an order modifying that practice under s. 5(4)(c), relates to farming techniques and methods that are of a requisite standard or established and followed by similar agricultural operations, not to making orders that a farmer need not comply with a by-law concerning the minimum distance for locating his barn from another use.

[51] In deciding whether an agricultural operation that is directly affected by a municipal by-law is a normal farm practice, the Board is required to balance four factors. The third factor is whether the by-law reflects a provincial interest as expressed in a policy statement. This factor is to be considered and weighed with the other three factors. The Board did consider the guidelines in reaching its decision and therefore Hill submits that the Board had "regard for" the policy statement.[2]

[52] The Board's conclusion was a conclusion it drew after applying s 6(15) of the *FFPPA*, not s. 9. Irrespective of what the Board may have concluded as to whether a practice is a normal farm practice after applying s6 (15), s.9 requires that the Board's decision be consistent with the Minister of Agriculture's directives, guidelines or policy statements.

[53] The Board's comment that its decision did not contradict the policy statement was unreasonable. Subsection 2.1.4 of the policy statement in effect at the relevant time required that "…new or expanding livestock facilities will comply with the minimum distance

separation formulae". The Board's order directly contradicted the plain wording of the policy.

[54] The Board referred to the MDS II as being a 'guideline'. The Board, however, does not refer to the Farm Practices Position Statement issued by the Ontario Ministry of Agriculture Food and Rural Affairs in 1998, the year that the *FFPPA*, was adopted. That Position Statement's purpose was to "clearly state the Ministry's position and to *give direction* on matters and issues related to farming and normal farm practices" [emphasis added]. The last paragraph of the Statement refers to Minimum Distance Separation, stating, *inter alia*, that new or expanding livestock facilities are to comply with the MDS formulae 'as per Provincial Policy Statement under the Planning Act'. The direction given in this Position Statement clearly falls within the provisions of s. 9 of the *FFPPA*. It was in effect at the time of the Board's determination. It constitutes more than a 'guideline' and was binding by the Board.

[55] The Board was satisfied that the location of the barns as dictated by its decision adequately addressed the Municipality's concerns regarding separation distance. As I have indicated, the concerns were not those of the Municipality alone. The Municipality's by-law reflected a provincial policy directive with which the Board's decision was required to be consistent.

Conclusion

[56] The Board's decision cannot stand. Pursuant to s. 9(1) of the *FFPPA*, the Board was required to ensure that its decision in this case was consistent with the Ministry's MDS II guidelines. Compliance with the Ministry's MDS II guidelines would have required the appellant's closest proposed barn to be located 604 metres from the institutional zone occupied by the Stanley Complex. Instead, the Board permitted a setback of only 302 metres. This result – a reduction by half of the required setback distance – simply cannot be said to be consistent with the MDS II guidelines. The Board could not ignore section 9 and render a decision that was inconsistent with the MDS II guidelines. It's decision was unreasonable.

[57] In the result I would dismiss the appeal.

[58] Costs of this appeal are payable by Hill to the Municipality of Bluewater and are fixed in the amount of $20,000 all inclusive.

RELEASED: September 18, 2006 ("RAB")

"Karen M. Weiler J.A."

"I agree R. A. Blair J.A."

"I agree Paul S. Rouleau J.A."

---

[1] Normal Farm Practice is defined in s. 1(1) . Normal Farm Practice means a practice that ,

(a) is conducted in a manner consistent with proper and acceptable customs and standards as established and followed by similar agricultural operations under similar circumstances; or

(b) makes use of innovative technology in a manner consistent with proper advanced farm management practices;

[2] The *Planning Act* has since been amended and now requires that decisions of Boards affecting planning matters, “shall be consistent with” provincial policy statements.

COBOURG COURT FILE NO.: 004918
DATE: 2002-Feb-6
ONTARIO
SUPERIOR COURT OF JUSTICE

BETWEEN:

SHELLY JANE MAYHEW
Appellant

And

SCOTT JIBB, Chief Building Official for the Corporation of the Township of . Hamilton, and THE CORPORATION OF THE TOWNSHIP OF HAMILTON
Respondents

D. Wayne Fairbrother, for the Appellant
C. Gregory Kay, for the Respondents

HEARD:. January 18, 2002

REASONS FOR JUDGMENT

MACDOUGALL, J.

[1] This is an appeal from the decision of Scott Jibb, the Chief Building Official of the Corporation of the Township of Hamilton, ("the Township") refusing to issue a building permit to the Appellant on October 16, 2001 for a detached, single-family dwelling house on lands described as Block "K", Registered Plan of Subdivision 436 (lithe Subject Lands").

[2] The portion of the Subject Lands on which the Appellant seeks permission to construct a detached, single-family dwelling house is zoned "Estate Residential" by the existing approved Comprehensive Zoning By-Law for the Township. A detached, single-family dwelling house is a permitted use in this zone.

[3] Prior to applying for a building permit, it was the understanding of the Applicant and Township officials that the existing zoning on the Subject Lands was zoned "Open Space Zoning" which would not permit residential construction.

[4] The Applicant applied to the Township for a rezoning of part of Block "K" to "Estate Residential Exception and Environmental - Protection Zoning" and to change the minimum frontyard depth from 75 feet to 50 feet, and the minimum sideyard setback from 40 feet to 25 feet.

[5] - On October 24th, 2000 the Township denied the Appellant's application for rezoning and the Appellant then appealed the Township's decision to the Ontario Municipal Board.

[6] A few days prior to the hearing before the Ontario Municipal Board on April *25th,* 2001, the Township's planner "discovered the error" that the relevant part of Block "K" was still zoned "Estate Residential". The property had not in fact been rezoned to "Open Space" as intended by the Township pursuant to the requirement of the Ministry of Housing when the Ministry gave draft plan approval on March 31, 1978.

[7) The Ministry of Housing for the Province of Ontario had on March 31st, 1978 advised the Township that the draft plan of subdivision had been approved subject to certain amendments and conditions, one of which was the requirement that the Township's restricted area zoning bylaw contain provisions which would have the effect of prohibiting all buildings and structures in the Subject Lands, except those necessary for

flood or erosion control.

[8] At that time when the application for this plan of subdivision was being made, the Township of Hamilton was passing its first -Comprehensive Restrictive-Area zoning by-law. It appears that the Township official mistakenly advised the Ministry of Housing that the restrictive zoning was in place to prevent the development of Block "I". As indicated above, this mistake was not discovered until just prior to the date set for the hearing of the Appellant's appeal to the Ontario Municipal Board.

[9] The Parties proceeded with the appeal before the Ontario Municipal Board. The Board dismissed the Applicant's appeal on April 25, 2001. The Board stated that the zoning requested represented "…inappropriate planning and was not in the public interest".

[10] At the time of the hearing before the Ontario Municipal Board, the Township was revising its Comprehensive Restrictive Area Zoning By-law with the intention of re-zoning Block "K" to correct the zoning error that had been discovered immediately prior to the Ontario Municipal Board hearing.

[11] On September 18, 2001, the Applicant commenced her application process for a building permit to construct a residence on Block "K". Over a period of several months, the Appellant prepared a Site Plan and obtained approvals required by the Township to support her building permit application, including an Entrance Permit, approval from the Health Unit to construct and install a septic system, and the approval of the Ganaraska Region Conservation Authority.

[12] On October 16, 2001 the Appellant was advised by letter from the Respondent Scott Jibb, Chief Building Official, denying the Appellant's building permit application on the basis that paragraph 34 of the Subdivision Agreement for Plan 436, which was registered on title to Block K, *"expressly prohibits building permits on Block K except buildings or structures required for flood or erosion control purposes".*

[13] According to the Appellant, Scott Jibb advised her that, "...the decision to refuse [the Appellant's building permit application] was based solely on the legal interpretation provided [to the Respondents] with respect to paragraph 34 of the Subdivision Agreement and that there were no other grounds for refusing the Appellant's application for a building permit".

[14] The Township had entered into a Subdivision Agreement with the developer dated January 8th, 1980. Paragraph 34 of the Subdivision Agreement is entitled "Lands Unsuitable for Building" and provides as follows:

> 34. The owner agrees that the lots and blocks of the Plan which are set out in Schedule "0" hereto are unsuitable for building purposes and that no application will be made for a building permit for the erection of any structure on any such lot or block until the conditions outlined in Schedule "D" hereto for such lot or block have been satisfied to the approval of the Municipal Engineer and/or other authorities having jurisdiction.

[15] Schedule "0" to the Subdivision Agreement includes the Subject Lands. 'For some inexplicable reason there is no Schedule "D" attached to the Subdivision Agreement registered on title.

POSITION OF THE PARTIES

[16] The parties agree that Section 8(2)(a) of the *Building Code*

Act, 1992, S.O. 1992, c.23 provides that the Chief Building Official shall issue a permit unless,

> (a) The proposed building. construction or demolition will contravene this Act or the building code or any other applicable law;

[17] The term *"applicable law"* as used in section 8(2)(a) of the *Building Code Act* is defined in Ontario Regulation 160/93 as follows:

> For the purpose of s.8 of the Building Code Act, 1992, any general or special Act, and all regulations and by-laws enacted thereunder, which prohibit the proposed construction or demolition of the building unless the Act, regulation or by-law is complied with.

[18) The Appellant submits that where an applicant for a bul1ding permit has satisfied all the requirements of s.8(2) of *The Building Code Act* it is mandatory for the Chief Building Official to issue a building permit. A Chief Building Official bas no discretion when exercising the decision to issue a building permit when all statutory requirements have been fulfilled.

[19] The Appellant submits that the provisions in the Subdivision Agreement, paragraph 34, registered on title is not "applicable law" within the meaning of s. 8(2) (a) of the Act.

[20] On behalf of the Township it is submitted that S.51 (26) of *The Planning Act.* Provides statutory authority for a municipality to enter into a Subdivision Agreement, the provisions of which can be enforced against the existing and subsequent .owners of the Subject Lands. *As* section 34 of the Subdivision Agreement provides that Block "K" is unsuitable for building purposes, the applicant, as a subsequent owner, is therefore bound by the provisions of the Subdivision Agreement and is not entitled to a building permit for the construction of a single-family residence on the Subject Lands.

ANALYSIS

[21] S.25 of the *Building Code Act* provides that any persons who consider themselves aggrieved by an order or a decision made by an inspector or Chief Building Official under this Act or the regulations, except a decision not to issue a conditional permit under S.8 (3) may, 20 days after the order or decision is made, appeal the order or decision to a judge of the Superior Court. Subsection (4) provides:

> If an appeal is made under' this section, the judge shall. hold a hearing and may rescind or affirm the order or decision of the inspector of Chief Building Official, or take such action as the judge considers the inspector or Chief Building Official ought to take in accordance with this Act and the regulations and, for such impose, may substitute his or her opinion for that of the inspector of Chief Building Official.

[22] The duty of the judge under this subsection therefore, is to do what. the judge considers the inspector or Chief Official ought to have done. The judge has no powers other than those that were possessed by the inspector or chief official, and has no discretion to act. or defer action, if that discretion was not enjoyed by the inspector or chief official. (See: Southey J., speaking for the Divisional Court in *Woodglen* & *Co. v. North York (City)* (1984), 47 O.R. (2d) 614, 12 D.L.R. (4th) 146 (Div. Ct.).) .

[23] It is common ground that S.8(l) is mandatory, requiring the Chief Building Official to issue a building permit for the purposes of this case unless the proposed building or

construction will contravene this Act or the Building Code or any other applicable law. There is no suggestion that the proposed building construction would contravene the *Building Code Act* or the Building Code.

[24]' It is also common ground that the rights of the applicant are to be determined at the time the Chief Building Official makes the decision whether to issue the permit. (See *Summit Glenn Dev. Corp. v. Toronto* (198.9), 44 M.P.L.R. 50 (Ont. Dist. Ct.).)

[25] The "applicable law" which S.8(2)(a) directs the official to apply in deciding whether to grant a permit is the law in force at the time of such decision. (See: *H & D Int. Group v. Toronto* (1988), 44 M.P.L.R. 187 (Ont. Dist. Ct.) Therefore, in this case, whether the Appellant at the time she submitted her application for a building permit knew that the intent of the Township was to rezone the Subject Lands as originally intended is of no consequence in these circumstances. (See: *Frontenac-Lennox & Addington R.C.S.S. Bd. v. Kingston* (1994), 25 M.P.L.R. (2d) 102 (Ont. Gen. Div.).)

[26] In Re: *Woodglen & Co.* v. *North York et al* (1984), 47 O.R. (2d) 614 (Div. Ct.) the respondent had applied for a building permit to construct a single family dwelling on certain lands. The proposed use was permitted under the applicable zoning by-law passed and approved in 1953, but, because it conflicted with the Official Plan, approved in 1974, the permit was refused. The municipality had failed to amend its zoning by-law to conform with the Official Plan. The court held that the intention of the municipality to rezone to prohibit such construction was not a valid reason for refusing or postponing the issuance of the permit.

[27] It bas also been held that the common law duty of care to those who may foreseeably be affected by the approval of the permit is not relevant. (See: *Alaimo v. North York (City) (Chief Building Official)* [1995] 26 M.P.L.R. (2d) 69 (Ont. Gen. Div.).

[28] The issue then, is whether the. provisions of paragraph 34 of the Subdivision Agreement registered on title constitutes "any other applicable law" as defined .in Ontario Regulation 160/93.

[29] If the provisions in paragraph 34 of the Subdivision Agreement were considered to be "building restrictions", then according to the decision in McDonald's Restaurants of Can. Ltd. v. Humm et al (1983) 24 M.P.L.R. 103 (Ont. Co. Ct.), building restrictions which run with the land, even though the municipality may be a party to the agreement imposing such restrictions, are not applicable law.

[30] A number of statutes and regulations have been considered by the courts on this issue as to whether requirements thereunder constitute "applicable. law", for example:

The *Conservation Authorities Act* and regulations thereunder were held to be *applicable law* prohibiting the construction of buildings on a flood plain without the consent of the authority. (See: *Upper Thames River Conservation Authority* v. *London* (1989), 67 O.R. (2d) 784 (Dist. Crt.)(and *Stacey* v. *Oxford-On-Rideau* (1989), 46 M.P .L.R. 15 (Ont. Dist. Crt.).)

The *Environmental Protection Act,* requiring approval for a heat pump to be installed in a building was held to be *applicable law* Since, ".. .this Act has a logical and real nexus to the subject and purpose of the *Building Code Act.* (See: *Upper Thames River Conservation Authority* v. *London* (1989), 42 M.P .L.R. 241).

[31] It has also been held that the requirement of the filing of a Drainage Plan and a Site Plan approval constitute II *applicable law"* and both plans should have been submitted prior to the submission of the building permit application. (See: *Woodglen* & *NCO v. North York Chief Bldg. Official* (1994) 23 M.P.L.R. (2d) 219 (Ont. Gen. Div.).)

[32] Section 51(26) of the *Planning Act,* (formerly S.26) provides:

> A municipality and the Minister may enter into agreements imposed as a condition to the approval of a plan of subdivision and any such agreement may be registered against the land to which it applies and the municipality or the Minister, as the case may be, shall be entitled to enforce the provisions thereof against the owner and, subject to the provision of the *Registry Act* and the *Land Titles Act,* any and all subsequent owners of land.

[33] The issue of whether provisions of Subdivision agreements registered on title could constitute "other applicable law" was considered by the court in *Rotstein v. North York (City) . (Chief Building Official)* (1995), 29 M.P.L.R. (2d) 305 (Ont. Gen. Div.).

[34] In the *Rotstein,* there was a provision in the Subdivision agreement that appeared to prohibit the ,proposed use of the lots and the owners, by proceeding with the proposed construction would be in breach of the agreement.

[35] Moldaver, J, (as he then was) stated: at paragraph 24:

> The appellants contend that the Subdivision Agreement should be treated as if it had the force of law, equivalent to a regulation or bylaw, thereby bringing it within the purview of the words "applicable law" defined in s.2 (2) of Regulation 160/93. In support of this, reliance was placed on s. 51(6) of the Planning Act.

And at paragraph 26:

> In my opinion, the Subdivision Agreement did not take on the force of law, and therefore it did not come within the purview. of. the words "applicable law". It was' nothing more than a contract between the City and the developer. The fact that I could be registered on title and enforced by the City under 5.51 (6) of the Planning Act did not have the effect of converting it into a regulation or by-law, or something akin to either.

[36] It has been held, however, that, " other applicable law" includes a Heritage Easement Agreement registered on title under section 37 of the *Ontario Heritage Act.* In *Roman Catholic Episcopal Corp.") v. Cobourg* (1998), 46 M.P.L.R., (2d) 195.) *(Roman Catholic Episcopal Corp.)* the court found that the Heritage Easement Agreement qualified as *applicable law.* Under the provisions of the *Heritage Act* the municipality was empowered to pass a by-law designating property as having historic or architectural value or interest under section 29. Aside from this designation power, section 37 of the *Heritage Act* also provided for historical easement and covenant agreements.

[37] In this case. the Town of Cobourg did pass a designation by-law and also entered into a Heritage Easement Agreement that was registered on title. The court framed the issue as follows:

> [Does] the agreement come within the term "applicable law" given, that the Chief building Official has the authority to refuse a demolition under the *Building*

Code Act if the demolition would contravene an applicable law ?.

[38] The court stated:

> In this case. the casement was created as part of a statutory scheme to protect heritage buildings in Ontario. Under section 37 (2) of the Act, the municipality must have the authority of a by-law to enter into such an agreement. It can then enforce the casement agreement, whether or not it is the. owner of the land that could be benefited or accommodated by the agreement. Most importantly, pursuant to section 37(5), the agreement prevails when there is a conflict with the provisions of the Act relating to alteration and demolition found in sections 33 and 34. That subsection is. In . effect, a statutory incorporation, by reference, of the easement agreement. It gives priority to the easement agreement in the event of a conflict with other parts of the legislation, and thus it allows landowners and municipalities to expand the protection for building beyond that provided elsewhere in the statute. Given the terms of section 37(5) of the Act, I conclude that the Heritage Easement Agreement is applicable law here.[Emphasis added]

[39] The court specifically found that section 37(5) of the Ontario Heritage Act which provides:

> Where there is a conflict between an easement or covenant entered into by council of a municipality under subsection (1) and section 33 or 34, the easement or covenant shall prevail.

[40] It docs not appear from the decision that the *Rotstein* case was considered by the court in *Roman Catholic Episcopal Corp.*

[41] There is not a similar *"statutory incorporation"* in the *Planning Act* with reference to a Subdivision agreement. In my view, this is a distinguishing feature from the *Rotstein* decision Although the Planning Act does provide that the municipality can . enforce the provisions of the Subdivision agreement, the Planning Act does not contain a similar provision to section 37 (5) of the *Ontario Heritage Act.*

[42] In my view, the *Roman Catholic Episcopal Corp.* case is not in conflict with the decision in Rotstein. Accordingly, in my view, the statement in *Rotstein* that the Subdivision Agreement did not come within the purview of the words "applicable law" still remains a persuasive judicial determination.

[43] The case of 723 *Rymel Inc. v. Lampman* (2001) 17 M.P.L.R. (3d) 230 (Ont S.C.J.) does not assist the Respondents. That court, in its final determination, found that the. use of the almost completed building as a residential access care centre would be rendered illegal upon the demolition of a separate building that was to be preserved, resulting in a contravention of a site specific. zoning by-law. The fact that the Site Plan Agreement had been entered into and had been registered on title did not appear to be of significant consequence in the court's ruling. It was the zoning by-law that was held to be, *other applicable law.*

[44] In summary, therefore, the provisions in paragraph 34 of the Subdivision. Agreement registered on title do not constitute "other applicable law".

[45] In addition the wording of paragraph 34 of the Subdivision Agreement docs not state that all buildings and structures except those necessary for flood or erosion control are

prohibited as required by the conditions for draft plan approval from the Ministry. Instead, paragraph 34 of the Subdivision Agreement states that, if certain conditions ".. .have been satisfied.. to the approval of the Municipal Engineer and/or other authorities having jurisdiction.. .". Accordin81Y, this paragraph does allow for building subject to approvals.

[46] The Applicant submits that she has satisfied the requirements of "other authorities having jurisdiction".

(47) In summary, the court is satisfied that, under the circumstances, provided the Applicant has fulfilled all the other prerequisites, (as apparently she has), the chief Building Official was required to issue the requested building permit An order will therefore go to that effect.

[48] The appeal is allowed with costs to the Appellant fixed at $2,500, plus GST.

HOWDEN, J.

[1] Olympia Athletic Camps Limited (Olympia), has been operating as a summer camp for children since 1980, on the shores of Oxbow Lake. The respondent 563973 Ontario Limited owns the main camp site on the north shore, as well as a .71 acres (31,000 sq. ft.) property on a point of land on the south shore. Both properties are leased to Olympia. It is the Point on the south shore which is the subject of the building permits in question. The appellant is a ratepayers' association comprised of owners of cottage lots on Oxbow Lake.

[2] Olympia Sports Camp has been operating on a developed site zoned for camp buildings and activities on the north shore. The Point has been used over the years intermittently, but regularly each summer since 1949, for overnight camping by groups who boat over from the main camp. The Kiwanis Club ran the camp until the mid-70's. Other groups leased the camp land on the north shore and the Point for children's camps in the late '70's, again only in the summer. Throughout, the Point has been an undeveloped natural area, zoned for waterfront residential and some other shorelines uses but not camping.

[3] Previous to the building permit approval of August 6, 2004, the only structures on the Point were two tent platforms. They served as floors for the campers' tents. Each measured 10' x 10'.

[4] Though it is difficult to ascertain from the rather incomplete history of the application in the body of the affidavit of the Chief Building Official (CBO), it appears from the attachments to the three permits issued by him that the following applications were made for permits for construction on the Point land:

(i) on July 19, 2004, the president of Olympia applied to install a septic

system, to serve a building having 12 bathroom fixtures (sinks, showers, toilets) and a double kitchen sink.

(ii) on July 26, 2004, the person identified by the CBO as Olympia's site manager signed an application on behalf of Olympia's president David Grace - Mr. Grace is listed as the owner; the application was for "tent platforms for tents", to be 12 feet by 10 feet or 120 square feet, and 16 feet by 16 feet or 256 square feet in floor area (the application appears to be for the two tent platforms having a total square footage of 366 square feet);

(iii) on August 12, 2004, Olympia applied for a permit to construct a building on the Point; plans are attached showing a proposed one-storey building with dimensions of 30 feet by 50 feet, 1500 square feet in total floor area, to contain a bathroom of four sinks, four toilets and two showers, plus a double kitchen sink, a large common room (30 feet by 15 feet), two smaller meeting rooms, and two staff rooms.

[5] The respondent Stephen Watson as the CBO issued the following permits, listed in chronological order:

(i) July 28, 2004 – building permit #2004-0426 covered the septic system installation, to serve the 30' x 50' building proposal. The application originally referred to four bedrooms as the basis for the sewage calculations; it was refused by letter of the CBO of July 23, 2004 because the calculations could not be based on bedrooms and the permit which finally issued is conditioned on the septic system serving meeting rooms only and up to 16 persons;

(ii) August 6, 2004 – building permit #2004-0446 was issued for two tent platforms measuring 16' x 16' and two tent platforms 10' x 12', being 752 square feet in total tent floor area; a site plan is shown as having been reviewed on August 6, 2004 by the Township showing a total of four tent platforms, not merely the two mentioned in the application, as proposed for the Point and it is no doubt this drawing on which the permit was issued;

(iii) August 24, 2004 – building permit #2004-0503 was issued by the CBO for construction of what is referred to as a "shower building"; the floor plan reviewed by the CBO shows a 30' x 50' building, to contain two staff rooms, two "participant" or meeting rooms, a 15' x 30' common room, and bathroom area containing four toilets, four sinks and two showers. No kitchen sink is shown, though the approved application includes installation of a double kitchen sink as I noted earlier.

[6] The appeal from the permit of August 6, 2004 approving installation of the four tent platforms was filed after the expiration of the 20-day period referred to in section 25(1) of the *Building Code Act*. The appeal from the permit issued for the proposed building was brought within the statutory time. No appeal was taken in respect of the septic permit.

[7] There is no controversy, as I understood the submissions of counsel, over the following proposition: that the use of the Point for camping purposes as an adjunct to the main camp on the north shore is legally non-conforming; this seasonal use has subsisted annually in the summer since 1949, well before the zoning bylaw was enacted in 1972. The Point is zoned Waterfront Residential (WR). The uses permitted by the zoning bylaw do not include camping. The permitted uses in the WR zone are:

(a) Residential Uses:
A detached single family house; a private cabin.

(b) Non-residential Uses:
A church; a golf course; a public use.

None of these uses include camping. By itself the Point is too insular and small to accommodate the non-residential uses permitted by the by-law. The Point land was not subject to zoning control until 1972 when the first comprehensive zoning bylaw was enacted (later approved by the Ontario Municipal Board).

[8] The issues on this appeal are:

(i) Should the time for appeal of the tent platform permit be extended?

(ii) What is the standard of review properly applicable to the CBO's decisions in this case?

(iii) A legal non-conforming use having been established on the Point land, do the zoning bylaw and the *Planning Act* allow erection of a structure accessory thereto?

(iv) Are the intended uses of the proposed building accessory to the principal camping use and therefore allowed by the zoning bylaw?

[9] The relevant sections of the *Building Code Act* and the *Planning Act* follow.

Building Code Act:

8(1) No personal shall construction or demolish a building or cause a building to be constructed or demolished unless a permit has been issued therefor by the chief building official 1991, c.23, s 8(1); 1997, c 30, Sched. B, s.7(1).

8(2) The chief building official shall issue a permit referred to in subsection (1) unless,

(a) the proposed building, construction or demolition will contravene this Act, the building code or any other applicable law;

25(1) A person who considers themself aggrieved by an order or decision made by the chief building official, a registered code agency or an inspector under this Act (except a decision under subsection 8(3) not to issue a conditional permit)

may appeal the order or decision to the Superior Court of Justice within 20 days after the order or decision is made. 2002, c.9, s.40(2).

(2) A judge to whom an appeal is made may, upon such conditions as the judge considers appropriate, extend the time for making the appeal before or after the time set out in subsection (1), if the judge is satisfied that there is reasonable grounds for the appeal and for applying for the extension. 1991, c.23, s.25(2).

…

(4) On an appeal, a judge may affirm or rescind the order or decision and take any other action that the judge considers the chief building official, registered code agency or inspector ought to take in accordance with this Act and the regulations and, for those purposes, the judge may substitute his or her opinion for that of the official, agency or inspector. 2002, c.9, s.40(3).

Planning Act

34(9) No by-law passed under this section applies,

(a) to prevent the use of any land, building or structure for any purpose prohibited by the by-law if such land, building or structure was lawfully used for such purpose on the day of the passing of the by-law, so long as it continues to be used for that purpose; or

45(2) In addition to its powers under subsection (1), the committee, upon any such application,

a) where any land, building or structure, on the day the by-law was passed, was lawfully used for a purpose prohibited by the by-law, may permit

(i) the enlargement or extension of the building or structure, if the use that was made of the building or structure on the day the by-law was passed, or a use permitted under subclause (ii) continued until the date of the application to the committee, but no permission may be given to enlarge or extend the building or structure beyond the limits of the land owned and used in connection therewith on the day the by-law was passed, or

(ii) the use of such land, building or structure for a purpose that, in the opinion of the committee, is similar to the purpose for which it was used on the day the by-law was passed or is more compatible with the uses permitted by the by-law than the purpose for which it was used on the day the by-law was passed, if the use for a

purpose prohibited by the by-law or another use for a purpose previously permitted by the committee continued until the date of the application to the committee; or

(c) where the uses of land, buildings or structures permitted in the by-law are defined in general terms, may permit the use of any land, building or structure for any purpose that, in the opinion of the committee, conforms with the uses permitted in the by-law. R.S.O. 1990, c.P13, s.45(2).

[10] It is clear law that the *Planning Act* and the municipal zoning bylaw are part of the "applicable law" which by s.8(2) of the *Building Code Act*, is not to be contravened.[1]

[11] The appellant took the position in its original material that what was being proposed by Olympia went well beyond the intermittent historic use of the Point. The president Mr. Wylie and a land use planner retained by the Association, Wesley Crown, filed affidavits indicating their understanding that Olympia was intending to operate a fulltime summer – long commercial camping program on the point for 30 to 50 participants, using the proposed building with kitchen/washroom facilities to allow longer overnight stays. The planner, Mr. Crown, was of the opinion that the proposed use and buildings were too remote from, and amounted to an unacceptable intensification of, the longstanding occasional camping use of the Point hitherto devoid of any developed facilities other than a covered barrel for sewage use and two tent platforms. The applicant's material was filed in 2004 within one and one-half months of the first building permit issued for the Point. It was based on the views of its president and other cottagers as to the history of use of the Point land.

[12] The respondents filed extensive material focused on the historic use of the Point as an adjunct to the main camp from 1949 to date. The evidence covers the period from the camp's inception under the auspices of the Kiwanis Club, through three years of rental to other camping groups in the late 1970's, to Olympia's operation of the main camp and use of the Point from 1980. Three additional affidavits were filed in April 2005 by two members of the appellant Association with property on the lake as well as a supplementary affidavit by Mr. Crown. He had reviewed the material filed by the respondents. Mr. Crown is of the view that the proposed construction indicated a more intensive use of the Point than in the past with greater impacts on cottagers and on the lake, and that the proposed building was not permitted as an accessory use or structure by the Township bylaw. Cross-examinations on the parties' affidavit material occurred in December 2005 and January 2006.

[13] By the time of the hearing of the application in late May, 2006, the positions of the parties, particularly of the appellant, had been refined somewhat based on the substantial evidentiary record accumulated since 2004.

[14] The appellant's position before me accepts the continuity of the seasonal camping use of the Point since 1972 on an occasional basis; however, it attacks the two permits under appeal essentially on grounds that the CBO erred factually and in law. His factual error was in determining the nature of the use in 1972 as a campground, to which facilities like washrooms, meeting and staff rooms, and even a restaurant or kitchen could be considered ancillary. This is important because it is the type of use at the time of passage of the zoning by-law which is protected by the doctrine of acquired right or legal non-conforming use. (citing *Saint-Romuald (City)v. Olivier* at para. 19-21) His error in law is said to be the allowance of a new building as an accessory structure to a legal non-conforming

use. Counsel for the appellant submits that section 34(9)(a) of the *Planning Act* protects only the actual use as of 1972 when the bylaw was passed, and that the intensification from occasional overnight camping to a serviced indoor accommodation centre (in his words) and increased tent platform area violate the zoning bylaw and the *Act*. He also submitted that the proposed building contravenes the definition of "accessory" in the zoning by-law. Thus, he argues, as violations of the "applicable law", the permits should have been refused.

[15] The appellant requests that the time for appealing the tent platform permit should be extended under section 25(2) of the *Building Code Act*. Its president stated in his affidavit that its officials did not know of the permit until "in or about the middle of August 2004" and the time from then to acquisition of legal assistance and preparation of the appeal material extended beyond the 20 day period. The appellant relies also on the strength of the case for bylaw contravention as its members see it, by allowance of the four tent platforms by the CBO.

[16] The position of Olympia is that the tent platform appeal should be dismissed as being out of time. The applicant's executive officers were aware early in the appeal period of the issuance of the permit, and the building of the new platforms. They were advised of their appeal rights at a meeting of the Township Planning Advisory Committee on August 10, 2004 some 16 days before expiry of the appeal period. He submitted that there is no reasonable ground for the extension of the appeal period and that Olympia would be prejudiced if it was granted. It is further submitted by Olympia that the use of the point for camping purposes in 1972 and since has been continuous throughout the summer, three to four nights per week. The new structures are meant to better accommodate a program to serve as an outdoor overnight camping experience limited to no more than 16 people at a time. No sleeping accommodation and no kitchen are provided in the final approved drawings, thus negating any intent of use for human habitation. Mr. Dryer submits that the building proposals are within the principles governing legal non-conforming uses which allow some improvement and intensification; therefore the building permits are justified as minor structural alterations to a legal non-conforming use within the principles in *Saint-Romuald (City)v. Olivier* 2001 SCC 57 (CanLII), [2001] 2 S.C.R. 898 and *Rotstein v. Oro-Medonte (Township)* [2002] O.J. No. 4990 (Ont. S.C.J.). He further argued that erection of a building accessory to the principal use which is legally non-conforming is permitted specifically by the Township zoning bylaw; if two interpretations of the accessory provision in the bylaw are reasonable, the presumption of regularity should apply to uphold the permits.

[17] The Township's position opposed that of the applicant on standard of review and the availability of a use or structure accessory to a legal non-conforming use where the municipal zoning bylaw enlarges the statutory protection in s.34(9)(a). Mr. Kussner submitted that:

(i) the CBO's decisions were entitled to deference as determinations involving his experience on matters of mixed fact and law;

(ii) the established non-conforming use for camping purposes affects the status of the whole lot;

(iii) the proposed building provides indoor amenity space for campers accessory to the principal use and having no independent life of its own;

(iv) the building permits therefore come within the "applicable law" as elucidated in *Saint-Romuald* and in *Central Jewish Institute v. Toronto*

(City) [1948] S.C.R. 101; they also conform to the option chosen by the Township in passing the zoning bylaw, to expand legal non-conforming rights beyond the minimum protection in section 34(9)(a) of the *Planning Act*.

Time for Appeal from Building Permit #2004-0446 (Tent Platforms)

[18] The applicant's right of appeal from the tent platform permit subsisted for 20 days from August 6, 2004, subject to the discretion of the judge hearing the matter to extend the time. The appeal from the CBO's decision to allow four tent platforms to be constructed in place of the former two is combined with the appeal from the CBO's issuance of permit no. 2004-0503. The appeals were not brought until September 10, 2004, some two weeks after the end of the 20 day appeal period from permit no. 2004-0446. The appeal from the CBO's decision to allow erection of the building was filed within the statutory period.

[19] Section 25(2) of the *Building Code Act* gives a discretion to the court to extend the time for appeal where two threshold tests are met:

(i) there must be reasonable grounds for the appeal; and

(ii) there must be reasonable grounds for the extension.

[20] The evidence of the president of the Association, Mr. Wylie, is that the Association's officials knew of the tent platform permit by mid-August, 2004. The Association officials were also aware that the new tent platforms were being constructed on the site at the same time. What the applicant's evidence omits is that the Association executive knew of this building permit at the meeting of the planning committee on August 10. Mr. Wylie and Mr. McRoberts were informed at that time of the right to appeal and were given a copy of the statutory appeal provision which, of course, states quite clearly that the time for appeal is limited.[2] Thus, by August 10, 2004, 16 days before the expiry of the appeal period, the president of the Association knew of the right of appeal and its limits. There is no explanation by Mr. Wylie for the delay in appealing from issuance of the tent platform permit other than it took time to retain counsel and to prepare the appeal to the court.

[21] I find there to be no reasonable ground or explanation for the delay in bringing the appeal or for an extension of the appeal period.

[22] As I understand the submissions by the appellant's counsel, the principal object of attack is the permit allowing construction of the building as it purportedly marks a change in character of the non-conforming use as it existed since 1972, violates the by-law definition of "accessory", and violates the zoning bylaw and the *Planning Act's* limited protection of legal non-conforming uses. The ground for the appeal from the tent platform permit appears to be that the new platforms go beyond replacement of the old tent platforms in location, number and size. The use for camping purposes remains the same, and the number of persons on site at any one time is not to increase; it is to be 16, not 40 or 50 as the appellants' members originally feared, if the septic design limit is reliable. The zoning provision said to be violated by this permit is section 4(9)(a) of the zoning bylaw. That provision, by itself, limits replacement of structures to the same location and dimensions as the original. However, I note that section 4(9)(c) contemplates an extension where it complies with the bylaw. I am aware, of course, that the appeal based on non-compliance with section 4(1) of the bylaw (accessory structures) and section 34(9)(a) of the *Planning Act* appears to include in its ambit the tent platforms.

[23] While there is an arguable ground for appealing from permit #2004-0446, it is not the central focus of the appeal. Obviously the appellant and its counsel decided not to appeal from it separately within the time for appeal. On balance, I find there to be no reasonable ground for extending the period for appeal in that the second part of the threshold test is not met. I also find that refusal to extend the time does not bring a significant prejudice to the main focus of the appeal, the proposed building and its impact on the historic non-conforming use as well as its compliance with the accessory requirements of the bylaw.

[24] Accordingly, the time for appeal is not extended and the appeal from the CBO's decision to issue permit #2004-0446 is dismissed.

Standard of Review

[25] Pursuant to section 25 of the *Building Code Act*, the judge hearing an appeal may affirm or rescind the decision of the CBO, and may take any other action that, in the judge's view, ought to have been taken within the *Act* and regulations. For those purposes, the judge may substitute his or her opinion.[3]

[26] Nevertheless, the prevailing law as to standard of review is not simply to allow the judge to do as he or she deems fit. The CBO is an official with training and substantial experience in issues involving the *Ontario Building Code*, building plans, construction in the field, and detail adherence to the *Code* and plans. These technical areas are not areas of expertise necessarily shared by a court. However, in approaching issues of law and jurisdiction, the court has expertise, by experience, training and knowledge not shared by a CBO, whatever number of times that official may have read or applied some provisions of a zoning bylaw. I also note that in this case the CBO says that he often consults the Township planner on issues of zoning compliance. There is no affidavit evidence from the planner for the Township. Decisions of law or jurisdiction attract a standard of, or approaching, the correctness end of the continuum; decisions of a factual nature more within the area of expertise of a CBO, or issues of mixed fact and law, are generally entitled to deference on a standard of reasonableness.[4]

[27] In this case, the question of whether the provisions of the *Planning Act* and the township zoning bylaw regarding legal non-conforming uses are properly interpreted to allow, as a matter of law, erection of a structure accessory to the principal use is one of law. The standard of review on that issue is correctness. Whether the intended use and the proposed building come within the protection afforded legal non-conforming uses and the accessory requirements of the by-law involve questions of fact and mixed fact and law on which the decisions of the CBO are entitled to some deference. Mr. Watson is a person of experience in the building field since 1998 during which he has considered the zoning bylaw many times, as well as building applications and inspection of building sites and usage. These decisions attract a standard of reasonableness on review by this court.

Legal Non-Conforming Use and Accessory Use and Structures

[28] The principal disagreement between the applicant and the respondents concerns the issue of law as to whether a new structure is available as accessory to the principal use which is legally non-conforming. Counsel were able to provide no authority directly on this issue.

[29] Counsel for the appellant attacked the characterization by the CBO of the legal non-conforming use of the Point as a campground, rather than as occasional day and overnight camping. Leaving aside the developed connotations of a campground for now, the distinction between continuous and occasional summer camping usage has become somewhat academic in my view. The applicant's perception of the

occasional nature of the use is not borne out by the affidavit evidence of Gerald Withers, George Dee and George Ferguson. All told, they participated in camps using the Point from 1949 through the 1970's. Their evidence is that as of the early 1970's, including 1972, the Point was used for overnight camping purposes by 12 campers and one or two staff. They used the two tent platforms as floors for the tents as well as the fire-pit for cooking and a covered barrel as a primitive toilet. Their evidence as to usage is somewhat vague for obvious reasons. Nevertheless, they say that the tents on these platforms were used "most nights in the summer". (One, sometimes two "cabins" used the point at a time; "cabin" is twelve campers plus one or two staff. Withers and Dee affidavits). Mr. Dee, who was on staff from 1955 until 1970 when the Kiwanis Club ran the principal camp, described a typical excursion from the main camp to the Point as follows:

> Typically a cabin of campers with their counselors would be transported to the point by boat after lunch. They would spend the afternoon at the point, set themselves up to stay over in the tent, cook and eat dinner outdoors at the point, have a campfire in the evening, sleep over, have breakfast in the morning and then return to the main camp property.

The Point was used for this purpose regularly throughout the summers, at times three to four nights per week and at other times less often. Each group stayed for a night at a time. (Dee and Ferguson affidavits)

[30] Since the 1970's, Mr. Grace states that frequency and intensity of use has varied from summer to summer. He described Olympia's use of the point since acquisition of the properties in or about 1980 until the early 2000's.

> The use of the subject lands by campers and staff with the camp has been and continues to be as a camping area, cookout area and outdoor recreational and wilderness area for both day trips and overnight trips. This use of the subject lands has included and continues to include overnight camping, nature trails, campfires, meetings, swimming and boating. … The subject lands have also been continuously used for staff activities such as pre-camp meetings and programs, for recreation, and on their days off. In or about the summer of 2001, Olympia took some steps to improve the subject lands for these uses, which included cleaning up the grounds, erecting a sign with the camp's name on it (since taken down) and improving the fire-pit used for cookouts. The installation of a dock took place in 2002.

[31] Mr. Grace indicates in his affidavit that a new program was commenced by Olympia on the subject lands after the new platforms were installed. He described that program as follows:

> After construction of the tent platforms and new outhouses, Olympia ran a program from August 15 to 28, 2004 on the subject lands named Hero's Journey Camp…. In 2004, this was a 14 day program involving nine campers and five staff members. The subject lands were used for about nine out of the fourteen days of the program. Programming included lessons (in canoeing, portaging nature skills and camping, etc.), co-

> operative games, opening and closing ceremonies, and related outdoor activities. During their time spent at the subject lands, the campers and staff participation in this program slept in tents on the tent platforms and cooked their own food (on the first Sunday night of the program the campers slept on the ground rather than on the tent platforms as the tent platforms did not pass inspection until the next day). In 2005, the program will be extended to three weeks and will provide campers with a high school credit. This program represents a continuation of the use of the subject lands as an adjunct to the camp lands and as part of the camp's operations and programming. There is no intention to turn the subject lands into a separate camp or campground operation. The suggestions to that effect in the Wylie and Crown affidavits are baseless, speculative and false.

[32] Mr. Grace's affidavit does not fully explain why the new building is being proposed for what, until now has allegedly been the main attraction of the Point - its natural wilderness characteristics and proximity to, though separate from, the main property. He lists some environmental issues which he sees as being addressed by the proposed building: matters such as garbage storage, grey water concerns (though none were expressed in evidence), food storage, and fire equipment storage. The proposed building would also house an emergency phone. He describes these as "in part" why the new building is being proposed. His affidavit then defers to the CBO's affidavit where the intended use is said to be "accurately described". Yet it is Mr. Grace who is the chief officer of the body proposing it.

[33] The CBO states the following, without much more detail than Mr. Grace's affidavit, as to the role for the proposed building:

> 27. Specifically, the proposed shower and washroom facilities would comply on the basis that they would function as an amenity for the benefit of campers when using the property for camping purposes….
>
> 31. With the building permit application changes I requested, and based on my understanding of Olympia's intended use of the access re-building, I was satisfied that it would be consistent with the restrictions in the zoning bylaw that applied to accessory uses, in terms of being "secondary to and exclusively devoted to" the main camping use. I believe that if it were not for the camping activities, the accessory building would not be used at all. The accessory building is intended only to provide an indoor amenity to people when they are using the site for camping purposes, and it does not have any freestanding function.
>
> 34. It has always been my understanding and information that whatever term may have been used to describe it on some of the plans, the accessory building is not intended to be used for sleeping or "accommodation" facilities. Rather than providing sleeping quarters, I am advised that the accessory building will offer meeting facilities for

> the campers, in addition to providing washroom and shower facilities for them, at times when they are using the subject lands for camping purposes. I do agree with Mr. Crown that the building will be used for a variety of camp related purposes, but as indicated above, those purposes serve to render the building accessory to the principal camping activities. (emphasis added)

[34] From the evidence before me, the use lawfully established when the first zoning bylaw was passed in 1972 is best characterized as overnight wilderness camping including nature walks, campfires, meetings of staff and/or with campers, swimming and boating, as a proximate adjunct to the principal camp. Since then, there has been an increase in frequency of use by Olympia and some change in the type of use; a day off respite for staff and visiting counselors, overnights for cabins of campers, practice canoeing for the "canoe trip", brush clearance, BBQ's, and since 2004 the Hero's Journey Camp which is intended to become a three week program. (The brochures, attached to the Grace affidavit as exhibits indicate use of the Point and Algonquin or Temagami as wilderness experiences and separation from the familiar world as steps and challenges in a Campbellesque life experience – it describes the Point as "our new Base Camp").

[35] Counsel for the appellant association submitted that the new camping program represents more than the occasional camping use in 1972. He submitted that in finding it to be a campground as of 1972, the CBO erred by ignoring its occasional usage then and by considering that a building with meeting and washroom facilities was a normal part of a campground operation. Counsel for the appellant further submitted that the CBO erred in viewing section 2(1)(c) and 4(1) of the zoning bylaw as permitting the proposed building as accessory to the principal camping use. In this conclusion, the CBO fundamentally mistook a legal non-conforming use and the protection of acquired right in the *Planning Act* and the zoning bylaw as altering the protected status of a legal non-conforming use to one allowed or permitted by the bylaw, to which accessory uses or structures could be added. Mr. Green submitted that the CBO's interpretation of section 2(1) and 4(1) of the bylaw conflicts with other provisions of the bylaw [sections 2, 5 and 4(9)(a)] and of the *Planning Act* [section 34(9) and 45(2)]. Finally, Mr. Green argued that the proposed building, containing a kitchen sink, wash basins, toilets, showers and five meeting rooms, runs afoul of section 4(1) of the zoning bylaw as being capable of providing for human habitation and contravening the definition of accessory in the zoning bylaw (citing *Conlin v. Prowse* [1995] O.J. 3735 Div. Ct.) Mr. Geen submitted that because these errors reflect violations of the "applicable law", the building permit was issued wrongly and should be cancelled.

[36] For Olympia, Mr. Dryer submitted that the legal non-conforming use in this instance is more than a single camping use. It includes several individual uses, as it has for years – overnight camping, group meetings, boating as transport to the point, outdoor toilet facility, and campfires. He sees the program begun with the building of the new tent platforms and the application to permit the new building as a more intense, but essentially a continuation of the, use going back to 1972. It is represented that there is to be no sleeping in the building; what is proposed is not meant to be an indoor camping program. The numbers have reduced from the original proposal to an upper limit of 16, to which the septic system design is restricted. He submitted that the planner retained by the applicant, Wesley Crown, based his opinion on erroneous information – there is no full range commercial camp program at the Point, only a use subordinate to the main camp. He characterized the proposal as a facility addition to carry on the same use, an intensification allowed by the judgment in *Central Jewish Institute*.

[37] Mr. Dryer summarized Olympia's position in the following propositions:

- ➢ The permits allow a minor structural alteration to the legal non-conforming use established in 1972.
- ➢ A presumption of regularity and intra vires should apply to sections 2 and 4 of the zoning bylaw if there are two reasonable interpretations thereof.
- ➢ In any event, in law, a structure or use is permitted accessory to the principal legal non-conforming use.

[38] For the township, Mr. Kussner submitted the following:

(i) deference should be shown to the CBO, the issues being primarily factual or mixed fact and law, with the lone exception being whether the bylaw permits a use accessory to a legal non-conforming use; this issue attracts correctness as the standard of review;

(ii) there is a low threshold required to establish a legal non-conforming use, and the proposed structure as well as the new tent platforms and the principal use by Olympia are within the by-law use protection for legal non-conforming issues;

(iii) there is no principle of law that an accessory use cannot be permitted where the principal use is legally non-conforming; section 34(9) of the *Planning Act* provides a minimum protection for legally established uses, which a municipality can choose to exceed as this one has purported to have done in section 4(1);

(iv) the building proposal meets the bylaw criteria for an accessory use, and;

(v) the basis of the appeal is nothing but unwarranted fear.

[39] Before completion of counsel's submissions, I reminded them of the approach to statutory interpretation preferred in several recent cases by the Supreme Court of Canada and the Ontario Court of Appeal. Writing for the Supreme Court of Canada, Iaccobucci, J. wrote the following:

> In Elmer Driedger's definitive formulation, found at page 87 of his *Construction of Statutes* (2d ed, 1983):
>
> > Today there is only one principle of approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.
>
> Driedger's modern approach has been repeatedly cited by this court as the preferred approach …

> The preferred approach recognizes the important role that context must inevitably play when a court construes the written words of the Statute [paras 26-27, *Bell ExpressVu LLP v. Rex* 2002 SCC 42 (CanLII), (2002) 2 S.C.R. 559]

[40] The Ontario Court of Appeal referred to the modern approach in dealing with an interpretive problem not unlike this case in that both a provincial statute and a municipal bylaw were involved.[5]

[41] As Blair, J.A. stated in *118143 Ontario Inc.* at para 12:

> … In my view, the issue is not whether, taken in isolation, the still existing authority of subsection 210.146 could justify the portion of the bylaw prohibiting and regulating the signs; rather, the issue is whether bylaw 301-94, taken as a whole, is a bylaw "licensing a business". The motion judge found that it was a bylaw licensing a business. His interpretation of the bylaw in this regard, and his conclusion the "regulation is inherently bound up with most, if not all, proper and effective licensing schemes, including the ability to regulate business premises and the equipment and other personal property used or kept for hire in the business", was plausible, in keeping with the objectives of the legislation in question, reasonable and just: see Ruth Sullivan, *Driedger on the Construction of Statutes* (Butterworths: Toronto) 3d edition, 1994, at page 131 (now 4th ed, at page 3). (emphasis added)

Following my suggestion, counsel requested an opportunity to file written submissions patterned on, and/or taking issue with, the modern approach. I have had an opportunity to consider them and have found them helpful.

[42] In approaching the issue before me, the following provisions of the *Planning Act* and of the zoning bylaw are relevant in understanding the context of section 4(1) of the bylaw relating to accessory uses and section 2 regarding legal non-conforming uses.

The *Planning Act*

> 1.1 Purposes – the purposes of this Act are,
>
> a) to promote sustainable economic development in a healthy natural environment within the policy and by the means provided under this Act;
>
> d) to provide for planning processes that are fair by making them open, accessible, timely and efficient;
>
> f) to recognize the decision making authority and accountability of municipal councils in planning.
>
> 34(1) Zoning bylaws – Zoning bylaws may be passed by the councils of local municipalities:
>
> (1) Restricting use of land – for prohibiting the use of land, for or except for such purposes as may be set out in the bylaw within the municipality or within

any defined area or areas or abutting on any defined highway or part of a highway.

(2) Restricting, erecting, locating or using of buildings – for prohibiting the erecting, locating or using of buildings or structures for or except for such purposes as may be set out in the bylaw within the municipality or within any defined area or areas or upon land abutting on any defined highway or part of a highway.

(9) Excepted lands and buildings – No bylaw passed under this section applies,

a) to prevent the use of any land, building or structure for any purpose prohibited by the bylaw if such land, building or structure was lawfully used for such purpose on the day of the passing of the bylaw, so long as it continues to be used for that purpose; or

b) to prevent the erection or use for a purpose prohibited by the bylaw of any building or structure for which a permit has been issued under section 5 of the *Building Code Act*, prior to the day of the passing of the bylaw, so long as the building or structure when erected is used and continues to be used for the purpose for which it was erected and provided the permit has not been revoked under section 6 of the *Building Code Act*.[6]

Zoning Bylaw

2(1)(a) Scope of Bylaw – Lands Subject to Bylaw: The provisions of this Bylaw shall apply to all lands within the corporate limits of the Township of Lake of Bays.

(b) Conformity with Bylaw: No building or structure shall hereafter be erected or altered, nor shall the use of any building, structure or lot hereafter be changed in whole or in part, except in conformity with the provisions of this Bylaw.

(c) Existing Uses Continued: Nothing in this Bylaw shall prevent the use of any lot, building or structure for any purpose prohibited by this bylaw if such lot, building or structure was lawfully used for such purpose on the date of passing of this Bylaw, so long as it continues to be used for that purpose.

(d) Building Permit Issued: Nothing in this Bylaw shall prevent the erection or use of any building or structure for a purpose prohibited by this Bylaw if the plans for such building or structure were approved by the Building Inspector prior to the date of passing of this bylaw, provided:

(i) when the building or structure is erected, it shall be used and continue to be used for the purpose for which the building permit was issued; and,

(ii) the erection of such building or structure is commenced within two (2) years of the date of passing of this Bylaw and provided the erection of such building or structure is completed within a reasonable time after the erection thereof is commenced.

4(1) Accessory Uses

(a) Uses Permitted: Where this bylaw provides that a lot may be used or a building or structure may be erected or used for a purpose, that purpose includes any accessory building, structure or use, but does not include any of the following:

i. any occupation for profit conducted within or accessory to a dwelling unit;

ii. any building used for human habitation of any description except as specifically permitted in this bylaw.

(9) Non-conforming Uses

(a) Rebuilding or Repair Permitted:
Nothing in this By-law prevents the rebuilding or repair of any building or structure that is damaged or destroyed subsequent to the date of passing of this By-law, provided that the dimensions of the original building or structure is not altered, and the building is replaced on the same location.

(b) Strengthening to Safe Condition Permitted:
Nothing in this By-law prevents the strengthening to a safe condition of any building or structure or part of any such building or structure which does not conform to the provisions of this By-law, provided that such alteration or repair does not increase the height, size or volume, or change the use or location of such building or structure.

(c) Extensions Permitted:
Nothing in this By-law prevents an extension or an addition being made to an existing permitted building or structure, even though such building or structure does not conform to one or more of the provisions of this By-law, provided such extension or addition does not contravene any of the provisions of this By-law.

> 5(1) Zone Classifications - For the purpose of this bylaw, all lands within the corporation are divided into zones and classified as follows:
>
> | Zones | Symbols |
> |---|---|
> | *Residential Zones*: | |
> | Residential Zone | R |
> | Waterfront Residential Zone | WR |
>
> (3) Uses Permitted and Zone Provisions – For each zone listed in section 5(1), there is a section of this bylaw which sets out the uses permitted in the zone provisions.
>
> 7(1) Uses permitted – No person shall within any WR Zone use any lot or erect, alter or use any building or structure for any purpose except one or more of the following WR uses, namely:
>
> a) Residential Uses: a detached single family dwelling house; a private cabin
>
> b) Non-residential Uses: a church; a golf course; a public use.

[43] Mr. Green argued that the official plan policy on non-conforming uses should be considered as an extrinsic aid to interpretation. I agree with that approach where there is a policy or policies that are sufficiently specific to be helpful and where the bylaw language derives directly from the official plan. I have mentioned in prior judgments that the zoning bylaw is part of the planning scheme authorized under the *Planning Act* and has its policy base in the official plan, thus in a proper case the official plan may be helpful in interpreting the zoning bylaw.[7] I tend to agree with the submission of Mr. Kussner in this instance, however, that the official plan policy on non-conforming uses does not address the issue of accessory use where the principal use is legally non-conforming nor does it indicate anything more than the traditional statement that legal non-conforming uses should disappear over time. That statement is not particularly helpful in dealing with the issue before me now which deals with the extent of the protection afforded by the *Planning Act* and the municipal zoning bylaw, as enacted, to continuing uses legally established before enactment of the zoning bylaw. From the Supreme Court of Canada decision in *Saint-Romuald*, supra, it is clear, as Doherty, J. found in *Ottawa (City) v. Capital Parking Inc.* 59 O.R. (3d) 327 (at para. 30):

> The legal non-conforming use doctrine rests on the principal that zoning bylaws which introduce new restrictions on the use of property should not deny land owners the right to use their property in the same manner they did prior to the introduction of those restrictions. In *Saint-Romuald (City)*, supra, at para 39, Binnie, J. stressed that the characterization of an acquired right could not free the owner from the constraint of the actual use at the time the limitation was introduced, but should also be not so restrictive as to deny any flexibility in the evolution of that use.

[44] Binnie, J. in *Saint-Romuald* cited the well-known 1948 case *Central Jewish Institute*, supra, in the majority's analysis of the protection in law afforded the type of legally non-conforming use, as distinct from factors of intensity of use and changes in intensity of the same type of use. *Central Jewish Institute* was found by Binnie, J. to stand for the sanctioning generally of increases in intensity of use provided the same type of use continues. *Central Jewish Institute* was a case of a small school which commenced legally in part of an existing building, but before it developed its educational program to occupy the rest of the building, the municipality passed a zoning bylaw prohibiting the school in that area. At that time, the statute exempted legal non-conforming uses from the zoning by-law. The majority held that the appellant school was entitled to expand throughout the building. What is important to my analysis here, however, is that neither *Saint Romuald* nor *Central Jewish Institute* dealt with a proposal to erect a new structure. They stand for the proposition that the legally established use of a lot or structure in existence at the time of the passing of the zoning bylaw provides statutory protection to continuation of the historic type of use of the entire lot or existing structure provided any intensification is not so great as to change the use. In this case, I agree that the use of part of the Point for the legally non-conforming purpose of camping is not frozen in time and space and affects the use status of the remainder of the lot or structure.

[45] The Township and Olympia submit that section 34(9) of the *Planning Act* and section 2(1)(c) of the bylaw act as, in counsel's words, a "permissive exception" to the general prohibition against uses or structures being established or erected except in conformity with the bylaw. They submit that zoning bylaws can prohibit all uses or structures not permitted by the bylaw [as in section 2(1)(b)], but a use or structure can be said to be permitted by the bylaw either as a use specifically permitted in the applicable zone [in this case, by section 7(1) for the WR zone], or they can be permitted by a general exception from the general prohibition [as in section 2(1)(c)]. Thus, it is submitted as being consonant with the intent of s.34(9) of the *Planning Act* and of this zoning bylaw, in accordance with the ordinary meaning of the words used, to interpret section 4(1)(a) as allowing accessory buildings or structures to be erected in this situation. Mr. Kussner sees the protection for, or in effect the allowance of, legally non-conforming uses or buildings as a minimum protection for the landowner on which a municipality may expand by its zoning by-law. He argues, supported by Mr. Dryer, that section 4(1)(a) is a policy choice by this municipality to allow an accessory structure to be erected either where the principal use is specifically permitted by the by-law or where it is a legally non-conforming use.

[46] I do not accept this argument. It flies in the face of the scheme of s.34 of the *Planning Act* ,the limited authorization to protect non-conforming uses and erection of structures in section 34(9) of the *Planning Act* and s.2(1) of the by-law, and it leads to unnecessary conflicts with other provisions of the zoning bylaw. Moreover, documentary evidence for such a policy choice having been made by this municipality is non-existent. Finally, the interpretation of section 21(c) and section 4(1) of the bylaw urged by the Township and Olympia distorts the ordinary meaning of the words used.

[47] Section 2(1)(c) of the bylaw simply states that the zoning bylaw does not prevent a use of a lot or of a building if such lot, building or structure was lawfully used for such purpose on the day of the passing of the bylaw. Section 2(1)(d) deals with the limited protection afforded the right to erect a building for a purpose prohibited by the bylaw; a building can be erected in that circumstance if the plans are approved prior to the bylaw's passage. They mirror s.34(9)(a) & (b) of the *Planning Act*. In this case, camping is a prohibited use and there was no building in place prior to the passage of the bylaw, nor was any permit approved prior to passage of the by-law.

[48] It is important to recognize that zoning bylaws are authorized by section 34 of the *Planning Act*; that is the source of the municipal zoning power. Section 2(1)(c) and (d) of the bylaw merely repeat the statutory law as to non-conforming uses and structures in s. 34(9). Throughout section 34, the distinction is maintained between prohibition and regulation of uses of land and prohibition and regulation of the erection of buildings and structures. Both the *Act* and the bylaw contemplate, as one method of zoning control, the prohibition of land uses and erection of buildings/structures unless they are permitted expressly by the bylaw. The "general prohibition" approach is the one adopted in this zoning by-law. Section 2(1)(c) and (d) of the bylaw do not contemplate anything more than protection of non-conforming uses and structures existing prior to the bylaw and used since (including acceptable intensification) and for erection of new structures where approval preceded passage of the bylaw. The by-law in s.2(1)(c) and (d) does not permit uses and new structures; it addresses the problem of uses and structures pre-existing the by-law which were established lawfully. Section 2(1)(c) and (d) cannot be said to permit uses of land or the erection of buildings/structures. The interpretation urged upon me by the Township would lead to a breakdown or erosion of meaningful land use control in that no longer would there be a distinction between uses or structures prohibited and permitted by a zoning bylaw. A legal non-conforming use would entitle the owner of the lot to erect accessory structures despite their express prohibition by the bylaw by a torturing of the words of sections 2(1)(c) and 4(1) and ignoring the additional legislative attempt at control of legal non-conforming uses in section 4(9)(a) (whereby a damaged building can only be replaced in its exact location in the case of a legal non-conforming use or structure); section 5(3) (which provides for the uses actually permitted by the bylaw in the different zones, and which in this case do <u>not</u> include camping), and section 2(1)(d) (which limits erection of new structures not in conformity with the bylaw only to those approved before the bylaw).

[49] Mr. Dryer argues that the caselaw interpreting and applying section 34(9) of the *Planning Act* should be the primary tool used in applying its principles to this case. He also submits that, in any event, that caselaw essentially follows the modern principles of statutory interpretation. The caselaw he refers to is primarily *Central Jewish Institute* and *Saint-Romuald*. As I have pointed out, and as those decisions themselves indicate, they do not speak to the distinction between uses permitted by zoning and uses or buildings that are protected from enforcement as legally non-conforming though prohibited by the zoning by-law.

[50] Mr. Dryer cited *Zalev Bros. Ltd. v. Windsor (City)* [1988] O.J. No. 935 (Ont.Dist.Ct.) as authority supporting his reading of section 34(9)(a) of the *Planning Act*. To the extent that *Zalev Bros.* ignores the distinction between legal non-conforming uses and erection of structures in section 34(9)(a) and (b) and approves a new "structure" accessory to a legal non-conforming use, I do not agree with it and I cannot follow it. I am not sure that this is the only interpretation of *Zalev*. In *Zalev*, the use of the land and the existing structures was for baling scrap metal. The company wanted to add a concrete pad as a foundation for a baler. The company had been baling scrap metal on this property for 20 years prior to the zoning restrictions and continuously since; it was a lawful use by way of acquired right. The court directed issuance of the building permit as an extension of an existing concrete pad without any real change to the type or intensity of use of the property. It appears to me that, if it was a case of an extension of a "structure" for purposes of the *Planning Act*, as the court appears to have found, it was a matter for the Committee of Adjustment under section 45(2) of the *Act*. That provision applies for a non-conforming structure to be enlarged or extended. However, it appears that in *Zalev* the court was dealing with an existing concrete pad which was to be extended, without any real change in the type of use of the land. I am not

sure that the pad addition was properly a "structure" within the context of the *Act*.

[51] I do not agree with Mr. Dryer that *Watts v. Benvenutti* [2006] O.J. No. 216 (Ont.C.A.), a case of a legal non-conforming use where no new building or enlargement or change to the land use occurred, somehow supports Olympia's position regarding the legality of the building permit for the new building in this case. In *Watts*, the trial judge found as a fact that there had been no change in the type of use from the period prior to enactment of the new zoning bylaw whereby agricultural uses such as a horse operation were prohibited. The Court of Appeal saw no reason to set aside the conclusion of the trial judge and found that section 45(2) of the *Planning Act* was not triggered because no change in the type of land use had occurred. No new building or structure was involved. *Watts* does not mean that section 45(2) of the *Planning Act* no longer applies to an enlargement of an existing non-conforming structure or a change in the type of legally non-conforming use.

[52] In summary, section 2(1)(c) of the bylaw protects the continuance of a legal non-conforming use as defined. It is to be interpreted, as is s.34(9) of the Act, to include some degree of intensification in line with the principles in *Saint-Romuald*. Section 2(1)(d) does not protect the right to build for a legally non-conforming purpose unless the plans were approved before passage of the bylaw. Section 2(1)(c) and 4(1) cannot be read harmoniously with the intent of the *Act* or their ordinary meaning in context with section 2(1)(d) and 4(9)(a) of the bylaw or within section 34(1) and (9) of the *Planning Act* as somehow converting a building proposed for a prohibited purpose to one to be erected for a purpose allowed by the bylaw. Nothing in what I have stated should be taken to detract from a municipality's power to permit or prohibit buildings as it chooses under s.34(2) of the *Planning Act* but it has not permitted a building accessory to a non-conforming use in this by-law by use of s.34(9)(a).

[53] No authority was cited to me, with the exception of *Zalev*, to support the propositions put forward by the Township and Olympia that section 34(9)(a) of the *Act* and sections 2(1) and 4(1) of the bylaw, in protecting a legally non-conforming use or structure, permit the erection of new structures accessory to the prohibited purpose of camping. For the reasons given, I reject that proposition. On this ground alone, the CBO erred in finding the building permit to not contravene the applicable law.

Compliance of the Proposed Building with the Accessory Requirements of the Bylaw

[54] If I am in error in my conclusion regarding contravention of the zoning by-law by a structure accessory to a legally non-conforming use, I must consider whether the proposed building meets the requirement of "accessory" building or structure in section 4(1)(a) of the zoning bylaw. That issue is a question of mixed fact and law, attracting deference to the CBO's decision to a standard of reasonableness. That standard of review imports an approach to the CBO's decision to ascertain whether it has a reasoned basis, on a reasonably probing review.

[55] Mr. Green submits that the proposed building is intended as an indoor amenity for up to 16 persons, including washroom/shower/toilet facilities, meeting rooms for campers and staff, and a double kitchen sink. Because the words "used for human habitation of any description" are held to include a building with facilities like heating and plumbing, he argues that the proposed building would contravene the accessory requirement in section 4(1)(a)(ii).[8] *Conlin* was a case of a one-storey studio built on the same lot as the owner's house. It was built to be used as an artist's studio where the owner would pursue her hobby of painting. The zoning allowed the house and one accessory structure, but "accessory" does not include a building which may be used for human habitation. The Divisional Court held, in addition to finding the studio to exceed the permitted building envelope without a variance, that heating and plumbing are prima facie indicators of use for human

habitation. Additionally, the Court held that the studio was not normally incidental to a home and was a main use, not secondary to it. It went beyond structures customarily accepted as accessory to a home such as a shed, garage, pool, cabana and similar structures.

[56] In this case, the CBO determined that the proposed building would house showers/washroom facilities for use only by campers from Olympia using the Point for camping purposes. Its meeting room provides shelter in inclement weather; no doubt that includes at night and in daytime, and room for cots or other sleeping equipment when desired. He refused to accept the original proposal for a kitchen because it went beyond the historic function of "this particular campground". (The CBO saw even a restaurant as an accessory use to a campground in his experience). He stated that, in function and use, it was accessory to the main camping use because it would be used solely by the campers and staff. He stated that it had no free-standing function at all.

[57] The planner retained by the applicant stated his opinion in his second affidavit that the proposed building represents a new use and cannot be considered accessory to the overnight camping use established prior to and since the bylaw's passage. He stated that indoor meeting facilities, shower facilities and a permanent septic system, requiring plumbing and electrical installation to operate, will encourage longer more intense usage of the Point. The drawing to the Point of hydro service, or placing of a generator, could serve as a precursor to further intensification. He stated that the building is large enough for use as sleeping quarters for more than 16 persons. He continued to call it an "accommodation centre". The CBO stated that the building is not intended for use for purposes of sleeping or accommodation; its use is only to serve a variety of camp related purposes, therefore, once erected, it is not clear what the control restriction such usage would be.

[58] Mr. Dryer cites in Olympia's factum the three requirements or components within the definition accepted by the courts of "accessory":

- The use or structure must be naturally and normally incidental to the principal use
- The use must be subordinate in purpose or floor area or both to a principal use
- The use must be exclusively devoted to a principal use and be located on the same lot. (Re: *1121472 Ontario Inc. v. Toronto (City)* [1995] O.J. No. 2942 (Ont. Gen. Div.)

[59] The word "accessory" is defined in the bylaw (section 3), when modifying a "building", as "a building that is secondary to and exclusively devoted to a main use, building or structure and located on the same lot".

[60] The building proposed is not supported by any evidence that I can find as a building subordinate and secondary to the main use. The uses to now have been basically those associated with outdoor camping. This lot is not a campground as suggested by the CBO where people come in vehicles, use the washroom, eat, and stay in camping facilities. There is no evidence before me that such a building is customarily incidental to outdoor camping. This building appears to change the main use from outdoor wilderness camping as an adjunct to the main camp to a central indoor facility for staff, campers, meetings, washroom facilities, in effect giving the Point the potential for the kind of new more continuous programming recently begun for two to three week intervals. It is not simply an enclosure for boats used to transport campers, or as an enclosure to protect from the rain. It is a program centre, an "indoor amenity" whose proposed use was never fully explained

by Mr. Grace, the proponent's president, in his affidavit. I do not find a rational basis for the finding that the proposed building was secondary to the main use, or that it is naturally or customarily incidental to it. I accept Mr. Crown's evidence in this regard and, following the reasoning in *Conlin*, find that the decision to permit the proposed building contravenes the zoning by-law.

[61] In my view, it is time that Olympia faces up to its zoning issue here and either applies publicly to rezone the Point in keeping with their plans for the Point as a new base of operation together with the north shore lot or brings an application to the Committee of Adjustment under s. 45(2)(a)ii) of the *Planning Act* for permission to establish a similar use of land. It is not clear, however, and this issue was not before me, whether the Committee could permit erection of a new building under that subsection.

[62] For the foregoing reasons, the appeal is allowed in respect of the building permit for the proposed building. Building permit No. 2004-0503 is hereby rescinded. The appeal in respect of building permit No. 2004-0446 is dismissed.

[63] Counsel may file written submissions on costs within 30 days.

REASONS FOR DECISION ON APPEAL

R. MacKINNON J.:

OVERVIEW

[1] This is an appeal from the refusal of the respondent Rutherford as Chief Building Official (the "CBO") of the Town of Innisfil to issue a building permit for a single family dwelling house on the applicants' lands at 1150 Arnold Street in that municipality. The appellants, under section 25(1) of the *Building Code Act*, (1992), S.O. 1992, c.23 (herein "the Code"), have the burden of demonstrating that the decision was in error. Under section 8 of the Code, it is only where "applicable law" prevents issuance that a CBO can refuse to issue the permit applied for. The legal issue before me is whether the CBO exercised her Code duty validly.

[2] The applicants submitted their application on October 29, 2004. The CBO's refusal was only issued on February 2, 2006. Counsel agree that the appeal standard on this review falls somewhere on a continuum between correctness and reasonableness. I agree, but my view is that the standard is closer to correctness because, pursuant to section 8(2) of the Code, a CBO is required to consider and apply "any other applicable law".

[3] For reasons that will follow, it is my view that Innisfil's CBO very belatedly, but properly, denied the application. In doing so she exercised her duty validly.

BACKGROUND

[4] On September 22, 2004, Innisfil passed consolidated zoning Bylaw 054-04, which granted single, residential (R1S) zoning for the applicants' property. Prior to that date, it was zoned Hold zone pursuant to the Municipality's Bylaw 036-98, which did not permit a single-family residence. Bylaw 054-04 was appealed to the Ontario Municipal Board (the "OMB") by

a number of affected parties, but not the appellants. It remained under appeal on October 29, 2004 when the appellants applied for their building permit.

[5] Between the fall of 2004 and the spring of 2005, Innisfil commenced the process of passing an amending bylaw to reflect approximately 35 errors in Bylaw 054-04. One of those errors related to the appellants' property which Innisfil had meant to retain in a hold category. The applicants received no response from the CBO either approving or denying their building permit application until April 2005. At no time during that period did Innisfil either advise them that the R1S rezoning of their lands under Bylaw 054-04 was an error or pass an interim control bylaw.

[6] The appellants' counsel wrote the CBO in April 2005 to inquire on the status of their application. The Municipality responded that it anticipated passing an amended bylaw to address clerical errors in the consolidated Bylaw 054-04, including an error with respect to the applicants' property. Mr. And Mrs. Philpott's counsel then requested in June 2005 that the permit application be held in abeyance pending resolution of the zoning matters. That abeyance expired with the July 19, 2005 decision of the OMB to which I will shortly refer.

[7] On June 29, 2005, (before that OMB decision) Innisfil enacted amending Bylaw 045-05 which rescinded the R1 zoning in Bylaw 054-04. The Philpotts' property was rezoned from Residential R1S to Future Development (FD) Zone, which once again did not permit a single detached dwelling.

[8] On July 22, 2005, the Philpotts' counsel appealed amending Bylaw 045-05 as it related to their property, but later withdrew the appeal in March 2006. It was accordingly deemed to be in effect as of June 29, 2005, and the FD zoning was confirmed.

[9] On July 19, 2005 the OMB held that consolidated zoning Bylaw 054-04 (except for certain sections not relevant to the applicants) was approved. It was deemed in law to have come into force on September 22, 2004, its date of passing. The applicants thereafter pressed Innisfil for a decision on their application and were eventually advised on February 2, 2006 by its CBO that the permit was refused on grounds that appropriate zoning had yet to be approved.

POSITION OF THE PARTIES

[10] "Applicable law" in this case requires a determination of the appropriate zoning to be applied. It is the position of the appellants that the CBO both failed to issue their building permit in accordance with the applicable zoning in place at the time they applied, and also failed to give proper and timely reasons for her refusal. They argue that they experienced considerable upset in their plans for retirement and incurred legal costs. They point out that they waited from when they applied in October 2004 until June 7, 2005 (when they consented that Innisfil should continue to hold the application in abeyance pending OMB disposition of the appeal of Bylaw 054-04), and also from July 19, 2005 (when the OMB decision in 054-04 was issued) until February 2, 2006 (when the permit refusal decision was conveyed to them). They argue that after the retrospective effect of Bylaw 054-04, a window of opportunity was created for them between September 22, 2004 (its deemed effective start date) and June 29, 2005 (the retrospective effective date for Bylaw 045-05 after abandonment of all appeals). The applicants argue that the only applicable zoning bylaw in effect at the time of submission of their application (and during the opportunity window) was Bylaw 054-04 which permitted what they sought to build.

[11] The Municipality and the CBO argue that at the application date, Bylaw 054-04 was then under appeal and therefore stayed by virtue of section 34(30) of the *Planning Act*. They point to the June 2005 correspondence between the Town and applicants' counsel where it was agreed that no

decision would be made until issues surrounding the zoning of the property had been clarified. That abeyance continued until the applicants requested on July 19, 2005 that the CBO make a decision. Innisfil argues that by that date, Bylaw 054-04 had been passed but was under appeal. The respondents submit that when the CBO was ultimately called upon to make a decision after July 2005, she was obliged to look to amending Bylaw 045-05 as applicable law for the purposes of her decision.

DISCUSSION

[12] Prior to January 2006, no regulation was in force with respect to the time period within which a CBO was required to determine whether to issue or refuse a building permit. The Innisfil CBO, however, operated on a code of conduct for building officials which required standards of professionalism, fairness and independence. Her failure to promptly notify the Philpotts for six months of the municipal intention to rezone their property to correct municipal errors breached that code. While I find no bad faith or mala fides on the part of herself or the municipality, her delay was inappropriate and inexcusable.

[13] Zoning classification questions are issues of mixed fact and law about what actually took place and about whether the facts in an individual case satisfy the legal test. These situations require deference to a decision of a CBO on a standard closer to reasonableness than correctness in situations where the CBO is acting closer to the core of his/her specialized knowledge, training and experience – and closer to correctness than reasonableness on issues which involve determination of the applicable law. This is one of the latter cases.

[14] In *Woodglen and City of North York* (1984) 47 O.R. (2d) 614, the Divisional Court held that municipalities no longer have a need to delay applications for building permit so that new zoning bylaws may be made effective because they have the power under section 38 of the *Planning Act* to pass interim control bylaws when land use policies are being reviewed. Our courts have generally held that building permits should issue when the proposed building complies with all requirements at the time of the application for the permit.

[15] In *Sixteenth Warden Ltd. v. Markham* (1993) O.J. No. 692, the court held that a judge must place herself or himself in the shoes of the CBO as of the date of receipt of the application and decide whether the issuance of a building permit would contravene any applicable law.

[16] In *Mayhew v. Hamilton* (2002) O.J. No. 1962, the court held that a CBO has no discretion to exercise when all statutory requirements have been fulfilled - even in a situation of error and revision of a comprehensive zoning bylaw. That court held that the rights of the applicant were to be determined at the time that the CBO makes the decision and that the applicable law was the law in force at that time. That court held that the intention of the Municipality to rezone to prohibit construction was not a valid reason for refusing or prohibiting the issuance of the permit.

[17] In *Wolfond v. North York* (1990) O.J. 1370, the court held that administrative delay by the CBO in acting on the applicant's building permit applications should not be permitted to deprive the applicants of their rights.

[18] When the Philpotts applied for their permit in October, 2004, Bylaw 054-04 was then under appeal. That is the only bylaw under which the Philpotts could gain a permit for single family dwelling.

[19] It is my view that there was no point in time, relevant to the Philpott application, where the CBO (based on the law as covered in the *Planning Act* and expanded in the case law) could have issued the permit under applicable law. There was considerable confusion in the Innisfil planning process and in the CBO's communication to the Philpotts and their counsel, but I am not satisfied that bad faith is demonstrated. When the

CBO was called upon to make a decision, she was entitled to look and did look at the amending Bylaw 045-05 as applicable law for her decision. It would have then been inappropriate for her to act in a way that was contrary to the clear intention of her council as expressed by its passage in June 2005 of the amending Bylaw 045-05. Innisfil's clear intention was to correct drafting errors in Bylaw 054-04 and not to permit the building of a home on the appellants' property.

[20] The decision of the CBO in these circumstances fell to be determined at the time she was ultimately called upon to make her decision. That decision was, by agreement of the parties, held in abeyance until July 2005. The municipality's amending bylaw had been passed by that date but was under appeal. At the time she was called to make her decision and for a period of time thereafter amending Bylaw 045-05 was in place. When all appeals were subsequently withdrawn to that bylaw, its retroactive effective date was June 29, 2005.

[21] It is my view that at all times material to the applicants' permit application, Innisfil's applicable zoning bylaw did not authorize the use of the land for purpose of a single family detached home by reason of the operation of section 34(30) of the *Planning Act* as it applied to its zoning bylaws. That said, the CBO's decision took an unreasonably long period to make and to be communicated to the applicants.

[22] Considering the continuum between reasonableness and correctness, I am of the view that the appeal fails as the eventual decision was both reasonable and correct. Accordingly this application is dismissed.

COSTS

[23] If the parties are not able to agree on the issue of costs they can, within 20 days from the date of issuance of these reasons, submit Bills of Costs and written argument of no more than three pages, single spaced. The parties from whom costs are sought shall respond, if at all, with materials of no more than the same length, within seven days after receipt of the requesting parties materials.

Water & Ice Ltd. v. Muskoka Lakes (Township)

Water & Ice Limited, Applicant and Neil Donald. Chief Building Official for the Township of Muskoka Lakes and the Corporation of the Township of Muskoka Lakes, Respondent

Ontario Superior Court of Justice

Shaughnessy R.S.J.

Heard: June 26, 2006
Judgment: June 29, 2006
Docket: Bracebridge 1-06

Counsel: Jameson W. Clow for Applicant
Michael E. Fitton, Q.C. for Respondents

.

APPLICATION for declaration that property owner was entitled to building permit and for order requiring municipality to issue permit.

***Shaughnessy R.S.J.*:**

1 The Indian River traverses part of central Ontario and connects Lake Rosseau with Lake Muskoka. The Applicant wishes to develop land as a marina on the Indian River at Port Carling in the Township of Muskoka Lakes. The property is comprised of 2.65 acres of dry land and approximately 1.2 acres of flood land.

2 The Applicant seeks a declaration that it is entitled to a Building Permit for the construction of boat docks and refueling facilities with respect to the development of the marina. The Applicant also seeks an Order that the Respondents be required and directed to issue a Building Permit for this construction pursuant to s. 8 of the *Building Code Act*. S.O. 1992, C.23.

3 The Respondent submits that pending the completion of an environmental assessment, it is premature to decide on a Site Plan Agreement which is a prerequisite to the issuance of a building permit.

Background Circumstances

4 Part of the subject property is zoned C2 which is zoning for a marina: part is zoned EPI as it is a marshy area and the flood area in front along the Indian River is zoned WOS.

5 Historically, part of the subject land was zoned C2 and used as a boat storage facility for many years. There were older docks placed in the Indian River in this location. On or about September 13, 2004. Water and Ice Limited submitted an application for site plan approval to develop the property as a new and expanded marina facility. No new docks or refueling facilities were proposed in this initial application. The Applicant obtained a building permit to construct buildings on the lands zoned C2. However, the Applicant then proceeded to build structures not in accordance with the permit. The Respondents raised objections to the construction and compelled the Applicant to obtain a revised building permit before revised plans and a revised site plan application were approved. The appropriate plans and applications related to the dry land marine storage facility were eventually provided and approved and are no longer an issue in this proceeding.

6 On March 17, 2005, the Applicant, Water and Ice Limited applied for an amendment to the site plan. The Application indicated there was no change in use as the property would still be used for marina storage and service. This amendment proposed two new docks on the Indian River that would be 12 feet wide and 66 feet in length with proposed gasoline dispensing facilities.

7 The Site Plan amendment for 2 new docks with gasoline dispensing facilities was presented with supporting reports from required agencies to the Township Planning Committee meeting of October 6, 2005. At this meeting, the Committee recommended an environmental assessment report. The Committee directed that a consultant be retained for the environmental assessment which it had authorized. The cost of the environmental study was to be borne by the Township of Muskoka Lakes.

8 It is not disputed that at the October 6. 2005 Planning Committee Meeting, the Applicant filed approvals from Transport Canada, the Department of Fisheries and Oceans, the Ministry of Natural Resources, as well as the environmental reports of the Applicant's expert. Michalski Neilson Associates Limited.

9 The Township also commissioned a peer review of the reports of Michalski Nielson. This review was conducted by Gartner Lee Limited. Their report is dated February 3, 2006.

10 The Applicant's environmental experts responded to the Gartner Lee peer review in a reported dated April 27, 2006.

11 The Court is advised that the Environmental Assessment Report will be available as of mid-September. 2006.

12 The Applicant made an application to the Ontario Municipal Board on November 3. 2005, pursuant to s. 41 (12) of the *Planning Act*. to determine the terms of and to approve a Site Plan Agreement relating to the docks and gasoline dispensing facilities. The Court is advised that the OMB hearing is expected in the fall of 2006.

13 On December 12, 2005 Water and Ice Limited submitted a Building Permit application with respect to the docks and refueling facilities. The Applicant was notified that it's

application for a building permit had been rejected on the basis that a Site Plan Agreement with respect to the docks and refueling services had not been agreed to.

Official Plan

14 The property is zoned C2 (Community Commercial Marina). The property zoned C2 is immediately adjacent to an area zoned EPI and designated as Environmental Protection in the Township Official Plan.

15 The Applicant's biologist, in affidavits, has identified the area in which the docks are to be placed as follows:

This type of habitat, particularly the shallow and productive nature, as well as its size is not common on Lake Muskoka or Lake Rosseau. For these reasons, this habitat should be appropriately protected and any in-water work properly mitigated.

16 The Official Plan Section C6.1.3. provides that:

Development adjacent to Environmental Protection wetland areas may be permitted provided that it does not result in any of the following.

I. Loss of wetland functions;

II. Subsequent demand for future development which will negatively impact on existing wetland functions;

III. Conflict with existing site-specific wetland management practices; and

IV. Loss of contiguous wetland area.

The Township may require that a proponent prepare an Environmental Impact Study addressing the above"

(emphasis added)

17 Accordingly, this section provides the opportunity to the Township to require an environmental impact study where development occurs adjacent to an Environmental Protection area.

18 Further, the Township may require under section F18.1 of the Official Plan, that in respect to a Site Plan Agreement, studies that *inter alia*, comment on the impact of a development on parks and recreation, the impact of boating, as well as biophysical concerns.

Legislative Provisions

19 The Township, in making a decision concerning this planning matter, is required by statute to make those decisions having due regard to the Policy Statements issued pursuant to the *Planning Act, R.S.O. 1990*, c.P. 13 ss. 3 (1) and (5). It follows that a decision relating to site plan control must be consistent with the Policy Statements.

20 The Provincial Policy Statement (2005) section 2, provides requirements relating to natural features and areas; fish habitat; restricting development, and site alteration in or near sensitive water features.

Building Code Act, 1992 S.O. 1992, C. 23

21 Section 8 (1) of the *Building Code Act* provides that no person shall construct or demolish a building or cause a building to be constructed or demolished, unless a permit has been issued by the Chief Building Official. Once all requirements are met, the Chief Building Official must issue a

building permit. The application must meet the requirements of applicable law. which *inter alia* includes the requirement of a site plan approval under the provisions of section 41 of the *Planning Act*. The general rule is that a building permit should not be issued where section 41 of the *Planning Act* applies, until site plan approval has been obtained from Council or the Municipal Board (*Quay West v. Toronto (City)*, [1989] O.J. No. 3072 (Ont. Div. Ct.), pg. 3 and *Ross v. Muskoka Lakes (Township)* [2004 CarswellOnt 19 (Ont. S.C.J.)] [2004] Can. L11 18309 pg. 7). Therefore, no person is to undertake construction until a site plan approval has been given.

Bad Faith/Unlawful Acts

22 The Applicant acknowledges that it cannot undertake construction in a site plan control area. It is also accepted that a condition to the approval of plans and drawings may require the owner of the land to meet specified conditions. However, it is submitted that in the present case. there is an attempt by the Township to prevent the land uses permitted by the Zoning By-law and to impose stricter standards on matters set out in the By-law. It is the Applicant's position that the Township is attempting to extend the range of items which they can approve or require through the use of site plan control and site plan agreements.

23 There is authority that a Court may order that a building permit be issued, despite a lack of site plan control, where there are "extraordinary circumstances" in which the municipal authority acted in bad faith, or for a clearly unlawful purpose (*Polla v. Toronto (City) Chief Building Official* , [2000] O.J. No. 4399 (Ont. S.C.J.) para 3); *Luxor Entertainment Corp. v. North York (City)*, [1996] O.J. No. 360 (Ont. Gen. Div.) p. 18; *Quay West v. Toronto (City)*, [1989] O.J. No. 3072 (Ont. Div. Ct.) para. 10.

24 The Courts have determined that the categories of what might be considered to be "extraordinary circumstances" is not closed and the determination is a factual one. However, examples of where "extraordinary circumstances" exist are:

(a) Where a site plan has been withheld for an unlawful reason;

(b) Where a municipality has not been acting in good faith;

(c) Where a municipality is using the lack of site plan approval as a basis for its refusal to issue a building permit and there is nothing to suggest that the site plan approval cannot be obtained in the ordinary course. (*Luxor Entertainment Corp. v. North York (City)*, *supra para. 18; Polla v. Toronto (City) Chief Building Official*, *supra*, *para. 17; Dominion Stores Ltd. v. Etobicoke (Borough)* (1982), 37 O.R. (2d) 661 (Ont. Div. Ct.).

Issue: Do the actions of the Township in this proceeding constitute "extraordinary circumstances" requiring the Court to review the process?"

25 Based on the material filed at this stage of the proceedings, I do not find any evidence of bad faith, or an unlawful act on the part of the Township Council. I do not find that there are any "extraordinary circumstances" requiring this Court to review the process and order that a building permit be issued without site plan control.

26 The Applicant has referred extensively to the decision in *Polla v. Toronto (City) Chief Building Official*, [2000] O.J. No. 4399 (Ont. S.C.J.). In the *Polla* case, the applicant sought to tear down her house and build a new one. The residential property backed onto a ravine and therefore, the applicant submitted a plan wherein she would build a retaining wall at the back of the property, thereby extending the usable land.

27 The applicant *Polla* had met all other conditions for the issuance of a building permit, except for obtaining site plan approval. The City of Toronto stated that it would not provide site plan approval unless the retaining wall was removed and the land restored to its natural state and that the proposed house was located a minimum of 10 meters from the edge of the ravine.

28 In the *Polla* case, (para 3), Justice Molloy cited the decision of the Divisional Court in *Quay West v. Toronto (City)* (1989), 47 M.P.L.R. 109 (Ont. Div. Ct.), at 111 that "as a general rule a building permit should not be issued for a development in a site plan control area to which [s. 41] of the *Planning Act* applies until site plan approval for the development has been obtained." The Polla case also cites *Quay West v. Toronto (City) (supra)*, for the principle that a building permit could only be issued without site plan approval if there were "extraordinary circumstances" in which the municipal authority was "acting in bad faith or for an obviously unlawful reason".

29 Justice Molloy in the *Polla* case, made specific findings on the evidence that the applicant was legally entitled to erect the retaining wall at the rear of her property. It was further a finding that the *Polla* property did not fall within the regulatory control of the Toronto Regional Conservation Authority and it was "not subject to zoning by-laws restricting activity on the property that might adversely affect the ecological balance in the ravine." (para 11)

30 There are specific findings in the *Polla* case that the City of Toronto, consistent with its Official Plan, may have imposed conditions directed towards safeguarding the natural environment of the ravine. Nevertheless until appropriate by-laws were passed, the Official Plan could not be used by the municipality to regulate land use. Therefore, in the *Polla* case, there was a specific finding that "the City has used power given to it for one purpose, to achieve a result that it has no legitimate legal authority to compel." (para 17)

31 There are numerous other authorities both from the OMB and the Courts rejecting attempts by municipal councils to use the guise of site plan control and site plan agreements to exceed their jurisdictions.

32 However, the present case on its facts, is much different. There are zoning by-laws in place governing the subject property. There are reasonable and lawful reasons for the Corporation of the Township of Muskoka Lakes to obtain an environmental assessment *at its own expense*.

33 The subject property zoned C2 is immediately adjacent to an area zoned EP1 and designated environmentally protected lands. The Official Plan requires a site evaluation report pursuant to Section C6.1.3. The Township may also require pursuant to F18.1. a Site Plan Agreement with studies on the impact of this development on parks and recreation, as well as the impact of boating on the area and other biophysical concerns.

34 I have particularly noted that the Township requested the firm of Gartner Lee Limited to provide a technical peer review of the Fish Habitat Assessment, (June 7, 2005) submitted by Michalski Neilson Associates on behalf of the Applicants and in support of the proposed redevelopment of marina lands on the Indian River in Port Carling, Ontario.

35 The Gartner Lee Limited report of February 3. 2006 details that the scope of the assessment by Michalski Neilson report is narrow in that "it is focused on the proposed infrastructure (docks and launch ramp) with little consideration of the activities that accompany this infrastructure." The Gartner Lee report states that the Michalski Neilson report "appears to be lacking an evaluation of potential impacts to fish

habitat." It is further stated that the Michalski Neilson report relies on "outdated (1981) background information" relating to the function that the habitat provides to local fish populations. Further, the Report states that Michalski Neilson does not comment on the potential impacts to fish habitat arising from the proposed re-development. Accordingly, the peer review report states that without "an assessment of impacts, there is a gap in the accepted approach to reporting methodology and between results and conclusions." The peer review report of Gartner Lee details a number of other concerns relating to the Michalski Neilson report (on which I do not propose to comment) and concludes as follows:

In summary, the [Michalski Neilson] report is adequate in terms of its limited scope on whether or not docks and the boat launch can be built to accommodate fish habitat. It provides appropriate conclusions in this regard. We conclude however, that fish habitat assessment is dated, incomplete and that the scope of the assessment should be expanded to consider the environmental implications of the entire project, and in particular, means to protect the aquatic vegetation community.

(emphasis added)

36 The Gartner Lee report of February 3. 2006 is authored and signed by Nick Hodges, an Intermediate Fisheries Biologist and Neil J. Hutchinson, Ph.D, Senior Aquatic Scientist.

37 In response to the peer review report, Mr. E. Al Shaw. MSc. Aquatic Biologist for Michalski Neilson Associates Limited, forwarded a report to the Applicant's planner dated April 27, 2006. In this response, it is stated that it was necessary to confirm their scope and role in the project. It is indicated that while completing an assessment of fish habitat fronting the property, they (Michalski Neilson) were "not retained to undertake an Environmental Impact Statement (EIS); nor was it our understanding that such a study was required." Nevertheless, Michalski Neilson state that overall the comments in the peer review report do not change their views of the proposed docking system and with proposed mitigation measures there will not be an adverse impact on fish and fish habitat.

38 Therefore, at this stage, the Applicant's experts and the peer review do *not* agree on the scope and adequacy of the Michalski Neilson report.

39 In these circumstances, it appears reasonable for the Township to obtain an Environmental Assessment Report in light of the allegation of deficiencies. Indeed, it is the duty and responsibility of the Council to ensure compliance with the policy statements issued pursuant to the *Planning Act*. A site plan control must be consistent with the policy statements of the *Planning Act*. These policy statements specifically address fish habitat and restricting development and site alteration near sensitive water features and/or natural features and areas.

40 Therefore, I find that there are no "exceptional circumstances" warranting the relief requested by the Applicants. Further, I find that the Court, while having jurisdiction, ought not to intervene barring exceptional circumstances. The Supreme Court of Canada in *Guignard c. St-Hyacinthe (Ville)* , [2002] S.C.J. No. 16 (S.C.C.) at para 11 stated:

This Court has often reiterated the social and political importance of local governments. It has stressed that their powers must be given a generous interpretation because their closeness to the members of the public who live or work on their territory make them more sensitive to the problems experienced by those individuals.

41 Therefore, the Township has a public function to protect

the public interest. Accordingly, due deference should be given to the Township provided that it has acted within its jurisdiction.

42 I find that it is appropriate and within the legislated powers of the Township to order, at public expense, an environmental assessment. This report is due approximately mid-September, 2006. Until this environmental assessment is completed, it is not known what the Site Plan Agreement should contain. Specifically, I do *not* find that the Township in directing an environmental assessment, is cloaking an attempt to control use or impose conditions beyond its jurisdiction.

43 Accordingly, the application is dismissed.

44 The parties may contact my secretary to arrange an appointment to speak to the matter of costs.
Application dismissed.

Shaughnessy R.S.J.

Court File No.143/06

ONTARIO SUPERIOR COURT OF JUSTICE
DIVISIONAL COURT

BETWEEN:

ASSOCIATION OF PROFESSIONAL ENGINEERS OF ONTARIO and
BERNARD ENNIS, P. Eng.

Applicants

- and -

HER MAJESTY THE QUEEN IN RIGHT OF ONTARIO as represented by THE MINISTER OF MUNICIPAL AFFAIRS AND HOUSING and DAVID BREZER, P. Eng. in his capacity as DIRECTOR OF THE BUILDING AND DEVELOPMENT BRANCH OF THE MINISTRY OF MUNICIPAL AFFAIRS AND HOUSING and in his capacity as a CHIEF BUILDING OFFICIAL
Respondents

HEARD: October 26-27, 2006

BEFORE: Lane, Chapnik and P. Smith, JJ.

COUNSEL: Richard Steinecke and Lisa S. Braverman, for the Applicants.

Dennis W. Brown, Q.C., and Sandra Di Ciano for the Respondents.

David C. Moore and Kenneth G. G. Jones for the Intervenor, Ontario Association of Architects.

REASONS FOR JUDGMENT

LANE J.:

[1] This application for judicial review challenges the validity of certain amendments to the Building Code, Ont. Reg. 403/97, a regulation enacted pursuant to the *Building Code Act, 1992*, S.O. 1992, c. 23 (the "*Building Code Act*").

[2] The applicants say that the amendments are invalid to the extent that they establish a duplicate registration or qualification scheme for Association of Professional Engineers of Ontario ("PEO") licence holders who prepare designs or conduct general reviews of buildings. The applicants contend that this regulation is invalid and should be read down to exclude PEO licence holders.

[3] For the reasons that follow, the application is allowed.

INTRODUCTION

The Parties

[4] The applicant PEO is the statutory body that regulates the practice of professional engineering in Ontario under the *Professional Engineers Act*, R.S.O. 1990, c. P.28. PEO regulates persons who hold licences, temporary licences, limited licences a provisional licences and entities that offer engineering services directly to the public who must hold certificates of authorization. Collectively they are called PEO licence holders.

[5] The applicant Bernard Ennis is a professional engineer employed by PEO. He is the PEO's Manager of Practice and Standards. He has also been designated as the professional engineer to assume responsibility for, supervise, and direct the professional engineering services performed by PEO itself (i.e. in respect of its own building space).

[6] The intervenor Ontario Association of Architects ("OAA") is the body established under the *Architects Act*, R.S.O. 1990, c. A.27, which is responsible for licencing and regulating architects in Ontario. OAA supports the application.

[7] The respondent Minister of Municipal Affairs and Housing (the "Minister") is responsible for the Building Code. The respondent David Brezer, P. Eng., is employed by the Ministry of Municipal Affairs and Housing ("MMAH") as the Director under the *Building Code Act*. The Director is the official responsible for administering and enforcing the regulatory scheme under the Building Code. The Director also doubles as a chief building official where no other is available.

The Application

[8] As will be detailed below, since December 31, 2005 the Building Code has established a regulatory scheme for persons who prepare designs or conduct general reviews of buildings in Ontario.

[9] Mr. Ennis has been asked to renovate PEO's head office. He is not registered or qualified under the Building Code to prepare building designs or to conduct general reviews and has not taken the required Building Code examinations. As such he is concerned that it would be illegal for him to prepare and submit the designs or file a general review commitment form for the renovations.

[10] The applicants say that PEO licence holders are not subject to the regulatory scheme under the Building Code, and have brought this application seeking declarations to that effect, as well as injunctive and other relief.

The Parties' Positions

[11] The applicants' submission is that, at least to the extent that *Building Code Act* and Building Code provisions establish a competing regulatory scheme for PEO licence holders who design or conduct general reviews of buildings, such provisions are invalid for the following reasons:

> (a) The impugned provisions encroach upon the PEO's exclusive regulatory jurisdiction under the *Professional Engineers Act.*
>
> (b) The impugned Building Code provisions are not authorized by the *Building Code Act*.
>
> (c) The impugned Building Code provisions unlawfully sub-delegate authority.

[12] The respondents submit that the provisions are valid enactments for the purpose of protecting the public by providing for the establishment and enforcement of standards relating to the construction and demolition of buildings. They are laws of general application and do not single out PEO licence holders, nor do they have as their purpose the regulation of PEO licence holders. They apply to the general class of designers and building practitioners with the purpose of ensuring public safety. They do not infringe on the jurisdiction of the PEO, nor is there conflict between the *Building Code Act* and the *Professional Engineers Act*. But if there were such a conflict, the Building Code, as the later enactment, would prevail.

[13] The respondent further submits that s. 34 (1) of the *Building Code Act* contains clear and unequivocal authority for the impugned Building Code provisions, and the Building Code does not constitute unauthorized sub-delegation.

[14] The intervenor OAA supports the applicants. It, like the professional engineers, lobbied the government against the

imposition of regulations to impose this additional regulatory regime in respect of building permit applications. Pending the resolution of this dispute, the OAA entered into a Memorandum of Understanding ("MOU") with the Minister, establishing a parallel regulatory regime within the OAA. Its position is that this regime will be ended if the PEO is successful in the present litigation.

[15] The OAA submits that the Building Code regime goes far beyond the establishment of standards for the content of applications for building permits or rules for their processing. Rather, it provides extensively for the training, qualifications and licensing of persons submitting applications and vests the Director with a variety of intrusive powers as to books and records and the suspension or revocation of an registrant's status. It is the difference between regulating the application for the building permit and regulating the individuals applying that underlies the OAA's objections to the Building Code regime.

[16] The OAA does not dispute the power of the Legislature to revise the governance of the profession of architecture by appropriate legislation, but raises the issue of whether the present legislation empowers the establishment by regulation of a parallel regulatory structure that derogates from the OAA's exclusive jurisdiction to govern architects. It submits that the Building Code provisions at issue are invalid:

> There are two simple and straightforward elements to this position: (1) under the *Architects Act* the OAA has exclusive jurisdiction to regulate architects and the practice of architecture in the Province of Ontario, (2) any regulation which purports to derogate from the established exclusive jurisdiction of the OAA must be clearly and unequivocally authorized by statute.[1]

[17] The resolution of this dispute requires an examination of the regulatory schemes under both the *Professional Engineers Act* and the *Building Code Act* and Building Code.

Regulatory Scheme under the *Professional Engineers Act*

[18] The applicant PEO is statutorily mandated to regulate the practice of professional engineering in the public interest.

[19] The "practice of professional engineering" means "any act of designing, composing, evaluating, advising, reporting, directing or supervising, wherein the safeguarding of life, health, property or the public welfare is concerned and that requires the application of engineering principles"[2].

[20] A significant component of the practice of professional engineering relates to design and general reviews of the construction of buildings.

[21] The word "design" and the phrase "general review" are terms of art in the building construction field and are defined in s. 12 (8) of the *Professional Engineers Act*.[3] The word "design" is defined in a substantially similar manner in s. 15.11 (6) of the *Building Code Act*. A general review assesses the conformity of the construction of the building to the design and is not, *per se*, an evaluation of its conformity with the Building Code.

[22] PEO licence holders share with architects the exclusive right to design and conduct general reviews of buildings. This exclusivity is shared in a carefully negotiated arrangement with architects set out in complementary provisions of the *Professional Engineers Act* and the *Architects Act*.[4] Both statutes were enacted in 1984. A Joint Practice Board of the two professions helps avoid confusion and conflicts between them.

[23] The *Professional Engineers Act* provides a comprehensive regulatory scheme for the registration of PEO licence holders (through a review of education and work experience and the examination of applicants), the investigation of concerns and complaints and the discipline of PEO licence holders, the setting of standards of practice, the carrying of professional liability insurance, and other regulatory powers.

[24] The PEO is active in the regulation of PEO licence holders who design and conduct general reviews of buildings.[5] The PEO's definition of professional misconduct has a number of applicable provisions, including performance standards specifically applicable to the Building Code. A significant proportion (almost half) of the PEO's complaints and discipline activities relate to Building Code work. The PEO has published numerous relevant professional practice guidelines. Finally, all PEO licence holders offering services to the public must obtain a certificate of authorization and meet the specified professional liability insurance requirements.

Regulatory Scheme under the *Building Code Act*

[25] For many years Ontario has had a system to regulate building construction. Plans must be submitted in order to obtain a building permit. Buildings under construction are subject to government inspections and various enforcement orders (e.g., stop work orders). This system was updated with the *Building Code Act*, which was proclaimed into force in 1993, almost ten years after the *Professional Engineers Act* became law.

[26] In 2000 the Trow Report and the BRRAG Report were released. The major theme of both reports was to streamline the building approval process under the *Building Code Act* and Building Code. Neither report identified significant concerns in the conduct of PEO licence holders. The BRRAG report also dealt with increasing the competence and accountability of those involved in the building industry, including those who do the actual construction. Again, PEO licence holders were not singled out. The BRRAG report specifically recommended that new initiatives should not duplicate existing regulatory structures.

[27] In 2003 the *Building Code Act* was amended to authorize a regulatory scheme for, among others, those persons preparing designs and conducting general reviews of buildings. Amendments to the Building Code were made in 2003 and 2005, taking effect on December 31, 2005. (The relevant provisions of the *Building Code Act* and Building Code are reproduced in Schedule A at the end of these reasons).

[28] The *Building Code Act* says the role of "designers" is to provide designs that comply with the Act and the Building Code, to provide sufficient information for building officials to determine such compliance, to perform general reviews, and to have the necessary qualifications and insurance required by the Building Code.[6] These are general role statements and PEO licence holders are not specifically identified in them. The *Building Code Act* also describes the role of chief building officials and other officials who determine whether a design or other construction work complies with the Building Code and who also enforce the legislation by issuing or withholding building permits.[7]

[29] The *Building Code Act* continues to recognize the expertise and qualifications of PEO licence holders and allows the making of regulations restricting certain aspects of general reviews only to PEO licence holders and/or architects.[8] The *Act* also expressly recognizes the regulatory role of the PEO and authorizes building officials to refer concerns about designs and general reviews by PEO licence holders to the PEO for regulatory action. At the request of the PEO, chief building officials must provide documents and information to PEO for regulatory action.[9]

[30] Article 2.3 of the Building Code allocates among PEO licence holders, architects and the public the ability to design and conduct general reviews of various types of buildings. The *Professional Engineers Act* and the *Architects Act* also address these matters.

[31] The Building Code regulatory scheme applies to every person engaged in the business of providing "design activities" to the public, excluding architects.[10] Where a design is intended to be submitted for a building permit, "design activities" include the preparation of the building design or the giving of an opinion concerning whether the building complies with the Building Code. As already mentioned above, this definition is very similar to the definition of "design" in the *Professional Engineers Act*.

[32] Article 2.17 of the Building Code sets out the qualifications and other requirements of designers that are subject to the regulatory scheme, including the following:

a. Successful completion of an examination program administered or authorized by the MMAH for registration / qualification;
b. A requirement to carry specified liability insurance;
c. A condition on registration restricting design and general reviews to the type of building for which one is registered;
d. A requirement to complete any new examinations that are developed;
e. The Director can reasonably require a registrant to provide any documents or information about a registrant's activities;
f. The representatives of the Director have access to a registrant's books and records for the purpose of confirming matters related to registration;
g. The Director can issue a notice of proposal to suspend or revoke the registration of a registrant for various reasons including the opinion that the past conduct of the registrant affords reasonable grounds for the belief that the business will not be carried on in accordance with law.

[33] It appears that Art. 2.17 duplicates many aspects of the requirements under the *Professional Engineers Act*. PEO licence holders must complete examinations administered by the PEO[11], be registered with the Registrar[12], and must carry liability insurance[13]. They are subject to investigation and discipline for professional misconduct.[14] And their licence can be revoked for, *inter alia*, professional misconduct, incompetence, and for past conduct that affords grounds for belief that he or she will not engage in the practice of professional engineering in accordance with the law and with honesty and integrity.[15] I will return to the issue of duplication in the analysis that follows.

ANALYSIS

Issue 1: Are the impugned Building Code provisions invalid because the *Building Code Act* does not authorize them?

[34] The parties agreed that the standard of review on the issue of the validity or *vires* of the impugned Building Code provisions is correctness: *Sunshine Village Corp. v. Canada (Parks Canada)* 2004 FCA 166 (CanLII), (2004), 238 D.L.R. (4th) 647 at para. 10 (Fed. C.A.).

[35] Paragraph 34 (1) 10 of the *Building Code Act* grants the Lieutenant Governor in Council very broad authority to make regulations "requiring any part of the design, construction or demolition of a building to be under the general review of an architect…or a professional engineer", which is reflected in s. 2.3 of the Building Code. Leaving aside the considerations of

contextual interpretation to be addressed later, and reading the language literally, the Lieutenant Governor in Council acted within his authority by enacting s. 2.3 of the Building Code, with two exceptions.

[36] First, I accept the applicants' submission that Art. 2.3.1.1 of the Regulation exceeds the reach of the statute by attempting to allocate between the professions the power to create particular designs (this is reflected in Table 2.3.1.1 – see Appendix A). Paragraph 34 (1) 10 of the *Building Code Act* only authorizes regulations requiring designs or parts of designs to be under the "general review" of one of the professions. The Lieutenant Governor in Council therefore erred in exercising his regulatory power, and Art. 2.3.1.1 is invalid to the extent that it purports to allocate the making of designs between professional engineers and architects.

[37] Second, I agree that the Lieutenant Governor in Council erred by purporting to direct the use of a professional engineer's seal in Art. 2.3.1.1 (4). There is no regulatory authority to make such a direction in s. 34 of the *Building Code Act*. The proper use of a seal is addressed in the *Professional Engineers Act*. Although counsel for the respondents conceded that Art. 2.3.1.1 (4) did not require anything more with regard to seals than what is already provided for under the *Professional Engineers Act*, that fact cannot support the over-broad Regulation.

[38] Paragraphs 34 (1) 33 to 35 and 35.3 of the Act grant the Lieutenant Governor in Council very broad authority to make regulations prescribing the qualifications of "designers" (including competency examinations, insurance and fees) and their registration with the Director. These matters are set out in great detail in Art. 2.17 of the Building Code, and I am not persuaded that the Lieutenant Governor in Council has exceeded his authority in simply creating such a regime for those dealing with the Code. The issue of whether the regime applies to architects and engineers raises different issues.

[39] In my view, the word "designers", as used in the *Building Code Act*, taken literally, is broad enough to include professional engineers. The applicants conceded that professional engineers both create designs and conduct general reviews. The Legislature can be taken to have known that professional engineers routinely perform these functions. While the Legislature has not expressly excluded professional engineers from the Act, there are provisions (dealt with below) suggesting a legislative intention to differentiate among classes of persons and to respect the existing position and statutory authority of the PEO to licence its members. I agree with the respondents' submission, citing *Sunshine*, *supra* at para. 18, that this court "must take the statute as it finds it", but it is the entire statute in its context that we consider. The *Rizzo* case illustrates that the literal meaning does not always prevail. I have no doubt that the Lieutenant Governor in Council had the authority under the Act to enact the regulation, but the issue of whether the Legislature intended to grant the Ministry the authority to exercise such a broad control over professional engineers is a contextual one and will be dealt with in the analysis later in these reasons regarding the principles of interpretation.

Issue 2: Are the impugned Building Code provisions invalid because they unlawfully sub-delegate authority?

[40] Subparagraph 34 (1) 33 (ii) of the *Building Code Act* authorizes the Lieutenant Governor in Council to make regulations "prescribing qualifications for…designers…including…requiring assessments or examinations in connection with obtaining or maintaining the required qualifications." The applicants submit that the Lieutenant Governor in Council unlawfully sub-delegated this power to MMAH in Art. 2.17.4.2 (1) (a) and (b) of the Building

Code, which states that the Director "may register an applicant…if…the applicant…successfully completed the examination program administered or authorized by the [MMAH]".

[41] The Ontario Court of Appeal in *Re Peralta and The Queen* reflex, (1985), 49 O.R. (2d) 705 at 717-18, aff'd 1988 CanLII 28 (S.C.C.), (1989), 66 O.R. (2d) 543 (S.C.C.), held that there is no rule against sub-delegation. Rather, the maxim *delegatus non potest delegare* is a rule of construction. The court must look to a number of factors to determine whether sub-delegation was intended. These factors include "administrative necessity", the suitability of the sub-delegate, and "the language of the whole enactment and of its purposes and objects".

[42] In my view, applying the aforementioned factors in this case indicates that the Legislature intended the Lieutenant Governor in Council to sub-delegate the administration of the examinations.

[43] Administrative necessity weighs heavily in favour of sub-delegation. It is not reasonable to expect the Lieutenant Governor in Council to prescribe in the Building Code the actual assessments and examinations required as part of the qualifications of designers. The Legislature has made MMAH responsible for the *Building Code Act* and Building Code. This makes MMAH the ideal sub-delegate. There can be no dispute that MMAH is a suitable sub-delegate for the administration of examinations that assess an applicant's knowledge of the Building Code regime. Indeed, it seems to me that sub-delegating the administration of examinations to the body that actually is responsible for the *Building Code Act* and Building Code is consistent with the overarching legislative purpose of protecting the public.

[44] Furthermore, the language used in s. 34 (1) 33 ii of the *Building Code Act* is consistent with sub-delegation. Strictly speaking, the Lieutenant Governor in Council need only "prescribe" that examinations be "required". The language of the provision does not go so far as to oblige the Lieutenant Governor in Council to "prescribe" the actual content of the assessments and examinations of designers.

[45] The applicants relied on this Court's decision in *Re Norman and Registration Committee of the Royal College of Dental Surgeons of Ontario* reflex, (1985), 50 O.R. (2d) 443 (Div. Ct.) [*Norman*] in support of their unlawful sub-delegation argument. That case is distinguishable from the case at bar. In *Norman* the Council of the College of Dentistry was given authority under s. 11 (7) (c) of the *Health Disciplines Act*, R.S.O. 1980, c. 196 to make regulations "governing the requirements and qualifications for the issuing of licenses". The Council passed a regulation giving itself the power to set or approve examinations that must be completed in order to obtain a license. The Divisional Court held that this aspect of the regulation was unlawful. Setting or approving examinations was a "requirement" in s. 11 (7) (c) of the *Health Disciplines Act*. The only way the Council could set or approve a "requirement" was by regulation. In other words, the Council could not sub-delegate to itself the power to set or approve the examinations; it had to set the examinations by regulation. In this case there is no self sub-delegation. For the reasons given above, the Lieutenant Governor in Council has properly sub-delegated authority over the administration of the examinations and assessments to the MMAH.

Issue 3: Does the *Building Code Act* and the Building Code encroach upon the exclusive regulatory jurisdiction of PEO under the *Professional Engineers Act*?

[46] The respondents concede that the purposes of the *Professional Engineers Act* and of the *Architects Act* are to regulate the practice and membership of their respective

professions in accordance with the public interest. The respondents submit that the new Building Code regime does not encroach on the regulatory jurisdiction of either of the professional associations. It is implicit in these submissions that the respondents recognize the exclusive authority of PEO and OAA to regulate their respective professions.

[47] The applicants and intervenor made extensive submissions on the exclusive nature of their responsibility and authority over the members of their respective professions. I conclude that the purpose of the two professional Acts is to regulate the conduct and good character of their members as well as their professional training and competence and this purpose is intended to be exclusive. This exclusivity is demonstrated by the comprehensive nature of the schemes, each of which addresses all the essential issues such as qualifications by education and experience to be registered, conduct and character, complaints and disciplinary functions, and punishment up to the level of de-certification. See *Regina Police Ass'n Inc. v. Regina (City) Board of Police Commissioners* 2000 SCC 14 (CanLII), (2000), 183 D.L.R. (4th) 14 at paras. 31-2 (S.C.C.) and *Abbott v. Collins* 2003 CanLII 46127 (ON C.A.), (2003), 64 O.R. (3d) 789 at paras. 4, 27-33 (Ont. C.A.).

[48] Mr. Brown, for the respondents, submits that the purpose of the *Building Code Act* and Building Code is not to regulate the practice of architecture or of professional engineering, but to ensure the safety of the public. He says the Legislature has chosen to enact a further layer of protection for the public relating to the construction of buildings and the new legislation must be read in the light of this purpose. I accept that the protection of the public is the purpose of the impugned legislation. However, as indicated above, parts of the *Building Code Act* and Building Code appear to duplicate the requirements of the professional Acts. One must ask, therefore, to what extent, if any, the protection of the public may be advanced by duplicating the professional regulatory Acts? This raises the question of whether this duplication was actually intended by the Legislature. Should those parts of the *Building Code Act* be read to include PEO license holders or not?

[49] The applicants say that the heart of the issue before the Court is that the Building Code usurps the authority of the professional bodies to govern their members as to the qualifications necessary to practice an important part of their profession. Architects and engineers come into contact with the Building Code on a frequent basis. The engineers are specifically licenced to practice professional engineering, which includes the art of designing, evaluating, reporting on, directing and supervising the design and construction of buildings in the light of engineering principles. Knowledge of the Building Code is a necessity for those practicing in the design of buildings, and education in the Building Code is a part of their professional responsibility. But the applicants submit that the revised Building Code goes much farther than regulating a professional's knowledge of its content. They say it also purports to regulate character and conduct. In these respects the applicants submit the Building Code directly duplicates and conflicts with PEO's exclusive regulatory authority.

[50] The applicants point to a number of instances of duplication. There are the rules in Art. 2.3 of the Building Code as to the application of the professional engineer's seal to plans. Art. 2.3 of the Building Code also allocates among PEO licence holders, architects and the public the ability to design and conduct general reviews of various types of buildings. The *Professional Engineers Act* and the *Architects Act* already address these issues (and I have already held above that the Lieutenant Governor in Council exceeded his statutory authority by regulating these matters).

[51] An even more problematic field is that of professional misconduct. Here, the Building Code by section 2.17 gives the Director the power to suspend a registrant for various reasons, including the opinion that the conduct of the registrant affords reasonable grounds for the belief that the registrant will not carry on business in accordance with law. This duplicates the powers of the Registrar of the PEO to suspend or revoke an engineer's licence. Mr. Brown submitted that there was no duplication because the Director would only revoke for conduct related to the Building Code. When pressed by the court that the Director could act in relation to whether the business was likely to be carried on in accordance with "law", he conceded that the Director could not ignore past conduct as evidence of character, but submitted that the Director's interest in the character of the registrant had nothing to do with engineering principles. This submission is not persuasive. The PEO's interest in the character of the licensees is not defined by engineering principles either, but by their character. It is clear that there is a duplication involved here.

[52] Mr. Brown further submitted that the present case was in parallel with the case of *Wilder v Ontario Securities Commission*, [2000] O.J. No. 758 (Div. Ct.), aff'd [2001] O.J. No. 1017 (C.A.), which I will address in greater detail below, where this court held that the Commission could regulate the conduct of a lawyer actually appearing before it, despite the fact that the lawyer was also subject to conduct regulation by the Law Society.

i. The *Wilder* case

[53] The issue in the *Wilder* case arose out of a letter written by Mr. Wilder, a lawyer acting in his professional capacity, to the Ontario Securities Commission in the course of a prospectus review. The Commission staff alleged that the letter contained a misleading statement of material fact and a Notice of Hearing was issued that the Commission would consider whether it was in the public interest to reprimand him for this act. Mr. Wilder brought a judicial review application seeking to prohibit the hearing and to quash the Notice on the grounds that only the Law Society had jurisdiction over him as a lawyer acting in a professional capacity.

[54] This court held that there was no inconsistency between the role of the Law Society in regulating the legal profession and the role of the Commission in regulating the capital markets – they both protect the public interest but the aspect of that interest is not the same. The Commission did not seek to discipline the lawyer for professional misconduct, but to protect its own process from abuse. Further, the Commission did not seek to control the right of access to practice before it, but only to reprimand an individual for alleged misconduct before it. Therefore, the court refused to quash the Notice of Hearing. In the Court of Appeal the argument turned largely on other issues, but the Court at para. 29 specifically adopted the analysis of Swinton J., for this court, in dealing with the issue now before us.

[55] The principle enunciated in *Wilder* has meaning for this case. I take it to mean that not every requirement of an entity with which a registered professional interacts impinges on the exclusive authority of the professional regulator. Such entities are entitled to protect the integrity of proceedings before them.

[56] It is important to note that the Commission in *Wilder* did not purport to go beyond the actual act that Mr. Wilder allegedly committed in dealing with the Commission. Nor, in my view, could the Commission have done so without invading the exclusive jurisdiction of the Law Society over issues of professional competence, character and conduct. For example, an inquiry by the Commission into Mr. Wilder's past conduct in

general in order to determine fitness on character grounds would be extremely suspect.

[57] The applicants and intervenor submit that the limit of *Wilder* is reached when the entity moves from regulating a particular interaction between itself and a professional, to the establishment of a competing regulatory scheme regulating the general conduct, character and competency of the registered professional. In their submission the Building Code regulatory scheme is the latter. The applicants draw attention to these features in their factum, at para. 36:

> It is submitted that in the present case, section 2.17 of the Building Code regulation establishes a competing regulatory scheme for the registration and discipline of PEO licence holders. For example, under both schemes:
>
> a. The scope of building designs and general reviews are virtually identical.
>
> b. There purports to be an allocation of what must be done by a PEO licence holder, what must be done by an architect and what can be done by anyone.
>
> c. The practitioner cannot practise without registration, qualification or authorization.
>
> d. A jurisprudence-type examination is required for registration / qualification.
>
> e. A practitioner seals / imprints his or her Building Code Identification Number (BCIN) on a document to take responsibility for it.
>
> f. A practitioner is subject to administrative investigation powers including the requirement to provide access to client files and information.
>
> g. A practitioner is subject to disciplinary action for failing to comply with the *Building Code Act, 1992* or the Building Code regulation.
>
> h. In addition a practitioner is also subject to a notice of proposal to suspend or revoke his or her registration or authorization for creating the belief that the practitioner will not carry on business in accordance with any law (not just Building Code law).
>
> i. In addition to the registration and disciplinary tools, a practitioner who fails to comply with the legislation is subject to a provincial offences prosecution before the courts and injunctive relief.
>
> j. There are liability insurance requirements for those offering services to the public.

[58] In addition, the applicant submits at para. 37 that:

> …the concept of assuming professional responsibility for one's work is more extensive under the *Professional Engineers Act* than it is under the Building Code Regulation. The PEO practitioner is expected to have either performed or to have closely supervised work he or she seals. Under the Building Code regulation the

> practitioner is encouraged to simply review and stamp the work of others.

[59] The Building Code certainly bears the distinctive characteristics of a professional regulatory statute. It regulates the requirements for admission to practice in the field of submitting building plans to the various building officials for approval. There are educational and insurance requirements; allocations of responsibility for various kinds of work; rules as to the stamping of work product; administrative obligations such as giving access to client files and information; disciplinary sanctions; and revocation powers on character grounds. In scope and function, it is indistinguishable from professional regulatory acts. If truth be told, the Building Code is a professional regulatory act in search of a profession.

[60] The profession of engineering often requires engineers to deal with compliance with the Building Code and to deal with building officials to obtain approval for their clients. Misconduct, negligence, dishonesty or the like in such dealings are professional failings and fall under the jurisdiction of the PEO. On its face, the Building Code gives power to the Director to examine into matters within the exclusive jurisdiction of the *Professional Engineers Act.* That conclusion does not at once lead to the further conclusion that it is invalid. It is necessary to consider the *Building Code Act* and in particular the power which it grants to make regulations. Does the *Building Code Act* authorize the making of regulations impinging on the exclusive authority of the applicant to govern its members? As I will explain below, I conclude that it does not.

ii. The *Building Code Act* does not authorize regulations that impinge on PEO's exclusive authority to regulate professional engineers

[61] The modern rule of statutory interpretation was formulated by Elmer Driedger[16] and was accepted as the preferred approach by the Supreme Court in *Re Rizzo and Rizzo Shoes Ltd.*, 1998 CanLII 837 (S.C.C.), [1998] 1 S.C.R. 27 at 41. In *Ontario (Attorney General) v. Big Canoe* 2002 CanLII 18055 (ON C.A.), (2002), 62 O.R. (3d) 167 (C.A.), leave to appeal to the S.C.C. ref'd [2003] S.C.C.A. No. 31, the Court of Appeal discussed the modern rule at p. 173:

> Finally, the "modern" interpretation method was reformulated in Canada by Professor R. Sullivan: Driedger on the Construction of Statutes (3rd ed. 1994) at p. 131:
>
> > There is only one rule in modern interpretation, namely, courts are obliged to determine the meaning of legislation in its total context, having regard to the purpose of the legislation, the consequences of proposed interpretations, the presumptions and special rules of interpretation, as well as admissible external aids. In other words, the courts must consider and take into account all relevant and admissible indicators of legislative meaning. After taking these into account, the court must then adopt an interpretation that is appropriate. An appropriate interpretation is one that can be justified in terms of (a) its plausibility, that is, its compliance with the legislative text; (b) its efficacy in its promotion of the legislative purpose; and (c) its acceptability, that is, the outcome is reasonable and just.

[62] The first consideration is the purpose of the *Professional Engineers Act*. It is clear that the purpose of the Act is the regulation of the conduct of professional engineers, including their character (e.g. whether there is reason to believe, based on past conduct, that the licensee will not carry on the profession in

accordance with law). The purpose of the *Building Code Act* is primarily to regulate the construction of buildings by establishing the standards of construction set out in the Building Code. As recently amended, the Building Code has the purpose of ensuring that those who deal with the Building Code and with Building Officials have certain qualifications and be registered.

[63] The respondents submit that there is no actual conflict between the two statutes. The Building Code is geared to testing designers' knowledge of the *Building Code Act* and Building Code. It does not touch upon the heart of PEO's mandate, "such as membership in the organization, professional ethics, competency as a professional engineer or architect, or any other sphere not directly relevant to building construction and demolition." If there is no real conflict, the two regimes can co-exist.

[64] The respondents submit that the case at bar is analogous to the case of *Law Society of Upper Canada v. Barrie (City)* reflex, (2000), 46 O.R. (3d) 620 (S.C. J.), where the City passed a by-law to require all businesses in the City to obtain a business licence. It was held that lawyers governed by the *Law Society Act* were not exempt. Compliance with the by-law did not conflict with the Law Society's jurisdiction over the professional aspects of the lawyer's business.

[65] In my view, the analogy is not apt. The business licence was really a tax. The City did not purport to legislate that the lawyer could not practice her profession without submitting to further professional testing or submitting to inquiries as to her fitness to practice. The situation before us is quite different. The Building Code prevents the professional engineer from performing some significant professional tasks for which he is already licensed by the PEO under the *Professional Engineers Act* unless he complies with these new profession-related requirements and exposes himself to a duplicative disciplinary scheme not confined to his actual interaction with building officials. Therefore it cannot be said that there is no real conflict between the two regimes.

[66] While the Building Code refers to "every person", it does not expressly include engineers among the persons required to obtain "qualifications". Certain provisions of the Building Code, such as Art. 2.3.1.1 discussed above, tend to support a legislative intention to respect the special rights and obligations of the professional engineer. This point is reinforced by the language of s. 34 (1) 33 of the *Building Code Act* (see Schedule A), which permits the making of regulations prescribing qualifications for designers and others, including "different qualifications for different classes of…designers". This signals a legislative intention to differentiate between classes of designers, presumably by reason of differences in training, education and experience. Thus it cannot be said that the purpose of the *Building Code Act* and Building Code support the proposition that the regulatory scheme implemented by this legislation is meant to impinge on the PEO's exclusive regulatory jurisdiction over its members.

[67] The second Driedger consideration is the consequences of opposing interpretations. In my view the inclusion of professional engineers within the Building Code regulatory scheme leads to incongruous results. As noted, they are already licenced through the *Professional Engineers Act* to perform the very acts now regulated by the Building Code. They are already under a scheme of discipline which can see them lose their licence on grounds of lack of competence or, in effect, bad character, through a complaints and discipline system. To involve professional engineers in a second such system over essentially the same professional competence is a form of double jeopardy, which is, as indicated by the various deponents giving affidavit evidence on behalf of the applicants and intervenor, unfair and unnecessary to accomplish the ends of the legislation.

[68] The *Wilder* case illustrates the problem and the solution. If a professional engineer interacts with an entity, such as a chief building official, in a dishonest or unprofessional manner, he or she may be exposed to some punishment under the rules of that entity, as was Mr. Wilder. But the bringing of charges of professional misconduct on character grounds (such as reason to believe from past conduct that the professional engineer will not act honestly), or the evaluation of a professional engineer's competency (through assessments and examinations) are exclusive functions of the PEO. To the extent that the Building Code imposes these and similar conditions on "persons", it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.

[69] Under the third Driedger consideration the courts look to the aids to interpretation and the presumptions and special rules of interpretation. The respondents submit that one test of legislative intent is the presence of an exemption for architects, but none for engineers. This would be a potent argument but for the special circumstances described above that the exemption came about as a temporary measure to await the resolution of the issues being canvassed in these reasons. In those circumstances it is not appropriate to draw the conclusion urged on us by counsel for the respondents.

[70] The respondents submit that in the event (which they deny) that there is some inconsistency between the *Professional Engineers Act* and the *Building Code Act* and Building Code, the latter should prevail because they were enacted later and are deemed to have impliedly repealed the former to the extent of the inconsistency. They rely on *Winnipeg School Division No. 1 v. Craton*, 1985 CanLII 48 (S.C.C.), [1985] 2 S.C.R. 150, where the issue was whether the school board's mandatory retirement policy, set out in s. 39 (2) of its Act, prevailed over the *Human Rights Act*. McIntyre J. for the Supreme Court observed, at para. 7, that:

> Section 6(1) of The Human Rights Act, enacted in 1974, was clearly a subsequent enactment and an express prohibition against discrimination in employment on the basis of age, and even setting aside the notion of any primacy for human rights legislation, it would have prevailed and repealed section 39(2) by implication.

[71] Certainly the relative timing of the passage of the two statutes was a factor in the Supreme Court's decision, but it is important to observe that the later enactment was an express prohibition of what was called for by the earlier, which is decidedly not so in the case before us.

[72] The scope of the concept of implied repeal is somewhat more limited than the respondents submit. Where the later statute is general and the earlier specific, it appears that the general may be construed as allowing an exception for the existing specific Act.[17] Such a principle would be applicable in the case at bar where the earlier *Professional Engineers Act* establishes a regime for a particular profession, whereas the later Building Code applies generally to everyone doing business with the chief building official about building permits. As well, cases show a significant respect for rights already granted and the need for very clear language to over-ride them.

[73] In *Re British Columbia Teachers' Federation and A.G. for British Columbia* reflex, (1985), 23 D.L.R. (4th) 161, the British Columbia Court of Appeal dealt with whether a directive from the B. C. Treasury Board establishing a formula limiting school expenditures prevailed over provisions of the *School Act* placing management, including teacher salaries and lay-offs, in the hands of the School Trustees. At pp. 173-4, Anderson J.A., for the majority, said:

> The Legislature, by enacting the School Act, conferred important statutory rights on school boards, teachers and the residents in each school district. …
>
> In the absence of express language, it will not be presumed that the Legislature intended to abrogate existing statutory rights of the nature described above.
>
> The law is summarized in Maxwell on The Interpretation of Statutes, 12th ed. (1969), at p. 196, as follows:
>
> "Now if anything be certain it is this," said the Earl of Selborne L.C. in The Vera Cruz, "that where there are general words in a later Act capable of reasonable and sensible application without extending them to subjects specially dealt with by earlier legislation, you are not to hold that earlier and special legislation indirectly repealed, altered, or derogated from merely by force of such general words, without any indication of a particular intention to do so." In a later case, Viscount Haldane said: "We are bound ... to apply a rule of construction which has been repeatedly laid down and is firmly established. It is that wherever Parliament in an earlier statute has directed its attention to an individual case and has made provision for it unambiguously, there arises a presumption that if in a subsequent statute the Legislature lays down a general principle, that general principle is not to be taken as meant to rip up what the Legislature had before provided for individually, unless an intention to do so is specially declared. A merely general rule is not enough, even though by its terms it is stated so widely that it would, taken by itself, cover special cases of the kind I have referred to. [Footnotes omitted] [Emphasis added]

[74] To a similar effect is the judgment of the Supreme Court in *Morguard Properties Ltd. v. City of Winnipeg*, 1983 CanLII 33 (S.C.C.), [1983] 2 S.C.R. 493. Estey J., who delivered the judgment of the court, stressed that existing statutory rights will not be deemed abrogated in the absence of express language indicating a clear legislative intention so to do. At p. 509 he said:

> In more modern terminology the courts require that, in order to adversely affect a citizen's right, whether as a taxpayer or otherwise, the Legislature must do so expressly. Truncation of such rights may be legislatively unintended or even accidental, but the courts must look for express language in the statute before concluding that these rights have been reduced.

[75] The cases show that before we could agree with the respondent that professional engineers are subject to the full panoply of control established by the Building Code, we should be able to point to statutory language which clearly indicates that the existing right of the professional engineers to practice in accordance with the *Professional Engineers Act* was intended to be abrogated. In my view, no such clear statutory language exists.

[76] The final Driedger consideration is the plausibility of the interpretation in the light of the actual language, its efficacy in promoting the purpose of the statute, and the fairness of the result. It is significant that there is no provision in the *Building Code Act* or in the Building Code establishing any form of primacy of those enactments over the professional regulatory Acts. By contrast, s. 35 (1) expressly provides that the *Building Code Act* and the Building Code supersede all municipal by-laws. Certainly the words “every person” are broad and are

intended to capture those who deal with the Code by presenting plans to building officials for permits. But there are, as noted, other provisions suggesting a legislative intention to differentiate among classes of persons and to respect the existing position and statutory authority of the PEO to licence its members. To do so in a rational way must result in the exclusion of professional engineers from the duplicative competence and character control scheme under the Building Code as they are already subject to such a statutory regime.

DISPOSITION

[77] I agree with the submissions of the respondents that this is not a case for injunctive relief or for the exercise of the court's prerogative powers. I would grant the following declarations:

1. Article 2.3.1.1 of the Building Code is not authorized by s. 34 (1) 10 of the *Building Code Act* and is invalid to the extent that it purports to allocate responsibility for designs between professional engineers and architects.

2. Article 2.3.1.1 (4) of the Building Code is not authorized by s. 34 of the *Building Code Act* and is invalid.

3. Clause 1.1 (1) (c), subsection 1.1 (2), clause 8 (2) (c), and subsections 15 (5) to (7) of the *Building Code Act* conflict with the exclusive regulatory jurisdiction of the PEO and do not apply to any holder of any licence or certificate issued under the *Professional Engineers Act*.

4. Article 2.17 of the Building Code conflicts with the exlusive regulatory jurisdiction of the PEO and does not apply to any holder of any licence or certificate issued under the *Professional Engineers Act*.

[78] Order to follow accordingly.

[79] While relief is only available to the applicant professional engineers in this case, in my opinion the analysis in these reasons for judgment applies equally to the intervenor architects.

COSTS

[80] Any party wishing to make submissions as to costs may do so by way of brief written submissions to the Court within 30 days of the release of these reasons for judgment.

[81] Before parting with this case, I wish to express my gratitude to my colleagues for their significant contributions to the preparation of these reasons.

SCHEDULE A

***Building Code Act, 1992*, S.O. 1992, c. 23**

Role of various persons

1.1 (1) It is the role of every person who causes a building to be constructed,

(a) to cause the building to be constructed in accordance with this Act and the building code and with any permit issued under this Act for the building;

(b) to ensure that construction does not proceed unless any permit required under this Act has been issued by the chief building official; and

(c) to ensure that construction is carried out only by persons with the qualifications and insurance, if any, required by this Act and the building code.

Role of designers

(2) It is the role of a designer,

(a) if the designers designs are to be submitted in support of an application for a permit under this Act, to provide designs which are in accordance with this Act and the building code and to provide documentation that is sufficiently detailed to permit the design to be assessed for compliance with this Act and the building code and to allow a builder to carry out the work in accordance with the design, this Act and the building code;

(b) to perform the role described in clause (a) in respect of only those matters for which the designer has the qualifications, if any, required by this Act and the building code; and

(c) if the building code requires that all or part of the design or construction of a building be under general review, to perform the general review in respect of only those matters for which the designer has the qualifications, if any, required by this Act and the building code.

Issuance of permits

8. (2) The chief building official shall issue a permit [to construct or demolish a building] unless,

…

(c) a person who prepared drawings, plans, specifications or other documents or gave an opinion concerning the compliance of the proposed building or construction with the Building Code does not have the applicable qualifications, if any, set out in the Building Code or does not have the insurance, if any, required by the Building Code.

…

Referral of plans, etc.

(9) Upon reasonable grounds, the chief building official or registered code agency may refer drawings, plans or specifications accompanying applications for permits or the reports arising out of the general review of the construction of a building to the Association of Professional Engineers of Ontario or the Ontario Association of Architects for the purpose of determining if the *Professional Engineers Act* or the *Architects Act* is being contravened.

Same

(9.1) At the request of the Association of Professional Engineers of Ontario or the Ontario Association of Architects, the chief building official shall refer documents and information described in subsection (9) to those associations for the purpose of

determining if the *Professional Engineers Act* or the *Architects Act* is being contravened.

Qualifications for designers

15.11 (5) A person is not eligible to engage in any of the following activities unless he, she or it has the qualifications and meets the requirements set out in the Building Code to be a designer:

1. Prepare a design or give other information or opinion concerning whether a building or part of a building complies with the building code, if the design, information or opinion is to be submitted to a chief building official in connection with (i) an application for a permit, (ii) [omitted] or (iii) a report described in paragraph 2.

2. If a general review of the construction of a building is required by the Building Code, prepare a written report based on the general review.

Same

(6) In subsection 5, "design" includes a plan, specification, sketch, drawing or graphic representation respecting the construction of a building.

Prohibition

(7) No person shall represent, directly or indirectly, that he, she or it has the qualifications or meets the requirements established under this section if the person does not have those qualifications or does not meet those requirements.

Regulations

34. (1) The Lieutenant Governor in council may make regulations governing standards for the construction and demolition of buildings, including,

…

10. requiring any part of the design, construction or demolition of a building to be under the general review of an architect as defined in the *Architects Act* or a professional engineer as defined in the *Professional Engineers Act* and that copies of reports arising from the general review be provided to the chief building official or to a registered code agency;

…

33. prescribing qualifications for chief building officials, inspectors, registered code agencies, designers and other persons referred to in section 15.12 and related matters including,

(i) requiring different qualifications for different classes of officials, inspectors, designers and other persons,

(ii) requiring assessments or examinations in connection with obtaining or maintaining the required qualifications,

(iii) [establishment of register of qualified persons];

(iv) [fees];

Building Code, O. Reg. 403/97

Design and Section 2.3. General Review

Design 2.3.1.

2.3.1.1. Design by Architect or Professional Engineer

(1) Except as permitted in Sentences (2) and (3), the *construction*, including, for greater certainty, enlargement or alteration, of every *building* or part thereof described in Table 2.3.1.1. and this Article shall be designed and reviewed by an *architect*, *professional engineer* or both.

(2) An *architect* may provide the services within the practice of professional engineering in any *building* described in Table 2.3.1.1., or a *professional engineer* may provide the services within the practice of architecture in any *building* described in Table 2.3.1.1. where to do so does not constitute a substantial part of the services provided by the other profession related to the *construction* of the *building* and is necessary

(a) for the *construction* of the *building* and is incidental to the other services provided by the *architect* or *professional engineer*, or

(b) for coordination purposes.

TABLE 2.3.1.1.(4)
Design and General Review
Forming Part of Sentence 2.3.1.1.(1)

Building **Classification by** ***Major Occupancy***	***Building*** **Description**	**Design and General Review by:**
Assembly occupancy only	Every *building*	*Architect* and *professional engineer*(1)
Assembly occupancy and any other *major occupancy* except *industrial*	Every *building*	*Architect* and *professional engineer*(1)
Care or detention occupancy only	Every *building*	*Architect* and *professional engineer*(1)
Care or detention occupancy and any other *major occupancy* except *industrial*	Every *building*	*Architect* and *professional engineer*(1)
Residential occupancy only	Every *building* that exceeds 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
	Every *building* that exceeds 600 m^2 in *gross area* and that contains a *residential occupancy* other than a *dwelling unit* or *dwelling units*	*Architect*(2)
Residential occupancy only	Every *building* that exceeds 600 m^2 in *gross area* and contains a *dwelling unit* above another *dwelling unit*	*Architect*(2)
	Every *building* that exceeds 600 m^2 in *building area* contains 3 or more dwelling units and has no *dwelling unit* above another *dwelling unit*	*Architect*(2)
Residential occupancy and any other *major occupancy* except *industrial, assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
Business and personal services occupancy only	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
Business and personal services occupancy and any other *major occupancy* except *industrial, assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
Mercantile occupancy only	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
Mercantile occupancy and any other *major occupancy* except *industrial, assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* and *professional engineer*(1)
Industrial occupancy only and where there are no subsidiary *occupancies*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* or *professional engineer*(3)
Industrial occupancy and one or more other *major occupancies* where the portion of the area occupied by one of the other *major* or subsidiary *occupancies* exceeds 600 m^2	The non-industrial portion of every *building*	*Architect* and *professional engineer*(1)
	The industrial portion of every *building*	*Architect* or *professional engineer*(3)
Industrial occupancy and one or more other *major occupancies* where no portion of the area occupied by one of the other *major* or subsidiary *occupancies* exceeds 600 m^2	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*Architect* or *professional engineer*(3)
Column 1	2	3

Notes To Table 2.3.1.1.

(1)An *architect* shall provide services within the practice of architecture and a *professional engineer* shall provide the services within the practice of professional engineering.

(2)An *architect* may engage a *professional engineer* to provide services within the practices of professional engineering.

(3)Only a *professional engineer* may provide services within the practice of professional engineering.

(4)Requirements for design and general review by an *architect* or *professional engineer* or a combination of both for the *construction*, enlargement or alteration of a *building* are set out in the *Architects Act* and the *Professional Engineers Act*.

(3) The requirement for an *architect* does not apply to the preparation or provision of a design for interior space for a *building*, including finishes, fixed or loose furnishings, equipment, fixtures and partitioning of space, and related exterior elements such as signs, finishes and glazed openings used for display purposes, that does not affect or is not likely to affect

(a) the structural integrity,

(b) a fire safety system or *fire separation*,

(c) a main entrance or *public corridor* on a floor,

(d) an *exit* to a public thoroughfare or to the exterior,

(e) the *construction* or location of an exterior wall, or

(f) the usable floor space through the addition of a *mezzanine*, infill or other similar element, of the *building*.

(4) Where a building or part of it described in Table 2.3.1.1. is designed by an architect or a professional engineer or a combination of both as required by this Article, all plans, sketches, drawings, graphic representations, specifications and other documents that are prepared by an architect, professional engineer or both and that form the basis for the issuance of a permit under Section 8 of the Act or any changes to it authorized by the chief building official shall bear the signature and seal of the architect, professional engineer or both, as applicable.

(5) Where the *foundations* of a *building* are to be constructed below the level of the footings of an adjacent *building* and within the angle of repose of the *soil*, as drawn from the bottom of the footings, the *foundations* shall be designed by a *professional engineer*.

(6) The thermal design of a *building* in accordance with Section 9.38. shall be prepared and provided by an *architect* or *professional engineer* or a combination of both.

General Review 2.3.2.

2.3.2.1. General Review by Architect or Professional Engineer

(1) Except as permitted in Sentence (2), a person who intends to construct or have constructed a building required to be designed by an architect, professional engineer or both, shall ensure that an architect, professional engineer or both are retained to undertake the general review of the construction of the building in accordance with the performance standards of the Ontario Association of Architects or the Association of Professional Engineers of Ontario, as applicable, to determine whether the construction is in general conformity with the plans, sketches, drawings, graphic representations,

specifications and other documents that are prepared by an architect, professional engineer or both and that form the basis for the issuance of a permit under Section 8 of the Act or any changes to it authorized by the chief building official, copies of written reports arising out of the general review shall be forwarded to the chief building official or registered code agency, as the case may be, by the architect, professional engineer or both who have been retained to undertake the general review of the construction of the building.

(2) An *architect* or a *professional engineer* need not be retained to undertake the general review of *construction* of a *building* where the *building* is designed in accordance with Section 9.38.

2.3.2.2. Restriction for General Review

(1) Only an *architect* may carry out or provide the general review of the *construction* of a *building*

(a) that is constructed in accordance with a design prepared or provided by an *architect*, or

(b) in relation to services that are provided by an *architect* in connection with the design in accordance with which the *building* is constructed.

(2) Only a *professional engineer* may carry out or provide the general review of the *construction* of a *building*

(a) that is constructed in accordance with a design prepared or provided by a *professional engineer*, or

(b) in relation to services that are provided by a *professional engineer* in connection with the design in accordance with which the *building* is constructed.

2.3.2.3. Demolition of a Building

(1) The applicant for a permit respecting the *demolition* of a *building* shall retain a *professional engineer* to undertake the general review of the project during *demolition*, where

(a) the *building* exceeds 3 *storeys* in *building height* or 600 m^2 in *building area*,

(b) the *building* structure includes pre-tensioned or post-tensioned members,

(c) it is proposed that the *demolition* will extend below the level of the footings of any adjacent *building* and occur within the angle of repose of the *soil*, drawn from the bottom of such footings, or

(d) explosives or a laser are to be used during the course of *demolition*.

Section 2.17. Qualifications for Designers

2.17.1.1. Scope

(1) This Section prescribes, for the purposes of Clause 8 (2) (c) and Subsection 15.11 (5) of the Act, the qualifications for a person who carries out *design activities* after December 31, 2005.

Qualifications — 2.17.4. Persons Engaged in the Business of Providing Design Activities to the Public

2.17.4.1. General

(1) Except as provided in sentences 3 and 4, every person engaged in the business of providing design services to the public after December 31, 2005, must have the following qualification:

(a) The person must be *registered* with the *director*.

2.17.4.2. Registration and Renewal of a Registration

(1) [The Director may register an applicant if]

(a) the applicant…has successfully completed the [Minster's] examination program relating to the person's knowledge of this Act and this Code;

(b) all persons who will review and take responsibility for design activities provided to the public…have successfully completed the examination program administered or authorized by the [MMAH]…relating to the person's knowledge of this Act and of this Code.

(c) the applicant…is covered by the insurance required under Subsection 2.21.2. during the term of the registration applied for, …

2.17.4.9. Suspension, Revocation, Refusal to Register or Renew a Registration

(1) The Director may in the circumstances set out in sentence (2):

(a) refuse to register an applicant or to renew a registration, or

(b) suspend or revoke a registration.

(2) The circumstances referred to in sentence (1) are:

(a) the registered person is in contravention of the Act or this Code;

(b) the registered person is in breach of a condition of the registration…

…

(d) the director is of the opinion that the past conduct of the applicant or registered person…affords reasonable grounds for belief that the business …authorized by the registration will not be carried on in accordance with law.

SUPERIOR COURT OF JUSTICE - ONTARIO
DIVISIONAL COURT

RE: Paul Philpott and Christine Philpott v. The Corporation of the Town of Innisfil and Heather Rutherford in her capacity as Chief Building Official of The Corporation of the Town of Innisfil

BEFORE: Justices Ferrier, Cumming and Donohue

COUNSEL: ***Ellen Anderson*** and ***Michael Adams*** for Appellants/Applicants
Robert Bigioni for Respondents/Respondents

HEARD: **March 15 and 16, 2007**

E N D O R S E M E N T

CUMMING J.

The Appeal

[1] The appellants appeal a judgment of MacKinnon, J. dated August 23, 2006. He dismissed the appellants/applicants' appeal of the Chief Building Official's ("CBO") denial of their application for a building permit. This matter raises novel legal issues.

[2] We dismiss the appeal. Our reasons follow.

Background

[3] The appellants, Mr. and Ms. Philpott, own property referred to as 1150 Arnold Street in the Town of Innisfil. On September 22, 2004 the Town passed Consolidated By-Law 054-04, which granted single, residential (R1S) zoning for the subject property of the Philpotts. Prior thereto the zoning was "H" or "Hold" which did not permit a single-family residence.

[4] By-law 054-04 was appealed by a number of affected parties (not the applicants).

[5] The Town realized at some point in the fall of 2004 that By-Law 054-04 contained a number of errors, one of which was a clerical, mapping error pertaining to the subject property. The Town had not intended in enacting By-Law 054-04 to change the zoning for the subject property. The purported change was inadvertent.

[6] Learning of the zoning change through By-Law 054-04, the appellants applied for a building permit October 29, 2004, authorizing them to build a single-family home. The application was unilaterally held in abeyance by the Town. The appellants first learned about the clerical errors in By-Law 054-04 at a public meeting May 11, 2005. Mr. Philpott was told at that time of the clerical error relating to his property and that the Town intended to restore the "Holding Zone" to his property.

[7] The appellants were then formally advised by the Town by letter June 3, 2005 that the R1S zoning for their property was a clerical error. They were told that By-Law 054-04 was under a pending appeal, and that an amending by-law would be passed, such that the R1S zoning would fall away and the "Holding Zone " restored. They were further advised that pursuant to s. 34(30) of the *Planning Act*, R.S.O., 1990, c. P 13. By-Law 054-04 was not in force until the appeals were dealt with by the Ontario Municipal Board ("OMB"). They were also told that if the amending by-law was appealed the

BETWEEN:

ASSOCIATION OF PROFESSIONAL ENGINEERS OF ONTARIO and
BERNARD ENNIS, P. Eng.

Applicants

- and -

HER MAJESTY THE QUEEN IN RIGHT OF ONTARIO as represented by THE MINISTER OF MUNICIPAL AFFAIRS AND HOUSING and DAVID BREZER, P. Eng. in his capacity as DIRECTOR OF THE BUILDING AND DEVELOPMENT BRANCH OF THE MINISTRY OF MUNICIPAL AFFAIRS AND HOUSING and in his capacity as a CHIEF BUILDING OFFICIAL

HEARD: October 26-27, 2006

BEFORE: Lane, Chapnik and P. Smith, JJ.

COUNSEL: Richard Steinecke and Lisa S. Braverman, for the Applicants.

Dennis W. Brown, Q.C., and Sandra Di Ciano for the Respondents.

David C. Moore and Kenneth G. G. Jones for the Intervenor, Ontario Association of Architects.

REASONS FOR JUDGMENT

LANE J.:

[1] This application for judicial review challenges the validity of certain amendments to the Building Code, Ont. Reg. 403/97, a regulation enacted pursuant to the *Building Code Act, 1992*, S.O. 1992, c. 23 (the "*Building Code Act*").

[2] The applicants say that the amendments are invalid to the extent that they establish a duplicate registration or qualification scheme for Association of Professional Engineers of Ontario ("PEO") licence holders who prepare designs or conduct general reviews of buildings. The applicants contend that this regulation is invalid and should be read down to exclude PEO licence holders.

[3] For the reasons that follow, the application is allowed.

INTRODUCTION

The Parties

[4] The applicant PEO is the statutory body that regulates the practice of professional engineering in Ontario under the *Professional Engineers Act*, R.S.O. 1990, c. P.28. PEO regulates persons who hold licences, temporary licences, limited licences and provisional licences and entities that offer engineering services directly to the public who must hold certificates of authorization. Collectively they are called PEO licence holders.

[5] The applicant Bernard Ennis is a professional engineer employed by PEO. He is the PEO's Manager of Practice and Standards. He has also been designated as the professional engineer to assume responsibility for, supervise, and direct the professional engineering services performed by PEO itself (i.e. in respect of its own building space).

[6] The intervenor Ontario Association of Architects ("OAA") is the body established under the *Architects Act*, R.S.O. 1990, c. A.27, which is responsible for licencing and regulating architects in Ontario. OAA supports the application.

[7] The respondent Minister of Municipal Affairs and Housing (the "Minister") is responsible for the Building Code. The respondent David Brezer, P. Eng., is employed by the Ministry of Municipal Affairs and Housing ("MMAH") as the Director under the *Building Code Act*. The Director is the official responsible for administering and enforcing the regulatory scheme under the Building Code. The Director also doubles as a chief building official where no other is available.

The Application

[8] As will be detailed below, since December 31, 2005 the Building Code has established a regulatory scheme for persons who prepare designs or conduct general reviews of buildings in Ontario.

[9] Mr. Ennis has been asked to renovate PEO's head office. He is not registered or qualified under the Building Code to prepare building designs or to conduct general reviews and has not taken the required Building Code examinations. As such he is concerned that it would be illegal for him to prepare and submit the designs or file a general review commitment form for the renovations.

[10] The applicants say that PEO licence holders are not subject to the regulatory scheme under the Building Code, and have brought this application seeking declarations to that effect, as well as injunctive and other relief.

The Parties' Positions

[11] The applicants' submission is that, at least to the extent that *Building Code Act* and Building Code provisions establish a competing regulatory scheme for PEO licence holders who design or conduct general reviews of buildings, such provisions are invalid for the following reasons:

> (a) The impugned provisions encroach upon the PEO's exclusive regulatory jurisdiction under the *Professional Engineers Act.*
>
> (b) The impugned Building Code provisions are not authorized by the *Building Code Act*.
>
> (c) The impugned Building Code provisions unlawfully sub-delegate authority.

[12] The respondents submit that the provisions are valid enactments for the purpose of protecting the public by providing for the establishment and enforcement of standards

relating to the construction and demolition of buildings. They are laws of general application and do not single out PEO licence holders, nor do they have as their purpose the regulation of PEO licence holders. They apply to the general class of designers and building practitioners with the purpose of ensuring public safety. They do not infringe on the jurisdiction of the PEO, nor is there conflict between the *Building Code Act* and the *Professional Engineers Act*. But if there were such a conflict, the Building Code, as the later enactment, would prevail.

[13] The respondent further submits that s. 34 (1) of the *Building Code Act* contains clear and unequivocal authority for the impugned Building Code provisions, and the Building Code does not constitute unauthorized sub-delegation.

[14] The intervenor OAA supports the applicants. It, like the professional engineers, lobbied the government against the imposition of regulations to impose this additional regulatory regime in respect of building permit applications. Pending the resolution of this dispute, the OAA entered into a Memorandum of Understanding ("MOU") with the Minister, establishing a parallel regulatory regime within the OAA. Its position is that this regime will be ended if the PEO is successful in the present litigation.

[15] The OAA submits that the Building Code regime goes far beyond the establishment of standards for the content of applications for building permits or rules for their processing. Rather, it provides extensively for the training, qualifications and licensing of persons submitting applications and vests the Director with a variety of intrusive powers as to books and records and the suspension or revocation of an registrant's status. It is the difference between regulating the application for the building permit and regulating the individuals applying that underlies the OAA's objections to the Building Code regime.

[16] The OAA does not dispute the power of the Legislature to revise the governance of the profession of architecture by appropriate legislation, but raises the issue of whether the present legislation empowers the establishment by regulation of a parallel regulatory structure that derogates from the OAA's exclusive jurisdiction to govern architects. It submits that the Building Code provisions at issue are invalid:

> There are two simple and straightforward elements to this position: (1) under the *Architects Act* the OAA has exclusive jurisdiction to regulate architects and the practice of architecture in the Province of Ontario, (2) any regulation which purports to derogate from the established exclusive jurisdiction of the OAA must be clearly and unequivocally authorized by statute.[1]

[17] The resolution of this dispute requires an examination of the regulatory schemes under both the *Professional Engineers Act* and the *Building Code Act* and Building Code.

Regulatory Scheme under the *Professional Engineers Act*

[18] The applicant PEO is statutorily mandated to regulate the practice of professional engineering in the public interest.

[19] The "practice of professional engineering" means "any act of designing, composing, evaluating, advising, reporting, directing or supervising, wherein the safeguarding of life, health, property or the public welfare is concerned and that requires the application of engineering principles"[2].

[20] A significant component of the practice of professional engineering relates to design and general reviews of the construction of buildings.

[21] The word "design" and the phrase "general review" are terms of art in the building construction field and are defined in s. 12 (8) of the *Professional Engineers Act*.[3] The word "design" is defined in a substantially similar manner in s. 15.11 (6) of the *Building Code Act*. A general review assesses the conformity of the construction of the building to the design and is not, *per se*, an evaluation of its conformity with the Building Code.

[22] PEO licence holders share with architects the exclusive right to design and conduct general reviews of buildings. This exclusivity is shared in a carefully negotiated arrangement with architects set out in complementary provisions of the *Professional Engineers Act* and the *Architects Act*.[4] Both statutes were enacted in 1984. A Joint Practice Board of the two professions helps avoid confusion and conflicts between them.

[23] The *Professional Engineers Act* provides a comprehensive regulatory scheme for the registration of PEO licence holders (through a review of education and work experience and the examination of applicants), the investigation of concerns and complaints and the discipline of PEO licence holders, the setting of standards of practice, the carrying of professional liability insurance, and other regulatory powers.

[24] The PEO is active in the regulation of PEO licence holders who design and conduct general reviews of buildings.[5] The PEO's definition of professional misconduct has a number of applicable provisions, including performance standards specifically applicable to the Building Code. A significant proportion (almost half) of the PEO's complaints and discipline activities relate to Building Code work. The PEO has published numerous relevant professional practice guidelines. Finally, all PEO licence holders offering services to the public must obtain a certificate of authorization and meet the specified professional liability insurance requirements.

Regulatory Scheme under the *Building Code Act*

[25] For many years Ontario has had a system to regulate building construction. Plans must be submitted in order to obtain a building permit. Buildings under construction are subject to government inspections and various enforcement orders (e.g., stop work orders). This system was updated with the *Building Code Act*, which was proclaimed into force in 1993, almost ten years after the *Professional Engineers Act* became law.

[26] In 2000 the Trow Report and the BRRAG Report were released. The major theme of both reports was to streamline the building approval process under the *Building Code Act* and Building Code. Neither report identified significant concerns in the conduct of PEO licence holders. The BRRAG report also dealt with increasing the competence and accountability of those involved in the building industry, including those who do the actual construction. Again, PEO licence holders were not singled out. The BRRAG report specifically recommended that new initiatives should not duplicate existing regulatory structures.

[27] In 2003 the *Building Code Act* was amended to authorize a regulatory scheme for, among others, those persons preparing designs and conducting general reviews of buildings. Amendments to the Building Code were made in 2003 and 2005, taking effect on December 31, 2005. (The relevant provisions of the *Building Code Act* and Building Code are reproduced in Schedule A at the end of these reasons).

[28] The *Building Code Act* says the role of "designers" is to provide designs that comply with the Act and the Building

Code, to provide sufficient information for building officials to determine such compliance, to perform general reviews, and to have the necessary qualifications and insurance required by the Building Code.[6] These are general role statements and PEO licence holders are not specifically identified in them. The *Building Code Act* also describes the role of chief building officials and other officials who determine whether a design or other construction work complies with the Building Code and who also enforce the legislation by issuing or withholding building permits.[7]

[29] The *Building Code Act* continues to recognize the expertise and qualifications of PEO licence holders and allows the making of regulations restricting certain aspects of general reviews only to PEO licence holders and/or architects.[8] The *Act* also expressly recognizes the regulatory role of the PEO and authorizes building officials to refer concerns about designs and general reviews by PEO licence holders to the PEO for regulatory action. At the request of the PEO, chief building officials must provide documents and information to PEO for regulatory action.[9]

[30] Article 2.3 of the Building Code allocates among PEO licence holders, architects and the public the ability to design and conduct general reviews of various types of buildings. The *Professional Engineers Act* and the *Architects Act* also address these matters.

[31] The Building Code regulatory scheme applies to every person engaged in the business of providing "design activities" to the public, excluding architects.[10] Where a design is intended to be submitted for a building permit, "design activities" include the preparation of the building design or the giving of an opinion concerning whether the building complies with the Building Code. As already mentioned above, this definition is very similar to the definition of "design" in the *Professional Engineers Act*.

[32] Article 2.17 of the Building Code sets out the qualifications and other requirements of designers that are subject to the regulatory scheme, including the following:

a. Successful completion of an examination program administered or authorized by the MMAH for registration / qualification;
b. A requirement to carry specified liability insurance;
c. A condition on registration restricting design and general reviews to the type of building for which one is registered;
d. A requirement to complete any new examinations that are developed;
e. The Director can reasonably require a registrant to provide any documents or information about a registrant's activities;
f. The representatives of the Director have access to a registrant's books and records for the purpose of confirming matters related to registration;
g. The Director can issue a notice of proposal to suspend or revoke the registration of a registrant for various reasons including the opinion that the past conduct of the registrant affords reasonable grounds for the belief that the business will not be carried on in accordance with law.

[33] It appears that Art. 2.17 duplicates many aspects of the requirements under the *Professional Engineers Act*. PEO licence holders must complete examinations administered by the PEO[11], be registered with the Registrar[12], and must carry liability insurance[13]. They are subject to investigation and discipline for professional misconduct.[14] And their licence can be revoked for, *inter alia*, professional misconduct, incompetence, and for past conduct that affords grounds for belief that he or she will not engage in the practice of professional engineering in accordance with the law and with

honesty and integrity.[15] I will return to the issue of duplication in the analysis that follows.

ANALYSIS

Issue 1: Are the impugned Building Code provisions invalid because the *Building Code Act* does not authorize them?

[34] The parties agreed that the standard of review on the issue of the validity or *vires* of the impugned Building Code provisions is correctness: *Sunshine Village Corp. v. Canada (Parks Canada)* 2004 FCA 166 (CanLII), (2004), 238 D.L.R. (4th) 647 at para. 10 (Fed. C.A.).

[35] Paragraph 34 (1) 10 of the *Building Code Act* grants the Lieutenant Governor in Council very broad authority to make regulations "requiring any part of the design, construction or demolition of a building to be under the general review of an architect…or a professional engineer", which is reflected in s. 2.3 of the Building Code. Leaving aside the considerations of contextual interpretation to be addressed later, and reading the language literally, the Lieutenant Governor in Council acted within his authority by enacting s. 2.3 of the Building Code, with two exceptions.

[36] First, I accept the applicants' submission that Art. 2.3.1.1 of the Regulation exceeds the reach of the statute by attempting to allocate between the professions the power to create particular designs (this is reflected in Table 2.3.1.1 – see Appendix A). Paragraph 34 (1) 10 of the *Building Code Act* only authorizes regulations requiring designs or parts of designs to be under the "general review" of one of the professions. The Lieutenant Governor in Council therefore erred in exercising his regulatory power, and Art. 2.3.1.1 is invalid to the extent that it purports to allocate the making of designs between professional engineers and architects.

[37] Second, I agree that the Lieutenant Governor in Council erred by purporting to direct the use of a professional engineer's seal in Art. 2.3.1.1 (4). There is no regulatory authority to make such a direction in s. 34 of the *Building Code Act*. The proper use of a seal is addressed in the *Professional Engineers Act*. Although counsel for the respondents conceded that Art. 2.3.1.1 (4) did not require anything more with regard to seals than what is already provided for under the *Professional Engineers Act*, that fact cannot support the over-broad Regulation.

[38] Paragraphs 34 (1) 33 to 35 and 35.3 of the Act grant the Lieutenant Governor in Council very broad authority to make regulations prescribing the qualifications of "designers" (including competency examinations, insurance and fees) and their registration with the Director. These matters are set out in great detail in Art. 2.17 of the Building Code, and I am not persuaded that the Lieutenant Governor in Council has exceeded his authority in simply creating such a regime for those dealing with the Code. The issue of whether the regime applies to architects and engineers raises different issues.

[39] In my view, the word "designers", as used in the *Building Code Act*, taken literally, is broad enough to include professional engineers. The applicants conceded that professional engineers both create designs and conduct general reviews. The Legislature can be taken to have known that professional engineers routinely perform these functions. While the Legislature has not expressly excluded professional engineers from the Act, there are provisions (dealt with below) suggesting a legislative intention to differentiate among classes of persons and to respect the existing position and statutory authority of the PEO to licence its members. I agree with the respondents' submission, citing *Sunshine*, *supra* at para. 18, that this court "must take the statute as it finds it", but it is the entire statute in its context that we consider. The *Rizzo* case illustrates that the literal meaning does not always prevail. I

have no doubt that the Lieutenant Governor in Council had the authority under the Act to enact the regulation, but the issue of whether the Legislature intended to grant the Ministry the authority to exercise such a broad control over professional engineers is a contextual one and will be dealt with in the analysis later in these reasons regarding the principles of interpretation.

Issue 2: Are the impugned Building Code provisions invalid because they unlawfully sub-delegate authority?

[40] Subparagraph 34 (1) 33 (ii) of the *Building Code Act* authorizes the Lieutenant Governor in Council to make regulations "prescribing qualifications for…designers…including…requiring assessments or examinations in connection with obtaining or maintaining the required qualifications." The applicants submit that the Lieutenant Governor in Council unlawfully sub-delegated this power to MMAH in Art. 2.17.4.2 (1) (a) and (b) of the Building Code, which states that the Director "may register an applicant…if…the applicant…successfully completed the examination program administered or authorized by the [MMAH]".

[41] The Ontario Court of Appeal in *Re Peralta and The Queen* reflex, (1985), 49 O.R. (2d) 705 at 717-18, aff'd 1988 CanLII 28 (S.C.C.), (1989), 66 O.R. (2d) 543 (S.C.C.), held that there is no rule against sub-delegation. Rather, the maxim *delegatus non potest delegare* is a rule of construction. The court must look to a number of factors to determine whether sub-delegation was intended. These factors include "administrative necessity", the suitability of the sub-delegate, and "the language of the whole enactment and of its purposes and objects".

[42] In my view, applying the aforementioned factors in this case indicates that the Legislature intended the Lieutenant Governor in Council to sub-delegate the administration of the examinations.

[43] Administrative necessity weighs heavily in favour of sub-delegation. It is not reasonable to expect the Lieutenant Governor in Council to prescribe in the Building Code the actual assessments and examinations required as part of the qualifications of designers. The Legislature has made MMAH responsible for the *Building Code Act* and Building Code. This makes MMAH the ideal sub-delegate. There can be no dispute that MMAH is a suitable sub-delegate for the administration of examinations that assess an applicant's knowledge of the Building Code regime. Indeed, it seems to me that sub-delegating the administration of examinations to the body that actually is responsible for the *Building Code Act* and Building Code is consistent with the overarching legislative purpose of protecting the public.

[44] Furthermore, the language used in s. 34 (1) 33 ii of the *Building Code Act* is consistent with sub-delegation. Strictly speaking, the Lieutenant Governor in Council need only "prescribe" that examinations be "required". The language of the provision does not go so far as to oblige the Lieutenant Governor in Council to "prescribe" the actual content of the assessments and examinations of designers.

[45] The applicants relied on this Court's decision in *Re Norman and Registration Committee of the Royal College of Dental Surgeons of Ontario* reflex, (1985), 50 O.R. (2d) 443 (Div. Ct.) [*Norman*] in support of their unlawful sub-delegation argument. That case is distinguishable from the case at bar. In *Norman* the Council of the College of Dentistry was given authority under s. 11 (7) (c) of the *Health Disciplines Act*, R.S.O. 1980, c. 196 to make regulations "governing the requirements and qualifications for the issuing of licenses". The Council passed a regulation giving itself the power to set or approve examinations that must be completed in order to

obtain a license. The Divisional Court held that this aspect of the regulation was unlawful. Setting or approving examinations was a "requirement" in s. 11 (7) (c) of the *Health Disciplines Act*. The only way the Council could set or approve a "requirement" was by regulation. In other words, the Council could not sub-delegate to itself the power to set or approve the examinations; it had to set the examinations by regulation. In this case there is no self sub-delegation. For the reasons given above, the Lieutenant Governor in Council has properly sub-delegated authority over the administration of the examinations and assessments to the MMAH.

Issue 3: Does the *Building Code Act* and the Building Code encroach upon the exclusive regulatory jurisdiction of PEO under the *Professional Engineers Act*?

[46] The respondents concede that the purposes of the *Professional Engineers Act* and of the *Architects Act* are to regulate the practice and membership of their respective professions in accordance with the public interest. The respondents submit that the new Building Code regime does not encroach on the regulatory jurisdiction of either of the professional associations. It is implicit in these submissions that the respondents recognize the exclusive authority of PEO and OAA to regulate their respective professions.

[47] The applicants and intervenor made extensive submissions on the exclusive nature of their responsibility and authority over the members of their respective professions. I conclude that the purpose of the two professional Acts is to regulate the conduct and good character of their members as well as their professional training and competence and this purpose is intended to be exclusive. This exclusivity is demonstrated by the comprehensive nature of the schemes, each of which addresses all the essential issues such as qualifications by education and experience to be registered, conduct and character, complaints and disciplinary functions, and punishment up to the level of de-certification. See *Regina Police Ass'n Inc. v. Regina (City) Board of Police Commissioners* 2000 SCC 14 (CanLII), (2000), 183 D.L.R. (4th) 14 at paras. 31-2 (S.C.C.) and *Abbott v. Collins* 2003 CanLII 46127 (ON C.A.), (2003), 64 O.R. (3d) 789 at paras. 4, 27-33 (Ont. C.A.).

[48] Mr. Brown, for the respondents, submits that the purpose of the *Building Code Act* and Building Code is not to regulate the practice of architecture or of professional engineering, but to ensure the safety of the public. He says the Legislature has chosen to enact a further layer of protection for the public relating to the construction of buildings and the new legislation must be read in the light of this purpose. I accept that the protection of the public is the purpose of the impugned legislation. However, as indicated above, parts of the *Building Code Act* and Building Code appear to duplicate the requirements of the professional Acts. One must ask, therefore, to what extent, if any, the protection of the public may be advanced by duplicating the professional regulatory Acts? This raises the question of whether this duplication was actually intended by the Legislature. Should those parts of the *Building Code Act* be read to include PEO license holders or not?

[49] The applicants say that the heart of the issue before the Court is that the Building Code usurps the authority of the professional bodies to govern their members as to the qualifications necessary to practice an important part of their profession. Architects and engineers come into contact with the Building Code on a frequent basis. The engineers are specifically licenced to practice professional engineering, which includes the art of designing, evaluating, reporting on, directing and supervising the design and construction of buildings in the light of engineering principles. Knowledge of the Building Code is a necessity for those practicing in the design of buildings, and education in the Building Code is a

part of their professional responsibility. But the applicants submit that the revised Building Code goes much farther than regulating a professional's knowledge of its content. They say it also purports to regulate character and conduct. In these respects the applicants submit the Building Code directly duplicates and conflicts with PEO's exclusive regulatory authority.

[50] The applicants point to a number of instances of duplication. There are the rules in Art. 2.3 of the Building Code as to the application of the professional engineer's seal to plans. Art. 2.3 of the Building Code also allocates among PEO licence holders, architects and the public the ability to design and conduct general reviews of various types of buildings. The *Professional Engineers Act* and the *Architects Act* already address these issues (and I have already held above that the Lieutenant Governor in Council exceeded his statutory authority by regulating these matters).

[51] An even more problematic field is that of professional misconduct. Here, the Building Code by section 2.17 gives the Director the power to suspend a registrant for various reasons, including the opinion that the conduct of the registrant affords reasonable grounds for the belief that the registrant will not carry on business in accordance with law. This duplicates the powers of the Registrar of the PEO to suspend or revoke an engineer's licence. Mr. Brown submitted that there was no duplication because the Director would only revoke for conduct related to the Building Code. When pressed by the court that the Director could act in relation to whether the business was likely to be carried on in accordance with "law", he conceded that the Director could not ignore past conduct as evidence of character, but submitted that the Director's interest in the character of the registrant had nothing to do with engineering principles. This submission is not persuasive. The PEO's interest in the character of the licensees is not defined by engineering principles either, but by their character. It is clear that there is a duplication involved here.

[52] Mr. Brown further submitted that the present case was in parallel with the case of *Wilder v Ontario Securities Commission*, [2000] O.J. No. 758 (Div. Ct.), aff'd [2001] O.J. No. 1017 (C.A.), which I will address in greater detail below, where this court held that the Commission could regulate the conduct of a lawyer actually appearing before it, despite the fact that the lawyer was also subject to conduct regulation by the Law Society.

i. The *Wilder* case

[53] The issue in the *Wilder* case arose out of a letter written by Mr. Wilder, a lawyer acting in his professional capacity, to the Ontario Securities Commission in the course of a prospectus review. The Commission staff alleged that the letter contained a misleading statement of material fact and a Notice of Hearing was issued that the Commission would consider whether it was in the public interest to reprimand him for this act. Mr. Wilder brought a judicial review application seeking to prohibit the hearing and to quash the Notice on the grounds that only the Law Society had jurisdiction over him as a lawyer acting in a professional capacity.

[54] This court held that there was no inconsistency between the role of the Law Society in regulating the legal profession and the role of the Commission in regulating the capital markets – they both protect the public interest but the aspect of that interest is not the same. The Commission did not seek to discipline the lawyer for professional misconduct, but to protect its own process from abuse. Further, the Commission did not seek to control the right of access to practice before it, but only to reprimand an individual for alleged misconduct before it. Therefore, the court refused to quash the Notice of Hearing. In the Court of Appeal the argument turned largely

on other issues, but the Court at para. 29 specifically adopted the analysis of Swinton J., for this court, in dealing with the issue now before us.

[55] The principle enunciated in *Wilder* has meaning for this case. I take it to mean that not every requirement of an entity with which a registered professional interacts impinges on the exclusive authority of the professional regulator. Such entities are entitled to protect the integrity of proceedings before them.

[56] It is important to note that the Commission in *Wilder* did not purport to go beyond the actual act that Mr. Wilder allegedly committed in dealing with the Commission. Nor, in my view, could the Commission have done so without invading the exclusive jurisdiction of the Law Society over issues of professional competence, character and conduct. For example, an inquiry by the Commission into Mr. Wilder's past conduct in general in order to determine fitness on character grounds would be extremely suspect.

[57] The applicants and intervenor submit that the limit of *Wilder* is reached when the entity moves from regulating a particular interaction between itself and a professional, to the establishment of a competing regulatory scheme regulating the general conduct, character and competency of the registered professional. In their submission the Building Code regulatory scheme is the latter. The applicants draw attention to these features in their factum, at para. 36:

> It is submitted that in the present case, section 2.17 of the Building Code regulation establishes a competing regulatory scheme for the registration and discipline of PEO licence holders. For example, under both schemes:
>
> a. The scope of building designs and general reviews are virtually identical.
>
> b. There purports to be an allocation of what must be done by a PEO licence holder, what must be done by an architect and what can be done by anyone.
>
> c. The practitioner cannot practise without registration, qualification or authorization.
>
> d. A jurisprudence-type examination is required for registration / qualification.
>
> e. A practitioner seals / imprints his or her Building Code Identification Number (BCIN) on a document to take responsibility for it.
>
> f. A practitioner is subject to administrative investigation powers including the requirement to provide access to client files and information.
>
> g. A practitioner is subject to disciplinary action for failing to comply with the *Building Code Act, 1992* or the Building Code regulation.
>
> h. In addition a practitioner is also subject to a notice of proposal to suspend or revoke his or her registration or authorization for creating the belief that the practitioner will not carry on business in accordance with any law (not just Building Code law).

i. In addition to the registration and disciplinary tools, a practitioner who fails to comply with the legislation is subject to a provincial offences prosecution before the courts and injunctive relief.

j. There are liability insurance requirements for those offering services to the public.

[58] In addition, the applicant submits at para. 37 that:

> …the concept of assuming professional responsibility for one's work is more extensive under the *Professional Engineers Act* than it is under the Building Code Regulation. The PEO practitioner is expected to have either performed or to have closely supervised work he or she seals. Under the Building Code regulation the practitioner is encouraged to simply review and stamp the work of others.

[59] The Building Code certainly bears the distinctive characteristics of a professional regulatory statute. It regulates the requirements for admission to practice in the field of submitting building plans to the various building officials for approval. There are educational and insurance requirements; allocations of responsibility for various kinds of work; rules as to the stamping of work product; administrative obligations such as giving access to client files and information; disciplinary sanctions; and revocation powers on character grounds. In scope and function, it is indistinguishable from professional regulatory acts. If truth be told, the Building Code is a professional regulatory act in search of a profession.

[60] The profession of engineering often requires engineers to deal with compliance with the Building Code and to deal with building officials to obtain approval for their clients. Misconduct, negligence, dishonesty or the like in such dealings are professional failings and fall under the jurisdiction of the PEO. On its face, the Building Code gives power to the Director to examine into matters within the exclusive jurisdiction of the *Professional Engineers Act.* That conclusion does not at once lead to the further conclusion that it is invalid. It is necessary to consider the *Building Code Act* and in particular the power which it grants to make regulations. Does the *Building Code Act* authorize the making of regulations impinging on the exclusive authority of the applicant to govern its members? As I will explain below, I conclude that it does not.

ii. The *Building Code Act* does not authorize regulations that impinge on PEO's exclusive authority to regulate professional engineers

[61] The modern rule of statutory interpretation was formulated by Elmer Driedger[16] and was accepted as the preferred approach by the Supreme Court in *Re Rizzo and Rizzo Shoes Ltd.*, 1998 CanLII 837 (S.C.C.), [1998] 1 S.C.R. 27 at 41. In *Ontario (Attorney General) v. Big Canoe* 2002 CanLII 18055 (ON C.A.), (2002), 62 O.R. (3d) 167 (C.A.), leave to appeal to the S.C.C. ref'd [2003] S.C.C.A. No. 31, the Court of Appeal discussed the modern rule at p. 173:

> Finally, the "modern" interpretation method was reformulated in Canada by Professor R. Sullivan: Driedger on the Construction of Statutes (3rd ed. 1994) at p. 131:
>
> > There is only one rule in modern interpretation, namely, courts are

> obliged to determine the meaning of legislation in its total context, having regard to the purpose of the legislation, the consequences of proposed interpretations, the presumptions and special rules of interpretation, as well as admissible external aids. In other words, the courts must consider and take into account all relevant and admissible indicators of legislative meaning. After taking these into account, the court must then adopt an interpretation that is appropriate. An appropriate interpretation is one that can be justified in terms of (a) its plausibility, that is, its compliance with the legislative text; (b) its efficacy in its promotion of the legislative purpose; and (c) its acceptability, that is, the outcome is reasonable and just.

[62] The first consideration is the purpose of the *Professional Engineers Act*. It is clear that the purpose of the Act is the regulation of the conduct of professional engineers, including their character (e.g. whether there is reason to believe, based on past conduct, that the licensee will not carry on the profession in accordance with law). The purpose of the *Building Code Act* is primarily to regulate the construction of buildings by establishing the standards of construction set out in the Building Code. As recently amended, the Building Code has the purpose of ensuring that those who deal with the Building Code and with Building Officials have certain qualifications and be registered.

[63] The respondents submit that there is no actual conflict between the two statutes. The Building Code is geared to testing designers' knowledge of the *Building Code Act* and Building Code. It does not touch upon the heart of PEO's mandate, "such as membership in the organization, professional ethics, competency as a professional engineer or architect, or any other sphere not directly relevant to building construction and demolition." If there is no real conflict, the two regimes can co-exist.

[64] The respondents submit that the case at bar is analogous to the case of *Law Society of Upper Canada v. Barrie (City)* reflex, (2000), 46 O.R. (3d) 620 (S.C. J.), where the City passed a by-law to require all businesses in the City to obtain a business licence. It was held that lawyers governed by the *Law Society Act* were not exempt. Compliance with the by-law did not conflict with the Law Society's jurisdiction over the professional aspects of the lawyer's business.

[65] In my view, the analogy is not apt. The business licence was really a tax. The City did not purport to legislate that the lawyer could not practice her profession without submitting to further professional testing or submitting to inquiries as to her fitness to practice. The situation before us is quite different. The Building Code prevents the professional engineer from performing some significant professional tasks

for which he is already licensed by the PEO under the *Professional Engineers Act* unless he complies with these new profession-related requirements and exposes himself to a duplicative disciplinary scheme not confined to his actual interaction with building officials. Therefore it cannot be said that there is no real conflict between the two regimes.

[66] While the Building Code refers to "every person", it does not expressly include engineers among the persons required to obtain "qualifications". Certain provisions of the Building Code, such as Art. 2.3.1.1 discussed above, tend to support a legislative intention to respect the special rights and obligations of the professional engineer. This point is reinforced by the language of s. 34 (1) 33 of the *Building Code Act* (see Schedule A), which permits the making of regulations prescribing qualifications for designers and others, including "different qualifications for different classes of…designers". This signals a legislative intention to differentiate between classes of designers, presumably by reason of differences in training, education and experience. Thus it cannot be said that the purpose of the *Building Code Act* and Building Code support the proposition that the regulatory scheme implemented by this legislation is meant to impinge on the PEO's exclusive regulatory jurisdiction over its members.

[67] The second Driedger consideration is the consequences of opposing interpretations. In my view the inclusion of professional engineers within the Building Code regulatory scheme leads to incongruous results. As noted, they are already licenced through the *Professional Engineers Act* to perform the very acts now regulated by the Building Code. They are already under a scheme of discipline which can see them lose their licence on grounds of lack of competence or, in effect, bad character, through a complaints and discipline system. To involve professional engineers in a second such system over essentially the same professional competence is a form of double jeopardy, which is, as indicated by the various deponents giving affidavit evidence on behalf of the applicants and intervenor, unfair and unnecessary to accomplish the ends of the legislation.

[68] The *Wilder* case illustrates the problem and the solution. If a professional engineer interacts with an entity, such as a chief building official, in a dishonest or unprofessional manner, he or she may be exposed to some punishment under the rules of that entity, as was Mr. Wilder. But the bringing of charges of professional misconduct on character grounds (such as reason to believe from past conduct that the professional engineer will not act honestly), or the evaluation of a professional engineer's competency (through assessments and examinations) are exclusive functions of the PEO. To the extent that the Building Code imposes these and similar conditions on "persons", it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.

[69] Under the third Driedger consideration the courts look to the aids to interpretation and the presumptions and special rules of interpretation. The respondents submit that one test of legislative intent is the presence of an exemption for architects, but none for engineers. This would be a potent argument but for the special circumstances described above that the exemption came about as a temporary measure to await the resolution of the issues being canvassed in these reasons. In those circumstances it is not appropriate to draw the conclusion urged on us by counsel for the respondents.

[70] The respondents submit that in the event (which they deny) that there is some inconsistency between the *Professional Engineers Act* and the *Building Code Act* and Building Code, the latter should prevail because they were enacted later and are deemed to have impliedly repealed the former to the extent of the inconsistency. They rely on *Winnipeg School Division No. 1 v. Craton*, 1985 CanLII 48

(S.C.C.), [1985] 2 S.C.R. 150, where the issue was whether the school board's mandatory retirement policy, set out in s. 39 (2) of its Act, prevailed over the *Human Rights Act*. McIntyre J. for the Supreme Court observed, at para. 7, that:

> Section 6(1) of The Human Rights Act, enacted in 1974, was clearly a subsequent enactment and an express prohibition against discrimination in employment on the basis of age, and even setting aside the notion of any primacy for human rights legislation, it would have prevailed and repealed section 39(2) by implication.

[71] Certainly the relative timing of the passage of the two statutes was a factor in the Supreme Court's decision, but it is important to observe that the later enactment was an express prohibition of what was called for by the earlier, which is decidedly not so in the case before us.

[72] The scope of the concept of implied repeal is somewhat more limited than the respondents submit. Where the later statute is general and the earlier specific, it appears that the general may be construed as allowing an exception for the existing specific Act.[17] Such a principle would be applicable in the case at bar where the earlier *Professional Engineers Act* establishes a regime for a particular profession, whereas the later Building Code applies generally to everyone doing business with the chief building official about building permits. As well, cases show a significant respect for rights already granted and the need for very clear language to over-ride them.

[73] In *Re British Columbia Teachers' Federation and A.G. for British Columbia* reflex, (1985), 23 D.L.R. (4th) 161, the British Columbia Court of Appeal dealt with whether a directive from the B. C. Treasury Board establishing a formula limiting school expenditures prevailed over provisions of the *School Act* placing management, including teacher salaries and lay-offs, in the hands of the School Trustees. At pp. 173-4, Anderson J.A., for the majority, said:

> The Legislature, by enacting the School Act, conferred important statutory rights on school boards, teachers and the residents in each school district. …
>
> In the absence of express language, it will not be presumed that the Legislature intended to abrogate existing statutory rights of the nature described above.
>
> The law is summarized in Maxwell on The Interpretation of Statutes, 12th ed. (1969), at p. 196, as follows:
>
> > "Now if anything be certain it is this," said the Earl of Selborne L.C. in The Vera Cruz, "that where there are general words in a later Act capable of reasonable and sensible application without extending them to subjects specially dealt with by earlier legislation, you are not to hold that earlier and special legislation indirectly repealed, altered, or derogated from merely by force of such general words,

without any indication of a particular intention to do so." In a later case, Viscount Haldane said: "We are bound ... to apply a rule of construction which has been repeatedly laid down and is firmly established. It is that wherever Parliament in an earlier statute has directed its attention to an individual case and has made provision for it unambiguously, there arises a presumption that if in a subsequent statute the Legislature lays down a general principle, that general principle is not to be taken as meant to rip up what the Legislature had before provided for individually, unless an intention to do so is specially declared. A merely general rule is not enough, even though by its terms it is stated so widely that it would, taken by itself, cover special cases of the kind I have referred to. [Footnotes omitted] [Emphasis added]

[74] To a similar effect is the judgment of the Supreme Court in *Morguard Properties Ltd. v. City of Winnipeg*, 1983 CanLII 33 (S.C.C.), [1983] 2 S.C.R. 493. Estey J., who delivered the judgment of the court, stressed that existing statutory rights will not be deemed abrogated in the absence of express language indicating a clear legislative intention so to do. At p. 509 he said:

> In more modern terminology the courts require that, in order to adversely affect a citizen's right, whether as a taxpayer or otherwise, the Legislature must do so expressly. Truncation of such rights may be legislatively unintended or even accidental, but the courts must look for express language in the statute before concluding that these rights have been reduced.

[75] The cases show that before we could agree with the respondent that professional engineers are subject to the full panoply of control established by the Building Code, we should be able to point to statutory language which clearly indicates that the existing right of the professional engineers to practice in accordance with the *Professional Engineers Act* was intended to be abrogated. In my view, no such clear statutory language exists.

[76] The final Driedger consideration is the plausibility of the interpretation in the light of the actual language, its efficacy in promoting the purpose of the statute, and the fairness of the result. It is significant that there is no provision in the *Building Code Act* or in the Building Code establishing any form of primacy of those enactments over the professional regulatory Acts. By contrast, s. 35 (1) expressly provides that the *Building Code Act* and the Building Code supersede all municipal by-laws. Certainly the words “every person” are broad and are intended to capture those who deal with the Code

by presenting plans to building officials for permits. But there are, as noted, other provisions suggesting a legislative intention to differentiate among classes of persons and to respect the existing position and statutory authority of the PEO to licence its members. To do so in a rational way must result in the exclusion of professional engineers from the duplicative competence and character control scheme under the Building Code as they are already subject to such a statutory regime.

DISPOSITION

[77] I agree with the submissions of the respondents that this is not a case for injunctive relief or for the exercise of the court's prerogative powers. I would grant the following declarations:

1. Article 2.3.1.1 of the Building Code is not authorized by s. 34 (1) 10 of the *Building Code Act* and is invalid to the extent that it purports to allocate responsibility for designs between professional engineers and architects.

2. Article 2.3.1.1 (4) of the Building Code is not authorized by s. 34 of the *Building Code Act* and is invalid.

3. Clause 1.1 (1) (c), subsection 1.1 (2), clause 8 (2) (c), and subsections 15 (5) to (7) of the *Building Code Act* conflict with the exclusive regulatory jurisdiction of the PEO and do not apply to any holder of any licence or certificate issued under the *Professional Engineers Act*.

4. Article 2.17 of the Building Code conflicts with the exlusive regulatory jurisdiction of the PEO and does not apply to any holder of any licence or certificate issued under the *Professional Engineers Act*.

[78] Order to follow accordingly.

[79] While relief is only available to the applicant professional engineers in this case, in my opinion the analysis in these reasons for judgment applies equally to the intervenor architects.

COSTS

[80] Any party wishing to make submissions as to costs may do so by way of brief written submissions to the Court within 30 days of the release of these reasons for judgment.

[81] Before parting with this case, I wish to express my gratitude to my colleagues for their significant contributions to the preparation of these reasons.

SCHEDULE A

***Building Code Act, 1992*, S.O. 1992, c. 23**

Role of various persons

1.1 (1) It is the role of every person who causes a building to be constructed,

(a) to cause the building to be constructed in accordance with this Act and the building code and with any permit issued under this Act for the building;

(b) to ensure that construction does not proceed unless any permit required under this Act has been issued by the chief building official; and

(c) to ensure that construction is carried out only by persons with the qualifications and insurance, if any, required by this Act and the building code.

Role of designers

(2) It is the role of a designer,

(a) if the designers designs are to be submitted in support of an application for a permit under this Act, to provide designs which are in accordance with this Act and the building code and to provide documentation that is sufficiently detailed to permit the design to be assessed for compliance with this Act and the building code and to allow a builder to carry out the work in accordance with the design, this Act and the building code;

(b) to perform the role described in clause (a) in respect of only those matters for which the designer has the qualifications, if any, required by this Act and the building code; and

(c) if the building code requires that all or part of the design or construction of a building be under general review, to perform the general review in respect of only those matters for which the designer has the qualifications, if any, required by this Act and the building code.

Issuance of permits

8. (2) The chief building official shall issue a permit [to construct or demolish a building] unless,

…

(c) a person who prepared drawings, plans, specifications or other documents or gave an opinion concerning the compliance of the proposed building or construction with the Building Code does not have the applicable qualifications, if any, set out in the Building Code or does not have the insurance, if any, required by the Building Code.

…

Referral of plans, etc.

(9) Upon reasonable grounds, the chief building official or registered code agency may refer drawings, plans or specifications accompanying applications for permits or the reports arising out of the general review of the construction of a building to the Association of Professional Engineers of Ontario or the Ontario Association of Architects for the purpose of determining if the *Professional Engineers Act* or the *Architects Act* is being contravened.

Same

(9.1) At the request of the Association of Professional Engineers of Ontario or the Ontario Association of Architects, the chief building official shall refer documents and information described in subsection (9) to those associations

for the purpose of determining if the *Professional Engineers Act* or the *Architects Act* is being contravened.

Qualifications for designers

15.11 (5) A person is not eligible to engage in any of the following activities unless he, she or it has the qualifications and meets the requirements set out in the Building Code to be a designer:

1. Prepare a design or give other information or opinion concerning whether a building or part of a building complies with the building code, if the design, information or opinion is to be submitted to a chief building official in connection with (i) an application for a permit, (ii) [omitted] or (iii) a report described in paragraph 2.

2. If a general review of the construction of a building is required by the Building Code, prepare a written report based on the general review.

Same

(6) In subsection 5, "design" includes a plan, specification, sketch, drawing or graphic representation respecting the construction of a building.

Prohibition

(7) No person shall represent, directly or indirectly, that he, she or it has the qualifications or meets the requirements established under this section if the person does not have those qualifications or does not meet those requirements.

Regulations

34. (1) The Lieutenant Governor in council may make regulations governing standards for the construction and demolition of buildings, including,

…

10. requiring any part of the design, construction or demolition of a building to be under the general review of an architect as defined in the *Architects Act* or a professional engineer as defined in the *Professional Engineers Act* and that copies of reports arising from the general review be provided to the chief building official or to a registered code agency;

…

33. prescribing qualifications for chief building officials, inspectors, registered code agencies, designers and other persons referred to in section 15.12 and related matters including,

(i) requiring different qualifications for different classes of officials, inspectors, designers and other persons,

(ii) requiring assessments or examinations in connection with obtaining or maintaining the required qualifications,

(iii) [establishment of register of qualified persons];

(iv) [fees];

Building Code, O. Reg. 403/97

Design and Section 2.3. General Review

Design 2.3.1.

2.3.1.1. Design by Architect or Professional Engineer

(1) Except as permitted in Sentences (2) and (3), the *construction*, including, for greater certainty, enlargement or alteration, of every *building* or part thereof described in Table 2.3.1.1. and this Article shall be designed and reviewed by an *architect*, *professional engineer* or both.

(2) An *architect* may provide the services within the practice of professional engineering in any *building* described in Table 2.3.1.1., or a *professional engineer* may provide the services within the practice of architecture in any *building* described in Table 2.3.1.1. where to do so does not constitute a substantial part of the services provided by the other profession related to the *construction* of the *building* and is necessary

(a) for the *construction* of the *building* and is incidental to the other services provided by the *architect* or *professional engineer*, or

(b) for coordination purposes.

TABLE 2.3.1.1.[4]
Design and General Review
Forming Part of Sentence 2.3.1.1.(1)

Building **Classification by** ***Major Occupancy***	***Building*** **Description**	**Design and General Review by:**
Assembly occupancy only	Every *building*	*Architect* and *professional engineer*[1]
Assembly occupancy and any other *major occupancy* except *industrial*	Every *building*	*Architect* and *professional engineer*[1]
Care or detention occupancy only	Every *building*	*Architect* and *professional engineer*[1]
Care or detention occupancy and any other *major occupancy* except *industrial*	Every *building*	*Architect* and *professional engineer*[1]
Residential occupancy only	Every *building* that exceeds 3 *storeys* in *building height*	*Architect* and *professional engineer*[1]
	Every *building* that exceeds 600 m^2 in *gross area* and that contains a *residential occupancy* other than a *dwelling unit* or *dwelling units*	*A*
Residential occupancy only	Every *building* that exceeds 600 m^2 in *gross area* and contains a *dwelling unit* above another *dwelling unit*	*A*
	Every *building* that exceeds 600 m^2 in *building area* contains 3 or more dwelling units and has no *dwelling unit* above another *dwelling unit*	*A*
Residential occupancy and any other *major occupancy* except *industrial*, *assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Business and personal services occupancy only	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Business and personal services occupancy and any other *major occupancy* except *industrial*, *assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Mercantile occupancy only	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Mercantile occupancy and any other *major occupancy* except *industrial*, *assembly* or *care or detention occupancy*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Industrial occupancy only and where there are no subsidiary *occupancies*	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*
Industrial occupancy and one or more other *major occupancies* where the portion of the area occupied by one of the other *major* or subsidiary *occupancies* exceeds 600 m^2	The non-industrial portion of every *building*	*A*
	The industrial portion of every *building*	*A*
Industrial occupancy and one or more other *major occupancies* where no portion of the area occupied by one of the other *major* or subsidiary	Every *building* that exceeds 600 m^2 in *gross area* or 3 *storeys* in *building height*	*A*

occupancies exceeds 600 m^2		
Column 1	2	3

Notes To Table 2.3.1.1.

(1)An *architect* shall provide services within the practice of architecture and a *professional engineer* shall provide the services within the practice of professional engineering.

(2)An *architect* may engage a *professional engineer* to provide services within the practices of professional engineering.

(3)Only a *professional engineer* may provide services within the practice of professional engineering.

(4)Requirements for design and general review by an *architect* or *professional engineer* or a combination of both for the *construction*, enlargement or alteration of a *building* are set out in the *Architects Act* and the *Professional Engineers Act*.

(3) The requirement for an *architect* does not apply to the preparation or provision of a design for interior space for a *building*, including finishes, fixed or loose furnishings, equipment, fixtures and partitioning of space, and related exterior elements such as signs, finishes and glazed openings used for display purposes, that does not affect or is not likely to affect

(a) the structural integrity,

(b) a fire safety system or *fire separation*,

(c) a main entrance or *public corridor* on a floor,

(d) an *exit* to a public thoroughfare or to the exterior,

(e) the *construction* or location of an exterior wall, or

(f) the usable floor space through the addition of a *mezzanine*, infill or other similar element, of the *building*.

(4) Where a building or part of it described in Table 2.3.1.1. is designed by an architect or a professional engineer or a combination of both as required by this Article, all plans, sketches, drawings, graphic representations, specifications and other documents that are prepared by an architect, professional engineer or both and that form the basis for the issuance of a permit under Section 8 of the Act or any changes to it authorized by the chief building official shall bear the signature and seal of the architect, professional engineer or both, as applicable.

(5) Where the *foundations* of a *building* are to be constructed below the level of the footings of an adjacent *building* and within the angle of repose of the *soil*, as drawn from the bottom of the footings, the *foundations* shall be designed by a *professional engineer*.

(6) The thermal design of a *building* in accordance with Section 9.38. shall be prepared and provided by an *architect* or *professional engineer* or a combination of both.

General Review 2.3.2.

2.3.2.1. General Review by Architect or Professional Engineer

(1) Except as permitted in Sentence (2), a person who intends to construct or have constructed a building required to be designed by an architect, professional engineer or both, shall ensure that an architect, professional engineer or both are retained to undertake the general review of the construction of the building in accordance with the performance standards of the Ontario Association of Architects or the Association of Professional Engineers of Ontario, as applicable, to determine whether the construction is in general conformity with the plans, sketches, drawings, graphic representations,

specifications and other documents that are prepared by an architect, professional engineer or both and that form the basis for the issuance of a permit under Section 8 of the Act or any changes to it authorized by the chief building official, copies of written reports arising out of the general review shall be forwarded to the chief building official or registered code agency, as the case may be, by the architect, professional engineer or both who have been retained to undertake the general review of the construction of the building.

(2) An *architect* or a *professional engineer* need not be retained to undertake the general review of *construction* of a *building* where the *building* is designed in accordance with Section 9.38.

2.3.2.2. Restriction for General Review

(1) Only an *architect* may carry out or provide the general review of the *construction* of a *building*

(a) that is constructed in accordance with a design prepared or provided by an *architect*, or

(b) in relation to services that are provided by an *architect* in connection with the design in accordance with which the *building* is constructed.

(2) Only a *professional engineer* may carry out or provide the general review of the *construction* of a *building*

(a) that is constructed in accordance with a design prepared or provided by a *professional engineer*, or

(b) in relation to services that are provided by a *professional engineer* in connection with the design in accordance with which the *building* is constructed.

2.3.2.3. Demolition of a Building

(1) The applicant for a permit respecting the *demolition* of a *building* shall retain a *professional engineer* to undertake the general review of the project during *demolition*, where

(a) the *building* exceeds 3 *storeys* in *building height* or 600 m^2 in *building area*,

(b) the *building* structure includes pre-tensioned or post-tensioned members,

(c) it is proposed that the *demolition* will extend below the level of the footings of any adjacent *building* and occur within the angle of repose of the *soil*, drawn from the bottom of such footings, or

(d) explosives or a laser are to be used during the course of *demolition*.

Section 2.17. Qualifications for Designers

2.17.1.1. Scope

(1) This Section prescribes, for the purposes of Clause 8 (2) (c) and Subsection 15.11 (5) of the Act, the qualifications for a person who carries out *design activities* after December 31, 2005.

Qualifications — 2.17.4. Persons Engaged in the Business of Providing Design Activities to the Public

2.17.4.1. General

(1) Except as provided in sentences 3 and 4, every person engaged in the business of providing design services to the

public after December 31, 2005, must have the following qualification:

(a) The person must be *registered* with the *director*.

2.17.4.2. Registration and Renewal of a Registration

(1) [The Director may register an applicant if]

(a) the applicant…has successfully completed the [Minster's] examination program relating to the person's knowledge of this Act and this Code;

(b) all persons who will review and take responsibility for design activities provided to the public…have successfully completed the examination program administered or authorized by the [MMAH]…relating to the person's knowledge of this Act and of this Code.

(c) the applicant…is covered by the insurance required under Subsection 2.21.2. during the term of the registration applied for, …

2.17.4.9. Suspension, Revocation, Refusal to Register or Renew a Registration

(1) The Director may in the circumstances set out in sentence (2):

(a) refuse to register an applicant or to renew a registration, or

(b) suspend or revoke a registration.

(2) The circumstances referred to in sentence (1) are:

(a) the registered person is in contravention of the Act or this Code;

(b) the registered person is in breach of a condition of the registration…

…

(d) the director is of the opinion that the past conduct of the applicant or registered person…affords reasonable grounds for belief that the business …authorized by the registration will not be carried on in accordance with law.

SUPERIOR COURT OF JUSTICE - ONTARIO
DIVISIONAL COURT

RE: Paul Philpott and Christine Philpott v. The Corporation of the Town of Innisfil and Heather Rutherford in her capacity as Chief Building Official of The Corporation of the Town of Innisfil

BEFORE: Justices Ferrier, Cumming and Donohue

COUNSEL: ***Ellen Anderson*** and ***Michael Adams*** for Appellants/Applicants
Robert Bigioni for Respondents/Respondents

HEARD: **March 15 and 16, 2007**

E N D O R S E M E N T

CUMMING J.

The Appeal

[1] The appellants appeal a judgment of MacKinnon, J. dated August 23, 2006. He dismissed the appellants/applicants' appeal of the Chief Building Official's ("CBO") denial of their application for a building permit. This matter raises novel legal issues.

[2] We dismiss the appeal. Our reasons follow.

Background

[3] The appellants, Mr. and Ms. Philpott, own property referred to as 1150 Arnold Street in the Town of Innisfil. On September 22, 2004 the Town passed Consolidated By-Law 054-04, which granted single, residential (R1S) zoning for the subject property of the Philpotts. Prior thereto the zoning was "H" or "Hold" which did not permit a single-family residence.

[4] By-law 054-04 was appealed by a number of affected parties (not the applicants).

[5] The Town realized at some point in the fall of 2004 that By-Law 054-04 contained a number of errors, one of which was a clerical, mapping error pertaining to the subject property. The Town had not intended in enacting By-Law 054-04 to change the zoning for the subject property. The purported change was inadvertent.

[6] Learning of the zoning change through By-Law 054-04, the appellants applied for a building permit October 29, 2004, authorizing them to build a single-family home. The application was unilaterally held in abeyance by the Town. The appellants first learned about the clerical errors in By-Law 054-04 at a public meeting May 11, 2005. Mr. Philpott was told at that time of the clerical error relating to his property and that the Town intended to restore the "Holding Zone" to his property.

[7] The appellants were then formally advised by the Town by letter June 3, 2005 that the R1S zoning for their property was a clerical error. They were told that By-Law 054-04 was under a pending appeal, and that an amending by-law would be passed, such that the R1S zoning would fall away and the "Holding Zone " restored. They were further advised that pursuant to s. 34(30) of the *Planning Act*, R.S.O., 1990, c. P 13. By-Law 054-04 was not in force until the appeals were dealt with by the Ontario Municipal Board ("OMB"). They were also told that if the amending by-law was appealed the

Town would seek consolidation of the hearing before the OMB in respect of the parent By-law 054-04. Further, the Philpotts were told that their application for a building permit would be held in abeyance pending the disposition of By-Law 054-04 and that if they sought an earlier decision on the application it would be denied as the property did not comply with the restrictive zoning currently in place.

[8] The solicitor for the Philpotts responded June 7, 2005, stating in part,

> I accept your explanation of the Town's position and would request that the application be held in abeyance, as suggested by you, until the zoning matters are resolved.

[9] On June 29, 2005 the Town passed amending By-Law 045-05, which rescinded the R1S zoning for the subject property and zoned it as Future Development (FD) Zone. Such zoning would not allow the construction of a single-family dwelling.

[10] By order of the OMB dated July 19, 2005 Consolidated By-Law 054-04 was deemed to have come into force September 22, 2004.

[11] On July 22, 2005 the appellants appealed the amending By-Law (but later withdrew this appeal March 17, 2006).

[12] The appellants were advised by the CBO February 2, 2006 that the permit was refused on the basis of the application not complying with the zoning requirements. The Philpotts appealed and the appeal was heard by Mr. Justice MacKinnon.

[13] MacKinnon, J. held that there was no point in time, relevant to the Philpotts' application, when the CBO could have issued the building permit under applicable law.

The Law

[14] The CBO cannot issue a building permit where there would be a contravention of the zoning requirements: *Building Code Act, 1992*, S.O. 1992, c.23, s. 8(1) and 8(2). Section 8 (2)(a) provides:

> The chief building official shall issue a permit…unless,
>
> (a) the proposed building…will contravene this Act, the building code or any other *applicable law*. [Emphasis added]

[15] A by-law does not come into force until all appeals are withdrawn or finally disposed of. Once appeals are exhausted, the by-law is deemed to have come into force on its day of passage. *Planning Act*, s. 34(30), (31). That is, the by-law comes into force with retroactive effect.

[16] As of October 29, 2004 (the date of the appellants' application for the building permit) the zoning prohibited the issuance of a permit for a single-family dwelling. Consolidated By-Law 054-04 could not come into force until all appeals were exhausted, ie. at the point of the OMB decision of July 19, 2005: s. 34(30), *Planning Act*.

[17] Hence, the CBO could not issue the permit between October 29, 2004 (the date of application for the permit) and July 19, 2005, when the OMB hearing disposed of the appeals relating to By-Law 054-04 (with consequential retroactive effect as of that date back to September 22, 2004).

[18] The appellants argue that from its enactment June 29, 2005, until March 17, 2006, when they withdrew their own

Town would seek consolidation of the hearing before the OMB in respect of the parent By-law 054-04. Further, the Philpotts were told that their application for a building permit would be held in abeyance pending the disposition of By-Law 054-04 and that if they sought an earlier decision on the application it would be denied as the property did not comply with the restrictive zoning currently in place.

[8] The solicitor for the Philpotts responded June 7, 2005, stating in part,

> I accept your explanation of the Town's position and would request that the application be held in abeyance, as suggested by you, until the zoning matters are resolved.

[9] On June 29, 2005 the Town passed amending By-Law 045-05, which rescinded the R1S zoning for the subject property and zoned it as Future Development (FD) Zone. Such zoning would not allow the construction of a single-family dwelling.

[10] By order of the OMB dated July 19, 2005 Consolidated By-Law 054-04 was deemed to have come into force September 22, 2004.

[11] On July 22, 2005 the appellants appealed the amending By-Law (but later withdrew this appeal March 17, 2006).

[12] The appellants were advised by the CBO February 2, 2006 that the permit was refused on the basis of the application not complying with the zoning requirements. The Philpotts appealed and the appeal was heard by Mr. Justice MacKinnon.

[13] MacKinnon, J. held that there was no point in time, relevant to the Philpotts' application, when the CBO could have issued the building permit under applicable law.

The Law

[14] The CBO cannot issue a building permit where there would be a contravention of the zoning requirements: *Building Code Act, 1992*, S.O. 1992, c.23, s. 8(1) and 8(2). Section 8 (2)(a) provides:

> The chief building official shall issue a permit…unless,
>
> (a) the proposed building…will contravene this Act, the building code or any other *applicable law*. [Emphasis added]

[15] A by-law does not come into force until all appeals are withdrawn or finally disposed of. Once appeals are exhausted, the by-law is deemed to have come into force on its day of passage. *Planning Act*, s. 34(30), (31). That is, the by-law comes into force with retroactive effect.

[16] As of October 29, 2004 (the date of the appellants' application for the building permit) the zoning prohibited the issuance of a permit for a single-family dwelling. Consolidated By-Law 054-04 could not come into force until all appeals were exhausted, ie. at the point of the OMB decision of July 19, 2005: s. 34(30), *Planning Act*.

[17] Hence, the CBO could not issue the permit between October 29, 2004 (the date of application for the permit) and July 19, 2005, when the OMB hearing disposed of the appeals relating to By-Law 054-04 (with consequential retroactive effect as of that date back to September 22, 2004).

[18] The appellants argue that from its enactment June 29, 2005, until March 17, 2006, when they withdrew their own

appeal, there was a stay of amending By-Law 045-05. Thus, the appellants argue that the permit could have been issued after July 19, 2005 and at any point until March 17, 2006 (when the appeal was withdrawn) when amending By-Law 045-05 came into force with retrospective force to June 29, 2005.

[19] The CBO was called upon by the appellants July 22, 2005, and some eight times thereafter, to review and approve their application for a permit. The CBO did not make her decision on the application until February 2, 2006. She says she made her decision at that time because counsel for the appellants/applicants "pressed for a final decision in the matter." She looked to amending By-Law 045-05 as "applicable law" within the meaning of s. 8 (2)(a) of the *Building Code Act, 1992* for the purposes of her decision. Given her view as to the "applicable law", the permit could not be approved. Assuming this interpretation and application of the law is correct, there was non-compliance with the zoning requirements.

[20] The retrospective effect of amending By-Law 045-05 was only operative at the later point in time, March 17, 2006, when there was a withdrawal of the appellants' appeal re that amending By-Law. MacKinnon J. held (para. 29 of his decision):

> …When the CBO was called upon to make a decision, she was entitled to look and did look at the amending Bylaw 045-05 as applicable law for her decision. It would have been inappropriate for her to act in a way that was contrary to the clear intention of her council as expressed by its passage June 29, 2005 of the amending Bylaw 045-05. Innisfil's clear intention was to correct drafting errors in Bylaw 054-04 and not to permit the building of a home on the appellants' property.

[21] We agree with this finding. We are of the view MacKinnon, J correctly interpreted and applied the law to the facts at hand.

[22] We add the following observation. The appellants knew of the clear intention of the Town to bring into force amending By-Law 045-05 as of June 29, 2005, which would ultimately be retrospectively in force as of that date, but was put in abeyance because of appeals, including the appeal of the appellants.

[23] The appellants knew that once their appeal would be dealt with at the scheduled appeal hearing March 27, 2006, their appeal would be exhausted and amending By-Law 045-05 would come into force retrospectively to June 29, 2005. It is reasonable to infer this is why the appellants requested on some eight occasions a review of their pending application for a permit between July 22, 2005 and February 2, 2006. Moreover, the appellants were being encouraged by the Town's Director of Planning to withdraw their application for a building permit but refused to do so.

[24] The certainty of the inevitability of amending By-Law 045-05, with impending ultimate retroactive effect to June 29, 2005, was, of course, known to the CBO when she made her decision to refuse the permit February 2, 2006. Indeed, the CBO would have known of this certainty as of June 29, 2005 when the amending By-law was enacted. This certainty would also be known to the appellants as of June 29, 2005, which is why they were seeking, quite understandably, a decision on their application for a permit as of July 22, 2005 and before amending by-Law would come into force with retroactive effect as of June 29, 2005.

[25] There are two questions raised in respect of the interpretation of s. 8 (2)(a) of the *Building Code Ac, 1992*. First, what is the relevant point in time as to when "applicable law" is to be considered? Is it (as argued by counsel for the appellants) when the application for a permit is submitted (here, October 29, 2004)? Or is it at the later point in time when the CBO makes a decision in respect of the application?

[26] In our view, and we so find, the pertinent point of time for a determination by the CBO of "applicable law" is at the time of the CBO's decision in respect of an application for a building permit. First, the plain wording and meaning of s. 8(2)(a) suggests this interpretation. Second, the policy underlying the imposition of zoning standards is to have orderly development for the general advantage of the overall community as seen by the elected governmental body with the legal authority to enact zoning requirements.

[27] It seems contrary to the policy objectives underlying the legislation that a CBO would be obliged to approve an application for a permit simply on the basis of the "applicable law" as fixed on the date the application was submitted. Consider a hypothetical example. Would this approach be consistent with the policy objectives if the application was submitted on day #1; a downzoning by an amending by-law came into force on day #2; and the application was handed to the CBO for decision-making only on day #3?

[28] The second question relates to what specifically is embraced within the term "applicable law". Section 1.1.3.3 (1) of O. Reg. 403/97, enacted pursuant to the *Building Code Act, 1992*, gives an extensive definition for "applicable law", which includes (at 10. (d)) "by-laws made under section 34 …of the *Planning Act*…." The question then is- does this definition embrace amending By-Law 045-05, enacted June 29, 2005, for the purpose of the CBO's decision-making February 2, 2006 in refusing to issue the building permit applied for October 29, 2004? The amending By-Law would only come into force at a later date, March 17, 2006 (when the final appeal was withdrawn). However, at that point Amending By-Law 045-05 would have retroactive effect to June 29, 2005.

[29] In our view, and we so find, the CBO correctly applied "applicable law" (as set forth in s. 8 (2)(1) of the *Building Code Act* and O. Reg 403/97) as including Amending By-Law 045-05 in making her decision in respect of the appellants' application for a building permit. This interpretation is consistent with, and gives effect to, the apparent underlying public policy to the overall regime of the *Building Code Act, 1992* and zoning by-laws.

[30] Where the subsequent by-law (amending By-Law 045-05) awaiting OMB review before it comes into force retrospectively is more restrictive than the prior by-law (Consolidated By-Law 054-04), a CBO should treat the subsequent by-law as "applicable law", pending the OMB decision. However, where the subsequent appealed by-law (Consolidated By-Law 054-04 in relation to the prior by-law it was amending) is not more restrictive than the prior by-law, the plain meaning of the first part of s. 34(30) (that the amending by-law is not in force until the appeals have been disposed of) requires the CBO to not consider the amending by-law as "applicable law" until it comes into force, but rather, to look to the pre-existing by-law then in force. See the reasons of Cameron J. in *Hastings Corp. v Toronto (City) Chief Building Official*, [2004] O.J. No. 521 at paras. 63-65, affm'd (2004). 50 M.P.L.R. (3d) 31 (Div. Ct.) at paras. 28, 30 and 31.

[31] See also *Foodcorp Ltd. v. Brampton (City)*, [1994] O.J. No. 2379 (Ont. Co. Ct.) at paras. 28-31; *Hastings Corp. v. Toronto (City) Chief Building Official*; *Re Donald Bye Excavating Co. Ltd. et al and City of Peterborough*, [1973] 1 O.R. 139 (Ont. C.A.). R*e Woodglen &Co. Ltd. and City of North York et al*, (1984), 47 O.R. (2d) 814 (Div. Ct.), is

distinguishable on its facts, where the Divisional Court held that an "official plan" was not a "law" and the mere expression of intention of the municipality to re-zone in the future was insufficient to refuse the issuance of a permit. Similarly, *Mahew v. Hamilton* [2002] O.J. No. 1962 (S.C.J.) is distinguishable from the situation at hand, where MacDougall, J. held that a mere "subdivision agreement" was not an "applicable law."

[32] In short, the CBO was entitled to look to amending By-Law 045-05 as "applicable law" when she made her decision February 2, 2006, given the intent of Council in enacting the amendments to correct previous clerical, mapping errors in Consolidated By-Law 054-04, the actual enactment of amending By-Law 045-05 as of June 29, 2005 to meet this objective, and the certainty that the amending by-law would have force retrospectively to June 29, 2005 once the appellants' appeal (and any other appeal) was exhausted.

[33] We find there was no error in law on the part of MacKinnon J., nor any error in his determination of matters of mixed law and fact, nor any palpable and overriding error in his findings of fact.

[34] In our view, the evidentiary record also establishes the CBO engaged in an impartial and fair consideration of the appellants' application for a building permit, as required by ss. 1.1(6), 7.1.and 8 of the *Building Code Act, 1992* and by the Innisfil Code of Conduct for Building Officials. There was some delay in making the decision. MacKinnon was critical of this delay but found there was not any bad faith, noting the "considerable confusion in the Innisfil planning process."

Disposition

[35] For the reasons given, the appeal is dismissed.

[36] Submissions were made as to costs. Costs would normally follow the event. However, given all the circumstances of this case, and the relative novelty of the legal issue, in our view this is a situation where costs should not be awarded.

Building Code Act Section 1

SHORT TITLE	DESCRIPTION	CITATIONS
Alaimo v. York (City) Chief Building Official	A CBO is under no common law duty to protect property neighbouring the site of new construction which would allow him to refuse a building permit for construction that complies with the BC. The law of nuisance is not applicable law for the consideration of building permit issuance. New construction which would put the chimney on a neighbouring building out of compliance with building standards is nonetheless legal.	(1995), 26 M.P.L.R. (2d) 69 (Ont. Gen. Div.)
Galway & Cavendish (United Townships) v. Windover	Municipalities have the authority to zone lands covered by water provided they do not interfere with navigation. This is so even though the bed of the waterbody is owned by the Province, provided the bylaw does not work at cross-purposes to provincial legislation. Zoning by-laws should be given a liberal interpretation. A floating boathouse is a structure within the meaning of the BC.	(1995), 30 M.P.L.R. (2d) 109, 130 D.L.R. (4th) 710 (Ont. Gen. Div.)
Innisfil (Township) v. Shakell	A mobile home is a 'building' and is subject to the pre-requisite of a building permit. An owner of lands should not be held responsible for the illegal actions of tenants in their introduction of illegal mobile homes.	(1980). 32 OR. (2d) 329, 14 M.P.L.R. 225, 121 D.L.R. (3d) 366 (H.C.)
Kim v. Mississauga (City)	The BCA does not authorize 'part permits'. A permit issued to allow the plumbing for a car wash gives the car wash building, not just it's plumbing, protection from subsequently passed zoning by-laws.	(1996), 33 M.P.L.R. (2d) 135, 29 C.L.R. (2d) 98 (Ont. Gen.Div.)

Putnam v. Stirling-Rawdon (Township)	**A dwelling and garage connected by an underground tunnel is one building. As the CBO issued a building permit for a structure at a location not permitted by the by-law the municipality is estopped from challenging the regularity of the garage.**	**[2000] O.J. No. 734, Belleville, Court File No. 1880/99, Ontario Superior Court of Justice, Belch J., March 6, 2000.**
R. v. King Insulation Services Ltd.	**The installation of insulation requires a building permit even though no structural alterations are involved. Such installation is a material alteration of a building.**	**(1981), 13 M.P.L.R. 127 (Div. Ct.)**
R. v. Springman,	**At common law, a 'building or structure' does not include mobile trailers.**	**[1964] SCR. 267, 42 CR. 407, 47 W.W.R. 298, [1964] 3 CCC. 105**
Whitchurch-Stouffville Chief Building Official v. 893472 Ontario Ltd.	**A building permit is required for a concrete batching plant. Concrete pads were 'floors', block walls for material holding pens were 'walls' and were a building.**	**(1994). 23 M.P.L.R. (2d) 307 (Ont. Div. Ct.)**

Building Code Act Section 1.1

SHORT TITLE	DESCRIPTION	CITATIONS
Association of Professional Engineers of Ontario v. Minister of Municipal Affairs and David Brezer	**The Building Code Act does not authorize a regulation which duplicates the professional regulation of Professional Engineers in Ontario, particularly as it respects their conduct or competency. To the extent the Building Code imposes such conditions, it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.**	**Court File No.143/06 (Ont. Div. Ct.)**

Building Code Act Section 3

SHORT TITLE	DESCRIPTION	CITATATIONS
Dusevic v. Columbia Shuswap (Regional District)	**At common law a municipality is under no obligation to enforce it's by-laws and is not civilly liable to persons suffering from the non-enforcement. This is unchanged where there is no statutory direction to the contrary i.e. in the by-law**	**(1998)m 44 M.P.L.R. 160 (B.C.S.C.)**

Building Code Act Section 7

SHORT TITLE	DESCRIPTION	CITATIONS
Kim v. Mississauga (City)	The BCA does not authorize 'part permits'. A permit issued to allow the plumbing for a car wash gives the car wash building, not just it's plumbing, protection from subsequently passed zoning by-laws.	(1996), 33 M.P.L.R. (2d) 135, 29 C.L.R. (2d) 98 (Ont. Gen.Div.)
McDonald's Restaurants of Canada Ltd. v. Humm	No ownership in the lands is necessary to make a permit application. Certainly the owner of a leasehold interest in the lands under a long-term lease is entitled to apply. Section 5(2) of the 1983 Building Code Act which gives power to council to enact by-laws as to the application forms should not be construed to allow council to extend its authority in effect by compelling the applicant to agree to do anything. The applicant cannot be required to enter into an agreement with the applicant. The CBO does not make a discretionary decision in deciding to issue or deny a permit. Private agreements restricting the use of a site are not 'applicable law'.	(1983), 24 M.P.L.R. 103 (Co. Ct.)

Building Code Act Section 7(d)

SHORT TITLE	DESCRIPTION	CITATIONS
Erin Dancer Holding Corp. v. Richmond Hill (Town)	Rights to the refund of permit fees are not lost by the repeal of the by-law refund provisions after the fees have been paid.	(1996), 33 M.P.L.R. (2d) 1 (Ont. Div. Ct.)
Erin Dancer Holding Corp. v. Richmond Hill (Town)	A permit fee by-law which provided for refunds if the applicant 'disagrees' with the value ascribed by the CBO requires notice of disagreement to be given at the time the fee is paid. Silence will indicate acceptance.	(1998) 109 O.A.C. 188, 38 OR. (3d) 452 (C.A.), reversing (1996), 33 M.P.L.R. (2d) 1 (Div. Ct.)

Building Code Act Section 8 General

SHORT TITLE	DESCRIPTION	CITATIONS
A.W Banfield Construction Ltd. v. Oshawa (City)	The fact a demolition permit for an existing residential building has not been issued is not good reason to refuse the issuance of a building permit for a new building.	(1978) 6 M.P.L.R. 61,21 OR. (2d) 157 (Div. Ct.)
Campeau Corp. v. Gloucester(Township)	Where statute requires the by-laws of a local municipality to conform with the official plan of an upper-tier municipality, a building permit should not be issued for a use which conflicts with the upper-tier official plan.	(1978), 21 OR. (2d) 4, M.P.L.R. 290, 89 D.L.R. (3d) 135, affirmed (1979), 22 OR. (2d) 652, 8 M.P.L.R. 147, 96 D.L.R. (3d) 321 (CA.)
Conin Construction Co. v. Scarborough (Borough)	Unless authorized by statute, a municipality cannot make the payment of a development charge a condition of issuing a building permit [Ed. note: this case is rendered largely obsolete by the specific authority given by the Development Charges Act]. Monies paid under the practical compulsion of necessity are recoverable if there was no legal authority for their collection.	(1981), 15 M.P.L.R. 133, 32 OR. (2d) 500, 122 D.L.R. (3d) 291 (H.C.)
Csele v. Pelham (Town)	Where an upper-tier municipality has the authority to zone lands in conformity to it's official plan, a conflict between local zoning and an upper tier official plan will be irrelevant and a building permit should be issued for a use even though the use conflicts with the upper-tier official plan.	(1985), 29 M.P.L.R. 188 (Dist. Ct.)
Craft Bilt Materials Ltd. V. City of Toronto	A Chief Building Official is an employee of a municipality and so in not an independent decision maker. A reviewing tribunal may receive additional evidence not before the CBO when the latter's decision was made. The determination of whether a building product complies with the Building Code is a matter of statutory interpretation and so a review of the CBO's decision is a legal matter to be judged on a standard of correctness. Once the alternative criteria for compliance set out the in the Code is satisfied then the Code itself is satisfied. Ministry bulletins regarding the Code do not have the force of law and are at best advisory.	Court File No.: 05-CV-302521 PD2

Dominion Stores Ltd. v. Etobicoke (Borough)	**A municipality cannot prohibit access to a site from abutting local roads as a condition of site plan approval. Where a municipality imposes unlawful conditions to site plan approval the applicant is entitled to a building permit notwithstanding the site plan approval is outstanding. An applicant for site plan approval is not obliged to appeal to the OMB to resolve an illegal condition [Ed. note: When section 41(4.3) of the Planning Act is proclaimed the OMB will be the body to determine the latter].**	**(1982), 37 OR. (2d) 661, 135 D.L.R. (3d) 301, 19 M.P.L.R. 88, 26 R.P.R. 1 (Div. Ct.)**
Pedwell v Town of Pelham	**A CBO has a right to consult with other Town officials but must make an independent decision. The Environmental Assessment Act is applicable law.**	**DOCKET: C30587, COURT OF APPEAL, WEILER, ROSENBERG and ARMSTRONG JJ.A., MAY 9, 2003**
Philpott v. Innisfil (Town)	**It is not correct/reasonable to respond to a building permit application submitted after the passage of a zoning by-law amendment which would have (inadvertently) permitted the building/use which was the subject of the permit where the by-law error was subsequently corrected (and at no time was the by-law in law amended to permit the said building/use).**	**2006 CanLII 28741 (ON S.C.), Docket: CV-06-145**
Re Russell and Banbury et al	**In obiter dicta, a judge expressed the opinion that permits under predecessor legislation did not allow permits to be issued after the fact and that any so issued would be invalid. [Editorial note: This early, and off-hand, view does not accord with a broad and liberal mandate as directed by the Interpretations Act.]**	**[1955] O.R. 653-667, WILSON J., 8th JUNE 1955**

Rothfield v. Manolakos,	**The breach of a building by-law by an owner does not discharge the municipality from it's duty to competently inspect construction, although damages will be reduced by the contributory negligence of the owner.**	**[1989] 2 SCR. 1259, [1990] 1 W.W.R. 408, 63 D.L.R. (4th) 449, 41 B.C.L.R. (2d) 374, (sub nom. Manolakos v. Gohmann) 46 M.P.L.R. 217, 1 C.C.L.T. (2d) 233, (sub nom. Manolakos v. Vernon (City)) 102 N.R. 249**
Rotstein v. North York (City)	**Two or more lots on a plan of subdivision may be a single 'lot' in the context of zoning. A registered subdivision agreement is not applicable law.**	**(December 13, 1994), Doc. No. RE4602/94 (Ont. Gen. Div.), leave to appeal refused (January 11, 1995), O'Leary J. (Ont. Div. Ct.)**
Seel Enterprises Ltd. v. Toronto (City)	**The failure to have a lodging house licence and the existence of building code violations at the time a prohibitory by-law was passed prevent a use from claiming legal non-conforming status.**	**(1982), 17 M.P.L.R. 315 (Div. Ct.).**
Shell Canada Products Ltd. v. Barrie (City) Chief Building Official	**The lack of site plan approval and an intervening interim control by-law disentitled an applicant to a building permit.**	**(1992), 11 M.P.L.R. (2d) 43, 2 C.L.R. (2d) 200 (Ont. Gen. Div.), additional reasons at (1992), 13 M.P.L.R. (2d) 279 (Ont. Gen. Div.)**
Sixteenth Warden Ltd. v. Markham (Town)	**Section 34(9) of the Planning Act can be interpreted as including a situation where a 'permit ought to have been issued' where a permit should have been issued, notwithstanding the post-permit application passage of an interim control by-law. Site plan approval is not a prerequisite to the issuance of a building permit where the approval was improperly withheld.**	**(1993), 12 OR. (3d) 653. 18 M.P.L.R. (2d) 70 (Gen. Div.)**

Stacey v. Oxford-on-Rideau (Township)	**The Conservation Authorities Act and regulations is applicable law. "Construction" in the Conservation Authorities Act does not include the reconstruction of a fire-damaged building.**	**(1989), 46 M.P.L.R. 15 (Ont. Dist. Ct.)**
Toronto Area Transit Operating Authority v. Mississauga (City)	**A Crown in Right of Ontario agent is not required to obtain site plan approval, apply for a building permit, or pay parks levies, for it's building**	**(1996), 32 M.P.L.R. (2d) 97, 133 D.L.R. (4th) 257 (Ont. Gen. Div.)**
Vann Niagara v Oakville	**A sign by-law which prohibits all billboard signs and all third party signs violates the Charter of Rights guarantee of freedom of expression. The municipality failed to show its objective in passing the sign by-law is pressing and substantial; that the by-law is rationally connected to that objective; that the by-law minimally impairs the right to freedom of expression; and finally, that there is proportionality between the effects and the objectives of the by-law. The by-law limitations are invalid.**	**DOCKET: C36773, COURT OF APPEAL, BORINS, FELDMAN AND MACPHERSON JJ.A., June 14, 2002**
Vann Niagara v Oakville	**A sign by-law which limits signs to an area of 80 sq. ft. freedom of expression, but minimally, and is constitutionally valid.**	**[2003] 3 S.C.R. 15, 2004-01-20, Docket: 29359**
Water & Ice Ltd. v. Muskoka Lakes (Township)	**Site Plan Approval must conform to Provincial Policy Statements. Where the municipal Official Plan requires an environmental impact statement in the circumstances, the failure to have same justifies the withholding of site plan approval and does not evidence 'extraordinary circumstances' which would allow a building permit to be issued without site plan approval.**	**23 M.P.L.R. (4th) 87**
W Kirby v. Coquitlam (City)	**Where the CBO was unaware of the existence of fill on site which would have required additional consideration before issuing a permit, there is no actionable negligence if the subsequently constructed building proves inadequate for the actual site conditions. A reasonably prudent building inspector would not have alerted to the condition.**	**(1996), 27 C.L.R. (2d) 120, 37 M.P.L.R. (2d) 113 (B.C. S.C.)**

Walker v. Kingston (City)	**A permit issued on the applicant's advice that the building was a two-family dwelling when it was not so used is properly revoked as given on 'mistaken or false information'.**	**(1991), 6 M.P.L.R. (2d) 316 (Ont. Gen. Div.)**
Walton v. Lincoln (Town)	**Legal non-conforming use status is lost by a fire which destroys the building containing the use. A CBO acts correctly in taking into account not only the structural design of a building but also it's intended use in refusing a permit application. Zoning is applicable law at the plan review stage.**	**(1997), 43 M.P.L.R. (2d) 291 (Ont. Gen. Div.)**
Whitchurch-Stouffville Chief Building Official v. 893472 Ontario Ltd.	**A building permit is required for a concrete batching plant. Concrete pads were 'floors', block walls for material holding pens were 'walls' and were a building.**	**(1994). 23 M.P.L.R. (2d) 307 (Ont. Div. Ct.)**
William F. White Ltd. V. Toronto Chief Building Officia	**Once compliance with applicable laws is shown, there is an absolute duty on the chief building official to issue the permit.**	**(1999) 44 O.R. (3d) 750, Superior Court of Justice, Stinson J., June 29, 1999**
Wolfond v. North York Building Commissioner	**Administrative delay in issuing a building permit should not deprive a permit applicant of grandparent rights which would have existed had a permit been promptly issued. An applicant's rights crystallize on the date of the CBO'S decision.**	**(1990), 1 M.P.L.R. (2d) 189, 74 OR. (2d) 466 (Dist. Ct.)**

Building Code Act Section 8(1)

SHORT TITLE	DESCRIPTION	CITATIONS
723 Rymal Inc. v. Hamilton (City) Chief Building Official	A zoning by-law permitting a (i) "Community and Residential Care Access Centre"; and, (ii) a restaurant, required both uses to exist to comply with the zoning. A demolition permit for an existing building, identified in a site plan approval of the restaurant use, is properly denied as the result would be the remaining "Community and Residential Care Access Centre" would violate the by-law.	[2001] O.J. No. 832, Court File No. 00-2262, Ontario Superior Court of Justice, Lofchik J., January 9, 2001.
Teperman & Sons Ltd. v. Toronto (City)	The right to a demolition permit crystallizes on the day the application is made.	(1975), 7 OR. (2d) 533, 55 D.L.R. (3d) 653 (CA.)
Trivest Developments Ltd. v. Toronto (City)	The Building Code Act and the Planning Act are not in pari materia insofar as the meaning of 'demolition' is concerned.	(1986), 54 OR. (2d) 728, 39 R.P.R.255, 32 M.P.L.R. 124 (H.C.), affirmed (1986), 57 OR. (2d) 799 (CA)
W Kirby v. Coquitlam (City)	Where the CBO was unaware of the existence of fill on site which would have required additional consideration before issuing a permit, there is no actionable negligence if the subsequently constructed building proves inadequate for the actual site conditions. A reasonably prudent building inspector would not have alerted to the condition.	(1996), 27 C.L.R. (2d) 120, 37 M.P.L.R. (2d) 113 (B.C. S.C.)

Whitchurch-Stouffville Chief Building Official v. 893472 Ontario Ltd	**A building permit is required for a concrete batching plant. Concrete pads were 'floors', block walls for material holding pens were walls'and were a building.**	**(1994). 23 M.P.L.R. (2d) 307 (Ont. Div. Ct.)**

Building Code Act Section 8(2)

SHORT TITLE	DESCRIPTION	CITATIONS
1423107 Ontario Inc. v. Woodstock (City)	Any doubt about the compliance of a use to the zoning should be resolved in favour of the proponent. The use of premises for full nudity non-therapeutic body massage is not permitted by the applicable zoning bylaws permission for a 'health club', nor is the operation of a tanning bed facility. The building permit was properly refused.	[2001] O.J. No. 1330 , Court File No. 462/00 , Ontario Superior Court of Justice , Woodstock, Ontario , Heeney J. , Judgment: April 2, 2001.
382671 Ontario Ltd. v. London (City) Chief Building Official	Space within an apartment building which has the status of a legal non-conforming use may be converted to another apartment unit. In this regard, a building can be altered beyond its precise non-conforming status so long as such is reasonable.	28 O.R. (3d) 718, [1996] O.J. No. 1352, Court File No. 20060/96 Ontario Court (General Division), Killeen J., April 4, 1996
382671 Ontario Ltd. v. London (City) Chief Building Official	A zoning by-law provision which conflicts with rights under section 34(9) of the Planning Act is without authority. A legal non-conforming apartment building of 16 units may increase the number of units under it's grandparent rights i.e. it status is not dependent on the number of units simpliciter.	(1996), 32 M.RL.R. (2d) 1, 28 OR. (3d) 718 (Gen. Div.)

861168 Ontario Inc. v Foreshew, CBO of Lindsay (Town)	**Neither the costs of renovation nor the change in income-generating ability are determinative of whether the work requires site plan approval. If fewer people will be using a building after renovations that is indicative of the usability of the building being reduced. changes in 'usability' should be measured in relation to the facilities and matters set out in sec. 41(7)(a) of the Planning Act.**	**(1991), 3 OR. (3d) 721, 6 M.P.L.R. (2d) 84 (Gen. Div.)**
Alaimo v. York (City) Chief Building Official	**A CBO is under no common law duty to protect property neighbouring the site of new construction which would allow him to refuse a building permit for construction that complies with the BC. The law of nuisance is not applicable law for the consideration of building permit issuance. New construction which would put the chimney on a neighbouring building out of compliance with building standards is nonetheless legal.**	**(1995), 26 M.P.L.R. (2d) 69 (Ont. Gen. Div.)**
Association of Professional Engineers of Ontario v. Minister of Municipal Affairs and David Brezer	**The Building Code Act does not authorize a regulation which duplicates the professional regulation of Professional Engineers in Ontario, particularly as it respects their conduct or competency. To the extent the Building Code imposes such conditions, it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.**	**Court File No.143/06 (Ont. Div. Ct.)**
Brantford (Township) v. Doctor	**The Ontario BCA and BC apply to construction on Indian Lands.**	**(1995), 29 M.P.L.R. (2d) 300, [1996] 1 C.N.L.R 49 (Ont. Gen. Div.).**
Country Pork Ltd. v. Ashfield (Township)	**The failure to provide a nutrient management plan as part of a building permit application was fatal to the right to receive the permit when an intervening interim control by-law prohibited the use.**	**[2001] O.J. No. 1127, Court File No. 30858, Ontario Superior Court of Justice, Leitch J., Judgment: February 28, 2001**
David Gallo Building Co. v. Toronto (City)	**Revisions to permit plans which described a building which is taller, larger, and differently configured is a new application and not an amendment to the original. Rights arising from the original application are not inherited by the revision where the applicant had failed to clearly declare a willingness to alter the plans to comply with the zoning and the alterations are not specific and in train.**	**[1934] 3 OR. 892, 38 D.L.R. (3d) 536 (Div. Ct.)**

Davison v. Orangeville (Town)	**The compliance of a use to an official plan policy is irrelevant where the proposed use conflicts with zoning in force which predates the OP policy.**	**(1996), 36 M.P.L.R. (2d) 74 (Ont. Gen. Div.)**
Dominion Stores Ltd. v. Etobicoke (Borough)	**A municipality cannot prohibit access to a site from abutting local roads as a condition of site plan approval. Where a municipality imposes unlawful conditions to site plan approval the applicant is entitled to a building permit notwithstanding the site plan approval is outstanding. An applicant for site plan approval is not obliged to appeal to the OMB to resolve an illegal condition [Ed. note: When section 41(4.3) of the Planning Act is proclaimed the OMB will be the body to determine the latter].**	**(1982), 37 OR. (2d) 661, 135 D.L.R. (3d) 301, 19 M.P.L.R. 88, 26 R.P.R. 1 (Div. Ct.)**
Forster v. Waterloo (City)	**The action of City Council in enacting a down-zoning by-law hard on the heels of the receipt of a report, having delayed its consideration of the applicant's site plan while at the same time instructing engineering and planning staff to continue negotiations with the applicant with respect to engineering and planning issues, constitutes bad faith and brings the situation into the category of extraordinary circumstances in which site plan approval is not required as a pre-condition to the issuance of a building permit.**	**Action No. 3415/92, Ontario Court of Justice General Division, Kitchener, , Sills J., February 12, 1993**

Green v. Dixon	**Where a septic system was installed contrary to original plans, but was subsequently approved by the Health Unit, the CBO bears no liability if the system malfunctions.**	**(March 24, 1995), Doc. Nos. Barrie G858 1, G858 IA (Ont. Gen. Div.)**
H & D International Group v. Toronto (City)	**An Interim Control By-law passed after the decision of the CBO has no application to the consideration of the correctness of the CB0's decision.**	**(1988), 44 M.P.L.R. 187 (Ont. Dist. Ct.)**
Haldimand-Norfolk (Regional Municipality) v. Copland	**The removal of a trailer home from a property causes the loss of the propery's legal non-conforming status. It's subsequent replacement, being a larger park model home, was an entirely different structure.**	**(1993), 28 M.P.L.R. (2d) 308, 131 D.L.R. (4th) 114 (Ont. Div. Ct.)**
Henry LePage v The Archipelago (Township)	**A floating dock attached to land is subject to the BCA. A zoning by-law is applicable law. An official plan is not applicable law and it should not be used to interpret a zoning by-law. Site plan approval is not applicable law [Ed. Note: The latter conclusion is, in it's breadth, wrong].**	**(July 7, 1989), Doc. No. 924/89 (Dist. Ct.)**
Hirmann v. Toronto (City)	**Where a use is permitted by the 'in force' zoning, will be retroactively prohibited by a passed, but appealed, zoning by-law which had been passed several years earlier and for which there is no timetable for the disposition of the appeals, a building permit will issue.**	**(1993), 13 OR. (3d) 54, (sub nom. Hirmann v. Toronto (City) Chief Building Official) 14 M.P.L.R. (2d) 256 (Gen. Div.)**

Hodgins v. Toronto (City)	**A CBO's decision to revoke a permit must be on one of the bases set out in the BCA. The CBO has no inherent jurisdiction to revoke a permit.**	**(1983), 21 M.P.L.R. 165 (Co. Ct.)**
J & R Rite Holdings (Oshawa) Inc. v. Oshawa (City)	**A CBO may refuse to issue a building permit where the proposed use conflicts with the official plan of an upper tier municipality, there is a statutory obligation for local zoning by-laws to be amended to conform with the upper-tier OP, even though the local zoning permits the use.**	**(1988), 64 OR. (2d) 471, 38 M.P.L.R. 97 (H.C.)**
Kally s Restaurant Inc. v. Scarborough (City)	**A municipality cannot require the provision of more parking than that required by it's zoning by-law, as it stood on the date of the application for site plan approval, as a condition of site plan approval. Where a municipality imposes unlawful conditions to site plan approval the applicant is entitled to a building permit notwithstanding the site plan approval is outstanding.**	**(1993), 12 OR. (3d) 312, 14 M.P.L.R. (2d) 117, 99 D.L.R. (4th) 381, 62 O.A.C. 143 (Div. Ct.)**
Kim v. Mississauga (City)	**The BCA does not authorize 'part permits'. A permit issued to allow the plumbing for a car wash gives the car wash building, not just it's plumbing, protection from subsequently passed zoning by-laws.**	**(1996), 33 M.P.L.R. (2d) 135, 29 C.L.R. (2d) 98 (Ont. Gen.Div.)**
Leeds & Grenville Board of Education v. Gerrard	**A geothermal heat pump system related to a new building is a 'building' as defined by the BCA. The Environmental Protection Act is 'applicable law'.**	**(1991), 8 C.E.L.R. (N.S.) 266 (Ont. Gen. Div.)**

Loblaws Inc. v. Ancaster (Town) Chief Building Official	**A building constructed pursuant to a permit issued for an intended use which does not comply with the zoning by-law is to require the occupant to comply with the bylaw. The permit need not be rescinded. The official plan can be looked at to interpret the meaning of a zoning bylaw provision. A use which is comprised of permitted and prohibited activities is not in compliance with zoning and the remedy is to limit the use to the permitted activities.**	**(1993), 13 M.RL.R. (2d) 94, 95 D.L.R. (4th) 695, 10 C.P.C. 232 (Ont. Gen. Div.)**
Lock v. Middlesex Centre (Township) Chief Building Official	**In reviewing a decision of a CBO a standard of correctness will generally be applied to decisions based on law or jurisdiction and a standard of reasonableness will be applied to questions of fact. With respect to questions of mixed fact and law, the more the decision of the chief building official is a determination of law, the closer the standard will be to correctness whereas if the decision is dependent upon factual determinations within the special expertise of the chief building official the more deferential will be the standard. A nutrient management by-law which adopts the provinces minimum distance separation formulas is applicable law. THE MDS II formula does not apply to a single lot zoning residential, but to an area zoned residential.**	**[2001] O.J. No. 3588 , Court File No. 30955, Ontario Superior Court of Justice , Leitch June 29, 2001.**
Lofaro v. North York (City) Chief Building Official	**Minor variances which relate to an 'existing' dwelling cease to have application when the building has ceased to exist except for a small fragment.**	**Action No. 17/91 and 439/91, 11 M.P.L.R. (2d) 278, Ontario Court of Justice General Division, Toronto, Sheard J., July 14, 1992**

Manchester v. North York (City) Chief Building Official	**Interim Control By-laws should be given a strict construction. The municipality's failure to give timely notice of passage of an ICB makes the by-law ineffective from the last date to give notice and not from the date of the by-law's passage.**	**(1994), 20 M.P.L.R. (2d) 213, 18 OR. (3d) 540, 115 D.L.R. (4th) 432, 72 O.A.C. 263 (Div. Ct.)(1993), affirming 15 OR. (3d) 690, 17 M.P.L.R.(2d) 150, 106 D.L.R. (4th) 646 (Gen. Div.)**
McDonald's Restaurants of Canada Ltd. v. Humm	**No ownership in the lands is necessary to make a permit application. Certainly the owner of a leasehold interest in the lands under a long-term lease is entitled to apply. Section 5(2) of the 1983 Building Code Act which gives power to council to enact by-laws as to the application forms should not be construed to allow council to extend its authority in effect by compelling the applicant to agree to do anything. The applicant cannot be required to enter into an agreement with the applicant. The CBO does not make a discretionary decision in deciding to issue or deny a permit. Private agreements restricting the use of a site are not 'applicable law'.**	**(1983), 24 M.P.L.R. 103 (Co. Ct.)**
McLear v. Mason	**An unlicensed salvage yard was an illegal nonconforming use due to the lack of a license.**	**(1988), 65 OR. (2d) 228, 39 M.P.L.R. 111 (H.C.)**
Midland (Town) v. Fred DaSilva Enterprises Ltd.	**A building permit issued ostensibly for a weeping tile bed for a shopping centre will give the intended building grandparent rights over a subsequently passed zoning restriction prohibiting the use.**	**(1977), 3 M.P.L.R. 158, 16 OR. (2d) 657, 79 D.L.R. (3d) 88 (CA.)**
Olympia & York Developments Ltd. v. Toronto (City)	**For the purposes of a site plan agreement a municipality is entitled to demand the registered owner, not only a long-term ground lessee, execute the agreement. A ground lessee is not an owner.**	**(1980), 29 OR. (2d) 353. 12 M.P.L.R. 219, 113 D.L.R. (3d) 695 (Div. Ct.)**

Ottawa (City) v Shore & Horwitz Construction Co.	**A building constructed for the federal crown on federal land is not subject to provincial building permit regulation.**	**[1960] OWN. 137, 22 D.L.R. (2d) 247 (H.C.)**
Ottawa (City of) v. The Chief Building Official of the City of Ottawa and 1479333 Ontario, Inc.	**For a law to be relevant and applicable to the question of the issuance of a building permit a real and logical nexus must exist between the applicable law and the essential purpose of the BCA, which is the construction, and demolition of buildings.**	**Ontario Divisional Court,** November 21, 2003, [2003] O.J. No. 4530, Court File No. 03-DV-857
Peacock v. CBO of Norfolk County	**An applicant's permit rights crystallize on the date the CBO makes the decision to issue or refuse a permit. An interim control by-law passed after an application is filed but before the decision must, absent extraordinary facts, be taken into account. A statute prohibiting the discharge of contaminants is applicable law relative to a permit application for a hog barn. The doctrine of legal non-conforming use cannot be used to protect expansion that necessarily entails grave environmental and public safety dangers.**	**SUPERIOR COURT OF JUSTICE, COURT FILE NO.: 0002/02, 2003/07/03** **Ontario Court of Appeal, Docket No. C42944, June 28, 2006**
Pedwell v. Pelham (Town)	**The fact a condition precedent to the issuance of a building permit (Health Unit septic approval) is not satisfied is irrelevant where the municipality frustrated the satisfaction of the condition by advising the approval authority that the proposed land use was prohibited by the zoning by-law. A municipal council has no authority to direct the CBO to not do an act which the CBO is statue bound to carry out. Compensation for damages follows the wrongful refusal to issue a building permit.**	**(1998). 47 M.P.L.R. (2d) 222 (Ont. Gen. Div.), additional reasons at (February 26, 1999), Doc. Toronto 5650.5/95 (Ont. Gen. Div.)**

Phi Delta Beta of London Inc. v. London (City) Chief Building Official	**A CBO is entitled to consider the intended use of a property in considering the conformity to zoning although that use has not yet been established. A fraternity house cannot be considered a 'single housekeeping unit'.**	**(1995), 25 M.P.L.R. (2d) 140 (Ont. Gen. Div.), affirmed (1996), 36 M.P.L.R. 319 (Ont. Div. Ct.)**
Polla v. Toronto (City) Chief Building Official	**Where the legality of site plan conditions is in issue the court has jurisdiction and will exercise it even though an appeal may be lodged with the OMB. A site plan condition requiring the removal of a lawful structure is illegal.**	**[2000] O.J. No. 4399, Court File No. 00-CV- 194025, Ontario Superior Court of Justice, Molloy J., udgment: November 21, 2000.**
Quay West v. Toronto (City)	**A proposed development does not have grandparent rights where a building permit 'ought to have been issued' before the passage of a prohibitory by-law, but had not in fact been issued. Site plan approval is a prerequisite to the issuance of a building permit, absent unusual circumstances.**	**(1989), 47 M.P.L.R. 109 (Ont. Div. Ct.), leave to appeal to CA. refused (1989), 47 M.P.L.R. 109 (Ont. CA.)**
Revenue Properties Co. v. Toronto (City)	**A building permit may be issued even where site plan approval is required but not yet obtained; however, construction under the permit cannot commence until site plan approval is obtained.**	**(1984), 26 M.P.L.R. 165 (Co. Ct.)**
Ross v. Muskoka Lakes (Township)	**The more the Chief Building Official's decision is a determination of law, the closer the standard will be to correctness. The more the initial decisions depended upon factual determinations within the special expertise of the Chief Building Official, the more deferential will be the standard. The general rule is that site plan approval is required before the building permit is to be issued because site plan approval is "other applicable law". Only where there is bad faith or other unlawful conduct should the court exercise the jurisdiction given to it under the Building Code Act to rectify an injustice by granting a building permit in the absence of site plan approval.**	**COURT FILE NO.: 257-02, Bracebridge, ONTARIO SUPERIOR COURT OF JUSTICE, January 19, 2004.**

Rotstein v. North York (City)	**Two or more lots on a plan of subdivision may be a single 'lot' in the context of zoning. A registered subdivision agreement is not applicable law.**	**(December 13, 1994), Doc. No. RE4602/94 (Ont. Gen. Div.), leave to appeal refused (January 11, 1995), O'Leary J. (Ont. Div. Ct.)**
Seel Enterprises Ltd. v. Toronto (City)	**The failure to have a lodging house licence and the existence of building code violations at the time a prohibitory by-law was passed prevent a use from claiming legal non-conforming status.**	**(1982), 17 M.P.L.R. 315 (Div. Ct.).**
Shell Canada Products Ltd. v. Barrie (City) Chief Building Official	**The lack of site plan approval and an intervening interim control by-law disentitled an applicant to a building permit.**	**(1992), 11 M.P.L.R. (2d) 43, 2 C.L.R. (2d) 200 (Ont. Gen. Div.), additional reasons at (1992), 13 M.P.L.R. (2d) 279 (Ont. Gen. Div.)**
Sixteenth Warden Ltd. v. Markham (Town)	**Section 34(9) of the Planning Act can be interpreted as including a situation where a 'permit ought to have been issued' where a permit should have been issued, notwithstanding the post-permit application passage of an interim control by-law. Site plan approval is not a prerequisite to the issuance of a building permit where the approval was improperly withheld.**	**(1993), 12 OR. (3d) 653. 18 M.P.L.R. (2d) 70 (Gen. Div.)**

Stacey v. Oxford-on-Rideau (Township)	**The Conservation Authorities Act and regulations is applicable law. "Construction" in the Conservation Authorities Act does not include the reconstruction of a fire-damaged building.**	**(1989), 46 M.P.L.R. 15 (Ont. Dist. Ct.)**
Superior Propane Inc. v. York (City)	**A zoning by-law restricting and regulating propane filling stations does not enhance provincial regulation on the same subject and, being in conflict, is invalid.**	**(1995), 27 M.P.L.R. (2d) 1,23 OR. (3d) 161, 123 D.L.R. (4th) 445, 17 C.E.L.R. (N.S.) 1, 80 O.A.C. 362 (C.A.)**
Thomas Furniture Ltd. v. Toronto	**A facility providing temporary shelter and food to homeless persons is a' crisis care facility' and not a hostel.**	**[2002] O.J. No. 929, Court File No. 01-CV-222738, Ontario Superior Court of Justice**
Toronto College Street Centre v. Toronto (City)	**A building permit application which conflicted with a Heritage Easement Agreement was properly refused. The Ontario Heritage Act should be given a broad and liberal interpretation.**	**(1986), 56 OR. (2d) 522. 17 O.A.C. 113, 31 D.L.R. (4th) 402,34 M.P.L.R. 138 (CA.), leave to appeal to 5CC. Refused (1987), 34 M.P.L.R. xxxi (note), 23 O.A.C. 160 (note), 79 N.R. 400 (note), 61 OR. (2d) 669 (note)**
Trucena Properties Ltd. v. Toronto (City)	**Site plan approval is not a prerequisite for the issuance of a building permit.**	**(1988), Doc. No. M l6550 1/88 (Ont. Dist. Ct.)**
Upper Thames Conservation Authority v. London (City)	**Internal renovations may not be subject to conservation regulations and so a building permit may be issued without conservation authority approval.**	**(1989), 67 OR. (2d) 784, 42 M.P.L.R. 241, 2 R.P.R. (2d) 58 (Dist. Ct.)**
Vanderschot v. North Easthope (Township)	**Municipal Interim control by-laws passed to control the height of structures in the vicinity of an airport were the exercise delegated federal authority validly received by the Municipality and authorized by the province. As uch they were constitutionally valid.**	**(1995), 24 OR. (3d) 286 (sub nom. Re Ellice (Township) Zoning By-laws 2-94 &/or 26-94) 28 M.P.L.R. (2d) 1 (Div. Ct.)**

Vann Niagara v Oakville	**A sign by-law which prohibits all billboard signs and all third party signs violates the Charter of Rights guarantee of freedom of expression. The municipality failed to show its objective in passing the sign by-law is pressing and substantial; that the by-law is rationally connected to that objective; that the by-law minimally impairs the right to freedom of expression; and finally, that there is proportionality between the effects and the objectives of the by-law. The by-law limitations are invalid.**	**DOCKET: C36773, COURT OF APPEAL, BORINS, FELDMAN AND MACPHERSON JJ.A., June 14, 2002**
Vann Niagara v Oakville	**A sign by-law which limits signs to an area of 80 sq. ft. freedom of expression, but minimally, and is constitutionally valid.**	**[2003] 3 S.C.R. 15, 2004-01-20, Docket: 29359**
Walton v. Lincoln (Town)	**Legal non-conforming use status is lost by a fire which destroys the building containing the use. A CBO acts correctly in taking into account not only the structural design of a building but also it's intended use in refusing a permit application. Zoning is applicable law at the plan review stage.**	**(1997), 43 M.P.L.R. (2d) 291 (Ont. Gen. Div.)**
Woodglen & Co. Ltd. v. North York (City)	**Official Plan policies are not applicable law. A judge acting under sec 25 should do what the CBO ought to have done. A judge has no other powers than that of the CBO and no discretion which the CBO does not also have.**	**(1983), 43 OR. (2d) 289, 23 M.P.L.R. 18 (Co. Ct.), affirmed (1984), 47 OR. (2d) 614, 9 C.L.R. 232, 26 M.P.L.R. 40, 5 O.A.C. 313, 12 D.L.R. (4th) 146 (Div. Ct.)**

Building Code Act Section 8(9)

SHORT TITLE	DESCRIPTION	CITATION
Hodgins v. Toronto (City)	**A CBO's decision to revoke a permit must be on the bases set out in the BCA. The CBO has no inherent jurisdiction to revoke a permit**	**(1983), 21 M.P.L.R. 165 (Co. Ct)**

Building Code Act Section 8(10)

SHORT TITLE	DESCRIPTION	CITATIONS
Bondy v. Lessard	A permit issued with full information regarding illegal construction on a property cannot subsequently be revoked when the relevant facts have not changed.	[1996] O.J. No. 3108 , DRS 9704913, Court File No. 96-GD-35852, Ontario Court of Justice (General Division), Windsor, Ontario
Budman v. Gravenhurst (Town)	A building permit issued for a lawful extension of a legal nonconforming building is properly revoked if the existing building is demolished.	(1983), 44 OR. (2d) 696, 24 M.P.L.R. 195, 1 O.A.C. 267 (Div. Ct.)
Roman Catholic Episcopal Corp. for the Diocese of Peterborough in Ontario, Canada v. Cobourg (Town)	A judge acting under sec 25 should do what the CBO ought to have done. A judge has no other powers than that of the CBO and no discretion which the CBO does not also have. A heritage easement agreement can be applicable law. A CBO who issues a demolition permit for work which conflicts with a heritage easement agreement act correctly in revoking the permit on the basis of the error.	(May 7, 1998), Doc. Cobourg 000401/98 (Ont. Gen. Div.) see also court file no. 49173/98
Walker v. Kingston (City)	A permit issued on the applicant's advice that the building was a two-family dwelling when it was not so used is properly revoked as given on 'mistaken or false information'.	(1991), 6 M.P.L.R. (2d) 316 (Ont. Gen. Div.)

Building Code Act Section 9

Craft Bilt Materials Ltd. V. City of Toronto	**A Chief Building Official is an employee of a municipality and so in not an independent decision maker.** **A reviewing tribunal may receive additional evidence not before the CBO when the latter's decision was made.** **The determination of whether a building product complies with the Building Code is a matter of statutory interpretation and so a review of the CBO's decision is a legal matter to be judged on a standard of correctness.** **Once the alternative criteria for compliance set out the in the Code is satisfied then the Code itself is satisfied.** **Ministry bulletins regarding the Code do not have the force of law and are at best advisory.**	**Court File No.: 05-CV-302521 PD2**	***B.C.A. Sec 8, 9, 28, B.C. Part 4(4.3.5.1) (4.1.1,4(1))***

Building Code Act Section 12

SHORT TITLE	DESCRIPTION	CITATIONS
Czumak v. Etobicoke (City)	An order to comply cannot prohibit all work from proceeding, but is limited to prohibiting work which does not comply with the building permit. A stop work order is not effective to stop work which is not prohibited by a proper order to comply. Failure to assist a search which is illegal will not found a charge.	September 16, 1994), (Ont. Prov. Div.)
Ingles v Tutkaluk Construction Ltd.	An owner who allows his contractor to proceed with construction without a building permit will bear some responsibility for his consequent damages.	1994), 24 M.P.L.R. (2d) 293 (Ont. Gen. Div.),
Ingles v Tutkaluk Construction Ltd.	A municipality is not absolved by the negligence of an owner of a building under construction. To avoid liability, a municipality must show that its inspectors exercised the standard of care that would be expected of an ordinary, reasonable and prudent inspector in the same circumstances.	Appeal allowed, [2000] 1 S.C.R. , 298
Mortimer v. Cameron	The failure by a plans examiner and a site inspector to use reasonable care in the approval of a renovation was the causative factor in personal damages awarded in the amount of $4.5 millions.	1994), 19 M.P.L.R. (2d) 286, 17 OR. (3d) 1, 68 O.A.C. 332,111 D.L.R. (4th) 428 (CA.), additional reasons at (June 24, 1994), Doc. CAC12036 (Ont. CA.). leave to appeal to SCC. refused (1994), 23 M.P.L.R. (2d) 314 (note) 114 D.L.R. (4th) vii (note), 19 OR. (3d)

Peterson v. Ajax (Town) Fire Marshal	**In the absence of any evidence that a change in facts has increased fire hazards in a building neither an order of a fire marshall nor a Fire Code Commission ruling can be sustained.**	**Ontario Court of Justice (General Division), Divisional Court, [1998] O.J. No. 3303, DRS 98-16383, Court File No. 750-9, B. Wright J., August 18, 1998.**
Petruzzi v. Coveny	**The purchaser of a house constructed by the previous owner is entitled to damages jointly from the owner/builder and the municipality whose inspector was negligent in inspecting the work. Mental distress damages are properly awarded. The original owner/builder is also responsible for damages relating to non-building code defects.**	**(1991), 7 M.P.L.R. (2d) 183, 48 C.L.R. 225 (Ont. Gen. Div.)**
Putnam v. Stirling-Rawdon (Township)	**A dwelling and garage connected by an underground tunnel is one building. As the CBO issued a building permit for a structure at a location not permitted by the by-law the municipality is estopped from challenging the regularity of the garage.**	**[2000] O.J. No. 734, Belleville Court File No. 1880/99, Ontario Superior Court of Justice, Belch J., March 6, 2000.**
R. v. 1267017 Ontario Ltd.	**A charge of failing to comply with an order to stop work until a building permit is obtained will be dismissed, despite the recipient's subsequent failure to obtain a permit, where there is no evidence that work continued. An order to comply requiring a building permit to be obtained is violated regardless of when the illegal work was done when no permit is applied for.**	**[2001] O.J. No. 3412, Ontario Court of Justice Newmarket, Ontario, Lampkin J. Oral judgment: July 19, 2001**

Building Code Act Section 13

SHORT TITLE	DESCRIPTION	CITATIONS
Toronto (City) Chief Building Official v. Vaghela Holdings Inc.	**In the absence of bad faith or similar illegal reasons for refusing a building permit , an applicant who has not received a permit is subject to the terms of a subsequently passed interim control by-law and will be subject to a compliance order**	**(1993), 16 M.P.L.R. (2d) 99 (Ont. Gen. Div.)**

Building Code Act Section 14

SHORT TITLE	DESCRIPTION	CITATIONS
Czumak v. Etobicoke (City)	An order to comply cannot prohibit all work from proceeding, but is limited to prohibiting work which does not comply with the building permit. A stop work order is not effective to stop work which is not prohibited by a proper order to comply. Failure to assist a search which is illegal will not found a charge.	(September 16, 1994), (Ont. SHORT TITLE	DESCRIPTION	CITATIONS
Thunder Bay (City) v. Kasstan Estate	An unauthorized inspection of a dwelling violated the occupant's Charter Rights and , in Consequence, the municipality was denied an order to recover the costs of a related property clean-up	(1999), 43 O.R. (3d) 703, 50 M.P.L.R. (2d) 301, 61 C.R.R. (2d) 164 (Ont. Gen. Div.)

Building Code Act Section 15.10

SHORT TITLE	DESCRIPTION	CITATIONS
Pickle Lake (Township of) v. Shetterly Enterprises Ltd.	**The test of "reasonableness" is applicable to review of an application under Section 15(10)(1) of the BCA to confirm an order of a CBO consequent on the CBO's decision that there existed an "immediate danger to the health or safety of any person" and to obtain an order respecting the reimbursement of costs.**	**Ontario Superior Court of Justice, Court File No: 05-114, Date: 2006-02-27**

Building Code Act Section 15.11 (5) to (7)

SHORT TITLE	DESCRIPTION	CITATIONS
Association of Professional Engineers of Ontario v. Minister of Municipal Affairs and David Brezer	The Building Code Act does not authorize a regulation which duplicates the professional regulation of Professional Engineers in Ontario, particularly as it respects their conduct or competency. To the extent the Building Code imposes such conditions, it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.	Court File No.143/06 (Ont. Div. Ct.)

Building Code Act Section 16

SHORT TITLE	DESCRIPTION	CITATIONS
Thunder Bay (City) v. Kasstan Estate	**An unauthorized inspection of a dwelling violated the occupant's Charter Rights and , in Consequence, the municipality was denied an order to recover the costs of a related property clean-up**	**(1999), 43 O.R. (3d) 703, 50 M.P.L.R. (2d) 301, 61 C.R.R. (2d) 164 (Ont. Gen. Div.)**

Building Code Act Section 19

SHORT TITLE	DESCRIPTION	CITATIONS
Czumak v. Etobicoke (City)	**An order to comply cannot prohibit all work from proceeding but is limited to prohibiting work which does not comply with the building permit. A stop work order is not effective to stop work which is not prohibited by a proper order to comply. Failure to assist a search which is illegal will not found a charge.**	**(September 16, 1994), (Ont Prov. Div.)**

Building Code Act Section 25

SHORT TITLE	DESCRIPTION	CITATIONS
1514904 Ontario Ltd. and Wilson Bassile v. the Corporation of The Town of Mississippi Mills	Where the basis of a challenge to a CBO's decision is not directed at its legal correctness but another aspect, the test is reasonableness of the decision. In the latter regard, it is not enough that the reviewing appeal body may have come to a different decision. The challenged decision must be unreasonable.	Ontario Superior Court of Justice, Perth Court File No: 686/05, 2005/08/25
1218897 Ontario Limited v. Ann Borooah, Chief Building Official,City of Toronto and Ryding Auto Body Ltd.	New evidence in addition to the information before the CBO may be entered on an appeal from the CBO's decision. The burden is on the applicant to show the CBO's decision was unreasonable or wrong in law. A standard close to correctness will be applied to decisions based on law or jurisdiction and a standard of reasonableness will be applied to questions of fact. Within the standard of reasonableness, the degree of deference or the "weight" to be given to any particular determination will depend on the circumstances.	Ontario Superior Court of Justice, Court File No: 05-CV-285838PD2, 2005/10/28

Albert Bloom Ltd. v. Bentinck (Township) Chief Building Official	Where the issuance of a building permit is challenged by a third party evidence can be introduced by the permit applicant which was not before the CBO.	(August 17, 1995). Doc. No. RE 4858/95 (Ont. Gen. Div.)
Cogan v. Toronto (City)	The entitlement to a building permit will not be denied where the application was not complete provided the corrections were specific and in train.	(1974), 3 OR. (2d) 661, 46 D.L.R. (3d) 481 (Div. Ct.) 8(2)(a);
Famous Players Inc. v. Toronto (City)	Where a building stands on two abutting properties the owner of one of the properties is a person 'aggrieved' and has standing to challenge a building permit issued to the other owner.	(1987), 47 R.P.R. 270, 37 M.P.L.R. 49 (Ont. Dist. Ct.)
Friends of McNichol Park v. Burlington (City)	A person is ‘aggrieved’ by the issuance of a building permit for a use not permitted by the zoning on the simple basis that this deprives the person of their right to oppose any rezoning by-law.	31 O.R. (3d) 405, Court File No. 512/96, Ontario Court (General Division), Divisional Court, Steele, McRae and Corbett JJ., November 27, 1996
Friends of Toronto Parkland v. Toronto (City)	To have standing to raise a challenge to a CBS's decision a person must have reasonable grounds for considering being 'aggrieved'.	(1991), 86 D.L.R. (4th) 669, 8 M.P.L.R. (2d) 127, 6 OR. (3d) 196, 53 OR. 376 (Div. Ct.)

Giangregorio v. Hamilton (City)	**An appellant under s. 25 of the [Building Code Act] has the burden of demonstrating by means of evidence placed before the court that the decision below was not reasonable or that it was wrong as a matter of law. In attempting to discharge that burden the appellant may tender additional evidence before the court, as may the respondents to the appeal.**	**[2001] O.J. No. 5670, Court File No. 014377, Ontario Superior Court of Justice, Matheson J., June 27, 2001**
Hastings Corp. Ltd. v. Borooah	**The appropriate standard of review of a decision of the CBO respecting the interpretation of a zoning by-law is closer to correctness than reasonableness. A zoning by-law which was passed before a permit application, continues an existing zoning permission for the subject of the application, but is under OMB appeal, is not applicable law as any changes withdrawing the permission would not be retroactive to the date of passage of the by-law.**	**DIVISIONAL COURT FILE NO.: 145/04, SUPERIOR COURT FILE NOS.:03-CV-255048CM1 & 03-CV-257685CM1, June 22, 2004**
Kally's Restaurant Inc. v. Scarborough (City)	**Where the zoning examiner calculated a buildings parking requirement based on an erroneous interpretation of the bylaw the court will direct the rescission of the permit with a direction that a new permit be issued if the plans are in accordance with the correct by-law interpretation.**	**Ontario Judgments: [1989] O.J. No. 1994, Action No. M186156/89 Ontario District Court -York Judicial District, Toronto, Ontario, Haley D.C.J., November 22, 1989.**
Loblaws Inc. v. Ancaster (Town) Chief Building Official	**A building constructed pursuant to a permit issued for an intended use which does not comply with the zoning by-law is to require the occupant to comply with the by-law. The permit need not be rescinded. The official plan can be looked at to interpret the meaning of a zoning by-law provision. A use which is comprised of permitted and prohibited activities is not in compliance with zoning and he remedy is to limit the use to the permitted activities. .**	**(1993), 13 M.RL.R. (2d) 94, 95 D.L.R. (4th) 695, 10 C.P.C. 232 (Ont. Gen. Div.)**

Noddle v. Toronto (City)	**An employee of a facility seeking a permit has status to challenge the issuance of the permit on the grounds of zoning compliance.**	**(1982), 19 M.P.L.R. 95, 37 OR. (2d) 421, 19 M.P.L.R. 95 (H.C.)**
Olmstead v. Greenberg	**Breaches of the Building Code may be challenged by a third party in an action even though the same relief might have been provided in a section 25 application.**	**[2001] O.J. No. 4545, Court File No. 01-CV-205761, Ontario Superior Court of Justice, Day J., Judgment: November 21, 2001.**
Peacock v. CBO of Norfolk County	**An applicant's permit rights crystallize on the date the CBO makes the decision to issue or refuse a permit. An interim control by-law passed after an application is filed but before the decision must, absent extraordinary facts, be taken into account. A statute prohibiting the discharge of contaminants is applicable law relative to a permit application for a hog barn. The doctrine of legal non-conforming use cannot be used to protect expansion that necessarily entails grave environmental and public safety dangers.**	**SUPERIOR COURT OF JUSTICE, COURT FILE NO.: 0002/02, 2003/07/03** **Ontario Court of Appeal, Docket No. C42944, June 28, 2006**
Ross v. Muskoka Lakes (Township)	**The more the Chief Building Official's decision is a determination of law, the closer the standard will be to correctness. The more the initial decisions depended upon factual determinations within the special expertise of the Chief Building Official, the more deferential will be the standard. The general rule is that site plan approval is required before the building permit is to be issued because**	**COURT FILE NO.: 257-02, Bracebridge, ONTARIO SUPERIOR COURT OF JUSTICE, January 19, 2004.**

	site plan approval is "other applicable law". Only where there is bad faith or other unlawful conduct should the court exercise the jurisdiction given to it under the Building Code Act to rectify an injustice by granting a building permit in the absence of site plan approval.	
Summit Glen Development Corp. v. Toronto (City)	The entitlement to a building permit should be judged as of the date of the CBO's decision.	(1989), 44 M.P.L.R. 50 (Ont. Dist. Ct.)
Weinberg v. Township of Euphrasia et al.	The phrase 'any person who considers himself aggrieved' applies where there are reasonable grounds for a person believing themself to having been wrongfully deprived of something or having title to something wrongfully affected.	Action No. 1238/89, Ontario District Court - Grey County, Owen Sound, Ontario, Zelinski D.C.J., December 12, 1989
Woodglen & Co. Ltd. v. North York (City)	Although the Divisional court has jurisdiction to order the issuance of a building permit under the Judicial Review Procedures Act, section [25] of the Building Code Act sets out the proper avenue for such relief.	(1983), 42 OR. (2d) 385, 23 M.P.L.R. 13, 149 D.L.R. (3d) 186 (Div. Ct.)
Woodglen & Co. Ltd. v. North York (City)	Official Plan policies are not applicable law. A judge acting under sec 25 should do what the CBO ought to have done. A judge has no other powers than that of the CBO and no discretion which the CBO does not also have.	(1983), 43 OR. (2d) 289, 23 M.P.L.R. 18 (Co. Ct.), affirmed (1984), 47 OR. (2d) 614, 9 C.L.R. 232, 26 M.P.L.R. 40, 5 O.A.C. 313, 12 D.L.R. (4th) 146 (Div. Ct.)

Building Code Act Section 28

Craft Bilt Materials Ltd. V. City of Toronto	**A Chief Building Official is an employee of a municipality and so in not an independent decision maker.** **A reviewing tribunal may receive additional evidence not before the CBO when the latter's decision was made.** **The determination of whether a building product complies with the Building Code is a matter of statutory interpretation and so a review of the CBO's decision is a legal matter to be judged on a standard of correctness.** **Once the alternative criteria for compliance set out the in the Code is satisfied then the Code itself is satisfied.** **Ministry bulletins regarding the Code do not have the force of law and are at best advisory.**	**Court File No.: 05-CV-302521 PD2**	***B.C.A. Sec 8, 9, 28, B.C. Part 4(4.3.5.1) (4.1.1,4(1))***

Building Code Act Section 31

Bakhtiari v. Axes Investments Inc.	The plans examiner failed to require interior fire separation doors in a building although a by-law called for them in plain language.. If the employee had a problem with the requirement, he acted unreasonably in failing to take it up with his superiors and obtain an interpretation. That is enough for liability. By way of defence, there must be a reasonable explanation for how this could happen if their employee had exercised reasonable care. This is a life safety matter whose importance is well known in the industry. It is utterly foreseeable that failure to require these devices would, in the case of fire, place the health and lives of the occupants at risk.	[2001] O.J. No. 4720 , Court File No. 95-CQ-61731CM , Ontario Superior Court of Justice, November 30, 2001
Calicloth Textiles Inc. v. Smith Falls (Town)	The payment of $2.175,000 in damages caused by the collapse of a faultily built roof were shared between the municipality and the building contractor.	[2001] O.J. No. 4946 , Court File No. 96 CV-100668 , Ontario Superior Court of Justice
Chapeskie v. Lake of Bays (Township)	Damages awarded by the court on a suit by the purchaser of a dwelling against it's builder and the municipality were divided 50:50 as between the two defendants. The ignorance of standards and failures of the builder were matched by the inadequacy exhibited by the Township's inspections and misleading occupancy permit.	File No. G13082/94, Ontario Superior Court of Justice, Newmarket, Howden J., July 9, 1999
La Sucrerie Casselman Inc. v. Cambridge (Township)	The issuance of a building permit for a building on catastrophe-prone erosion area was a breach of the municipalities duty of care and rendered it liable to make good the damages. In the circumstances of this case there	[2000] O.J. No. 4650, Court File No. 97-CV-002942-CM, Ontario Superior Court of Justice , Morin J.

	were no damages	
Petruzzi v. Coveny	The Purchaser of a house constructed by the previous owner is entitled to damages jointly from the owner/builder and the municipality whose inspector was negligent in inspecting the work. Mental distress damages are properly awarded. The original owner/builder is also responsible for damages relating to non-building code defects	(1991), 7 M.P.L.R. (2d) 183, 48 C.L.R. 255 (Ont. Gen. Div.)
Riverside Developments Bobcaygeon Ltd. v. Bobcaygeon	When the Chief Building Official for the municipality advised a developer that plans met the requirements of the Building Code for the Province, it is reasonable for the developer to rely on those assurances. It is also reasonable that the developer relied on the building inspector to check the construction as it advanced. Damages of some $14m. were awarded against the municipality.	COURT FILE NO.: 001779, 2004-01-19, SUPERIOR COURT OF JUSTICE, Justice B. Lass
Rothfiled v. Manolakos,	The breach of a building by-law by an owner does not discharge the municipality from it's duty to competently inspect construction, although damages will be reduced by the contributory negligence of the owner.	[1989] 2 SCR. 1259, [1990] 1 W.W.R. 408, 63 D.L.R. (4th) 449, 41 B.C.L.R. (2d) 374 (sub nom. Manlakos v. Gohmann) 46 M.P.L.R. 217, 1 C.C.L.T. (2d) 233, (sub nom. Manalakos v. Vernon (City)) 102 N.R. 249
Sapone v. Clarington (Municipality)	A Municipality has no legal duty to enforce it's by-laws and a damage suit against it premised on such a claim will be dismissed	[2001] O.J. No. 4991, Court File No. 6746/01, Ontario Superior Court of Justice, Lane J., December 18, 2001
Wirth v. Vancouver (City)	Where there is no foreseeable risk of personal injury or damage to property a municipality is under no duty of care to an owner of property abutting a site for which a building permit was negligently issued. Economic loss, whether	

	foreseeable or not, does not create a duty of care.	
Wooldridge v. Stack	**A Municipality will not bear civil liability for non-inspection of construction where it had no statutory obligation to inspect and decided not to for valid policy reasons.**	**(1993), 107 Nfld. & P.E.I.R. 280, 336 APR. 280 (Nfld. T.D.)**

Building Code Act Section 36

SHORT TITLE	DESCRIPTION	CITATIONS
Czumak v. Etobicoke (City)	An order to comply cannot prohibit all work from proceeding, but is limited to prohibiting work which does not comply with the building permit. A stop work order is not effective to stop work which is not prohibited by a proper order to comply. Failure to assist a search which is illegal will not found a charge.	(September 16, 1994), (Ont. Prov. Div.)
Maitland Valley Conservation v Cranbrook Swine	To successfully defend charges on the basis of 'officially-induced error' the accused must show: (1) he considered the legal consequences of its actions and sought legal advice, (2) the legal advice obtained must have been given by an appropriate official, (3) the legal advice was erroneous, (4) the person receiving the advice relied on it, and (5) the reliance was reasonable.	DOCKET: C37250 and C37262, COURT OF APPEAL, ABELLA, MACPHERSON and SIMMONS JJ.A., APR 28 2003
R. Pickles	The limitation period for laying a charge for building without a permit starts the day the work is complete, not the day the municipality discovers the offence was committed. The discoverability rule is not applicable.	COURT OF APPEAL FOR ONTARIO, DOHERTY, MACPHERSON and SIMMONS JJ.A, February 24, 2004.
R. v. 593288 Ontario Ltd.	In the case of proceedings for failure to comply with an order to comply, the one year limitation in section 36 (8) runs from the time when damage manifested itself.	[1998] O.J. No. 5670, DRS 99-07931, Ontario Court of Justice (Provincial Division), Newmarket, Lampkin Prov. J., December 18, 1998

Building Code Act Section 38

SHORT TITLE	DESCRIPTION	CITATIONS
Eramosa (Township) Chief Building Official v. Hilts	Although the court is reluctant to order such a destructive result as the demolition of an illegally erected building, to permit such to remain would encourage disobedience of and promote disrespect for the law.	File No. 630/94, Ontario Court of Justice (General Division), Guelph, Ontario, Langdon J., September 8, 1997
Nixon v. Greymac Mortgage Corp.	An order was given requiring a tenant to make application for a required building permit within 30 days or to cease using the premises.	(1984), 35 R.P.R. 271 (H.C.)
Toronto (City) Chief Building Official v. Andriano	A court order requiring the demolition of an addition constructed without a permit should allow 90 days for execution rather than 30 days, as the addition was not dangerous.	Court File No. 97-CV-128925, Ontario Court of Justice (General Division), Pitt J., September 30, 1998
Toronto (City) v. P & M Construction Ltd.	It is appropriate to require internal renovations which conflicted with the plans for the issued permit to be brought into conformity with the plans as filed.	(1981), 16 M.P.L.R. 85 (H.C.)

SHORT TITLE	DESCRIPTION	CITATIONS
Association of Professional Engineers of Ontario v. Minister of Municipal Affairs and David Brezer	**The Building Code Act does not authorize a regulation which duplicates the professional regulation of Professional Engineers in Ontario, particularly as it respects their conduct or competency. To the extent the Building Code imposes such conditions, it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.**	**Court File No.143/06 (Ont. Div. Ct.)**

Building Code Division C Article 3.2.4.1

SHORT TITLE	DESCRIPTION	CITATIONS
Association of Professional Engineers of Ontario v. Minister of Municipal Affairs and David Brezer	**The Building Code Act does not authorize a regulation which duplicates the professional regulation of Professional Engineers in Ontario, particularly as it respects their conduct or competency. To the extent the Building Code imposes such conditions, it should be read as excluding those members of professions already subject to a statutory professional regulatory regime.**	**Court File No.143/06 (Ont. Div. Ct.)**

Planning Act Section 3

Hill and Hill Farms Ltd. v Bluewater (Muncipality)	**Zoning bylaws are 'municipal bylaws' within the meaning of the Farming and Food Production Protection Act, 1998.** **The determination under the Farming and Food Production Protection Act, 1998 of what is a normal farming practice must be consistent with the Minister of Agriculture's directives, guidelines or policies. Reduction by half of a minimum separation distance cannot be considered is directly contradictory with Ministry directives and cannot stand.**	**Docket: C43637 Ontario Court of Appeal**	*PA s. 3*
Water & Ice Ltd. v. Muskoka Lakes (Township)	**Site Plan Approval must conform to Provincial Policy Statements. Where the municipal Official Plan requires an environmental impact statement in the circumstances, the failure to have same justifies the withholding of site plan approval and does not evidence 'extraordinary circumstances' which would allow a building permit to be issued without site plan approval.**	**23 M.P.L.R. (4th) 87**	**Water & Ice Ltd. v. Muskoka Lakes (Township)**

Planning Act Section 24

SHORT TITLE	DESCRIPTION	CITATIONS
Albert Bloom Ltd. v. Bentinck	A by-law passed to lift a holding 'H' provision in a zoning by-law is not capable of being tested against official plan conformity.	(1996), 31 OR. (3d) 317,37 M.P.L.R. (2d) 156, (sub nom. Bloom (Albert) Ltd. v. Bentinck (Township)) 96 O.A.C. 241 (C.A.)
Campeau Corp. v. Gloucester(Township)	Where statute requires the by-laws of a local municipality to conform with the official plan of an upper-tier municipality, a building permit should not be issued for a use which conflicts with the upper-tier official plan.	(1978), 21 OR. (2d) 4, M.P.L.R. 290, 89 D.L.R. (3d) 135, affirmed (1979), 22 OR. (2d) 652, 8 M.P.L.R. 147, 96 D.L.R. (3d) 321 (CA.)
Csele v. Pelham (Town)	Where an upper-tier municipality has the authority to zone lands in conformity to it's official plan, a conflict between local zoning and an upper tier official plan will be irrelevant and a building permit should be issued for a use even though the use conflicts with the upper-tier official plan.	(1985), 29 M.P.L.R. 188 (Dist. Ct.)
Davison v. Orangeville (Town)	The compliance of a use to an official plan policy is irrelevant where the proposed use conflicts with zoning in force which predates the OP policy.	(1996), 36 M.P.L.R. (2d) 74 (Ont. Gen. Div.)
J & R Rite Holdings (Oshawa) Inc. v. Oshawa (City)	A CBO may refuse to issue a building permit where the proposed use conflicts with the official plan of an upper tier municipality, there is a statutory obligation for local zoning by-laws to be amended to conform with the upper-tier OP, even though the local zoning permits the use.	(1988), 64 OR. (2d) 471, 38 M.P.L.R. 97 (H.C.)

Planning Act Section 33

SHORT TITLE	DESCRIPTION	CITATIONS
Trivest Developments Ltd. v. Toronto (City)	**The Building Code Act and the Planning Act are not in pari material insofar as the meaning of 'demolition' is concerned**	**(1986), 54 OR. (2d) 728, 39 R.P.R. 255 32 M.P.L.R. 124 (H.C., affirmed (1986), 57 OR. (2d) 799 (CA)**

Planning Act Section 34

SHORT TITLE	DESCRIPTION	CITATIONS
Axelrod Toronto (City)	A By-law which provides that where a building of a certain type presently exists, it may only be replaced by a building with the height, floor area and density limitations prescribed in the by-law is not concerned with use of property or construction standards but rather with limiting future use where certain structures presently exist. While this may be a proper and meritorious planning purpose, it is not a purpose authorized by The Planning Act and such a by-law is invalid.	(1981), 15 M.P.L.R. 143 (Div. Ct.)
Galway & Cavendish (United Townships) v. Windover	Municipalities have the authority to zone lands covered by water provided they do not interfere with navigation. This is so even though the bed of the waterbody is owned by the Province, provided the by-law does not work at cross-purposes to provincial legislation. Zoning by-laws should be given a liberal interpretation. A floating boathouse is a structure within the meaning of the BC.	(1995), 30 M.P.L.R. (2d) 109, 130 D.L.R. (4th) 710 (Ont. Gen. Div.)
Greater Toronto Airports Authority v. Mississauga (City)	The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.	(1999), 43 OR. (3d) 9, 50 M.P.L.R. (2d) 54, 45 C.L.R. (2d) 212 (Ont. Gen. Div.)

Loblaws Inc. v. Ancaster (Town) Chief Building Official	**A building constructed pursuant to a permit issued for an intended use which does not comply with the zoning by-law is to require the occupant to comply with the by-law. The permit need not be rescinded. The official plan can be looked at to interpret the meaning of a zoning by-law provision. A use which is comprised of permitted and prohibited activities is not in compliance with zoning and the remedy is to limit the use to the permitted activities.**	**(1993), 13 M.RL.R. (2d) 94, 95 D.L.R. (4th) 695, 10 C.P.C. 232 (Ont. Gen. Div.)**
Pettinato v. Oakville (Town)	**Clear language is required to avoid an interpretation of a zoning by-law which advances a residential community's quality of life.**	**(1996), 33 M.P.L.R. (2d) 216 (Ont. Gen. Div.)**
Philpott v. Innisfil (Town)	**It is not correct/reasonable to respond to a building permit application submitted after the passage of a zoning by-law amendment which would have (inadvertently) permitted the building/use which was the subject of the permit where the by-law error was subsequently corrected (and at no time was the by-law in law amended to permit the said building/use).**	**2006 CanLII 28741 (ON S.C.), Docket: CV-06-145**
Rotstein v. North York (City)	**Two or more lots on a plan of subdivision may be a single 'lot' in the context of zoning. A registered subdivision agreement is not applicable law.**	**(December 13, 1994), Doc. No. RE4602/94 (Ont. Gen. Div.), leave to appeal refused (January 11, 1995), O'Leary J. (Ont. Div. Ct.)**
Superior Propane Inc. v. York (City)	**A zoning by-law restricting and regulating propane filling stations does not enhance provincial regulation on the same subject and, being in conflict, is invalid.**	**(1995), 27 M.P.L.R. (2d) 1,23 OR. (3d) 161, 123 D.L.R. (4th) 445, 17 C.E.L.R. (N.S.) 1, 80 O.A.C. 362 (C.A.)**
Union Gas Ltd. v. Dawn (Township)	**Zoning restrictions pertaining to facilities approved for construction by the Ontario Energy Board are in conflict with provincial legislation and invalid.**	**(1977), 15 OR. (2d) 722, 2 M.P.L.R 23, 76 D.L.R. (3d) 613 (Div. Ct.)**
Vanderschot v. North Easthope (Township)	**Municipal Interim control by-laws passed to control the height of structures in the vicinity of an airport were the exercise delegated federal authority validly received by the Municipality and authorized by the province. As such they were constitutionally valid.**	**(1995), 24 OR. (3d) 286 (sub nom. Re Ellice (Township) Zoning By-laws 294 &/or 26-94) 28 M.P.L.R. (2d) 1 (Div. Ct.)**

1121472 Ontario Inc. v. Toronto (City)	The scale of a dance floor and entertainment provided removed a use from being a 'restaurant' to an 'entertainment facility'.	(1998), 39 OR. (3d) 535 (Ont. CA)
Greater Toronto Airports Authority v. Mississauga (City)	The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.	Docket Nos. C31539 and C31557, Ontario Court of Appeal, Toronto, Ontario, McMurtry C.J.O., Laskin and Charron JJ.A., November 3, 2000
Nicholls v. Merrickville-Wolford (Village)	A zoning exception permitting uses of a municipality, local boards, and the like, does not extend to lessees of such bodies. A health centre operated under lease by a non-profit group is not permitted by such an exception.	Ontario Court of Justice (General Division), Ottawa, Panet J., December 22, 1998
723 Rymal Inc. v. Hamilton (City) Chief Building Official	A zoning by-law permitting a (i) "Community and Residential Care Access Centre"; and, (ii) a restaurant, required both uses to exist to comply with the zoning. A demolition permit for an existing building, identified in a site plan approval of the restaurant use, is properly denied as the result would be the remaining "Community and Residential Care Access Centre" would violate the by-law.	[2001] O.J. No. 832, Court File No. 00-2262, Ontario Superior Court of Justice, Lofchik J., January 9, 2001.
1423107 Ontario Inc. v. Woodstock (City)	Any doubt about the compliance of a use to the zoning should be resolved in favour of the proponent. The use of premises for full nudity non-therapeutic body massage is not permitted by the applicable zoning by-laws permission for a 'health club', nor is the operation of a tanning bed facility. The building permit was properly refused.	[2001] O.J. No. 1330 , Court File No. 462/00 , Ontario Superior Court of Justice , Woodstock, Ontario , Heeney J. , Judgment: April 2, 2001.

Thomas Furniture Ltd. v. Toronto	**A facility providing temporary shelter and food to homeless persons is a crisis care facility and not a hostel**	**[2002] O.J. No. 929, Court File No. 01-CV-222738, Ontario Superior Court of Justice**

Planning Act Section 34(9)

SHORT TITLE	DESCRIPTION	CITATIONS
382671 Ontario Ltd. v. London (City) Chief Building Official	Space within an apartment building which has the status of a legal non-conforming use may be converted to another apartment unit. In this regard, a building can be altered beyond its precise nonconforming status so long as such is reasonable.	28 O.R. (3d) 718, [1996] O.J. No. 1352, Court File No. 20060/96 Ontario Court (General Division), Killeen J., April 4, 1996
382671 Ontario Ltd. v. London (City) Chief Building Official	A zoning by-law provision which conflicts with rights under section 34(9) of the Planning Act is without authority. A legal nonconforming apartment building of 16 units may increase the number of units under it's grandparent rights i.e. it status is not dependent on the number of units simpliciter.	(1996), 32 M.RL.R. (2d) 1, 28 OR. (3d) 718 (Gen. Div.)
1218897 Ontario Limited v. Ann Borooah, Chief Building Official,City of Toronto and Ryding Auto Body Ltd.	The relevant legality of a non-conforming use concerns it's status under the terms of the zoning by-law. Any unlawful or illegal matter relating to the use or occupation of the lands outside of the *Planning Act* is irrelevant. The requirement of continuity for a legal non-conforming use can be met although use/occupation has been interrupted by an event beyond the owner's control where there is a an intention to continue the non-conforming use and that use is continued as far as possible in the circumstances.	Ontario Superior Court of Justice, Court File No: 05-CV-285838PD2, 2005/10/28
Bice v. Mississaugas of the New Credit	A legal non-conforming use may be established even though it is not in operation i.e. a gasoline station which is set up but has not sold any product. The lack of proof of necessary certification of fuel tanks prevents the establishment of a legal non-conforming use.	DRS 98-09722 ,Court File No. T-1410-96 ,Federal Court, Trial Division ,Jerome, A.C.J. ,March 25, 1998.
Budman v. Gravenhurst (Town)	A building permit issued for a lawful extension of a legal nonconforming building is properly revoked if the existing building is demolished.	(1983), 44 OR. (2d) 696, 24 M.P.L.R. 195, 1 O.A.C. 267 (Div. Ct.)
Cogan v. Toronto (City)	The entitlement to a building permit will not be denied where the application was not complete provided the corrections were specific and in train.	(1974), 3 OR. (2d) 661, 46 D.L.R. (3d) 481 (Div. Ct.) 8(2)(a);

David Gallo Building Co. v. Toronto (City)	**Revisions to permit plans which described a building which is taller, larger, and differently configured is a new application and not an amendment to the original. Rights arising from the original application are not inherited by the revision where the applicant had failed to clearly declare a willingness to alter the plans to comply with the zoning and the alterations are not specific and in train.**	**[1934] 3 OR. 892, 38 D.L.R. (3d) 536 (Div. Ct.)**
Haldimand-Norfolk (Regional Municipality) v. Beres	**The demolition of a legal non-conforming building will effect the abandonment of grandparent rights. A replacement building is illegal and it's occupation will be restrained.**	**(1980), 106 D.L.R. (3d) 760, 27 OR. (2d) 373 (H.C.)**
Haldimand-Norfolk (Regional Municipality) v. Copland	**The removal of a trailer home from a property causes the loss of the property's legal non-conforming status. It's subsequent replacement, being a larger park model home, was an entirely different structure.**	**(1993), 28 M.P.L.R. (2d) 308, 131 D.L.R. (4th) 114 (Ont. Div. Ct.)**
Heutinck v. Oakland (Township)	**To be legally non-conforming a use must be the same legally nonconforming use existing at the date the by-law restriction was passed.**	**(1997), 42 M.P.L.R. (2d) 258 (Ont. CA.)**
Kim v. Mississauga (City)	**The BCA does not authorize 'part permits'. A permit issued to allow the plumbing for a car wash gives the car wash building, not just it's plumbing, protection from subsequently passed zoning by-laws.**	**(1996), 33 M.P.L.R. (2d) 135, 29 C.L.R. (2d) 98 (Ont. Gen.Div.)**
Lofaro v. North York (City) Chief Building Official	**Minor variances which relate to an 'existing' dwelling cease to have application when the building has ceased to exist except for a small fragment.**	**Action No. 17/91 and 439/91, 11 M.P.L.R. (2d) 278, Ontario Court of Justice General Division, Toronto, Sheard J., July 14, 1992**
McLear v. Mason	**An unlicensed salvage yard was an illegal non-conforming use due to the lack of a license.**	**(1988), 65 OR. (2d) 228, 39 M.P.L.R. 111 (H.C.)**

Midland (Town) v. Fred DaSilva Enterprises Ltd.	**A building permit issued ostensibly for a weeping tile bed for a shopping centre will give the intended building grandparent rights over a subsequently passed zoning restriction prohibiting the use.**	**(1977), 3 M.P.L.R. 158, 16 OR. (2d) 657, 79 D.L.R. (3d) 88 (CA.)**
Oxbow Lake Cottagers Association v. Lake of Bays (Twp)	**The protection provided by the Planning Act to legal non-conforming uses does not extend to permitting the introduction of new buildings or structures for the protected uses.**	**2006 CanLII 32324 (ON S.C.), Court File No. 04-B7727**
Peacock v. CBO of Norfolk County	**An applicant's permit rights crystallize on the date the CBO makes the decision to issue or refuse a permit. An interim control by-law passed after an application is filed but before the decision must, absent extraordinary facts, be taken into account. A statute prohibiting the discharge of contaminants is applicable law relative to a permit application for a hog barn. The doctrine of legal nonconforming use cannot be used to protect expansion that necessarily entails grave environmental and public safety dangers.**	**SUPERIOR COURT OF JUSTICE, COURT FILE NO.: 0002/02, 2003/07/03** **Ontario Court of Appeal, Docket No. C42944, June 28, 2006**
Quay West v. Toronto (City)	**A proposed development does not have grandparent rights where a building permit 'ought to have been issued' before the passage of a prohibitory by-law, but had not in fact been issued. Site plan approval is a prerequisite to the issuance of a building permit, absent unusual circumstances.**	**(1989), 47 M.P.L.R. 109 (Ont. Div. Ct.)**
Saint-Romuald (City) *v.* Olivier	**Merely continuing the precise pre-existing activity, even at an intensified level, is protected as legally non-conforming unless there is an intensification of such a degree as to create an altogether different use. The landowner overreaches itself if (i) the scale or intensity of the activity can be said to bring about a change in the type of use, or if (ii) the addition of new activities or modification of old ones is seen by the Court as too remote from the earlier activities to be entitled to protection, or if (iii) the new or modified activities can be shown to create undue additional or aggravated problems for the municipality, the local authorities, or the neighbours. The factors are balanced against one another.** **Substitution of nude dancers for country and western singers is not such an extreme variation in the nightclub or cabaret formula as to constitute a wholly different and therefore unprotected use. The pre-existing use can appropriately be characterized as the commercial offering of a combination of food, drink, ambiance and lawful entertainment to the public. The switch to a different form of entertainment is within this general nightclub purpose.**	**Supreme Ct. of Canada, [2001] 2 S.C.R. 898, September 27, 2001.**

Seel Enterprises Ltd. v. Toronto (City)	**The failure to have a lodging house licence and the existence of building code violations at the time a prohibitory by-law was passed prevent a use from claiming legal non-conforming status.**	**(1982), 17 M.P.L.R. 315 (Div. Ct.). (1992), 11 M.P.L.R. (2d) 43, 2**
Shell Canada Products Ltd. v. Barrie (City) Chief Building Official	**The lack of site plan approval and an intervening interim control by-law disentitled an applicant to a building permit.**	**C.L.R. (2d) 200 (Ont. Gen. Div.), additional reasons at (1992), 13 M.P.L.R. (2d) 279 (Ont. Gen. Div.)**
Sixteenth Warden Ltd. v. Markham (Town)	**Section 34(9) of the Planning Act can be interpreted as including a situation where a 'permit ought to have been issued' where a permit should have been issued, notwithstanding the post-permit application passage of an interim control by-law. Site plan approval is not a prerequisite to the issuance of a building permit where the approval was improperly withheld.**	**(1993), 12 OR. (3d) 653. 18 M.P.L.R. (2d) 70 (Gen. Div.)**
Thorman v. Cambridge (City)	**In a single family zoned area, the exemption provided by s. 34(9) of the Planning Act allows a building containing 3 dwelling units to use space formerly occupied by a butcher shop for another dwelling unit.**	**(1977), 4 M.P.L.R. 220, 18 OR. (2d) 142, 81 D.L.R. (3d) 736 (H.C.)**
Walton v. Lincoln (Town)	**Legal non-conforming use status is lost by a fire which destroys the building containing the use. A CBO acts correctly in taking into account not only the structural design of a building but also it's intended use in refusing a permit application. Zoning is applicable law at the plan review stage.**	**(1997), 43 M.P.L.R. (2d) 291 (Ont. Gen. Div.)**

Watts and Watts v. Shawn Benvenuti and Kim Alderson	**The factors which are to be considered in determining if an allegedly legally non-conforming use is a new use or an iteration of a pre-existing use are:** **1. The purpose of the pre-existing use and the activities that were carried on the property prior to the enactment of the new bylaw.** **2. Whether the new proposed use is simply an intensification of the old use or goes beyond the old use by a matter of degree and constitutes, in terms of community impact, a difference in kind.** **3. The remoteness of the change of the activity from the earlier activity.** **4. The extent to which the new activities are within the original scope of usage.** **5. The neighborhood effects as established.** **6. The proper balance in the characterization of the legal non-conforming use (not too general so as to liberate the owner from the constraints of what he actually did and not so narrow as to rob him of flexibility).** **A conversion of a cash crop agricultural operation into a horse farm is protected by legal non-conforming status where the number of horses is not excessive.**	**Ontario Superior Court of Justice, 2005 CanLII 27154 (ON S.C.), Court File No: 9/05, July 25, 2005**
Wolfond v. North York Building Commissioner	**Administrative delay in issuing a building permit should not deprive a permit applicant of grandparent rights which would have existed had a permit been promptly issued. An applicant's rights crystallize on the date of the CBO'S decision.**	**(1990), 1 M.P.L.R. (2d) 189, 74 OR. (2d) 466 (Dist. Ct.)**

Planning Act Section 34(30)

SHORT TITLE	DESCRIPTION	CITATIONS
Hastings Corp. Ltd. v. Borooah	**The appropriate standard of review of a decision of the CBO respecting the interpretation of a zoning by-law is closer t correctness than reasonableness. A zoning by-law which was passed before a permit application, continues an existing zoning permission for the subject of the application, but is under omb appeal, is not applicable law as any changes withdrawing the permission would not be retroactive to the date of passage of the by-law.**	**DIVISION COURT FILE NO.: 145/04, SUPERIOR COURT FIL NOS.: 03-CV-255048CMI & 03-CV-257685CMI, June 22, 2004**

Planning Act Section 35

SHORT TITLE	DESCRIPTION	CITATIONS
Phi Delta Beta of London Inc. v. London (City) Chief Building Official	**A CBO is entitled to consider the intended use of a property in considering the conformity to zoning although that use has not yet been established. A fraternity house cannot be considered a 'single' housekeeping unit'**	**(1995), 25 M.P.L.R. (2d) 140 (Ont. Gen. Div.), affirmed (1996), 36 M.P.L.R. 319 (Ont. Div. Ct.)**

Planning Act Section 38

SHORT TITLE	DESCRIPTION	CITATIONS
Sixteenth Warden Ltd. v. Markham (Town)	Section 34(9) of the Planning Act can be interpreted as including a situation where a 'permit ought to have been issued' where a permit should have been issued, notwithstanding the post-permit application passage of an interim control by-law. Site plan approval is not a prerequisite to the issuance of a building permit where the approval was improperly withheld.	(1993), 12 OR. (3d) 653. 18 M.P.L.R. (2d) 70 (Gen. Div.)
Toronto (City) Chief Building Official v. Vaghela Holdings Inc.	In the absence of bad faith or similar illegal reasons for refusing a building permit, an applicant who has not received a permit is subject to the terms of a subsequently passed interim control by-law and will be subject to a compliance order.	(1993), 16 M.P.L.R. (2d) 99 (Ont. Gen. Div.)
Vanderschot v. North Easthope (Township)	Municipal Interim control by-laws passed to control the height of structures in the vicinity of an airport were the exercise delegated federal authority validly received by the Municipality and authorized by the province. As such they were constitutionally valid.	(1995), 24 OR. (3d) 286 (sub nom. Re Ellice (Township) Zoning By-laws 2-94 &/or 26-94) 28 M.P.L.R. (2d) 1 (Div. Ct.)

Planning Act Section 38(8)

SHORT TITLE	DESCRIPTION	CITATIONS
Quay West v. Toronto (City)	A proposed development does not have grandparent rights where a building permit 'ought to have been issued' before the passage of a prohibitory by-law, but had not in fact been issued. Site plan approval is a prerequisite to the issuance of a building permit, absent unusual circumstances.	(1989), 47 M.P.L.R. 109 (Ont. Div. Ct.), leave to appeal to CA. refused (1989), 47 M.P.L.R. 109 (Ont. CA.)
Shell Canada Products Ltd. v. Barrie (City) Chief Building Official	The lack of site plan approval and an intervening interim control by-law disentitled an applicant to a building permit.	(1992), 11 M.P.L.R. (2d) 43, 2 C.L.R. (2d) 200 (Ont. Gen. Div.), additional reasons at (1992), 13 M.P.L.R. (2d) 279 (Ont. Gen. Div.)

Planning Act Section 41

SHORT TITLE	DESCRIPTION	CITATIONS
861168 Ontario Inc. v Foreshew, CBO of Lindsay (Town)	Neither the costs of renovation nor the change in income-generating ability are determinative of whether the work requires site plan approval. If fewer people will be using a building after renovations that is indicative of the usability of the building being reduced. Changes in 'usability' should be measured in relation to the facilities and matters set out in sec. 41(7)(a) of the Planning Act.	(1991), 3 OR. (3d) 721, 6 M.P.L.R. (2d) 84 (Gen. Div.)
Dominion Stores Ltd. v. Etobicoke (Borough)	A municipality cannot prohibit access to a site from abutting local roads as a condition of site plan approval. Where a municipality imposes unlawful conditions to site plan approval the applicant is entitled to a building permit notwithstanding the site plan approval is outstanding. An applicant for site plan approval is not obliged to appeal to the OMB to resolve an illegal condition [Ed. note: When section 41(4.3) of the Planning Act is proclaimed the OMB will be the body to determine the latter].	(1982), 37 OR. (2d) 661, 135 D.L.R. (3d) 301, 19 M.P.L.R. 88, 26 R.P.R. 1 (Div. Ct.)
Egarhos v. Ottawa (City)	Increasing the number of residential apartments in a mixed use building by 10% through the conversion of unrentable office space is a 'development'.	(1985), 52 OR. (2d) 190 (Dist. Ct.)
Forster v. Waterloo (City)	The action of City Council in enacting a down-zoning by-law hard on the heels of the receipt of a report, having delayed its consideration of the applicant's site plan while at the same time instructing engineering and planning staff to continue negotiations with the applicant with respect to engineering and planning issues, constitutes bad faith and brings the situation into the category of extraordinary	Action No. 3415/92, Ontario Court of Justice -General Division, Kitchener, , Sills J., February 12, 1993

	circumstances in which site plan approval is not required as a pre-condition to the issuance of a building permit.	
Henry LePage v The Archipelago (Township)	A floating dock attached to land is subject to the BCA. A zoning by-law is applicable law. An official plan is not applicable law and it should not be used to interpret a zoning by-law. Site plan approval is not applicable law [Ed. Note: The latter conclusion is, in it's breadth, wrong].	(July 7, 1989), Doc. No. 924/89 (Dist. Ct.)
Kally s Restaurant Inc. v. Scarborough (City)	A municipality cannot require the provision of more parking than that required by it's zoning by-law, as it stood on the date of the application for site plan approval, as a condition of site plan approval. Where a municipality imposes unlawful conditions to site plan approval the applicant is entitled to a building permit notwithstanding the site plan approval is outstanding.	(1993), 12 OR. (3d) 312, 14 M.P.L.R. (2d) 117, 99 D.L.R. (4th) 381, 62 O.A.C. 143 (Div. Ct.)
Polla v. Toronto (City) Chief Building Official	Where the legality of site plan conditions is in issue the court has jurisdiction and will exercise it even though an appeal may be lodged with the OMB. A site plan condition requiring the removal of a lawful structure is illegal.	[2000] O.J. No. 4399, Court File No. 00-CV-194025, Ontario Superior Court of Justice, Molloy J., udgment: November 21, 2000.
Revenue Properties Co. v. Toronto (City)	A building permit may be issued even where site plan approval is required but not yet obtained; however, construction under the permit cannot commence until site plan approval is obtained.	(1984), 26 M.P.L.R. 165 (Co. Ct.)

Ross v. Muskoka Lakes (Township)	**The more the Chief Building Official's decision is a determination of law, the closer the standard will be to correctness. The more the initial decisions depended upon factual determinations within the special expertise of the Chief Building Official, the more deferential will be the standard. The general rule is that site plan approval is required before the building permit is to be issued because site plan approval is "other applicable law". Only where there is bad faith or other unlawful conduct should the court exercise the jurisdiction given to it under the Building Code Act to rectify an injustice by granting a building permit in the absence of site plan approval.**	**COURT FILE NO.: 257-02, Bracebridge, ONTARIO SUPERIOR COURT OF JUSTICE, January 19, 2004.**
Toronto Area Transit Operating Authority v. Mississauga (City)	**A Crown in Right of Ontario agent is not required to obtain site plan approval, apply for a building permit, or pay parks levies, for it's building**	**(1996), 32 M.P.L.R. (2d) 97, 133 D.L.R. (4th) 257 (Ont. Gen. Div.)**
Trucena Properties Ltd. v. Toronto (City)	**Site plan approval is not a prerequisite for the issuance of a building permit.**	**(1988), Doc. No. M l6550 1/88 (Ont. Dist. Ct.)**
Water & Ice Ltd. v. Muskoka Lakes (Township)	**Site Plan Approval must conform to Provincial Policy Statements. Where the municipal Official Plan requires an environmental impact statement in the circumstances, the failure to have same justifies the withholding of site plan approval and does not evidence 'extraordinary circumstances' which would allow a building permit to be issued without site plan approval.**	**23 M.P.L.R. (4th) 87**

Planning Act Section 41(4) to (9)

SHORT TITLE	DESCRIPTION	CITATIONS
Kally's Restaurant Inc. v. Scarborough (City)	**A municipality cannot require the provision of more parking than that required by it's zoning by-law, as it stood on the date of the application for site plan approval, as a condition of site plan approval. Planning Act Section 51(24(i)

SHORT TITLE	DESCRIPTION	CITATIONS
Mississauga (City of) , Peel District Public School Board et al v. Britannai North Holdings Inc.	**A condition of draft subdivision approval requiring satisfaction of the school boards regarding the adequate provision and distribution of educational facilities is within the jurisdiction of the approval authority. The 'adequate provision and distribution' of educational facilities is distinct from the 'the adequacy of school sites'.**	**Ontario Superior Court of Justice, Divisional Court, MacFarland, Dunnet and McCartney JJ. Judgment: December 3, 1999**

Planning Act Section 51(26)

SHORT TITLE	DESCRIPTION	CITATIONS
Mayhew v. Hamilton (Twp.)	**A building permit is properly issued for a parcel of land which was required by the terms of a subdivision agreement to be zoned so as to prohibit buildings, but which in fact was zoned to allow buildings, as a subdivision agreement is not applicable law.**	**Court File No. 004918 Feb. 6, 2002**
Rotstein v. North York (City)	**Two or more lots on plan of subdivision may be a single 'lot' in the context of zoning. A registered subdivision agreement is not applicable law**	**(December 13, 1994), Doc. No. RE4602/94 (Ont. Gen. Div.), leave to appeal refused (January 11, 1995), O'Leary J. (Ont. Div. Ct.)**

Planning Act Section 67

SHORT TITLE	DESCRIPTION	CITATIONS
Dusevic v. Columbia Shuswap (Regional District)	**At common Law a municipality is under no obligation to enforce it's by-laws and is not civilly liable to persons suffering from the non-enforcement. This is unchanged where there is no statutory direction to the contrary i.e. in the by-law.**	**(1989), 44 M.P.L.R. 160 (B.C.S.C.)**
Sapone v. Clarington (Municipality)	**A municipality has no legal duty to enforce it's by-laws and a damage suit against it premised on such a claim will be dismissed.**	**[2001] O.J. No. 4991, Court File No. 6746/01, Ontario Superior Court of Justice, Lane J., December 18, 2001**
Whislter Service Park Ltd. v. Whistler (Resort Municipality)	**A policy to enforce by-laws on a 'complaint driven' basis is proper, absent bad faith.**	**(1990), 50 M.P.L.R. 233, 41 C.L.R. 132 (B.C.S.C.)**

Planning Act Section 76(1)

SHORT TITLE	DESCRIPTION	CITATIONS
Mississauga (City) v. Vandenbergh	**Section 76(1) of the Planning Act does not authorize the increase in the number of apartment units within an existing multi-unit building**	**Court File No. A4740/96, Ontario Court of Justice (Genearl Division), Brampton Mackenzie J., January 7, 1998**

Conservation Authorities Act

SHORT TITLE	DESCRIPTION	CITATIONS
Stacey v. Oxford-on-Rideau (Township)	**The Conservation Authorities Act and regulations is applicable law. "Construction" in the Conservation Authorities Act does not include the reconstruction of a fire-damaged building.**	**(1989), 46 M.P.L.R. 15 (Ont. Dist. Ct.)**
Upper Thames Conservation Authority v. London (City)	**Internal renovations may not be subject to conservation regulations and so a building permit may be issued without conservation authority approval.**	**(1989), 67 OR. (2d) 784, 42 M.P.L.R. 241, 2 R.P.R. (2d) 58 (Dist. Ct.)**

Conservation Authority Act Section 28(1)(c) & (25)

SHORT TITLE	DESCRIPTION	CITATIONS
Upper Thames Conservation Authority v. London (City)	Internal renovations may not be subject to conservation regulations and so a building permit may be issued without conservation authority approval.	(1989), 67 OR. (2d) 784, 42 M.P.L.R. 241, 2 R.P.R. (2d) 58 (Dist. Ct.)

Development Charges Act

SHORT TITLE	DESCRIPTION	CITATIONS
Conin Construction Co. v. Scarborough (Borough)	Unless authorized by statute, a municipality cannot make the payment of a development charge a condition of issuing a building permit [Ed. note: this case is rendered largely obsolete by the specific authority given by the Development Charges Act]. Monies paid under the practical compulsion of necessity are recoverable if there was no legal authority for their collection.	(1981), 15 M.P.L.R. 133, 32 OR. (2d) 500, 122 D.L.R. (3d) 291 (H.C.)
Greater Toronto Airports Authority v. Mississauga (City)	The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.	(1999), 43 OR. (3d) 9, 50 M.P.L.R. (2d) 54, 45 C.L.R. (2d) 212 (Ont. Gen. Div.)
Greater Toronto Airports Authority v. Mississauga (City)	The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.	Docket Nos. C31539 and C31557, Ontario Court of Appeal, Toronto, Ontario, McMurtry C.J.O., Laskin and Charron JJ.A., November 3, 2000

Re Ontario Cancer Treatment and Research Foundation and Corporation of the City of Ottawa et al.	**A Foundation incorporated by an Act which includes a provision exempting the Foundation from taxation for municipal or provincial purposes is exempt from charges under the Development Charges Act, 1990**	**38 O.R. (3d) 224, Docket No. C22850, Court of Appeal for Ontario, Finlayson, Osborne and Labrosse JJ.A., February 12, 1998**

Environmental Assessment Act

SHORT TITLE	DESCRIPTION	CITATIONS
Toronto (City) Official Plan Amendment 333, Re	The installation of services by a developer under a subdivision agreement with a municipality is not subject to the Environmental Assessment Act.	(1986), 33 M.P.L.R. 177 (O.M.B)
Pedwell v Town of Pelham	A CBO has a right to consult with other Town officials but must make an independent decision. The Environmental Assessment Act is applicable law.	DOCKET: C30587, COURT OF APPEAL, WEILER, ROSENBERG and ARMSTRONG JJ.A., MAY 9, 2003

Environmental Protection Act

SHORT TITLE	DESCRIPTION	CITATIONS
Leeds & Grenville Board of Education v. Gerrard	A geothermal heat pump system related to a new building is a 'building' as defined by the BCA. The Environmental Protection Act is 'applicable law'.	(1991), 8 C.E.L.R. (N.S.) 266 (Ont. Gen. Div.)
Welwood v. Huron-Kinloss (Township)	In terms of the standard of review of a CBO's decision on questions of law, the CBO is required to be correct, on questions of fact the CBO is required to meet a standard of reasonableness, and on mixed questions of law and fact, the CBO is required to meet a standard of reasonableness. The Environmental Protection Act is not applicable law as it relates to a building permit for the two hog barns.	[2002] O.J. No. 1131, Court File No. 31433, Ontario Superior Court of Justice, Browne J.,March 26, 2002.

Environmental Protection Act Section 6

SHORT TITLE	DESCRIPTION	CITATIONS
Welsood v. Huron-Kinloss (Township)	**In terms of the standard of review of a CBO's decision on question of law, the CBO is required to be correct, on questions of fact the CBO is required to meet a standard of reasonableness, and on mixed questions of law and fact, the CBO is required to meet a standard of reasonableness. The Environmental Protection Act is not applicable law as it relates to a building permit for the two hog barns.**	**[2002 O.J. 1131 Court File No. 31433, Ontario Superior Court of Justice, Browne J., March 26, 2002.**

Fire Protection and Prevention Act Sections 24, 24 and 27

SHORT TITLE	DESCRIPTION	CITATIONS
Peterson v. Ajax (Town) Fire Marshal	**In the absence of any evidence that a charge in facts has increased fire hazards in a building neither an order of a fire marshal nor a Fire Code Commission ruling can be sustained.**	**Ontario Court of Justice (General Division), Divisional Court, [1998] O.J. No. 3303, DRS 98-16383, court File No. 750-9, B. Wright J., August 18, 1998**

Municipal Act

SHORT TITLE	DESCRIPTION	CITATIONS
Jessie's Centre Non-Profit Home Corp v. Bottan	**A municipal by-law authorizing technical trespass in order to construct a building can be relied on as a sword against spite-motivated actions by an abutting landowner to frustrate the exercise of the by-law created right.**	**(1991), 47 C.L.R. 113 (Ont. Gen.Div.)**

Municipal Act Section 99

SHORT TITLE	DESCRIPTION	CITATIONS
Vann Niagara v Oakville	A sign by-law which prohibits all billboard signs and all third party signs violates the Charter of Rights guarantee of freedom of expression. The municipality failed to show its objective in passing the sign by-law is pressing and substantial; that the by-law is rationally connected to that objective; that the by-law minimally impairs the right to freedom of expression; and finally, that there is proportionality between the effects and the objectives of the by-law. The by-law limitations are invalid.	DOCKET: C36773, COURT OF APPEAL, BORINS, FELDMAN AND MACPHERSON JJ.A., June 14, 2002
Vann Niagara v Oakville	A sign by-law which limits signs to an area of 80 sq. ft. freedom of expression, but minimally, and is constitutionally valid.	[2003] 3 S.C.R. 15, 2004-01-20, Docket: 29359

Public Transportation and Highway Improvement Act

SHORT TITLE	DESCRIPTION	CITATIONS
Essex 143 Joint Venture Ltd. v. Her Majesty The Queen In Right of Ontario as represented by the Minister of Transportation	**Where an agreement between the MTO and owner under section 38 of the Public Highway and Transportation Improvement Act entered into as a condition of the issuance of a permit under the PHTIA for a commercial component of a mixed use development provides that subsequent phases of a project are subject to permits, a permit must be obtained although the subsequent phase in issuance is residential. This is so regardless of whether a permit would have, absent the agreement, been required for the subsequent phase.**	**Court of Appeal for Ontario Docket: C43573, 2006/05/08**

Ontario Heritage Act

SHORT TITLE	DESCRIPTION	CITATIONS
Roman Catholic Episcopal Corp. for the Diocese of Peterborough in Ontario, Canada v. Cobourg (Town)	A judge acting under sec 25 should do what the CBO ought to have done. A judge has no other powers than that of the CBO and no discretion which the CBO does not also have. A heritage easement agreement can be applicable law. A CBO who issues a demolition permit for work which conflicts with a heritage easement agreement act correctly in revoking the permit on the basis of the error.	(May 7, 1998), Doc. Cobourg 000401/98 (Ont. Gen. Div.) see also court file no. 49173/98
Toronto College Street Centre v. Toronto (City)	A building permit application which conflicted with a Heritage Easement Agreement was properly refused. The Ontario Heritage Act should be given a broad and liberal interpretation.	(1986), 56 OR. (2d) 522. 17 O.A.C. 113, 31 D.L.R. (4th) 402,34 M.P.L.R. 138 (CA.), leave to appeal to 5CC. Refused (1987), 34 M.P.L.R. xxxi (note), 23 O.A.C. 160 (note), 79 N.R. 400 (note), 61 OR. (2d) 669 (note)

Constitutional Law

Greater Toronto Airports Authority v. Mississauga (City)	**The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.**	**(1999), 43 OR. Greater Toronto Airports Authority v. Mississauga (City)	**The Building Code and municipal development charge by-laws can have no application to lands owned by Canada where a lease from Canada specifically deals with the use of the lands in the same context as a municipal zoning by-law. The physical structures comprising an airport are within the exclusive jurisdiction of the Federal government and would also intrude over the federal jurisdiction over federal works and undertakings.**	**Docket Nos. C31539 and C31557, Ontario Court of Appeal, Toronto, Ontario, McMurtry C.J.O., Laskin and Charron JJ.A., November 3, 2000**

Civil Law and Liability

SHORT TITLE	DESCRIPTION	CITATIONS
Bakhtiari v. Axes Investments Inc.	The plans examiner failed to require interior fire separation doors in a building although a by-law called for them in plain language.. If the employee had a problem with the requirement, he acted unreasonably in failing to take it up with his superiors and obtain an interpretation. That is enough for liability. By way of defence, there must be a reasonable explanation for how this could happen if their employee had exercised reasonable care. This is a life safety matter whose importance is well known in the industry. It is utterly foreseeable that failure to require these devices would, in the case of fire, place the health and lives of the occupants at risk.	[2001] O.J. No. 4720 , Court File No. 95-CQ-61731CM , Ontario Superior Court of Justice, November 30, 2001
Calicloth Textiles Inc. v. Smith Falls (Town)	The payment of $2.175,000 in damages caused by the collapse of a faultily built roof were shared between the municipality and the building contractor.	[2001] O.J. No. 4946 , Court File No. 96-CV-100668 , Ontario Superior Court of Justice
Chapeskie v. Lake of Bays (Township)	Damages awarded by the court on a suit by the purchaser of a dwelling against it's builder and the municipality were divided 50:50 as between the two defendants. The ignorance of standards and failures of the builder were matched by the inadequacy exhibited by the Township's inspections and misleading occupancy permit.	File No. G13082/94, Ontario Superior Court of Justice, Newmarket, Howden J., July 9, 1999
Gadutsis v. Milne	A disclaimer of damages for revocation of a building permit, contained in a municipal permit form, will not protect a municipality from damages due to negligent municipal advice regarding applicable zoning and the negligent issuance of permit.	[1973] 2 OR. 503,34 D.L.R. (3d) 455 (H.C.)

Green v. Dixon	**Where a septic system was installed contrary to original plans, but was subsequently approved by the Health Unit, the CBO bears no liability if the system malfunctions.**	**(March 24, 1995), Doc. Nos. Barrie G858 1, G858 IA (Ont. Gen. Div.)**
Ingles v Tutkaluk Construction Ltd.	**An owner who allows his contractor to proceed with construction without a building permit will bear some responsibility for his consequent damages.**	**(1994), 24 M.P.L.R. (2d) 293 (Ont. Gen. Div.),**
Ingles v Tutkaluk Construction Ltd.	**A municipality is not absolved by the negligence of an owner of a building under construction. To avoid liability, a municipality must show that its inspectors exercised the standard of care that would be expected of an ordinary, reasonable and prudent inspector in the same circumstances.**	**Appeal allowed, [2000] 1 S.C.R. , 298**
Just v. British Columbia	**True policy decisions should be exempt from tortious claims so that governments are not restricted in making decisions based upon social, political or economic factors. However, the implementation of those decisions may well be subject to claims in tort.**	**(1989), 64 D.L.R. (4th) 689. 1 C.C.L.T. (2d) 1, [1989] 2 5CR. 1228, 18 M.V.R. (2d) 1, [1990] 1 W.W.R. 385,41 B.C.L.R. (2d) 350, 103 N.R. 1, 41 Admin. L.R. 161, [1990] R.R.A. 1404**
Kamloops (City) v. Nielsen	**In order to obtain recovery for economic loss there must be a private law duty to the injured landowner alongside the public law duty. The plaintiff has to belong to the limited class of owners or occupiers of the property at the time the damage manifests itself. Loss caused as a result of policy decisions made by the public authority in the bona fide exercise of discretion will not be compensable. Loss caused in the implementation of policy decisions will not be compensable if the operational decision includes a policy element. Loss caused in the implementation of policy decisions, i.e. operational negligence will be compensable. Loss will also be compensable if the implementation involves policy considerations and the discretion exercised by the**	**[1984] 2 SCR. 2, [1984] 5 W.W.R. 1. 10 D.L.R. (4th) 641, 29 C.C.L.T. 97, 26 M.P.L.R. 81, 8 C.L.R. 1, 54 N.R. 1, 66 B.C.L.R. 273**

	public authority is not exercised in good faith. Economic loss will only be recoverable if as a matter of statutory interpretation it is a type of loss the statute intended to guard against.	
Kingsbridge Development Inc. v. Hanson Needler Corp.	A right included in an agreement of purchase and sale to allow the purchaser a subterranean easement for building purposes on the vendor's retained lands, is not denied or violated by the fact there are utilities in the easement area since their placement did not frustrate the construction necessary for the purchaser's building.	(1990), 71 OR. (2d) 636, 37 C.L.R. 180 (H.C.)
La Sucrerie Casselman Inc. v. Cambridge (Township)	The issuance of a building permit for a building on catastrophe-prone erosion area was a breach of the municipalities duty of care and rendered it liable to make good the damages. In the circumstances of this case there were no damages.	[2000] O.J. No. 4650, Court File No. 97-CV-002942-CM, Ontario Superior Court of Justice , Morin J.
Littler v. Mission (District)	An inspector is under a duty of care not to issue permits/licenses which do not comply with zoning by-laws and liability will exist for damages suffered by the owner relying on the issuance.	(1991), 6 M.P.L.R. (2d) 164 (B.C. S.C.)
Mariani v. Puslinch Twp.	A vendor who constructs his own house has the same obligation as a commercial builder-for-sale for damages suffered by a subsequent owner by negligent construction which raises a foreseeable risk of injury to persons or danger to property. The damages are the cost of putting the house in a non-dangerous state.	DOCKET: C39746, appeal from the judgment of Justice Thomas M. Dunn of the Superior Court of Justice dated February 14, 2003, COURT OF APPEAL, MAY 12 2004

Mortimer v. Cameron	**The failure by a plans examiner and a site inspector to use reasonable care in the approval of a renovation was the causative factor in personal damages awarded in the amount of $4.5 millions.**	**(1994), 19 M.P.L.R. (2d) 286, 17 OR. (3d) 1, 68 O.A.C. 332,111 D.L.R. (4th) 428 (CA.), additional reasons at (June 24, 1994), Doc. CAC12036 (Ont. CA.). leave to appeal to SCC. refused (1994), 23 M.P.L.R. (2d) 314 (note) 114 D.L.R. (4th) vii (note), 19 OR. (3d) xvi (note), 76 O.A.C. 400 (note), 178 N.R. 146 (note) (SCC.)**
Petruzzi v. Coveny	**The purchaser of a house constructed by the previous owner is entitled to damages jointly from the owner/builder and the municipality whose inspector was negligent in inspecting the work. Mental distress damages are properly awarded. The original owner/builder is also responsible for damages relating to non-building code defects.**	**(1991), 7 M.P.L.R. (2d) 183, 48 C.L.R. 225 (Ont. Gen. Div.)**
Riverside Developments Bobcaygeon Ltd. v. Bobcaygeon	**When the Chief Building Official for the municipality advises a developer that plans met the requirements of the Building Code for the Province, it is reasonable for the developer to rely on those assurances. It is also reasonable that the developer relied on the building inspector to check the construction as it advanced. Damages of some $14m. were awarded against the municipality.**	**COURT FILE NO.: 001779, 2004-01-19, SUPERIOR COURT OF JUSTICE, Justice B. Glass, Ct. of**
Rothfield v. Manolakos,	**The breach of a building by-law by an owner does not discharge the municipality from it's duty to competently inspect construction, although damages will be reduced by the contributory negligence of the owner.**	**[1989] 2 SCR. 1259, [1990] 1 W.W.R. 408, 63 D.L.R. (4th) 449, 41 B.C.L.R. (2d) 374, (sub nom. Manolakos v. Gohmann) 46 M.P.L.R. 217, 1 C.C.L.T. (2d) 233, (sub nom. Manolakos v. Vernon (City)) 102 N.R. 249**

Sapone v. Clarington (Municipality)	A municipality has no legal duty to enforce it's by-laws and a damage suit against it premised on such a claim will be dismissed.	[2001] O.J. No. 4991, Court File No. 6746/01, Ontario Superior Court of Justice, Lane J., December 18, 2001
T.H. Critelli Ltd. v. Lincoln Trust & Savings Co.	The design of a new building which produced excessive snow loads on the roof of an abutting building was actionable nuisance.	(1978), 20 OR. (2d) 81, 4 C.C.L.T. 217, 2 R.P.R. 290, 86 D.L.R. (3d) 724 (H.C.)
Tridan Developments v Shell Canada Products	The damages caused by a gasoline spill onto an abutting property are properly calculated to be the sum of removing all contamination ($350,000) and the cost of installing an below grade barrier to shield against subsequent seepage from the site of the spill. As the resulting cleaned-up site would be pristine, there should be no damages for 'stigma'. As the site's owner suffered no other loss, no pre-judgment interest should be awarded.	COURT OF APPEAL FOR ONTARIO, DOCKET:C34404, 2002/01/03
W Kirby v. Coquitlam (City)	Where the CBO was unaware of the existence of fill on site which would have required additional consideration before issuing a permit, there is no actionable negligence if the subsequently constructed building proves inadequate for the actual site conditions. A reasonably prudent building inspector would not have alerted to the condition.	(1996), 27 C.L.R. (2d) 120, 37 M.P.L.R. (2d) 113 (B.C. S.C.)
Wirth v. Vancouver (City)	Where there is no foreseeable risk of personal injury or damage to property a municipality is under no duty of care to an owner of property abutting a site for which a building permit was negligently issued. Economic loss, whether foreseeable or not, does not create a duty of care.	50 M.P.L.R. 105. 47 B.C.L.R. (2d) 340, 3 C.C.L.T. (2d) 282,71 D.L.R. (4th) 745, [1990] 6 W.W.R. 225 (CA.)
Woolridge v. Stack	A municipality will not bear civil liability for non-inspection of construction where it had no statutory obligation to inspect and decided not to for valid policy reasons.	(1993), 107 Nfld. & P.E.I.R. 280, 336 APR. 280 (Nfld. T.D.)

BUILDING CODE ACT
FORMS & CERTIFICATES

APPLICATIONS

1. Application for Permit to Construct/Demolish Article 2.4.1.1A(2).
2. Application to the Building Code Commission for a Hearing.

Application for a Permit to Construct or Demolish

This form is authorized under subsection 8(1.1) of the Building Code Act.

For use by Principal Authority	
Application number:	Permit number (if different):
Date received:	Roll number:

Application submitted to: _____
(Name of municipality, upper-tier municipality, board of health or conservation authority)

A. Project information

Building number, street name		Unit number	Lot/con.
Municipality	Postal code	Plan number/other description	
Project value est. $		Area of work (m^2)	

B. Applicant

Applicant is: ❑ Owner or ❑ Authorized agent of owner

Last name	First name	Corporation or partnership	
Street address		Unit number	Lot/con.
Municipality	Postal code	Province	E-mail
Telephone number ( )	Fax ( )		Cell number ( )

C. Owner (if different from applicant)

Last name	First name	Corporation or partnership	
Street address		Unit number	Lot/con.
Municipality	Postal code	Province	E-mail
Telephone number ( )	Fax ( )		Cell number ( )

D. Builder (optional)

Last name	First name	Corporation or partnership (if applicable)	
Street address		Unit number	Lot/con.
Municipality	Postal code	Province	E-mail
Telephone number ( )	Fax ( )		Cell number ( )

E. Purpose of application

❑ New construction ❑ Addition to an existing building ❑ Alteration/repair ❑ Demolition ❑ Conditional Permit

Proposed use of building	Current use of building

Description of proposed work

F. Tarion Warranty Corporation (Ontario New Home Warranty Program)

i. Is proposed construction for a new home as defined in the *Ontario New Home Warranties Plan Act*? If no, go to section G. ❑ Yes ❑ No

ii. Is registration required under the *Ontario New Home Warranties Plan Act*? ❑ Yes ❑ No

iii. If yes to (ii) provide registration number(s): _____

G. Attachments

i. Attach documents establishing compliance with applicable law as set out in Article 1.4.1.3. of Division A.

ii. Attach Schedule 1 for each individual who reviews and takes responsibility for design activities.

iii. Attach Schedule 2 where application is to construct on-site, install or repair a sewage system.

iv. Attach types and quantities of plans and specifications for the proposed construction or demolition that are prescribed by the by-law, resolution, or regulation of the municipality, upper-tier municipality, board of health or conservation authority to which this application is made.

H. Declaration of applicant

I _____ certify that:
(print name)

1. The information contained in this application, attached schedules, attached plans and specifications, and other attached documentation is true to the best of my knowledge.
2. If the owner is a corporation or partnership, I have the authority to bind the corporation or partnership.

_____ _____
Date Signature of applicant

Personal information contained in this form and schedules is collected under the authority of subsection 8(1.1) of the *Building Code Act, 1992*, and will be used in the administration and enforcement of the *Building Code Act, 1992*. Questions about the collection of personal information may be addressed to: a) the Chief Building Official of the municipality or upper-tier municipality to which this application is being made, or, b) the inspector having the powers and duties of a chief building official in relation to sewage systems or plumbing for an upper-tier municipality, board of health or conservation authority to whom this application is made, or, c) Director, Building and Development Branch, Ministry of Municipal Affairs and Housing 777 Bay St., 2nd Floor. Toronto, M5G 2E5 (416) 585-6666.

Schedule 1: Designer Information

Use one form for each individual who reviews and takes responsibility for design activities with respect to the project.

A. Project Information

Building number, street name			Unit no.	Lot/con.
Municipality	Postal code	Plan number/ other description		

B. Individual who reviews and takes responsibility for design activities

Name		Firm		
Street address			Unit no.	Lot/con.
Municipality	Postal code	Province	E-mail	
Telephone number ( )	Fax number ( )		Cell number ( )	

C. Design activities undertaken by individual identified in Section B. [Building Code Table 3.5.2.1. of Division C]

❑ House	❑ HVAC – House	❑ Building Structural
❑ Small Buildings	❑ Building Services	❑ Plumbing – House
❑ Large Buildings	❑ Detection, Lighting and Power	❑ Plumbing – All Buildings
❑ Complex Buildings	❑ Fire Protection	❑ On-site Sewage Systems

Description of designer's work

D. Declaration of Designer

I _____ declare that (choose one as appropriate):
(print name)

❑ I review and take responsibility for the design work on behalf of a firm registered under subsection 3.2.4.of Division C, of the Building Code. I am qualified, and the firm is registered, in the appropriate classes/categories.

Individual BCIN: _____

Firm BCIN: _____

❑ I review and take responsibility for the design and am qualified in the appropriate category as an "other designer" under subsection 3.2.5.of Division C, of the Building Code.

Individual BCIN: _____

Basis for exemption from registration: _____

❑ The design work is exempt from the registration and qualification requirements of the Building Code.

Basis for exemption from registration and qualification:_____

I certify that:

1. The information contained in this schedule is true to the best of my knowledge.
2. I have submitted this application with the knowledge and consent of the firm.

_____ _____

Date Signature of Designer

NOTE:

1. For the purposes of this form, "individual" means the "person" referred to in Clause 3.2.4.7(1) d).of Division C, Article 3.2.5.1. of Division C, and all other persons who are exempt from qualification under Subsections 3.2.4. and 3.2.5. of Division C.
2. Schedule 1 is not required to be completed by a holder of a license, temporary license, or a certificate of authorization, issued by the Ontario Association of Architects. Schedule 1 is also not required to be completed by a holder of a license to practise, a limited license to practise, or a certificate of authorization, issued by the Association of Professional Engineers of Ontario.

Schedule 2: Sewage System Installer Information

A. Project Information

Building number, street name			Unit number	Lot/con.
Municipality	Postal code	Plan number/ other description		

B. Sewage system installer

Is the installer of the sewage system engaged in the business of constructing on-site, installing, repairing, servicing, cleaning or emptying sewage systems, in accordance with Building Code Article 3.3.1.1, Division C?

- ❑ Yes (Continue to Section C)
- ❑ No (Continue to Section E)
- ❑ Installer unknown at time of application (Continue to Section E)

C. Registered installer information (where answer to B is "Yes")

Name			BCIN	
Street address			Unit number	Lot/con.
Municipality	Postal code	Province	E-mail	
Telephone number ( )	Fax ( )		Cell number ( )	

D. Qualified supervisor information (where answer to section B is "Yes")

Name of qualified supervisor(s)	Building Code Identification Number (BCIN)

E. Declaration of Applicant:

I _____declare that:
(print name)

- ❑ I am the applicant for the permit to construct the sewage system. If the installer is unknown at time of application, I shall submit a new Schedule 2 prior to construction when the installer is known;

OR

- ❑ I am the holder of the permit to construct the sewage system, and am submitting a new Schedule 2, now that the installer is known.

I certify that:

1. The information contained in this schedule is true to the best of my knowledge.
2. If the owner is a corporation or partnership, I have the authority to bind the corporation or partnership.

TEMPLATE

Notification Of Marijuana Grow Operation Protocol Agreement Between Police Services And Municipalities

STATEMENT OF PRINCIPLE

Marijuana grow operations (MGOs) pose a serious threat to the safety and security of municipalities throughout Ontario. The detection, investigation, dismantling, and return of premises to legitimate use is a complex undertaking requiring the cooperation of police and municipal officials. A coordinated approach to this problem will help ensure that the entire process is conducted in a safe and effective manner. The safety of the personnel involved in the process and that of the public is of paramount importance.

LEGISLATIVE REQUIREMENTS

The *Municipal Act, 2001* is amended by adding the following sections:

Inspection of buildings containing marijuana grow operations

431.1 (1) If the clerk of a local municipality is notified in writing by a police force that a building located on land in the local municipality contained a marijuana grow operation, the local municipality shall ensure that an inspection of the building is conducted within a reasonable time after the clerk has been notified.

Persons who may conduct inspection

(2) An inspection referred to in subsection (1) may be conducted by,

(a) a by-law enforcement officer of any municipality or of any local board of any municipality; or

(b) an officer, employee or agent of any municipality or of any local board of any municipality whose responsibilities include the enforcement of a by-law, an Act or a regulation under an Act.

Nature of inspection

(3) The requirement in subsection (1) for an inspection is for an inspection that includes entering upon the land and into the building.

SAMPLE

Powers to conduct inspection

(4) The inspection shall be conducted pursuant to the powers of entry and inspection that the person conducting the inspection otherwise has under law, but only to the extent that the person conducting the inspection is able to do so.

Action to be taken

(5) Upon conclusion of the inspection, the person who conducted the inspection shall take whatever actions he or she is authorized by law to take in order to make the building safe and otherwise protect the public.

Definition

(6) In this section,

"police force" means a municipal police force, the Ontario Provincial Police or the Royal Canadian Mounted Police.

Where marijuana grow operation is in a lower-tier municipality

431.2 (1) If the clerk of a local municipality that is a lower-tier municipality is notified under subsection 431.1 (1) that a building located on land in the lower-tier municipality contained a marijuana grow operation, the lower-tier municipality shall, if in its opinion it is appropriate to do so, forward a copy of the notice referred to in subsection 431.1 (1) to the clerk of the upper-tier municipality of which the lower-tier municipality forms a part.

Same

(2) Upon the clerk of the upper-tier municipality being notified under subsection (1), the obligation under subsection 431.1 (1) to ensure that an inspection of the building is conducted becomes the obligation of both the lower-tier municipality and the upper-tier municipality.

PURPOSE

The purpose of this protocol is to assist the police service and municipality to provide an effective and coordinated response when dealing with premises that have operated as a marijuana grow operation. This response will help to ensure that, once police identify a property as a marijuana grow operation, necessary steps are taken to have the building made safe for the public.

For the purposes of this protocol, municipality means a single-tier municipal government or an upper-tier and one or more lower-tier municipal governments.

SAMPLE

PROTOCOL

Responsibilities of the Police Service

When an illicit marijuana growing operation has been discovered to be operating in a premise, building or structure on property within the jurisdiction of the municipality, the police service shall ensure:

1. An investigation is conducted into the illicit marijuana grow operation in accordance with the adequacy requirements in police operations as they pertain to drug investigations, the police service's Criminal Investigation Management Plan, if appropriate, and the police service's policies and procedures.

2. A notice is placed, consistent with Appendix ll, on the principal entrance to the premises.

3. The clerk of the municipality is notified, in writing by fax or by email, consistent with the On-Site Report (Appendix I), upon the completion of the on-site phase of the police investigation.

4. Appropriate agencies/personnel necessary to the police investigation at the premises are contacted, this may include:
    i) Hydro suppliers
    ii) Fire services
    iii) Children's Aid Society
    iv) Immigration

5. A site is deemed suitable for inspection by persons other than police when:
    a. The police investigation of the site premises and removal of marijuana plants is complete;
    b. All hazards of which police are aware of, have been contained, dismantled and/or are listed on the Site Report and sent to the municipality; and
    c. The notice has been affixed to the principle entrance of the premises indicating that a marijuana grow operation was dismantled and the premises may not be suitable for habitation/use until inspected by the municipality.

SAMPLE

Responsibilities of the Municipality

When an illicit marijuana grow operation has been discovered to be operating in a premise, building or structure on property within the jurisdiction of the municipality, the municipality shall ensure:

1. The name of the registered owner of the property as contained in the records of the municipality is forwarded to the police.

2. Appropriate inspection measures are taken by municipal authorities within a reasonable time, to identify and list all hazards resulting from the marijuana grow operation.

3. Appropriate information received from the police is forwarded to the respective inspection agency/personnel.

4. Current contact information for the clerk of the municipality is provided to the police.

5. Subsequent investigations are conducted as required by legislation.

6. Police contact identified on the form is contacted to acknowledge receipt of police notification.

Date: _____

These premises _____ were investigated by the _____Police Service and found to contain an illegal Marijuana Grow Operation. As a result, the premises may contain numerous hazards and may not be fit for occupancy. The municipality of _____ has been notified.

BUILDING CODE COMMISSION
DECISIONS BY FILE NUMBER

Note: Decisions Highlighted in Yellow (1998 & earlier) concern building regulations pre-dating Reg. 403/97

EDITORS NOTE: The statutory references in column 5 are to the so-numbered article/section in the building regulation at the time of the decision. As such numbers may have changed or the sections amended since the decision, the application of the decision to current regulations should be cross-checked against the original regulation (column 6 indicates the last amendment existing at the time of the decision).

1	2	3	5	4	6
BCC File No.	**Year**	**Date**	**Short Description from Style of Subject Matter of Decision**	**Article/Section of Building Code or other Regulation Referenced by the Decision**	**LAST AMEND. TO 403/97**
06-48-1118	2006	November 21, 2006	Whether the Chief Building Official complied with the requirements under Subsections 8(2.2) and 8(2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code to issue or refuse to issue the permit and, in the case of a refusal to issue the permit, to provide in writing all of the reasons for the refusal within the time period set out in Table 2.4.4.1B.	8(2.2) and 8(2.3), 2.4.1.1B.(1), Table 2.4.4.1B.	

06-36-1106	2006	August 24, 2006	Whether the Chief Building Official informed the Applicant, within the time period prescribed in the Building Code, of the decision to refuse to issue a building permit and of all of the reasons for the decision.		
06-24-1094	2006	June 22, 2006	Determine whether the 0.6 m wide stationary platform located at the rear of the garage, within which an automated platform operates, having been constructed without guards provides sufficiency of compliance with Sentence 9.8.8.1.(1)	9.8.8.1.(1)	
06-13-1083	2006	March 23, 2006	Determine whether the proposed use of a composite lumber product, referred to as Life Long Decking System, for the exterior walking surface of the proposed deck serving a residential dwelling provides sufficiency of compliance with Parts 4 and 9	Parts 4 and 9	
06-05-1075	2006	January 19, 2006	Whether the existing Group C residential condominium building consisting of a below grade parking garage and four levels of residential suites, where a close proximity sprinkler system is proposed to compensate for the deficient fire resistance rating of the exterior load bearing walls, provides sufficiency of compliance with Section 3.2.2.45.	3.2.2.45.	
06-02-1072	2006	January 12, 2006	Determine whether the 4th level “loft” design in a residential townhouse development provides sufficiency of compliance with the definition of “mezzanine” contained in Sentence 1.1.3.2.(1) and with the provisions of Sentence 9.10.4.1.(2)	1.1.3.2.(1) 9.10.4.1.(2)	

05-51-1065	2005	November 3, 2005	Determine whether the as-installed spiral staircase having a minimum run of 82.5 mm provides sufficiency of compliance with Sentence 9.8.5.2.(1)	9.8.5.2.(1)	
05-45-1059	2005	October 6, 2005	Determine whether the proposed home effluent pasteurization system provides sufficiency of compliance with Part 8	Part 8	
05-44-1058	2005	September 22, 2005	Determine whether the construction of a third floor loft area, which includes open stairwells from the second floor to the third floor loft area, provides sufficiency of compliance with Clause 9.9.9.1.(1)(a) and Sentence 9.9.9.1.(2)	9.9.9.1.(1)(a) 9.9.9.1.(2)	
05-43-1057	2005	September 22, 2005	Determine whether the as-constructed spiral stairs having a minimum run of less than 150 mm provides sufficiency of compliance with Sentence 9.8.5.2.(1)	9.8.5.2.(1)	
05-42-1056	2005	September 22, 2005	Determine whether the as-installed guard, serving a restaurant patio and having been constructed with several continuous horizontal members running throughout the height of the guard and, in particular, located between 140 mm and 900 mm above the level being protected, provides sufficiency of compliance with Sentence 3.4.6.5.(8)	3.4.6.5.(8)	
05-34-1048	2005	August 4, 2005	Determine whether the proposed metal screen storage cubicles with wire-mesh roofs in a self-service storage facility located in the basement of a multiple occupancy building provides sufficiency of compliance with Articles 3.3.1.1. and 3.3.1.4., when considering Article 3.3.4.3.	3.3.1.1., 3.3.1.4.	

05-26-1040	2005	July 7, 2005	Determine whether the proposed use of "Panelcraft™ Honeycomb Roof System" honeycomb sandwich panels in a sunroom provides sufficiency of compliance with Sentence 4.1.1.3.(1)	4.1.1.3.(1)	
05-23-1037	2005	June 7, 2005	Determine whether the proposed main arena seating bowl, in particular the seat configuration, row width, vomitory and aisle widths, exit capacity/width, fire separation of main entry/exit "open stair", designed in accordance with NFPA 101-2000, "Life Safety Code" and NFPA 92B, "Smoke Management Systems in Malls, Atria and Large Areas", provides sufficiency of compliance with Articles 3.3.2.3., 3.3.2.4.. 3.4.3.4. and 3.4.4.1.	3.3.2.3., 3.3.2.4.. 3.4.3.4. and 3.4.4.1.	
05-22-1036	2005	June 7, 2005	Determine whether the as-constructed guardrail, consisting of metal pickets with decorative elements at their mid-points, around the main stairs in a one storey, Group C building provides sufficiency of compliance with Sentence 9.8.8.5.(1)	9.8.8.5.(1)	
05-21-1035	2005	June 7, 2005	Dispute involving the issuance of an Unsafe Order and whether a permit should be issued for the proposed construction of three non-load bearing demising walls to create a general store within an existing Group F, Division 3 major occupancy building		
05-15-1029	2005	April 21, 2005	Determine whether the installation of a septic field remediation technology known as the White KnightTM into an existing septic tank provides sufficiency of compliance with the Building Code when considering Part 11 and the definition of "septic tank" as outlined in Article 1.1.3.2.	Part 11, 1.1.3.2.	

05-14-1028	2005	April 21, 2005	Determine whether the existing Class 4 sewage system fails to comply with Articles 8.7.4.1., 8.7.4.2. and Clause 8.9.1.2.(1)(c)	8.7.4.1., 8.7.4.2., 8.9.1.2.(1)(c)	
05-13-1027	2005	April 14, 2005	Determine whether the proposed public use self-storage facility, having a Group F, Division 2, medium hazard industrial occupancy can be located in the basement level of a building currently designated for Group C, residential occupancy and Group E, retail purposes, provides sufficiency of compliance with Sentences 3.1.3.2.(2) and 3.1.3.2.(4)	3.1.3.2.(2), 3.1.3.2.(4)	
05-11-1025	2005	March 10, 2005	Determine whether the proposed installation of a Class 5 sewage system (holding tank) provides sufficiency of compliance with Article 8.8.1.2.	8.8.1.2.	
05-10-1024	2005	March 10, 2005	Determine whether the proposed Class 4 sewage system will provide sufficiency of compliance with Article 8.2.1.4., Sentences 8.2.1.6.(2), 8.7.4.2.(9) and Table 8.2.1.6.B	8.2.1.4., 8.2.1.6.(2), 8.7.4.2.(9), Table 8.2.1.6.B	
05-09-1023	2005	April 19, 2005	Determine whether the proposed use of high density polyethylene pipe to convey sanitary sewage from a Group B, Division 2 care facility to the municipal sewer main provides sufficiency of compliance with Sentence 7.2.5.9.(1)	7.2.5.9.(1)	
05-08-1022	2005	April 4, 2005	Determine whether the proposed direct vent fireplace sidewall terminations, constructed of type 304 stainless steel and located in walls having a limiting distance ranging from 0.55 m to 1.2 m provides sufficiency of compliance with Articles 9.10.14.1. and 9.10.14.5.	9.10.14.1. and 9.10.14.5.	

05-07-1021	2005	February 3, 2005	Determine whether the proposed automated storage and retrieval system that serves as structural support for the building in addition to support for the racking system components provides sufficiency of compliance with Article 3.2.2.67., Clause 3.4.2.5.(1)(c) and Sentence 3.4.4.1.(1)	3.2.2.67., 3.4.2.5.(1)(c) and 3.4.4.1.(1)	220/02
05-06-1020	2005	February 17, 2005	Determine whether the lower floor of the subject building qualifies as a ground floor when considering the definitions for “grade” and “first storey” as specified in Article 1.1.3.2.	1.1.3.2.	
05-05-1019	2005	January 20, 2005	Determine whether the as-constructed ICF wall system in a 167.2 m2 Group C dwelling, where no vapour barrier is provided, will provide sufficiency of compliance with Article 9.25.4.1.	9.25.4.1.	
05-04-1018	2005	January 20, 2005	Determine whether the as-constructed demising walls between Unit 18 and 18A and between Unit 18/Unit 18A and Unit 15 in the one storey portion Group E retail plaza, with Group D business and personal service occupancies, provides sufficiency of compliance with Article 3.3.1.1.	3.3.1.1.	220/02
05-03-1017	2005	January 19, 2005	Determine whether the size and positioning of openings in the as-constructed firewalls provide sufficiency of compliance with Article 3.1.10.5.	3.1.10.5.	
05-01-1015	2005	January 13, 2005	Determine whether the storage structure, referred to by the Applicant as a tent, provides sufficiency of compliance with Sentences 1.1.3.1.(1) and 2.1.1.3.(1), Subsection 3.13.1. and Sentence 9.1.1.4.(1)	1.1.3.1.(1) and 2.1.1.3.(1), 3.13.1. and 9.1.1.4.(1)	220/02

04-55-1010	2004	December 2, 2004	Determine whether the proposed location of a dry hydrant will provide sufficiency of compliance with Sentences 3.2.5.7.(1) and 3.2.5.7.(2) of the Ontario Building Code for a 929 m2 one storey sawmill	3.2.5.7.(1) and 3.2.5.7.(2)	220/02
04-53-1008	2004	November 18, 2004	Determine whether the proposed 6,524 m2 addition to an existing 5,870 m2 steel shearing and warehouse facility that has been designed without a standpipe and hose system provides sufficiency of compliance with Article 3.2.9.1.	3.2.9.1.	220/02
04-51-1006	2005	January 17, 2005	Determine whether the proposed exterior wall system that incorporates foamed plastic insulation and exterior cladding in an exterior wall of a Group C (Part 3) major occupancy building provides sufficiency of compliance with Sentences 3.2.3.7.(1) and 3.1.5.11.(3)	3.2.3.7.(1) and 3.1.5.11.(3)	
04-04-1000	2004	December 20, 2004	Determine whether the proposed compactor and scrap bin area in the basement level (former Eaton=s basement retail area) provides sufficiency of compliance with Articles 3.3.5.6 and 3.6.2.6	3.3.5.6 , 3.6.2.6	
04-34-989	2004	August 5, 2004	Determine whether the existing outdoor portable metal containers that are used for public storage are considered to be “buildings” under Section 1.-(1) of the *Building Code Act, 1992*	1.1.3.2.(1)	220/02
04-33-988	2004	August 5, 2004	Determine whether the as-constructed landing serving a flight of stairs in a Group A, Division 2 occupancy provides sufficiency of compliance with Sentence 3.4.6.3.(2)	3.4.6.3.(2)	

04-32-987	2004	July 22, 2004	Determine whether the omission of continuous guards between constructed rows of successive fixed seating provides sufficiency of compliance with Clause 3.3.2.8.(1)(c)	3.3.2.8.(1)(c)	
04-27-982	2004	June 17th, 2004	Determine whether the as-constructed exterior deck serving a Group C occupancy, which is comprised of a composite material referred to as "Life-Long Decking" that is manufactured by Brite Manufacturing Inc., will provide sufficiency of compliance with Articles 9.8.8.8. and 4.1.10.1. of the Ontario Building Code at 193 Sunset Beach Road, Richmond Hill, Ontario.	9.8.8.8. and 4.1.10.1.	220/02
04-09-964	2004	March 4, 2004	Determine whether the existing enclosed canopy, intended for use as an indoor and outdoor patio, which is attached to the wall of an existing Group A, Division 2 occupancy, provides sufficiency of compliance with Sentence 2.4.1.1.(5)	2.4.1.1.(5)	
04-04-959	2004	January 22, 2004	Determine whether the as-constructed Group C occupancy that is constructed as a three-storey residential house that includes a total of four separate suites, and which does not provide barrier-free access to the Ground Floor, complies with Article 3.8.1.1.	3.8.1.1

BCC File No.	**Year**	**Date**	**Short Description from Style of Subject Matter of Decision**	**Article/Section of Building Code or other Regulation Referenced by the Decision**	**LAST AMEND. TO 403/97**
03-54-952	2003	4-Dec-03	Determine whether the as-installed vertical exhaust shafts serving a residential high rise building which extend three storeys in height, and which are constructed using paper-lined gypsum shaftboard liners, comply with the intent of 6.2.3.2.(1) of the Ontario Building Code (OBC) or, in the alternative, whether these same shafts provide sufficiency of compliance with 6.2.3.2.(2)	6.2.3.2.	220/02
03-52-950	2003	1-Mar-04	Determine whether the proposed replacement of a Class 4 sewage system that is located on a “lot or parcel of land” that is serviced by additional Class 4 systems complies with the definition of sewage system in 1.1.3.2. of the Ontario Building Code, when considering that the lot is located adjacent to two lots that are all under the same ownership	1.1.3.2.	220/02
03-50-948	2003	20-Nov-03	Determine whether the proposed temporary air-supported structure, which has a Group A, Division 2 occupancy, that is not equipped with a sprinkler system or a standpipe and hose system, provides sufficiency of compliance with s 3.2.2.26. and 3.2.9.1., when considering 3.13.2.2.(3)	3.2.2.26. 3.2.9.1., 3.13.2.2.(3)	220/02

03-49-947	2003	20-Nov-03	Determine whether the as-built exterior concrete front entrance stairs, which have more than two risers and two treads and are supported by concrete patio stones, provide sufficiency of compliance with 9.8.9.1.(1)	9.8.9.1.(1)	220/02
03-34-932	2003	28-Aug-03	Determine whether the proposed addition to a Group F, Division 3 occupancy that will not be equipped with water closets, but is located 250 metres away from an adjacent building on the same property that contains water closets, provides sufficiency of compliance with 3.7.4.1.(3)	3.7.4.1.(3)	220/02
03-33-931	2003	28-Aug-03	Determine whether the as-installed fixture drainage outlets in the lavatories of a Group C occupancy comply with 7.2.2.5.(1)	7.2.2.5.(1)	220/02
03-31-929	2003	9-Sep-03	Determine whether the as-installed combustible plumbing fixtures in a Group C occupancy, which have a Smoke Developed Classification of 375, provide sufficiency of compliance with 3.1.13.7.(1)	3.1.13.7.(1)	283/01
03-28-926	2003	3-Jul-03	Determine whether the proposed manufactured mouldings intended for use in a building required to be of non-combustible construction provide sufficiency of compliance with 3.1.5.7.	3.1.5.7.	220/02
03-27-925	2003	4-Nov-03	[See Decision for Description]	9.14.2.1. 9.15.4.6. 9.20.8.3.(1) 9.23.2.2. 9.23.2.3. 9.23.5.1. 9.23.7.2. 9.27.3.2. 9.33.3.1.	220/02
03-26-924	2003	19-Jun-03	Determine whether the proposed combined water main and combined sanitary main serving the two subject buildings provides sufficiency of compliance with 7.1.6.4.	7.1.6.4.	220/02
03-22-920	2003	15-May-03	Determine whether 24 hour per day staffing at the subject group homes offered in lieu of automatic door openers provides sufficiency of compliance with 3.8.3.3.(5)		283/01
03-20-918	2003	15-May-03	Determine whether 24 hour per day staffing at the subject group home offered in lieu of automatic door openers provides sufficiency of compliance with 3.8.3.3.(5)	3.8.3.3. (5)	283/01

03-16-914	2003	1-May-03	Determine whether the as-built stair guard constructed to a height of 819.2 mm as measured vertically above the stair nosings and built in accordance with 9.8.8.2.(4) of the Ontario Building Code (OBC) complies with the intent of OBC 9.8.8.5. to reduce the likelihood of climbing, and whether the same guard with semi-circular elements measured at 698.5 mm above the stair nosings provides sufficiency of compliance with 9.8.8.5.	9.8.8.2.(4) 9.8.8.5.	283/01
03-08-906	2003	20-Feb-03	Determine whether the proposed seasonal boathouse clad with horizontally installed bevelled wood siding and mounted directly onto the framing without the use of a sheathing membrane provides sufficiency of compliance with 9.23.17.6.	9.23.17.5. 9.23.17.6. 9.36.2.1.	283/01
03-07-905	2003	23-Jan-03	Determine whether the two proposed, unsprinklered grandstand buildings, which will include Group D and Group A, Division 2 occupancies beneath a Group A, Division 4 major occupancy, provide sufficiency of compliance with 3.2.2.35.(4)	3.2.2.35.(4)	283/01
03-06-904	2003	23-Jan-03	Determine whether the existing floor assembly, which will separate a proposed bus terminal below from the existing parking garage above, will provide sufficiency of compliance with 11.4.2.3.(4)	11.4.2.3.(4)	283/01
03-04-902	2003	16-Jan-03	Determine whether the as installed upper kitchen cabinet valance, situated at the front edge of the underside of the cabinet approximately 360 mm above the counter surface and adjacent to the range/stove opening, provides sufficiency of compliance with s 9.10.21.2. and 9.10.21.3.	9.10.21.2. 9.10.21.3.	283/01
03-01-899	2003	16-Jan-03	Determine whether the egress lighting, which is not proposed to be illuminated for 24 hours of each day, complies with 3.2.7.1.(1)	3.2.7.1.(1)	283/01
02-43-898	2002	12-Dec-02	Determine whether the viewing walkway, having an area of 207 m2, is a mezzanine which provides sufficiency of compliance with s 3.2.1.1.(4), 3.3.1.5.(2), (3) and (4) of the Ontario Building Code or whether it is considered to be a storey which must be meet the construction requirements for a storey in a building having a Group F, Division 3 occupancy classification	3.2.1.1.(4) 3.3.1.5.(2), (3) and (4)	283/01
02-41-896	2002	4-Dec-02	Determine whether the as-installed natural gas fireplace that is located in the main lobby of a children's learning centre provides sufficiency of compliance with 3.3.1.2.(3)	3.3.1.2.(3)	283/01

02-40-895	2002	21-Nov-02	Determine whether the 800 mm non-climbable zone required for guards in 9.8.8.5. of the Ontario Building Code may be measured directly from the level of the walking surface to a height of 800 mm and, if so, whether the as-installed guard, having pickets with horizontal cross members at approximately 787 mm above the walking surface, provides sufficiency of compliance with 9.8.8.5.	9.8.8.5	283/01
02-39-894	2002	21-Feb-03	Determine whether the as-constructed basement concrete floor slab which varies in thickness from 64 mm to 89 mm provides sufficiency of compliance with 9.16.4.4.	9.16.4.4.	283/01
02-38-893	2002	21-Nov-02	Determine whether the compensating construction offered in an existing, 2 storey, 14 unit apartment building where the length of dead-end corridors exceeds the permitted maximum, provides sufficiency of compliance with 3.3.4.4.(1)(a) of the 1983 Ontario Building Code when considering 11.4.1.1.(1) and 11.5.2.1	11.4.1.1.(1) 11.5.2.1	283/01
02-37-892	2002	7-Nov-02	Determine whether the compensating measures offered where the slope of the bottom of the pool exceeds 8% at a water depth of 1,350 mm or less, provide sufficiency of compliance with 3.11.3.1.(6)(a) and 3.11.3.1. (7)	3.11.3.1.(6)(a) 3.11.3.1.(7)	283/01
02-36-891	2002	7-Nov-02	Determine whether the insulation used to wrap the attic duct work provides sufficiency of compliance with s 9.25.2.3.(1), 9.33.1.1.(1) and 6.2.4.3.(1) and whether the as-constructed wall assembly complies with the air barrier and vapour barrier requirements of 9.25.3.1.(1), 9.25.3.2.(1), 9.25.3.3.(1) and 9.25.4.1.(1) when considering s 5.4.1.1.(2) and 5.5.1.1.(2).	9.25.2.3.(1) 9.33.1.1.(1) 6.2.4.3.(10) 9.25.3.1.(1) 9.25.3.2.(1),	283/01
02-34-889	2002	17-Oct-02	Determine whether the proposed use of Class B wiring for line isolator modules located inside a residential suite and designed to isolate a signal circuit during an alarm condition only, complies with 3.2.4.19.(10)	3.2.4.19.(10)	283/01
02-33-888	2002	17-Oct-02	Determine whether the existing use of the subject building would require a firewall to separate the residential occupancy from the horse stable when considering 1.2.1.2. of the National Farm Building Code or whether, in the alternative, the proposed fire separation between the two uses will provide sufficiency of compliance with 9.10.9.11.(2)	9.10.9.11.(2)	283/01
02-31-886	2002	3-Oct-02	Determine whether the enlargement of the existing septic system to accommodate a proposed daily design flow rate of 8,000 L/day to service a warehouse addition provides sufficiency of compliance with 8.2.1.3.(2) and Table 8.2.1.3.B.	8.2.1.3.(2) Table 8.2.1.3.B.	283/01

02-30-885	2002	3-Oct-02	Determine whether the proposed drip irrigation leaching bed sewage system provides sufficiency of compliance with Part 8 when considering s 2.7.2.1. and 2.7.2.2.	2.7.2.1. 2.7.2.2.	283/01
02-29-884	2002	3-Oct-02	Determine whether the as-installed Class 1 (composting toilet) and Class 2 (greywater pit) systems which serve a seasonal dwelling in lieu of a Class 4 system provide sufficiency of compliance with 8.1.2.1.(1)	8.1.2.1.(1) 9.31.4.1.(1)	283/01
02-28-883	2002	26-Sep-02	Determine whether the elevated floor assembly having an area of 563.5 m2 in a Group F, Division 2 building is considered to be a mezzanine which must comply with the provisions of s 3.2.2.67.(2)(c) and (d) or whether it can be considered a service platform in conformance with the provisions of 3.2.1.1.(8)	3.2.2.67.(2)(c) and (d) 3.2.1.1.(8)	283/01
02-27-882	2002	12-Sep-02	Determine whether the proposed retail kiosk, located in a mall corridor, is required to provide barrier-free accessibility in accordance with the provisions of s 3.8.1.3.(1) and 3.8.2.1.(1)	3.8.	283/01
02-26-881	2002	12-Sep-02	Determine whether the subsurface (future basement) level of a proposed research facility, which will be unoccupied, unsprinklered and provided with limited access until such time as a use for the area has been determined, provides sufficiency of compliance with s 3.2.2.9.(1) and 3.4.2.1.(1) and s 3.2.2.52. and 3.2.2.77	3.2.2.9.(1) 3.4.2.1.(1) 3.2.2.52. 3.2.2.77.	283/01
02-25-880	2002	8-Aug-02	Determine whether the prefinished hardwood flooring proposed for the kitchen of a single detached residential building provides sufficiency of compliance with 9.30.1.2.	9.30.1.2	283/01
02-24-879	2002	8-Aug-02	Determine whether the prefinished hardwood flooring proposed for the kitchen of a single detached residential building provides sufficiency of compliance with 9.30.1.2.	9.30.1.2	283/01
02-22-877	2002	1-Aug-02	Determine whether the proposed natural gas fireplaces to be located in the Fireplace Lounges, which constitute extensions of public corridors leading to exits in sites 1 and 3, provide sufficiency of compliance with 3.3.1.2.(3), and whether the proposed use of glued-laminated heavy timber beams and purlins as well as plywood sheathing for attachment of copper roofing in the construction of the roof assembly of the fireplace lounge in site 3, provides sufficiency of compliance with s 3.2.2.43.(2), 3.2.2.16.(1) and 3.1.5.3.(2)	3.3.1.2.(3) 3.2.2.43.(2) 3.2.2.16.(1) 3.1.5.3.(2)	283/01

02-21-876	2002	1-Aug-02	Determine whether the proposed compensating measures offered in a building containing A2 and D occupancies and having exposing building faces with unprotected openings less than 10% of the exposing building face and which includes elements of combustible construction, provides sufficiency of compliance with 3.2.2.24. and 3.2.3.7.(1)	3.2.2.24. 3.2.3.7.(1)	283/01
02-20-875	2002	1-Aug-02	Determine whether the conversion of a century home into a six room inn, where no renovation to the existing entranceways is contemplated, is required to provide barrier-free access in accordance with 9.5.2.1.(1) and Section 3.8. when considering Part 11 and s 11.4.2.3.(1) and 11.4.3.4.(2)	9.5.2.1.(1) 3.8. Part 11 11.4.2.3.(1) 11.4.3.4.(2)	283/01
02-19-874	2002	4-Sep-02	Determine whether the repair of an existing Class 4 septic system, specifically with respect to the grain size of the imported sand filter material being used, provides sufficiency of compliance with the provisions of 11.3.1.1.	11.3.1.1.	283/01
02-18-873	2002	20-Jun-02	Determine whether the proposed fabric material roof which is not considered as a Class A, B or C roof covering, provides sufficiency of compliance with Section 3.1.15.	3.1.15.	283/01
02-17-872	2002	20-Jun-02	Determine whether the proposed new senior's residence, when considering the date that the building permit application was substantially complete, is permitted to be built to the construction requirements of the 1990 Ontario Building Code (OBC) in accordance with 12.1.1.1.(1)(b)	12.1.1.1.(1)(b)	283/01
02-16-871	2002	20-Jun-02	Determine whether the use of unlisted, alpha-numeric display devices forming part of the call station located in the nursing stations provides sufficiency of compliance with 3.2.4.20.(2)	3.2.4.20.(2)	283/01
02-15-870	2002	6-Jun-02	Determine whether the 6.75 m2 light well opening interconnecting Levels 3, 4 and 5 and which does not include a stairway, escalator or moving walkway, but will be equipped with additional fire safety features, provides sufficiency of compliance with s 3.2.8.2.(5) and (6)	3.2.8.2.(5) and (6)	283/01
02-14-869	2002	6-Jun-02	Determine whether the proposed installation of a Class 5 sewage system (holding tank) to serve a new cottage where the installation of a Code compliant Class 4 system is not possible, provides sufficiency of compliance with 8.8.1.2.(1)	8.8.1.2.(1)	283/01

02-13-868	2002	23-May-02	Determine whether the proposed additions that include crawl space areas which contain mechanical rooms housing HVAC equipment venting to the exterior is permitted to be governed by the construction requirements of 3.2.2.28.	3.2.2.9. 3.2.2.28.	283/01
02-12-867	2002	21-Mar-02	Determine whether the proposed renovation and repair of an existing residential structure provide sufficiency of compliance with the relevant provisions of Parts 2 and 11	Part 2 Part 11	283/01
02-11-866	2002	14-Mar-02	Determine whether the combustible wood screen cladding proposed on the exterior of the north, east and south faces of a parking structure provides sufficiency of compliance with 3.1.5.5.(1), (2) and (3)	3.1.5.5.(1), (2) and (3)	283/01
02-11-866	2002	14-Mar-02	Determine whether the combustible wood screen cladding proposed on the exterior of the north, east and south faces of a parking structure provides sufficiency of compliance with 3.1.5.5.(1), (2) and (3)	3.1.5.5.(1), (2) and (3)	283/01
02-10-865	2002	14-Mar-02	Determine whether the two hour fire separation between proposed A2 and existing F3 occupancies, that is penetrated by roof trusses (supported by the structural members of the separation), provides sufficiency of compliance with 3.1.7.3.(2) and s 3.1.8.1.(1)(a) and (b)	3.1.7.3.(2) 3.1.8.1.(1)(a) and (b)	283/01
02-07-862	2002	14-Feb-02	Determine whether the proposed inward swinging double doors would provide sufficiency of compliance with 3.3.1.10.(2)(a) when considering Subsection 3.1.16.	3.3.1.10.(2)(a)	283/01
02-05-860	2002	24-Jan-02	Determine whether the omission of a roof anchoring system, where window washing and maintenance is intended to be carried out from ladders with grade level access and where equipment is positioned to permit rooftop maintenance without approaching the parapet, provides sufficiency of compliance with 4.1.10.8	4.1.10.8.	283/01
02-04-859	2002	16-Jul-02	Determine whether the proposed foam plastic insulation and metal cladding system provides sufficiency of compliance with s 3.2.3.7.(7) and (8) when considering s 3.1.11.7. (1) and (2)	3.2.3.7.(7) and (8) 3.1.11.7. (1) and (2)	283/01
02-03-858	2002	17-Jan-02	Determine whether the as-installed design of the vertical steel pickets, which includes ornamental “birdcages” and “rosettes” set at a spacing of 55.5 mm (2 3/16 in) for a guard on a horizontal surface and slightly less for a guard serving a stair, complies with the intent of 9.8.8.5.(1)	9.8.8.5.(1)	283/01
02-02-857	2002	17-Jan-02	Determine whether the removal of the interior and exterior bridges, which form part of the continuous pool deck and facilitate the crossing of a 1752.6 mm (5 ft 9 in) portion of a seasonally divided pool, provides sufficiency of compliance with 3.11.3.1.(9)(a)	3.11.3.1.(9)(a)	283/01

02-01-856	2002	17-Jan-02	Determine whether the proposed fire access route, when considering the addition of a firewall between units within a residential townhouse block, creating “buildings” having an area of less than 600 m2, complies with the access route requirements of 9.10.19.3.	9.10.19.3.	283/01
01-62-855	2001	13-Dec-01	Determine whether the proposed interior and exterior guards to be comprised of wrought iron balusters containing sections of ornamental floral design and scroll patterns within the area between 100 mm and 900 mm above the walking surface, provide sufficiency of compliance with 9.8.8.	9.8.8.5.	283/01
01-59-852	2001	6-Dec-01	Determine whether the proposed 56.6 m2 addition to an existing multiple occupancy (A2 and C) building, which is intended to be unsprinklered and constructed using combustible construction, provides sufficiency of compliance with s 3.2.2.4.(2), 3.2.2.5.(1), 3.2.2.6.(1), 3.2.2.24. and 11.2.1.2.(1)	3.2.2.4.(2) 3.2.2.5.(1) 3.2.2.6.(1) 3.2.2.24. 11.2.1.2.(1)	283/01
01-57-850	2001	8-Nov-01	Determine whether the “trucking area”(used for loading/unloading) in an industrial building is considered as a “storage garage” and therefore required to be separated from the adjacent warehouse area by a fire separation having a fire-resistance rating of 1.5 hours in accoradance with 3.3.5.6	3.3.5.6.	283/01
01-56-849	2001	8-Nov-01	Determine whether the as-installed guard on an exterior deck having a horizontal member located at 165 mm above the walking surface, provides sufficiency of compliance with 9.8.8.5.(1)	9.8.8.5.(1)	283/01
01-55-848	2001	8-Nov-01	Determine whether the as-constructed stairs that provide access to a mezzanine level in an industrial occupancy and having a minimum run of 229 mm (9 in), provide sufficiency of compliance with 3.4.6.7.(1)	3.4.6.7.(1)	283/01
01-54-847	2001	25-Oct-01	Determine whether the as-installed guard serving these second floor balconies and having a horizontal member located at approximately 150 mm to 160 mm above the floor level, provides sufficiency of compliance with 9.8.8.5.(1)	9.8.8.5.(1)	283/01

01-53-846	2001	25-Oct-01	Determine whether the ground floor amenity space (exercise room, swimming pool, change room and lounge), that is not proposed to be sprinklered, in a building containing a Group C major occupancy, provides sufficiency of compliance with s 3.2.2.6., 3.2.2.23. and s 3.2.2.7.(1) and 3.2.2.8.(1)	3.2.2.6. 3.2.2.23 3.2.2.7.(1) 3.2.2.8.(1) 1.1.3.1.(1) 1.1.3.2.(1)	283/01
01-52-845	2001	25-Oct-01	Determine whether the compensating measures offered in a multi-tenant building containing Group F, Division 2 and Group D occupancies where the dedicated fume hood ductwork traversesthe2-hour fire separations between floors ,will provide sufficiency of compliance with s 3.1.8.7. and 3.1.8.8.	3.1.8.7. 3.1.8.8.	283/01
01-51-844	2001	25-Oct-01	Determine whether the compensating measures offered in lieu of standpipe and hose systems in buildings containing Group F, Division 2, Group F, Division 3 and Group D occupancies provide sufficiency of compliance with 3.2.9.1.(1)	3.2.9.1.(1)	283/01
01-49-842	2001	11-Oct-01	Determine whether the use of the existing septic system on a property where the reconstruction of a single detached residential dwelling is proposed due to the destruction of existing dwelling by a house fire, provides sufficiency of compliance with s 11.4.1.1., 11.4.2.5. and 11.4.3.6.	11.4.1.1. 11.4.2.5. 11.4.3.6.	283/01
01-48-841	2001	11-Oct-01	Determine whether the performance level of the existing septic system, when considering a proposed second storey addition that will include a three piece ensuite bathroom, provides sufficiency of compliance with s 11.4.2.5.(3) and 11.4.3.6.(1)	11.4.2.5.(3) 11.4.3.6.(1)	283/01
01-47-840	2001	27-Sep-01	Determine whether the construction of a replacement deck provides sufficiency of compliance with 11.3.3.1.(1)	11.3.3.1.(1)	283/01

01-45-838	2001	27-Sep-01	Determine whether the proposed main aisles in a Group F, Division 2 industrial building, which include several direction changes, lead through doors in interior partitions, and which lead to the exit doors located at 60 metre intervals around the perimeter of the building, provide sufficiency of compliance with 3.4.2.5.(2)	3.4.2.5.(2)	283/01
01-44-837	2001	27-Sep-01	Determine whether the distance from the rear of the dressing room area to an exit (in excess of 45 m) and the doors to the ice resurfacing room, that are not equipped with self-closing devices activated by a smoke detector, provide sufficiency of compliance with 3.4.2.5.(1)(c) and 3.1.8.12.(3)	3.4.2.5.(1)(c) 3.1.8.12.(3)	205/00
01-43-836	2001	28-Feb-01	Determine whether the direct supervision of patients at all times in lieu of providing visual signal devices where sound booths will be used provides sufficiency of compliance with s 3.2.4.19.(7) and 3.2.4.20.(1)	3.2.4.19(7) 3.2.4.20.(1)	283/01
01-42-835	2001	13-Sep-01	Determine whether the proposed sewage system with a portion of the distribution pipes located approximately 1 m to 2.2 m from the support posts of a proposed deck, provides sufficiency of compliance with 8.2.1.6.(2)	8.2.1.6.(2)	283/01
01-41-834	2001	13-Sep-01	Determine whether the as-installed holding tank, located approximately 7 m (20 ft) from an existing well, provides sufficiency of compliance with 8.2.1.6.(3) and Table 8.2.1.6.C.	8.2.1.6.(3), Table 8.2.1.6.C.	205/00
01-40-833	2001	30-Aug-01	Determine whether the proposed security gate house, that has not been designed for barrier-free access, provides sufficiency of compliance with s 9.5.2.1., 3.8.1.1., 3.8.1.2. and 3.8.2.3.	9.5.2.1. 3.8.1.1. 3.8.1.2. 3.8.2.3.	205/00
01-38-831	2001	30-Aug-01	Determine whether the as-installed guard, surrounding a 3rd floor opening, and being 15 to 30 mm lower in height than the required 1,070 mm, provides sufficiency of compliance with 3.3.1.17.(1)	3.3.1.17.(1)	205/00
01-37-830	2001	16-Aug-01	Determine whether the proposed 82.15 m2 , unsprinklered classroom addition to the existing unsprinklered detention occupancy, provides sufficiency of compliance with 3.2.2.37	3.2.2.37	205/00
01-36-829	2001	2-Aug-01	Determine whether the proposed sprinkler system, designed in conformance with NFPA 13, with the exception of the attic area which would conform to NFPA 13R (exempt from sprinklering), provides sufficiency of compliance with 3.2.5.13.(1)	3.2.5.13.(1)	205/00

01-35-828	2001	2-Aug-01	Determine whether the exit stair, which contains an opening for an elevator that is proposed to have a pressurized elevator shaft, provides sufficiency of compliance with 3.4.4.4.	3.4.4.4.	205/00
01-34-827	2001	19-Jul-01	Determine whether the proposed radiant thermal mass brick heating unit, having a Finnish design, provides sufficiency of compliance with Sections 9.21. and 9.22.	9.21. 9.22.	205/00
01-33-826	2001	19-Jul-01	Determine whether the shallow (450 to 500 mm), insulated garage footings and foundations provide sufficiency of compliance with 9.12.2.2.	9.12.2.2.	205/00
01-32-825	2001	5-Jul-01	Determine whether the proposed corridor design provides sufficiency of compliance with 3.3.3.3.(1)	3.3.3.3.(1)	205/00
01-31-824	2001	5-Jul-01	Determine whether the enlarged manufacturing and warehouse facility with a total building area of 27, 221 m2 that is not equipped with a standpipe and hose system provides sufficiency of compliance with 3.2.9.1.	3.2.9.1.	205/00
01-30-823	2001	5-Jun-01	Determine whether the as-constructed infill addition that joins together two previously separate structures thereby creating a building having an area of 2, 229 m2 (23,984 ft2), and that is not equipped with a standpipe and hose system, provides sufficiency of compliance with 3.2.9.1.	3.2.9.1.	205/00
01-29-822	2001	21-Jun-01	Determine whether the retrofit elevator, installed to permit barrier-free accessibility throughout the existing two storey building, and proposed without separation in a lobby containing an exit stair, provides sufficiency of compliance with 3.4.4.4.(6)	3.4.4.4.(6)	205/00
01-27-820	2001	7-Jun-01	Determine whether the materials used in the construction of a rain porch addition to the building known as KYO Zen Art's Centre meet the requirements of 9.3.2.1.	9.3.2.1.	205/00
01-26-819	2001	7-Jun-01	Determine whether the work undertaken on ting house constitutes repair or renovation in accordance with s 11.3.1.1. and 11.3.3.1.(1)	11.3.1.1. 11.3.3.1.	205/00
01-25-818	2001	10-Jun-01	Determine whether the as-installed paired corridor doors containing vision panels and which form part of the fire separation, are held open by magnetic hold open devices and are considered part of the barrier-free path of travel, provide sufficiency of compliance with 3.8.3.3.(14)	3.8.3.3.(14)	205/00

01-23-816	2001	10-May-01	Determine whether the 72 m2 (775 ft2) addition to the existing unsprinklered care and treatment occupancy that is also proposed to be unsprinklered provides sufficiency of compliance with 3.2.2.40	3.2.2.40.	205/00
01-22-815	2001	10-May-01	Determine whether the proposed construction of a new mezzanine (in an existing building), that is to have a minimum headroom clearance of 1,975 mm (6', 6") under the open web steel joists located at 1,975 mm (6', 6") on centre, provides sufficiency of compliance with s 3.3.1.8. and 3.4.3.6.	3.3.1.8. 3.4.3.6.	205/00
01-20-813	2001	26-Apr-01	Determine whether the proposed seasonal-use sleeping cabins are required to be barrier-free accessible, when considering 9.5.2.1. and 3.8.1.1.(1)(c)	9.5.2.1. 3.8.1.1.(1)(c)	205/00
01-19-812	2001	12-Apr-01	Determine whether the proposed supermarket that is to contain a delicatessen, a bakery, and a meat department is a listed occupancy under Table 8.2.1.3.B. (forming part of 8.2.1.3.(2)), or whether it is permitted to comply with 8.2.1.3.(4)	8.2.1.3.(4) , Table 8.2.1.3.B.	205/00
01-18-811	2001	12-Apr-01	Determine whether the four storey building, that is to contain a Group B, Division 3 occupancy on the first and second floors and a Group C occupancy on the third and fourth floors and that is proposed to be equipped with a single stage fire alarm system, complies with s 3.2.4.3.(1)(b), (c) and (e)	3.2.4.3.(1)(b), (c), (e)	205/00
01-17-810	2001	12-Apr-01	Determine whether the proposed self-service gas bar with a drive-through window, should be considered as a "service station" in accordance with 8.2.1.3.(2) and Table 8.2.1.3.B.	8.2.1.3.(2), Table 8.2.1.3.B.	205/00
01-16-809	2001	29-Mar-01	Determine whether the building's proposed power system, that includes two independent supply connections to two power supply system conforming with 3.2.7.5. of the Ontario Building Code (OBC) provides sufficiency of compliance with s 3.2.7.4.(1) and 3.2.7.9.(4)	3.2.5.13.(10) 3.2.7.4. 3.2.7.5. 3.2.7.9.	205/00

01-14-807	2001	29-Mar-01	Determine whether the building's proposed power system, that includes two independent supply connections to two separate street substations and one on-site co-generation plant, offered in lieu of a power supply system conforming with 3.2.7.5. of the Ontario Building Code (OBC) provides sufficiency of compliance with s 3.2.7.4.(1) and 3.2.7.9.(4)	3.2.5.13.(1) 3.2.7.4. 3.2.5.5. 3.2.7.9.	205/00
01-12-805	2001	26-Apr-01	Determine whether the as-built roofs with a slope of 7 ½/12 that was not constructed with eave protection, except one layer of 15 lb building paper, provides sufficiency of compliance with 9.26.5.2	9.26.5.1. 9.26.5.2.	205/00
01-11-804	2001	15-Mar-01	Determine whether the proposed design of the original Verona Suite plan, that includes a windowless, enclosed "study" room, complies with s 3.7.2.1.(1) and 9.7.1.2.(1	3.7.2.1.(1) 9.7.1.2.(1)	205/00
01-10-803	2001	15-Mar-01	Determine whether the proposed access to exit corridor, designed using a combination of the parameters outlined in 3.4.2.5.(1)(d) and 3.4.2.5.(2)	3.4.2.5.(1)(d)	205/00
01-09-802	2001	15-Mar-01	Determine whether the 13.25 litre water closets, proposed to be installed in the washrooms of the new hotel addition, provide sufficiency of compliance with 7.6.4.2.(3)	7.6.4.2.(3)	205/00
01-08-801	2001	22-Feb-01	Determine whether the as-installed fuel fired appliances, a portion of each having been situated within 3 m of exterior walls of the same building which contain openings, provide sufficiency of compliance with 6.2.5.2.(1)(c)	6.2.5.2.(1)(c)	205/00
01-07-800	2001	15-Feb-01	Determine whether the proposed air distribution system that is comprised of under-slab combustible duct piping provides sufficiency of compliance with 6.2.3.2.	6.2.3.2.	205/00
01-06-799	2001	15-Feb-01	Determine whether the proposed stacked townhouse units, with property lines occurring on both horizontal and vertical planes between them, comply with the requirements of s 9.10.11.1.(1), 7.1.6.4.(1) and 7.1.7.2.(1)	9.10.11.1.(1) 7.1.6.4.(1) 7.1.7.2.(1)	205/00

01-04-797	2001	8-Feb-01	Determine whether the proposed mezzanine, upper mezzanine and grid iron areas intended for a live performance teaching facility, in conjunction with certain additional protective measures, provides sufficiency of compliance with 3.2.2.24., s 3.2.1.1.(3),(4) and (5), 3.2.8.2.(1), 3.4.2.2. and 3.4.2.5.(1)(c)	3.2.1.1.(3), (4), (5) and (6) 3.2.2.24. 3.2.8.2.(1) 3.4.2.2. 3.4.2.5.(1)(c)	205/00
01-03-796	2001	8-Feb-01	Determine whether the various identified alleged deficiencies provide sufficiency of compliance with the relevant provisions of the Ontario Building Code	9.23. Part 11	205/00
01-02-795	2001	11-Jan-01	Determine whether the shade screen, due to its proposed construction and seasonal use, can be viewed as a structure that may be permitted to conform to the construction standards of Section 3.13.	3.2.3.	205/00
01-01-794	2001	11-Jan-01	Determine whether the location of the existing hydrant proposed to serve the needs of the expanded school facility provides sufficiency of compliance with s 3.2.5.5.(2)(b) and (c)	3.2.5.5.(2)(b) and (c)	205/00
00-61-793	2000	14-Dec-00	Determine whether the main arena seating bowl, in particular the number of seats, row widths, vomitory and aisle width, exits and access to exits and the smoke protection system, designed based on NFPA 101, "Life Safety Code" and NFPA 92B "Smoke Management Systems in malls atria, and large areas," provides sufficiency of compliance with s 3.3.2.3, 3.3.2.4, 3.4.3.4, 3.1.8.1, and 3.2.5.13(1)	3.3.2.3 3.3.2.4 3.4.3.4 3.1.8.1 3.2.5.13(1)	205/00
00-60-792	2000	7-Dec-00	Determine whether the proposed sewage system, which includes terraced distribution pipe runs, provides sufficiency of compliance with 8.7.2.1.(1)(a)	8.7.2.1.(1)(a)	205/00
00-59-791	2000	7-Dec-00	Determine whether the construction of a deck, extending 2.13 m over a portion of an existing septic tank and the stairs serving the deck situated within 1.06 m of the existing filter bed, provide sufficiency of compliance with s 8.2.1.6.(1) and (2)	8.2.1.4.(1) 8.2.1.6.(1) 8.2.1.6.(2)	205/00
00-58-790	2000	30-Nov-00	Determine whether the as-built exterior concrete stairs and landings, having widths ranging from 814 mm to 850 mm, provide sufficiency of compliance with s 9.8.3.3., 9.8.4.1. and 9.9.3.2.	9.8.3.3. 9.8.4.1. 9.9.3.2.	205/00

00-56-788	2000	16-Nov-00	Determine whether the proposed partition walls and corridor configuration provide sufficiency of compliance with s 3.1.5.12.(3), 3.2.2.24.(2), 3.3.1.1.(1), and 3.3.1.4.(3)	3.1.5.12.(1)(a) 3.2.2.24.(2) 3.3.1.1.(1) 3.3.1.4.(3)	205/00
00-54-786	2000	2-Nov-00	Determine whether the proposed guard comprised mainly of 35 mm diameter acrylic rods complies with s 9.8.8.8. and 4.1.10.1. and whether the irregular curved stair provides sufficiency of compliance with 9.8.2.1.(1)	9.8.8.8. 4.1.10.1. 9.8.2.1.(1)	205/00
00-52-784	2000	19-Oct-00	Determine whether the restaurant and fixed seat grandstand areas of the proposed new racetrack facility can be considered as sharing the same major occupancy in accordance with s 3.1.2.1. and 3.1.3.1.	3.1.2.1. 3.1.3.1.	205/00
00-51-783	2000	19-Oct-00	Determine whether the as-built guards, comprised mainly of an ornamental floral design, provide sufficiency of compliance with 9.8.8.5.	9.8.8.5.	205/00
00-49-781	2000	21-Sep-00	Determine whether the linen chute, which is proposed to extend from the basement to the second floor only and not up and through the roof, provides sufficiency of compliance with 3.6.3.3.(3)	3.6.3.3.(3)	205/00
00-48-780	2000	7-Sep-00	Determine whether, due to the consideration of the building as an existing structure and proposed construction of two additions, the classification of the entire structure as per 3.1.2.1.	3.1.2.1.	205/00
00–47-779	2000	7-Sep-00	Determine whether the proposed renovation and conversion of an existing, detached building containing a Group C occupancy to a Group B, Division 3 care facility is required to comply with s 3.3.3.3.(3) and 3.3.3.4.(1), s 3.4.3.1.(2)(d), (c) and 3.8.3.3.(5)(b) and 3.3.3.2.(2)	3.3.3.2.(2) 3.3.3.3.(3) 3.3.3.4.(1) 3.4.3.1.(2)(c), (d) 3.8.3.3.(5)(b)	205/00
00–46-778	2000	7-Sep-00	Determine whether the ventilation and exhaust system that proposes to provide supply air from the corridors to the resident rooms and to exhaust from the resident washrooms provides sufficiency of compliance with 6.2.3.10.(3)	6.2.3.10.(3)	205/00
00-45-777	2000	7-Sep-00	Determine whether the as-built guard provides sufficiency of compliance with s 9.8.8.7. and 9.8.8.8.	9.8.8.7 9.8.8.8	115/89

00-44-776	2000	24-Aug-00	Determine whether the proposed substitution of two water closets with a proprietary composting toilet system to serve a one-classroom portable school with an adequate water supply provides sufficiency of compliance with 3.7.4.1.(2) and Part 8	3.7.4.1.(2)	205/00
00-43-775	2000	24-Aug-00	Determine whether the performance level of the existing sewage system, when considering the proposed renovation that will increase the number of bedrooms and the total finished area by more than 15%, provides sufficiency of compliance with s 11.4.2.5.(3) and 11.4.3.6.(1)	11.4.2.5.(3) 11.4.3.6.(1)	205/00
00-42-774	2000	24-Aug-00	Determine whether the asinstalled sanitary drainage system that includes a sump pit and pumps provides sufficiency of compliance with 7.4.6.3.	7.4.6.3.	205/00
00-41-773	2000	24-Aug-00	Determine whether the specified compensating measures, offered in lieu of a standpipe and hose system, provide sufficiency of compliance with 3.2.9.1.	3.2.9.1.	205/00
00-40-772	2000	24-Aug-00	Determine whether the as-built stairs, handrails and guards provide sufficiency of compliance with s 9.8.2.1.(1), 9.8.3.1.(1) and 9.8.3.3.(2), 9.8.5.2., s 9.8.5.3.(1) and (2), 9.8.7.1.(1)(a), s 9.8.7.2. and 9.8.7.6., 9.8.8.2.(5) and 9.8.8.4.	9.8.2.1.(1) 9.8.3.1.(1) 9.8.3.3.(2), 9.8.5.2. 9.8.5.3.(1) (2) 9.8.7.1.(1)(a) 9.8.7.2. 9.8.7.6. 9.8.8.2.(5) 9.8.8.4.	400/91
00-39-771	2000	10-Aug-00	Determine whether the as-constructed building, which does not provide protection on a floor area with a barrier-free path of travel, which has a combustible canopy and which does not offer a separate heat detection system, provides sufficiency of compliance with 3.3.1.7., 3.1.5.22.(2) and 3.2.4.11.(2)(b) respectively	3.1.5.22.(2) 3.2.4.8.(2)(b) , 3.2.4.11.(2)(b), 3.2.4.16.(1) 3.3.1.7	205/00
00-38-770	2000	10-Aug-00	Determine whether the proposed elevated platform should be considered a stage and must therefore comply with 3.3.2.12.	1.1.3.2.	205/00

				3.3.2.12	
00-37-769	2000	27-Jul-00	Determine whether 3.8.2.1.(2)(k) of the Ontario Building Code, which permits an exemption from the requirement to provide barrier-free accessibility "within" residential suites, also applies to the design of the interior side of the egress doorways proposed for the units in the Sheraton Fallsview Hotel, Stanley Avenue and Livingstone Street, Niagara Falls, Ontario.	3.8.2.1.(1)(k)	205/00
00-36-768	2000	27-Jul-00	Determine whether the new sprinklered facility separated from an existing building by a firewall, but which is proposed to be constructed without facing a street for fire fighting purposes or a fire access route, provides sufficiency of compliance with s 3.2.2.10.(1) and (2), 3.2.5.4.(1), and 3.2.5.5.	3.2.2.10.(1) and (2) 3.2.5.4.(1) 3.2.5.5.	205/00
00-35-767	2000	27-Jul-00	Determine whether the proposed sprinklering of certain bathrooms, offered as a compensating measure in lieu of meeting the required flame-spread rating and smoke developed classification with respect to the as-installed whirlpool bathtubs, provides sufficiency of compliance with s 3.1.5.16., 3.1.13.3. and 3.1.13.7.(1)	3.1.5.16. 3.1.13.3. 3.1.13.7.(1)	205/00
00-34-766	2000	13-Jul-00	Determine whether the working capacity of an existing gravity fed septic tank provides sufficiency of compliance with 8.2.2.3.(1)(a)	8.2.2.3.(1)(a)	205/00
00-33-765	2000	13-Jul-00	Determine whether the proposed Whitewater treatment system discharging to the proposed shallow buried trench sewage system designed to be buried in shallow sand fill provides sufficiency of compliance with 8.6.2.2.(2) and Table 8.6.2.2.A.	8.6.2.2.(2) , Table 8.6.2.2.A.	205/00
00-32-764	2000	13-Jun-00	Determine whether the as-built sewage system consisting of two consecutive 4,500 L septic tanks equipped with an effluent filter (and offered as primary and secondary treatment units) and an in-ground disposal bed at R.R. # 1 Petrolia, 5072 Petrolia Line, Petrolia, Ontario provides sufficiency of compliance with 8.6.2.2.	8.6.2.2.	205/00

00-31-763	2000	29-Jun-00	Determine whether the proposed fabric material roof, which is not considered as a Class A, B or C roof covering, provides sufficiency of compliance with 3.1.15.2.(1)	2.1.1.11. 3.1.15.2.(1) (2)	205/00
00-30-762	2000	29-Jun-00	Determine whether the existing exposing building face that does not offer a fire-resistance rating of 45 minutes and is clad with combustible siding, but which has been built with a zero metre limiting distance, provides sufficiency of compliance with 9.10.14.12.(5)	9.10.14.12.(5)	205/00
00-29-761	2000	14-Jun-00	Determine whether the as-built handrail that projects 100 mm into the required 750 mm minimum width of a landing where a door swings into an exit stair complies with 3.4.3.5.(3	3.4.3.5.(3) 3.4.3.5.(4) 3.3.1.17.(3)	205/00
00-28-760	2000	14-Jun-00	Determine whether the proposed installation of a single fan unit providing 24 L/s exhaust on a continuous basis to serve a bathroom with two fixtures requiring ventilation provides sufficiency of compliance with 6.2.3.9.(12)	2.6.2.1.(1) 6.2.3.9.(12)	205/00
00-27-759	2000	21-Sep-00	Determine whether the subject commercially-used log house, which was disassembled, rebuilt at another location and provided with a barrier-free path of travel, is required to provide barrier-free accessibility in the proposed new washroom when considering 2.1.1.7.(2) and 9.5.2.1	2.1.1.7.(2) 9.5.2.1.	205/00
00-26-758	2000	1-Jun-00	Determine whether proposed Class 1 (composting and incinerating toilet) and Class 2 (greywater system) systems in lieu of a Class 4 septic system to serve a newly built seasonal dwelling, complies with 8.1.2.1.(1) when considering s 7.1.6.1.(1) and 9.31.4.1.(1), and a subsequent proposal to include a different type of a Class 1 system (flush unit/composting toilet), a Class 2 system and a Class 3 system provides sufficiency of compliance with s 8.2.1.5.(1) and 8.2.1.4.(2)	8.1.2.1.(1) 7.1.6.1.(1) 9.31.4.1.(1)	205/00
00-25-757	2000	25-May-00	Determine whether the eighteen sets of as-built spiral stairs, which are not required exit stairs and are measured at 780 mm in width and 50 mm and 160 mm in minimum and average tread depth respectively, are required to comply with 9.8.3.3.(2) and s 3.3.1.15 and 9.8.5.2	9.8.3.3.(2) 3.3.1.15 9.8.5.2.	205/00

00-24-756	2000	25-May-00	Determine whether the proposed roof assembly, which is to be constructed with fibreglass reinforced polymer panels, provides sufficiency of compliance with 3.1.5.1.(1)	3.1.5.1.(1)	205/00
00-23-755	2000	25-May-00	Determine whether the intended use of the proposed building, as a home for ambulatory individuals with disabilities, complies with the definition of "Residential Occupancy" as set out in 1.1.3.2	1.1.3.2. 3.1.2.5.	205/00
00-22-754	2000	18-May-00	Determine whether the 45 m travel distances in the existing portions of the building, which are not to be protected by a 2 hour rated wall at the proposed atrium, provide sufficiency of compliance with 3.2.8.4.(4)	3.2.8.9 3.2.8.4.(4)	205/00
00-21-753	2000	11-May-00	Determine whether the new supermarket, proposed to be constructed adjoining to an existing retail mall as one enlarged building built on two properties complies with s 3.2.3.1.(8), 3.2.3.7.(4), 3.2.3.12.(1), 3.2.3.12.(3), 3.2.3.13.(3) and 3.3.1.4.(4)	3.2.3.	205/00
00-20-752	2000	11-May-00	Determine whether the as-built guards constructed mainly with panels consisting of 50 by 50 mm wire mesh provides sufficiency of compliance with s 3.3.1.17.(5) and 3.4.6.5.(8)	3.3.1.17.(5) 3.4.6.5.(8)	205/00
00-19-751	2000	27-Apr-00	to determine; (1) whether the proposed second storey partitions located in the interconnected floor space between the first and second floors complies with 3.2.8.1.(5) of the Ontario Building Code (OBC), (2) whether the proposed second and third floor travel distances provide sufficiency of compliance with 3.4.2.5.(1)(c) and 3.3.2.5.(4), (3) whether the building should be considered as having one or two suites and thereby provide either a 30 minute or one hour separation as per s 3.3.2.2.(8) or 3.3.1.1.(1), (4) whether the proposed close-spaced sprinklers on both sides of the unrated fire separations on the first floor provide sufficiency of compliance with either s 3.3.2.2.(8) or 3.3.1.1.(1), and (5) whether the proposed installation of a sprinkler activated mechanical exhaust system in lieu of roof mounted gravity vents provides sufficiency of compliance with 3.3.2.12.(5)	3.2.8.1.(5) 3.4.2.5.(1)(c) 3.3.2.5.(4) 3.3.2.2.(8) 3.3.1.1.(1) 3.3.2.12.(5)	597/99

00-18-750	2000	14-Jun-00	Determine whether the as-built landings that are not as long as the width of the stairs they serve provide sufficiency of compliance with 9.8.4.1.(1)	9.8.4.1.(1)	205/00
00-17-749	2000	13-Apr-00	an application by Mr. Emanuel Vommero, owner, Vommero Enterprises, Niagara Falls, Ontario, for the resolution of a dispute with Mr. Mel Brown, Chief Building Official, City of Niagara Falls, Ontario, to interpret whether 3.8.2.1.(2)(k)	3.8.2.1.(2)(k) , 3.8.3.3.(11)	597/99
00-16-748	2000	13-Apr-00	Determine whether the various proposed compensating construction measures, offered in lieu of a standpipe and hose system, provide sufficiency of compliance with 3.2.9.1.(1	3.2.9.1.(1)	205/00
00-15-747	2000	29-Mar-00	Determine the applicability and/or compliance with s 3.2.8.1.(3) and 3.2.8.2.(6) of the Ontario Building Code (OBC) regarding the proposed main floor interconnected floor space, whether the proposed design of the second floor corridor complies with OBC 3.3.3.3.(1), and whether the proposed connection to the adjacent existing building provides sufficiency of compliance with OBC Subsection 3.1.10. or 3.2.3.1.(1)(b) and 3.2.3.7.(1)	3.2.8.1.(3) 3.2.8.2.(6) 3.3.3.3.(1) 3.2.3.18. 3.1.10. 3.2.3.1.(1)(b) 3.2.3.7.(1)	597/99
00-14-746	2000	29-Mar-00	Determine whether the as-built stair landing that measures 1093 by 915 mm and serves a stair 1093 mm in width, the lack of a second handrail in a 1093 mm wide stair and the absence of a railing at the lower flight (comprised of two risers) in the stair between the ground and second floor provide sufficiency of compliance with s 9.8.4.1.(1), 9.8.7.1.(1) and 9.8.7.2.(2) respectively	9.8.4.1.(1) 9.8.7.1.(1), (2) 9.8.7.2.(2)	597/99
00-13-745	2000	5-Oct-00	Determine whether the proposed construction of exterior walls and location of windows provides sufficiency of compliance with 3.2.3.13	3.2.3.13.	205/00
00-12-744	2000	29-Mar-00	Determine whether the as-constructed three separate and irregular stairs provide sufficiency of compliance with s 9.8.2.1.(1) and 9.8.3.1.(1) and 9.8.5.2	9.8.2.1.(1) 9.8.3.1.(1) 9.8.5.2.	395/96

00-11-743	2000	16-Mar-00	Determine whether the as-constructed sewage system, with a clearance of only 0.76 m between the nearest point of the septic tank and the foundation wall of the building, provides sufficiency of compliance with 8.2.1.6.(1)	8.2.1.6.(1)	597/99
00-10-742	2000	2-Mar-00	Determine whether the proposed 3 m by 4.5 m kiosk structure, located in a 9 m wide public corridor, is required to provide barrier-free accessibility in accordance with s 3.8.1.3.(1) and 3.8.2.1.(1)	3.8.1.3.(1) 3.8.2.1.(1)	597/99
00-09-741	2000	2-Mar-00	Determine whether the as-installed roll down security door that is closed only during non-business hours provides sufficiency of compliance with s 3.3.1.10.(1) and 3.3.1.12.(2	3.3.1.10.(1) 3.3.1.12.(2)	597/99
00-08-740	2000	17-Feb-00	Determine whether the as-installed ornamental metal guards and rails, that include pickets ranging in thickness from 13 to 31 mm and sections of scroll pattern, and that have triangular openings (large enough to insert a spherical object 100 mm in diameter) formed by the stair tread and riser and the bottom cord of the railing provides sufficiency of compliance with 9.8.8.5. and 9.8.8.4.(1) respectively	9.8.8.4.(1) 9.8.8.5.	597/99
00-07-739	2000	17-Feb-00	Determine whether the as-constructed acid vents serving plumbing fixtures of more than one laboratory room comply with 7.5.4.4.(1)	7.5.4.4.(1)	597/99
00-06-738	2000	17-Feb-00	Determine whether the proposed sprinklering of the residential portion of the new fire station (a facility not required to be sprinklered) with a sprinkler system designed in accordance with NFPA 13R provides sufficiency of compliance with 3.2.5.13.(1)	3.2.5.13.(1)	597/99
00-05-737	2000	3-Feb-00	Determine whether the proposed roof assembly that includes fireretardant plywood sheathing on Z-girts with a 25 mm air space and RSI 3.25 mineral fibre insulation mounted on a 38 mm decking provides sufficiency of compliance with 3.1.5.3.(2)	3.1.5.3.(2)	597/99
00-04-736	2000	3-Feb-00	Determine whether the church, proposed without a standpipe and hose system, but with a dome measuring approximately 18.3 m in height to the ceiling, provides sufficiency of compliance with 3.2.9.1.(1)	3.2.9.1.(1)	597/99

00-03-735	2000	1-Feb-00	Determine whether the proposed roof, designed to delay the run off of rainwater but which is engineered to support either snow or rain load but not both, complies with 4.1.7.3.(3)	4.1.7.3.(3)	597/99
00-02-734	2000	13-Jan-00	Determine whether the proposed sprinkler system, designed according to NFPA 13R, and intended for use in a Group B, Division 3 occupancy provides sufficiency of compliance with 3.2.2.40. and 3.2.5.13.(1	3.2.2.40 3.2.5.13.(1)	597/99
00-01-733	2000	13-Jan-00	Determine whether the operation of the building compensates for the as-built guards constructed mainly with panels consisting of 50 by 50 mm welded wire mesh and thereby provides sufficiency of compliance with 3.3.1.17.(5)	3.3.1.17.(5)	597/99
99-76-732	1999	16-Dec-99	Determine whether the type of occupancy, proposed as a drive through restaurant, is permitted to comply with 8.2.1.3.(4)	8.2.1.3.(4)	597/99
99-75-731	1999	9-Dec-99	Determine whether the noncombustible bleachers, with a calculated minimum fire-resistance rating of 1.36 hours, offered in lieu of sprinklering the spaces below, provides sufficiency of compliance with 3.2.2.35.(4)	3.2.2.35.(4)	278/99
99-74-730	1999	9-Dec-99	Determine whether the proposed live/work units measuring 146.7 m2 in area, excluding stairs and unfinished basements, comply with the definition of live/work units provided in 1.1.3.2	1.1.3.2.	278/99
99-73-729	1999	2-Dec-99	Determine whether a guard with a bottom rail, measured at more than 100 mm to its top, complies with requirements of 9.8.8.5.(1)	9.8.8.5.(1)	278/99
99-72-728	1999	2-Dec-99	Determine whether the as built guard, installed on the exterior barrier-free ramp with a maximum height of 865 mm and which includes a lower, parallel rail 660 mm above the ramp surface, provides sufficiency of compliance with Sub s 3.8.3.4.(1)(f)(i) and (ii) respectively	3.8.3.4.(1)(f)	278/99

99-71-727	1999	2-Dec-99	Determine whether the proposed sprinkler system, designed according to NFPA 13R, provides sufficiency of compliance with 3.2.2.41. and s 3.2.5.13.(1) and (2)	3.2.2.41 3.2.5.13.(1) (2)	278/99
99-69-725	1999	18-Nov-99	Determine whether the as constructed guard, consisting of numerous joined diagonal members, provides sufficiency of compliance with 9.8.8.5.(1)	9.8.8.5.(1)	278/99
99-68-724	1999	18-Nov-99	Determine whether the as constructed single stair serving a second storey loft measuring 813 mm in width between wall faces provides sufficiency of compliance with 9.8.3.3.(2)	9.8.3.3.(2)	278/99
99-67-723	1999	4-Nov-99	Determine whether the proposed sprinkler system, designed according to NFPA 13R, and intended for use in a Group B, Division 3 occupancy provides sufficiency of compliance with 3.2.2.40. and 3.2.5.13.(1)	3.2.2.40. 3.2.5.13.(1) (2) 3.1.2.5.	278/99
99-66-722	1999	4-Nov-99	Determine whether the second storey sound and lighting booth, as constructed, with a pull-down ladder and a lockable access hatch provides sufficiency of compliance with 3.4.1.1. and 3.3.1.13.(1)	3.4.1.1. 3.3.1.5.(2)	278/99
99-65-721	1999	4-Nov-99	Determine whether the stair lift, with a width of 1,220 mm when in operation, proposed to be located in an existing exit stair that is 1,675 mm wide provides sufficiency of compliance with 3.4.3.5.(1) and 3.4.3.1.(2)(b)	3.4.3.5.(1) 3.4.3.1.(2)(b)	278/99
99-63-720	1999	21-Oct-99	Determine whether the proposed addition, currently being constructed with fire separations having a 45 minute fire-resistance rating and that will result in a completed structure with a total building area of 5,198.9 m2, provides sufficiency of compliance with 3.2.2.75.	3.2.2.75.	278/99
99-63-719	1999	21-Oct-99	Determine whether the 1.4 m exterior canopy, which has not been provided with sprinkler protection for the area beneath the canopy, provides sufficiency of compliance with 3.2.5.13.(1)	3.2.5.13.(1)	395/96
99-62-718	1999	21-Oct-99	Determine whether the definition of "exit" as set out in 1.1.3.2. and 3.4.4.1.(1)	1.1.3.2. 3.2.3.12.(1), (2) (3),	278/99

				3.4.4.1.(1) 3.4.4.3.(1)	
99-61-717	1999	23-Sep-99	Determine whether the proposed four wired glass panels, none of which exceed 0.8 m2 ,but which have an aggregate area of 1.9 m2 , as part of a wall assembly providing a 3/4 hour fire-resistance rating complies with 3.1.8.16	3.1.8.16.	395/96
99-60-716a	1999	22-Apr-99	Determine whether the proposed expanded steel manufacturing facility with a total building area of 22,135 m2 (238,267 ft2), that is not equipped with a standpipe and hose system, provides sufficiency of compliance with 3.2.9.1	3.2.9.1.	122/98
99-60-716	1999	23-Sep-99	Determine whether the proposed new arena built adjoining to the existing retail mall as one, albeit expanded, building constructed on two properties complies with 3.2.3.4. of the Ontario Building Code (OBC), and if so, whether the proposed design, without the provision of a fire separation with a two hour fire resistance rating complete with closures or special interconnected floor space fire safety measures, provides sufficiency of compliance with 3.2.8.1.(1)	1.1.3.2. 3.2.1.1.(2) 3.2.3.4. 3.2.8.1.(1) 3.2.8.2.(1), (5) (6)	278/99
99-59-715	1999	23-Sep-99	Determine whether the proposed change of use to a Group A, Division 2 (restaurant) occupancy, that is not provided with barrier-free a accessible washroom nor a separate washroom shared between employees only, is required to comply with s 3.8.2.3.(1) and 3.7.4.3.(7) respectively	3.8.2.3.(1)	278/99
99-57-713	1999	26-Aug-99	Determine whether the proposed roof assembly that includes fireretardant plywood sheathing on Z-girts with a 25 mm air space and R19 fibreglass batt insulation mounted on a 38 mm metal decking provides sufficiency of compliance with 3.1.5.3.(1) and (20)	3.1.5.3.(1) (2)	278/99
99-56-712	1999	7-Oct-99	Determine whether the proposed insulation system and wall assembly composed of compressed, stacked straw bales enclosed by metal lath covered on both sides with 15 mm cement stucco and coated (on the outer surface of the interior only) with a waterproof finish provides sufficiency of compliance with s 9.25.2.1.(1), (2) and (4), 9.25.2.3.(1), 9.25.3.1., 9.25.4.1., 9.25.4.2.(5) and s 9.28.4.2. and 9.28.4.3.	9.25.2.1.(1), (2) (4), 9.25.2.3.(1) 9.25.3.1. 9.25.4.1. 9.25.4.2.(5) 9.28.4.2., 9.28.4.3.	278/99

99-55-711	1999	19-Aug-99	Determine whether the Class 4 sewage system filter bed and mantle proposed to be sited in an area with 1:3 slope provides sufficiency of compliance with 8.7.4.2.(8)	8.7.4.2.(8) 8.8.1.2.(1)	278/99
99-54-710	1999	19-Aug-99	Determine whether the proposed Class 1 and 2 sewage systems to serve a residential dwelling equipped with certain water conservation devices but with an estimated daily sanitary sewage flow of 2,700 litres per day provides sufficiency of compliance with 8.4.2.2.(1	8.4.2.2.(1)	278/99
99-53-709	1999	5-Aug-99	Determine whether the proposed combustible PVC window units installed in certain suites as a floor to ceiling wall assembly with approximately only 250 mm of noncombustible vertical separation between storeys and constituting openings of roughly 50 to 70 percent aggregate area of the exterior wall face provides sufficiency of compliance with 3.1.5.4.(5)	3.1.5.4.(5)	278/99
99-52-708	1999	5-Aug-99	Determine whether the proposed sprinkler system, designed according to NFPA 13R, provides sufficiency of compliance with 3.2.2.41. and s 3.2.5.13.(1) and (2)	3.2.2.41 3.2.5.13.(1) 3.2.5.13.(2)	278/99
99-51-707	1999	5-Aug-99	Determine whether the proposed sprinkler system, designed according to NFPA 13R, provides sufficiency of compliance with 3.2.2.41. and s 3.2.5.13.(1) and (2)	3.2.2.41 3.2.5.13.(1) 3.2.5.13.(2)	278/99
99-50-706	1999	5-Aug-99	Determine whether the proposed fire alarm system for the entire building, offered in lieu of a required second exit from certain second storey units, provides sufficiency of compliance with 3.4.2.1.	3.4.2.1.	278/99
99-49-705	1999	22-Jul-99	Determine whether the subject piers supporting a second storey balcony as constructed and first storey deck as proposed, with less than 5 m clearance distance to the sewage system distribution pipes, provides sufficiency of compliance with 8.2.1.6.(2)	8.2.1.6.(2)	122/98

99-48-704	1999	8-Jul-99	Determine whether the recently constructed upgraded, noncombustible, one hour rated, pressed steel frame with wired glass panels and a 45 minute rated hollow metal door designed to match the existing exit stairwell enclosure provides sufficiency of compliance with 3.1.8.16	3.1.8.16.	395/96
99-47-703	1999	8-Jul-99	Determine whether the bank vault interior, as constructed, without sprinkler protection in a building required to be sprinklered, provides sufficiency of compliance with 3.2.5.13.(1)	3.2.5.13.(1)	278/99
99-46-702	1999	17-Jul-99	Determine whether the raised dining platform, as constructed, should be required to conform with s 3.3.2.13.(1) and 3.4.6.4.(7)	3.3.2.13.	278/99
99-45-701	1999	24-Jun-99	Determine whether the proposed replacement of a failed Class 4 sewage system to be sited near the existing location with less than 30 m to two dug wells is required to comply with 8.2.1.6.(2)	8.2.1.6.(2) 11.5.1.1.(1)	278/99
99-44-700	1999	24-Jun-99	Determine whether a partially raised Class 4 sewage system, expanded as a result of an addition to the existing seasonal residence, with reduced setbacks and an undersized leaching bed provides sufficiency of compliance with s 8.7.4.2.(9) and 8.7.5.2.(3)	8.7.4.2.(9) 8.7.5.2.(3)	278/99
99-43-699	1999	24-Jun-99	Determine whether the deck, as constructed, with less than 1.5 m setback from the septic tank provides sufficiency of compliance with 8.2.1.6. and whether the proposed screened porch situated on the subject deck provides sufficiency of compliance with the same of the Ontario Building Code at 128 Greystone Drive, Carp, Ontario	8.2.1.6.	278/99
99-42-698	1999	17-Jun-99	Determine whether the structural support system of the first floor of the temporary sales pavilion built to accommodate a live load of 2.4 kPa complies with 4.1.6.2.	4.1.6.2.	278/99
99-41-697	1999	17-Jun-99	Determine whether a drainage system is required beneath the basement level concrete slab-on-grade as per Subsection 9.16.3.	9.16.3.	278/99

99-40-696	1999	3-Jun-99	Determine whether the proposed residential-type ventilation system in the subject B 3 occupancy complies with 6.2.3.10.(5) of the Ontario Building Code (OBC) and whether the proposed 825 mm (2 ft 8 in) width of corridor doors intended for ambulatory users complies with 3.3.3.3.(4)	6.2.3.10.(5) 3.3.3.3.(4)	278/99
99-39-695	1999	3-Jun-99	Determine whether the proposed communal gas-fired fireplace located in a lounge area open to the building's internal corridor system complies with 3.3.1.2.(3)	3.3.1.2(3)	278/99
99-38-694	1999	3-Jun-99	Determine whether the proposed pool deck width of 1,675 mm (5 ft 6 in) provides sufficiency of compliance with 3.11.3.1.(9)(a)	3.11.3.1.(9)(a)	122/98
99-37-693	1999	3-Jun-99	Determine whether the unobstructed open width portion of the casement windows complies with 9.7.1.3.(1)(b)	9.7.1.3.(1)(b)	122/98
99-36-692	1999	27-May-99	Determine whether the new garage, proposed to be situated with a set back of 150mm from the holding tank, provides sufficiency of compliance with 8.2.1.6	8.2.1.6.	122/98
99-35-691	1999	27-May-99	Determine whether, when considering an adequate daily loading rate, the Class 4 sewage system proposed without a 15 m mantle provides sufficiency of compliance with 8.7.4.2.(1)(b)	8.7.4.2.(1)(b)	122/98
99-34-690	1999	27-May-99	Determine whether the proposed expansion of the Class 4 sewage system based on current measured daily design sewage flow rates to serve an enlarged nursing home provides sufficiency of compliance with 8.2.1.3	8.2.1.3.	278/99
99-32-688	1999	13-May-99	Determine whether the existing gravel floor is required to comply with s 4.1.1.3.(1) and 4.1.1.7.(1), 3.8.1.3., and s 3.8.2.1.(1) and 9.9.5.5.(2)	4.1.1.3.(1) 4.1.1.7.(1) 3.8.1.3 3.8.2.1.(1) 9.9.5.5.(2)	278/99

99-31-687	1999	13-May-99	Determine whether the travel distances on the second to fifth floors ranging from 53 to 56 m, in a structure with interconnected floor space due to the full height atrium, provides sufficiency of compliance with 3.2.8.4.(4) and 3.4.2.5.(1)(b)	3.2.8.4.(4) 3.4.2.5.(1)(b)	122/98
99-30-686	1999	13-May-99	Determine whether the proposed vinyl fabric roof on an aluminium frame to serve as a cover for the garden centre provides sufficiency of compliance with 3.1.5.22	3.1.5.22.	278/99
99-29-685	1999	29-Apr-99	Determine whether the proposed sprinkler system to be installed throughout the North Infill portion of the subject building compensates for the lack of a rated roof assembly provided for the North Infill area thereby providing sufficiency of compliance with 3.2.2.17., and whether the proposed hold-open devices at the eight doors between the North Infill, the North Wing and the Link area comply with 3.1.8.12.	3.2.2.1.7. 3.1.8.12.	122/98
99-28-684	1999	29-Apr-99	Determine whether the fabricated asbestos cement pipe fittings comply with 7.2.5.1.	7.2.5.1.	122/98
99-25-681	1999	15-Apr-99	Determine whether a pressurized water system used in conjunction with a Class 2 sewage system provides sufficiency of compliance with 8.4.1.2.(2)	8.4.1.2.(2)	122/98
99-24-680	1999	15-Apr-99	Determine whether the two proposed 5,000 litre holding tanks to serve a 110 m2 cottage containing 6 bedrooms situated on a 1,538 m2 island provide sufficiency of compliance with 8.8.1.2. and 8.8.2.2.(1)	8.8.1.2. 8.8.2.2.(1)	122/98
99-23-679	1999	15-Apr-99	Determine whether the proposed leaching bed with absorption trenches having only a vertical separation of 300 mm and soil with a percolation rate of 125 minutes per cm provides sufficiency of compliance with 8.7.3.2.(2)(e)	8.7.3.2.(2)(e)	122/98

99-22-678	1999	8-Apr-99	Determine whether the proposed location of a fuel fired appliance and the proposed level of illumination of exit signage complies with s 3.6.2.1.(2) and 3.6.2.2.(3) and s 3.2.7.3.(1)(i) and (j) and 3.2.7.3.(3) respectively	3.6.2.2.(3) 3.2.7.3.(1)(i) 3.2.7.3.(1)(j)	122/98
99-21-677	1999	8-Apr-99	Determine whether the modified guard with a total height of 915 mm, consisting of a single steel rail supported by posts located approximately every 1,200 mm constructed upon the original (610 mm in height) historic iron lattice and wood guard, provides sufficiency of compliance with 9.8.8.4.(1) and 9.8.8.5.	9.8.8.4.(1) 9.8.8.5.	122/98
99-20-676	1999	8-Apr-99	Determine whether the proposed 83 m2 Pizza Nova Take Out franchise should be considered a mercantile occupancy and is therefore adequately served by a single unisex, barrier-free accessible washroom in accordance with 3.7.4.8.(3).	3.7.4.3.(4)	122/98
99-19-675	1999	24-Mar-99	Determine whether the structure, with a proposed total building area of 1,508 m2, that is not equipped with a sprinkler system, provides sufficiency of compliance with 3.2.2.59	3.2.2.59	122/98
99-18-674	1999	24-Mar-99	Determine whether the fire separations not required to have a fire-resistance rating proposed to surround the vertical service shafts and to be constructed of 92 mm steel studs and 12.7 mm gypsum board and sealed at the perimeter and at all penetrations provides sufficiency of compliance with 3.6.3.1.(1)	3.6.3.1.(1)	122/98
99-17-673	1999	24-Mar-99	Determine whether a portion of a basement foundation wall and the patio retaining walls, as constructed, complies with 9.12.2.2.(1) and the structural requirements of Part 4 respectively	9.12.2.2.(1)	122/98
99-16-672	1999	11-Mar-99	Determine whether the fire alarm pull stations, installed at a height of 900 mm in accordance with 3.7.1.5., provides sufficiency of compliance with 3.2.4.5.(1)	3.7.1.5. 3.2.4.5.(1)	395/96

99-15-671	1999	11-Mar-99	Determine whether the basement level bathrooms, as constructed, with ceiling heights ranging from 1,950 mm (6 ft, 5 in) to 2,075 mm (6 ft, 10 in), provide sufficiency of compliance with 9.5.2.1. of the 1990 Ontario Building Code at 387 393 Bell Street South, 12 - 24 MacLean Street, and 395 Bell Street South (Units 1 - 13), Ottawa, Ontario.	9.5.2.1.	395/96
99-14-670	1999	11-Mar-99	Determine whether the proposed laboratory and office tenancies should be considered separate suites, and would therefore be required to provide a doorway into a public corridor and to provide a fire separation between the corridor and the suites, including between the second floor corridor and the atrium, in accordance with 3.3.1.3.(8) and 3.3.1.4. respectively	3.3.1.3.(8) 3.3.1.4.	122/98
99-13-669	1999	24-Feb-99	Determine whether the proposed single exit public corridor serving two suites, each having access to a second exit, provides sufficiency of compliance with 3.3.1.3.(9)	3.3.1.3.(9)	122/98
99-12-668	1999	24-Feb-99	Determine whether the proposed sprinkler system installed throughout the three storey town homes compensates for the increase in travel distance to an exit door, thereby providing sufficiency of compliance with 9.9.9.1.(2)	9.9.9.1.(2)	122/98
99-11-667	1999	24-Feb-99	Determine whether the intended smoke management system compensates for the proposed increase in travel distance and the elimination of a second exit to certain stores, thereby providing sufficiency of compliance with 3.4.2.5.(1)(d) and Sub 3.4.2.5.(1)(d)(iv) respectively	3.4.2.5.(1)(d) 3.4.2.5.(1)(d)(v)	122/98
99-10-666	1999	8-Apr-99	Determine whether the existing washroom ventilation and the fire stopping in the subject farm building provide comply with 7.1.7.1.(1) of the Ontario Building Code and 3.1.3.1.(1)	7.1.7.1.(1)	395/96
99-07-663	1999	27-Jan-99	Determine whether a sprinkler system constructed to the NFPA 13R standard achieves sufficiency of compliance with 3.2.2.41 and s 3.2.5.13.(1) and (2)	3.2.2.41 3.2.5.13.(1) 3.2.5.13.(2)	395/96

99-06-662	1999	27-Jan-99	Determine whether a sprinkler system constructed to the NFPA 13R standard achieves sufficiency of compliance with 3.2.2.41 and s 3.2.5.13.(1) and (2)	3.2.2.41 3.2.5.13.(1) 3.2.5.13.(2)	395/96
99-05-661	1999	27-Jan-99	Determine whether the entrance doors, as installed, provides sufficiency of compliance with 3.1.8.13.	3.1.8.13.	395/96
99-04-660	1999	14-Jan-99	Determine whether the movable wall partitions installed as store fronts in numerous business occupancies, and located in their only means of egress, provides sufficiency of compliance with 3.3.1.11.(3)	3.3.1.11.(3)	122/98
99-03-659	1999	19-Jan-99	Determine whether the proposed ground floor elevator lobby, constructed without enclosure, provides sufficiency of compliance with 9.9.7.2.(2)	9.9.7.2.(2)	122/98
99-02-658	1999	12-Jan-99	Determine whether the proposed dwelling unit balconies, which are not intended as areas of refuge, are required to be barrier-free when considering 3.8.2.1.(3)	3.8.2.1.(3).	122/98
99-01-657	1999	12-Jan-99	Determine whether the proposed dwelling unit balconies, which are not intended as areas of refuge, are required to be barrier-free when considering 3.8.2.1.(3) of	3.8.2.1.(3).	122/98
98-51-656	1998	15-Dec-98	Determine whether the proposed installation of a securitydesk in a lobby area leading to an exit provides sufficiency of compliance with 3.4.4.4.(6)	3.4.4.4.(6).	122/98
98-50-655	1998	15-Dec-98	Determine whether the proposed steel shearing and warehouse facility, with an area of 5,870.68 m2, that is not equipped with a standpipe and hose system, provides sufficiency of compliance with 3.2.9.1.	3.2.9.1.	122/98
98-49-654	1998	15-Dec-98	Determine whether the non-water resistant drywall, as installed, in the main bathroom and the master bedroom ensuite washroom provides sufficiency of compliance with Subsection 9.29.2	9.29.2.	122/98

98-48-653	1998	15-Dec-98	Determine whether the natural and mechanical ventilation systems, as constructed, provide sufficiency of compliance with Subsections 9.32.2. and 9.32.3. respectively	3.2.9.1.	122/98
98-47-652	1998	3-Dec-98	Determine whether the proposed installation of combustible piping penetrations through fire separations, with a modified system of fire stopping, in a sprinklered building complies with s 3.1.9.1. and 3.1.9.4	3.1.9.1. 3.1.9.4.	122/98
98-46-651	1998	3-Dec-98	Determine whether the proposed installation of Electroguard delayed access devices on certain exit doors provides sufficiency of compliance with 3.4.6.15.(4)	3.4.6.15.(4)	122/98
98-45-650	1998	18-Nov-98	Determine whether changes to the existing tile field are required as a result of a proposed addition to an existing house in order to achieve sufficiency of compliance with Part 8 and 11.4.2.5.	11.4.2.5.	122/98
98-44-649	1998	5-Nov-98	Determine whether the proposed measures provide sufficiency of compliance with 3.9.3.4	3.9.3.4.	395/96
98-43-648	1998	5-Nov-98	Determine whether the proposed measures provide sufficiency of compliance with 3.9.3.4	3.9.3.4.	395/96
98-42-647	1998	5-Nov-98	Determine whether the proposed measures provide sufficiency of compliance with 3.9.3.4.	3.9.3.4.	395/96
98-41-646	1998	5-Nov-98	Determine whether a sprinkler system constructed to the NFPA 13R standard achieves sufficiency of compliance with 3.2.2.41 and s 3.2.5.13.(1) and 3.2.5.13.(2)	3.2.2.41, s 3.2.5.13.(1) (2)	122/98
98-40-645	1998	5-Nov-98	Determine whether the proposed measures, in lieu of a standpipe and hose system, provide sufficiency of compliance with 3.2.9.1.(1)(b) and Table 3.2.9.A	3.2.9.1.(2)(b) and Table 3.2.9.A.	395/96
98-39-644	1998	21-Oct-98	Determine whether post-indicating valves on a looped fire main around the perimeter of an new building are required to be electrically supervised to achieve sufficiency of compliance with s 3.2.2.12(1) and 3.2.4.16(5)	3.2.2.12(1) , 3.2.4.16(5)	395/96

98-38-643	1998	21-Oct-98	Determine whether corridor walls not constructed to be continuous from the floor to the underside of the ceiling in a self-storage facility achieve sufficiency of compliance with s 3.10.2.4.(2)(b) and (c)	3.10.2.4.(2)(b) (c)	395/96
98-36-641	1998	10-Sep-98	Determine whether an exterior ramp constructed as a barrier free path of travel provides sufficiency of compliance with 3.7.3.4.	3.7.3.4.	395/96
98-35-640	1998	26-Aug-98	Determine whether the proposed design of a residential building achieves sufficiency of compliance with 3.3.1.9.(9	3.3.1.9.(9)	395/96
98-34-639	1998	26-Aug-98	Determine whether the four subject exit doors at widths ranging from 746 mm (2 ft, 5 « in) to 760 mm (2 ft, 6 in) provides sufficiency of compliance with 3.4.3.1.(2)(e)	3.4.3.1.(2)(e)	395/96
98-32-637	1998	16-Jul-98	Determine whether the subject EPS Thermoplastic Panels on an exterior wall and some interior freezer walls are permitted in a sprinklered building required to be of noncombustible construction when considering 3.1.5.11.	3.1.5.11.	395/96
98-31-636	1998	16-Jul-98	Determine whether the as constructed barrier-free path of travel at 1,010 mm (3 ft., 4 in.) provides sufficiency of compliance with 3.7.1.3.	3.7.1.3.	395/96
98-30-635	1998	16-Jul-98	Determine whether the proposed mezzanine complies with 3.2.1.1.(3)	3.2.1.1.(3)	395/96
98-29-634	1998	29-Jul-98	Determine whether the existing sewage system with a working capacity of 6,819 Litres/day serving the proposed renovated house with a total finished area of 819.9 m2 provides sufficiency of compliance with s 8.2.1.3. and 8.2.2.3.	8.2.1.3. , 8.2.2.3.	122/98
98-28-633	1998	29-Jul-98	Determine whether the proposed residential sewage system which incorporates a recirculation sand filter with a shallow buried trench disposal system is permitted to be installed when considering 8.7.6.1	8.7.6.1.	122/98
98-27-632	1998	18-Jun-98	Determine whether the installed plywood platforms in eight assembly lines should be considered as finished flooring with concealed spaces underneath and therefore subject to 3.1.5.8	3.1.5.8.	395/96

98-25-630	1998	4-Jun-98	Determine whether a 428 m 2 retail store in a proposed retail occupancy that is equipped with a single washroom which is handicapped accessible provides sufficiency of compliance with 3.6.4.2.(25)(b)	3.6.4.2.(25)(b)(ii)	395/96
98-24-629	1998	21-May-98	Determine whether the proposed mezzanines, as designed, in sixteen units within the project comply with 9.10.4.1.(2)	9.10.4.1.(2)	395/96
98-23-628	1998	21-May-98	Determine whether the studio floor assembly above the garage, as constructed, with a concrete slab including an embedded hydronic heat radiation system but without insulation provides sufficiency of compliance with s 9.25.2.1. and 9.25.2.7	9.25.2.1. and 9.25.2.7.	395/96
98-22-627	1998	21-May-98	Determine whether the as built floor joists provide sufficiency of compliance with 9.40.3.3.	9.40.3.3.	395/96
98-21-626	1998	6-May-98	Determine whether the recently constructed addition of an airsupported structure to an existing single storey office building is required to install a standpipe and hose system, to provide a 1 hour fire resistance-rating on the mezzanine, and to separate the new and existing portions of the building also by a 1 hour rating in accordance with s 3.2.9.1., 3.13.2.2. and 3.13.2.3. respectively	3.2.9.1., 3.13.2.2. and 3.13.2.3.	122/98
98-20-625	1998	6-May-98	Determine whether the unenclosed walkway in the proposed two storey school structure provides sufficiency of compliance with s 3.2.8.2.(9)(c), 3.2.8.2.(9)(e) and 3.2.8.2.(9)(f)	3.2.8.2.(9)(c), 3.2.8.2.(9)(e) and 3.2.8.2.(9)(f)	395/96
98-19-624	1998	24-Apr-98	Determine whether the proposed windows, as unprotected openings offset at 1.2 metres in a wall 0.94 metres from the adjacent property line, provide sufficiency of compliance with 9.10.14.1.	9.10.14.1	395/96
98-18-623	1998	9-Apr-98	Determine whether the recently installed drop ceiling, at a height averaging 2,088 mm, provides sufficiency of compliance with 3.4.3.7.(1)	3.4.3.7.(1)	395/96
98-16-621	1998	9-Apr-98	to determine, among other things, whether the subject building is required to meet the structural requirements under 9.4.1.1	9.4.1.1.	395/96

98-15-620	1998	25-Mar-98	Determine whether the proposed installation of electromagnetic locking devices on one leaf only of a pair of double egress doors separating two occupancies, a pool and a school, provide sufficiency of compliance with 3.3.1.12.(3)	3.3.1.12.(3)	395/96
98-14-619	1998	25-Mar-98	Determine whether the roof assembly, as constructed, without a thermal barrier between the foam plastic insulation and the steel roof deck, but including other measures provides sufficiency of compliance with s 3.2.2.57.(2)(c) and 3.1.14.2.(2)(a	3.2.2.57.(2)(c) , 3.1.14.2.(2)(a)	395/96
98-13-618	1998	12-Mar-98	Determine whether the addition of a presidential suite can be defined as a mezzanine under 3.2.1.1.(4) to allow a single exit in accordance with 3.4.2.2. at Niagara Falls Ramada Suites Hotel & Conference Centre, 7389 Lundy's Lane, Niagara Falls, Ontario	3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	395/96
98-12-617	1998	12-Mar-98	Determine whether the existing sewage tank, drain pipe, "Standard" toilet and lack of inspection prior to use comply with Ontario Water Resources Act provisions 5.6.5., 4.8.1.(1), 2.1.5.(2) and 1.8.1.(2) respectively	3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	395/96
98-11-616	1998	4-Mar-98	Determine whether the shade screen adjacent to the existing building can be considered as a temporary structure adjoining that building and thus be subject to Subsection 3.1.6. and not Subsection 3.2.3.	3.3.1.5.	395/96
98-10-615	1998	4-Mar-98	Determine whether a combination microwave and exterior vented hood fan installed approximately 355 mm (14 in) above the top of a stove burner complies with 9.33.2.1	7.2.5.5. , 2.6.4.1.	395/96
98-09-614	1998	25-Feb-98	Determine whether a standpipe and hose system is required to be installed in accordance with 3.2.9.1	3.3.1.5.	395/96
98-08-613	1998	25-Feb-98	Determine whether the proposed distance between openings is permitted under 3.2.3.14	3.3.1.5.	395/96
98-07-612	1998	25-Feb-98	Determine whether the guard height and the openings in the guard, as constructed, provide sufficiency of compliance with 9.8.8.2.(1) and 9.8.8.4.	3.3.1.5.	395/96

98-06-611	1998	12-Feb-98	Determine whether piping used in the water main or service installation provides sufficiency of compliance with s 7.2.5.5. and 2.6.4.1.	7.2.5.5. , 2.6.4.1.	395/96
98-05-610	1998	12-Feb-98	to det ermine whether the proposed egress distances, which slightly exceed 15 metres from certain classrooms, provide sufficiency of compliance with 3.3.1.5	3.3.1.5.	395/96
98-04-609	1998	12-Feb-98	Determine whether the three oversized, overhead door openings proposed for rear of the building, considering the subject limiting distance, are required to be installed with 1.5 hour fire rated doors at Bretton Imported Cars	3.2.3.1.	395/96
98-03-608	1998	15-Jan-98	Concerning whether the proposed measures provide sufficiency of compliance in li eu of adequate egress from the fourth storey in accordance with 3.3.4.4.(3)	3.3.4.4.(3)	115/89
98-02-607	1998	15-Jan-98	an application by Mr. and Mrs. Jeff Davie, Property Owners, 939 Queen Street West, Mississauga, Ontario, for the resolution of a dispute with Mr. Andrew Feetham, Chief Building Official, Town of Wasaga Beach, Ontario, Concerning whet er the proposed building is required to provide ventilation facilities under 9.32.1.2	9.32.1.	115/89
97-63-605	1997	18-Feb-98	Concerning whether the proposed cinema seating design, especially regarding the number of seats per row and aisle configuration, provides sufficiency of compliance with s 3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	395/96
97-61-603	1997	18-Feb-98	Concerning whether the proposed cinema seating design, especially regarding the number of seats per row and aisle configuration, provides sufficiency of compliance with s 3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	3.3.2.3.(2), 3.3.2.4.(2), 3.3.2.4.(3), 3.3.2.4.(4) and 3.3.2.4.(5)	395/96
97-60-602	1997	18-Dec-97	Concerning whether the proposed closely spaced sprinklers designed to protect an unprotected opening area exceeding the permitted limit provide sufficiency of compliance with 3.2.3.1.(1)	3.2.3.1.(1)	115/89

97-59-601	1997	18-Dec-97	Determine whether the proposed fire hydrant spacing in relation to the distance to the rear lane garages provides sufficiency of compliance with Subsection 9.10.19 and 3.2.5.8.(2)	Subsection 9.10.19. , 3.2.5.8.(2)	115/89
97-58-600	1997	11-Dec-97	Concerning whether an additional fire hydrant is to be installed to comply with 3.2.5.8(2)	3.2.5.8.(2)	115/89
97-57-599	1997	11-Dec-97	Concerning whether a travel distance of 38 metres in a building equipped with early suppression fast response sprinklers provides sufficiency of compliance with 3.4.2.5.(1)(a)	3.4.2.5.(1)(a)	115/89
97-55-597	1997	11-Dec-97	Concerning self closing devices are required between the corridors and sleeping rooms in accordance with 3.1.8.11.(5)	3.1.8.11.(5)	115/89
97-54-596	1997	26-Nov-97	Concerning whether the travel distance from the entry door of certain suites to the exit provides sufficiency of compliance with 3.4.2.5.(1)(f)	3.4.2.5.(1)(f)	115/89
97-52-594	1997	13-Nov-97	Concerning whether the proposed front door steps are exit stairs requiring handrails under 3.4.6.4.	3.4.6.4.	115/89
97-51-593	1997	13-Nov-97	Determine whether the proposed measures provides sufficiency of compliance regarding standpipe and hose pressure in accordance with 3.2.9.3	3.2.9.3.	115/89
97-50-592	1997	13-Nov-97	Concerning whether the stairs, as constructed, provide sufficiency of compliance with 9.8.3.3.(2) of the Ontario Building Code (OBC) and whether OBC 9.8.3.4. requires that the minimum headroom for stairs in a dwelling unit	9.8.3.3.(2) , 9.8.3.4.	115/89
97-49-591	1997	29-Oct-97	Concerning whether the proposed exit stair provides sufficiency of compliance with 3.4.1.4.	3.4.1.4.	115/89
97-48-590	1997	29-Oct-97	Concerning whether the standpipe and hose system provides adequate water pressure to comply with 3.2.9.3.(6)	3.2.9.3.(6)	115/89
97-47-589	1997	29-Oct-97	Concerning whether a renovation enclosing an existing atrium space should comply with Section 9.25	9.25	115/89

97-46-588	1997	9-Oct-97	Determine whether the proposed glass paver floor assembly provides sufficiency of compliance with 3.2.2.45.(2)	3.2.2.45.(2)	115/89
97-45-587	1997	9-Oct-97	Concerning whether the proposed wall assembly, including the Royal Building System exterior cladding, provides sufficiency of compliance with 3.1.5.5.	3.1.5.5.	115/89
97-44-586	1997	9-Oct-97	Determine whether the proposed renovations provide sufficiency of compliance with s 3.2.5.5.(1), 3.2.5.6.(4) and 9.10.19.3, s 3.3.4.4. and 9.9.9.1., and 3.2.3.13.(2) and 9.9.4.4.	9.9.9.1.(1), 3.3.4.4., 9.10.19.3.	115/89
97-43-585	1997	24-Sep-97	Concerning whether the floor assemblies above the oil cellar and caster basement provide sufficiency of compliance with s 3.2.1.4.(1) and (2) of the Ontario Building Code (OBC), whether the openings in the said floor assemblies provide sufficiency of compliance with 3.1.8.1.(2) of the OBC, and whether the number of exits from the caster basement provide sufficiency of compliance with 3.4.2.1.(2)	3.2.1.4.(1) , 3.2.1.4.(2)	115/89
97-42-584	1997	24-Sep-97	Concerning whether the wood guard for the proposed third floor deck provides sufficiency of compliance with 9.8.8.5.	9.8.8.5.	115/89
97-41-583	1997	11-Sep-97	Concerning whether the proposed addition is required to a have stand pipe hose system in accordance with 3.2.9.1.	3.2.9.1.	115/89
97-40-582	1997	11-Sep-97	Concerning whether the proposed third floor office space provides sufficiency of compliance with 9.9.8.2	9.9.8.2.	115/89
97-39-581	1997	11-Sep-97	Concerning whether the proposed water and sewage service connections provides sufficiency of compliance with 7.1.6.4.(1)	7.1.6.4.(1)	115/89
97-38-580	1997	21-Aug-97	Determine whether the unprotected openings on the subject residential addition comply with 9.10.14.1.(1)	9.10.14.1.(1)	115/89
97-37-579	1997	21-Aug-97	Concerning whether the subject stairs containing six winders provides sufficiency of compliance with 9.8.5.3.(1)	9.8.5.3.(1)	115/89
97-36-578	1997	21-Aug-97	Concerning whether the proposed exterior spiral staircase provides sufficiency of compliance with 9.8.5.2.	9.8.5.2.	115/89

97-35-577	1997	12-Aug-97	Concerning whether the proposed sprinkler and egress facility upgrades from an interior office mezzanine provide sufficiency of compliance with 3.2.2.54.	3.2.2.54.	115/89
97-34-576	1997	12-Aug-97	Determine whether a required fire alarm system should sound in the theatre space of a concert building in accordance with 3.2.4.19.(1)	3.2.4.19.(1)	115/89
97-33-575	1997	12-Aug-97	Concerning whether a precast concrete mezzanine using steel HSS sections and steel plate for structural support provides sufficiency of compliance with 3.2.2.22.(2)(b)	3.2.2.22.(2)(b)	115/89
97-32-574	1997	22-Jul-97	the resolution of a dispute whether the roof truss assembly provides sufficiency of compliance with the Ontario Building Code	9.10.9.14.(3)	115/89
97-31-573	1997	22-Jul-97	Concerning whether the wall and ceiling construction containing foamed plastic insulation provides sufficiency of compliance according to 3.1.4.2.(1)	3.1.4.2.(1)	115/89
97-29-571	1997	9-Jul-97	Concerning whether the proposed termination of a 2 hour firewall on the underside of a reinforced concrete roof slab on one side only provides sufficiency of compliance with 3.1.10.3.(2)(a)	3.1.10.3.(2)(a)	115/89
97-28-570	1997	9-Jul-97	Concerning whether the proposed retail supermarket addition should provide washroom facilities based on occupant load in accordance with 3.1.16.1.	3.1.16.1.	115/89
97-27-569	1997	9-Jul-97	Concerning whether the proposed polyethylene skylight should be considered a roof according to 3.2.3.18.	3.2.3.18.	115/89
97-25-567	1997	3-Jul-97	Concerning whether the proposed height of the handrails at the landing of the exit stairways provides sufficiency of compliance with s 3.4.6.4.(4) and 3.4.6.4.(5)	3.4.6.4.(4) , 3.4.6.4.(5)	115/89
97-24-566	1997	3-Jul-97	Concerning whether the proposed stairs to chancel platform should be considered as access stairs and thus be required to have the specified handrails according to 3.4.6.4.(1)	3.4.6.4.(1)	115/89

97-23-565	1997	3-Jul-97	Concerning whether the constructed addition provides sufficiency of compliance with the requirements for a standpipe and hose system, building sprinklering, adequate water supply and sprinklering in the spray booth area in accordance with s 3.2.9.1.(1)(b), 3.2.2.52.(1)(b) and s 3.2.5.8. and 6.2.2.5. respectively	3.2.2.52.(1)(b), 3.2.5.8., 3.2.9.1.(1)(b) , 6.2.2.5.	115/89
97-22-564	1997	22-Jun-97	Concerning whether the proposed window openings on the west of a 2 storey single-detached house at 68 Ellsworth Avenue, Richmond Hill, Ontario provide sufficiency	9.10.14.1. and 9.10.14.12.(4)	115/89
97-21-563	1997	19-Jun-97	Concerning whether the proposed extension of the mezzanine onto the parking area of the existing roof should be considered as part of the mezzanine	3.2.1.1.(3) , 3.2.1.1.(4)	115/89
97-19-561	1997	12-Jun-97	Concerning whether the subject slab-on-ground should be insulated in accordance with 9.25.2.7.(1)	9.25.2.6. and 9.25.2.7.(1)	115/89
97-18-560	1997	12-Jun-97	Concerning whether the subject building is required to be sprinklered in accordance with 3.2.2.44.	3.2.2.44.	115/89
97-17-559	1997	28-May-97	Concerning whether the subject building is 1 storey in height in accordance with 3.2.1.1.(8) of the Ontario Building Code (OBC) and whether structural fire resistance under OBC 3.2.2.57.	3.3.1.1.(8) and 3.2.2.57.	115/89
97-16-558	1997	28-May-97	Concerning whether the performance area is a stage and thus subject to the requirements of 3.3.2.13	3.3.2.13.	115/89
97-14-556	1997	8-May-97	Concerning whether locating occupancies not exceeding 15% of the public corridor area on the same side as new retail units in an unobstructed 6 metre public corridor, provides sufficiency of compliance with 3.3.1.9.(6) and 3.4.2.5.(1)(d)	3.3.1.9.(6) , 3.4.2.5.(1)(d)	115/89
97-13-555	1997	24-Apr-97	Concerning whether a stair with a width of 660 mm (2' 2") rather than the required 860 mm (2' 10") provides sufficiency of compliance with 9.8.3.3.(2)	3.2.5.1.(1) and 3.2.5.1.(2)	115/89
97-12-554	1997	8-May-97	Concerning whether the fire fighting access requirements of s 3.2.5.1.(1) and 3.2.5.1.(2)	3.2.5.1.(1) and 3.2.5.1.(2)	115/89

97-11-553	1997	24-Apr-97	Concerning whether a spiral stair which is a secondary exit provides sufficiency of compliance with 9.8.5.2	9.8.5.2.	115/89
97-09-551	1997	10-Apr-97	Concerning whether 9.10.14.13. applies to an accessory building	9.10.14.13.	115/89
97-08-550	1997	10-Apr-97	Concerning whether i) there is a change in performance level and, ii) a skylight set in a wood frame, prov ides sufficiency of compliance with Section 11.3 and 3.2.3.15.	11.3. and 3.2.3.15.	115/89
97-07-549	1997	26-Mar-97	Concerning whether the "Royal Building System" consisting of a PVC shell structure filled with concrete, provides sufficiency of compliance with 3.2.3.7.(2	3.2.3.7.(2)	115/89
97-06-548	1997	26-Mar-97	Concerning whether an air supported structure with a mezzanines and interior partitions, provides sufficiency of compliance with Subsection 3.1.6	3.1.6.	115/89
97-05-547	1997	26-Mar-97	Concerning whether i) not providing wired glass in fixed steel frames adjacent to an unenclosed exterior stair, provides sufficiency of compliance with 3.2.3.13.(2) and, ii) providing doors crossing a corridor with the left hand door swinging in direction of exit travel, provides sufficiency of compliance with s 3.3.1.10.(3) and 3.3.3.3.(3)	3.2.3.13.(2) 3.3.1.10.(3) and 3.3.3.3.(3)	115/89
97-04-546	1997	11-Mar-97	Determine whether a 2 hour fire separation between an existing school and a gymnasium addition provides sufficiency of compliance with 3.1.10	2.1.3.1. and Subsection 3.1.10	115/89
97-03-545	1997	26-Feb-97	Concerning whether the conversion of 11 units in an existing multi-unit apartment building is to be classified under a residential or institutional major occupancy under Subsection 3.1.2. and 3.1.3.5.(1)	3.1.2. and 3.1.3.5.(1)	115/89
97-02-544	1997	26-Feb-97	Concerning whether adding a mezzanine to an existing building such that the total area of the mezzanine would be 12.5% of the building area complies with s 3.2.1.1.(3) and 3.2.1.1.(4)	3.2.1.1.(3) , 3.2.1.1.(4)	115/89

97-01-543	1997	26-Feb-97	Concerning whether installing a trench and weeping tile around the exterior of a foundation wall provides sufficiency of compliance with s 9.15.4.3. and 9.14.6.1.	9.15.4.3. , 9.14.6.1.	583/83
96-59-542	1996	13-Feb-97	Concerning whether providing fire separated balconies at the front and back, and a wide shared exit for each of the 2 upper units in a 4 unit building provides sufficiency of compliance with 9.9.9.3.	9.9.9.3.	115/89
96-58-541	1996	13-Feb-97	Concerning whether the ventilation requirements for an automobile showroom and new car delivery area are subject to 6.2.2.3.	6.2.2.3.	115/89
96-57-540	1996	13-Feb-97	Concerning whether the proposed combination of straight, winders, and curved stairs provide sufficiency of compliance with Section 9.8.	9.8.	115/89
96-56-539	1996	8-Jan-97	Concerning whether connecting floor drains from the below grade levels of a multi-storey parking lot to the sanitary drainage system, without oil interceptors provides sufficiency of compliance with 7.4.4.3.	7.4.2.1.	115/89
96-55-538	1996	8-Jan-97	Concerning whether Section 9.5. of the Building Code applies to; whether the requirements of 9.5. are met; and, whether the required heating provisions of 9.33.1.3.(1) have been met	Section 9.5 and 9.33.1.3	115/89
96-54-537	1996	12-Dec-96	Concerning whether a secondary spiral stair which has a rise exceeding 200 mm provides sufficiency of compliance with 9.8.3.1.(1) and 9.8.5.2.	9.8.3.1.(1) , 9.8.5.2.	115/89
96-53-536	1996	8-Jan-96	Concerning whether or not a change of occupancy from an office use to a fitness club use complied with the requirements of 11.3.4.1.	11.3.4.1.	115/89
96-52-535	1996	12-Dec-96	Concerning whether the circulation of return air from students' bedrooms to a mechanical room where it is mixed with fresh air and recirculated back to the suites provides sufficiency of compliance with 6.2.3.11.(2)	6.2.3.11.(2)	115/89
96-51-534	1996	21-Nov-96	Determine whether Fire alarm signals which are not activated simultaneously but which activate in other portions of a commercial mall within no more than 5 minutes provides sufficiency of compliance with Subsection 3.2.4	3.2.4.4.(2)(b)	115/89

96-50-533	1996	21-Nov-96	Determine whether the audibility of the fire alarm system complies with 3.2.4.19.(1)	3.2.4.19.(1)	115/89
96-49-532	1996	21-Nov-96	Determine whether the configuration of the corridors and travel distance for a proposed self storage building provides sufficiency of compliance with 3.10.2.4.(2)	9.30.6.3.	115/89
96-48-531	1996	13-Nov-96	Concerning whether the installation of the ceramic tile provides sufficiency of compliance with 9.30.6.3	9.30.6.3.	115/89
96-47-530	1996	31-Oct-96	Concerning whether the spiral staircase that provides sufficiency of compliance with s 9.8.3.1.	9.8.3.1.	20/95
96-46-529	1996	13-Nov-96	Concerning whether providing sprinkler protection for the basement and ground floor and not upgrading second floor/ceiling assembly for the proposed increase in ground floor restaurant seating from 30 to 49 (eg. change of major occupancy from Group E to Group A-2) provides sufficiency of compliance with 11.3.4.1.(4)	11.3.4.1.(4)	115/89
96-45-528	1996	15-Oct-96	Concerning whether i) the building may be considered a Special and Unusual Structure under 3.2.2.61. rather than 3.2.2.2.; ii) whether the below grade process area is more than one storey in accordance with 3.2.1.1.(8); iii) whether the complete floor areas in the building are required to be protected by an automatic sprinkler system in accordance with 3.2.1.5., and s 3.2.2.11.(2), 3.4.2.5.(1), 3.2.8.2.(3); and iv) whether the exits in the below grade process floor areas sufficiently comply with the separation of exits and travel distance requirements in s 3.4.2.1., 3.4.4.1. and 3.4.2.5.(1)	3.2.1.5., 3.2.2.2., 3.2.2.61., 3.4.2.1., & 3.4.4.1., and s 3.2.1.1.(8), 3.2.2.11.(2), 3.2.8.2.(3) & 3.4.2.5.(1)	20/95
96-44-527	1996	26-Sep-96	Concerning whether the ceiling plenum consisting of a 1 ?" wood roof deck, sprinkler system and smoke detectors provide sufficiency of compliance with s 3.5.4.3. 6.2.3.2., and 3.1.5.14.(1)	3.5.4.3., 6.2.3.2., and 3.1.5.14.(1)	20/95
96-43-526	1996	15-Oct-96	Determine whether not sloping the floor and locating the drain so that water from one head will flow over the area that serves another head in a group shower facility provides sufficiency of compliance with 7.2.2.3.(3)	7.2.2.3.(3)	20/95

96-42-525	1996	31-Oct-96	Concerning whether the windows that result from the conversion of a second floor balcony to a sunroom addition provides sufficiency of compliance with 9.10.14.12.(3) and 9.10.14.5.	9.10.14.12.(3) , 9.10.14.5.	20/95
96-41-524	1996	26-Sep-96	Concerning whether the spatial separation and the percentage of window openings in the west face of Block A at Wesley-Robins Retirement Village provides sufficiency of compliance with s 3.2.3.1., 3.2.3.5., 3.2.3.6., 3.2.3.7., and 3.2.3.8.	3.2.3.1., 3.2.3.5., 3.2.3.6., 3.2.3.7., 3.2.3.8.	20/95
96-40-523	1996	11-Sep-96	Concerning whether the bevelled side of a bay window is a wall or exposing building face of a fire compartment and if the portion of the exterior wall between such windows in each suite requires a fire resistance rating at least equal to the rating required for the interior demising wall, as described in s 3.2.3.14.(1) & (2)	3.2.3.14.(1) (2)	20/95
96-39-522	1996	11-Mar-96	Concerning whether the width of the interior stairway provides sufficiency of compliance with 9.8.3.3.(2).	9.8.3.1.(1) , 9.8.5.2.	115/89
96-38-521	1996	26-Sep-96	Concerning whether the warm air supply system which is installed above the ceiling instead of in the concrete slab-on-ground provides sufficiency of compliance with 6.2.4.6.	6.2.4.6.	20/95
96-37-520	1996	1-Aug-96	Concerning whether not sprinklering the interconnected floor space designated as student lounge due to the precedent of non-sprinklered interconnected floor space in the existing building provides sufficiency of compliance with 3.2.8.2.(6)	3.2.8.2.(6)	20/95
96-36-519	1996	23-Aug-96	Concerning three issues: i) Interpretation of the technical requirements of s 3.4.2.1.(1), 3.4.4.1.(1), and 3.4.4.2.(2). At issue is the proposed use of Stair No. 1 as an exit through a lobby, to provide one of the required exits to serve the basement and second floor, in addition to the ground floor. ii) Sufficiency of compliance with the technical requirements of 3.4.4.2.(2)(b). At issue is the maximum path of travel of 16.45 m from the entry into the lobby at the second floor level to the exterior exit door at ground level. iii) Sufficiency of compliance with the technical requirements of 3.5.3.1.(1) and Table 3.5.3.A. At issue is the use of unlabelled elevator doors on the ground floor and second floor entrances into the elevator car.	3.4.2.1.(1), 3.4.4.1.(1), 3.4.4.2.(2) & 3.5.3.1.(1) , 3.4.4.2.(2)(b)	20/95

96-35-518	1996	23-Aug-96	Concerning whether the proposed ground floor market style retail outlet with no fire separations between units nor between units and circulation routes where the corridor widths are less than 5 m wide provide sufficiency of compliance with 3.3.1.1.(2) and 3.3.1.4.(1)(c)	3.3.1.1.(2), 3.3.1.14.(1)(c)	20/95
96-34-517	1996	11-Sep-96	Concerning whether lateral support clips and the supports of the lateral clip for a precast concrete wall are required to have a 2 hour fire resistance rating in accordance with 3.2.3.7.(2)(b)	3.2.3.7.(2)(b)	20/95
96-33-516	1996	11-Sep-96	Concerning whether the separation of exits from the basement and the construction of the south exposing building face provide sufficiency of compliance with 9.9.4.2.(1) and 9.10.14.11.	9.9.4.2.(1) , 9.10.14.11.	20/95
96-32-515	1996	14-Jun-96	Concerning whether the height of the existing balustrade and the provision of a temporary canvas awning attached to the inner side of the openings of an existing balustrade will provides sufficiency of compliance with the requirements in 3.3.1.17.	3.3.1.17.	20/95
96-31-514	1996	25-Jun-96	Concerning whether the use of gas fired sealed combustion heaters mounted within 4.2 metres of an egress doorway in a portable classroom without a 1.5 hour fire separation between the appliance and the classroom provides sufficiency of compliance with 3.9.3.7.	3.9.3.7.	20/95
96-30-513	1996	14-Jun-96	Concerning whether providing strobe lights in the Intensive Care Unit, Operating Rooms and Post Anaesthesia Care Units to visually indicate the activation of the fire alarm system in lieu of audible devices provides sufficiency of compliance with the requirements in 3.2.4.19.	3.2.4.19.	20/95
96-29-512	1996	12-Jun-96	Concerning whether a tent to be used as a new home sales office and display area should be considered a temporary structure in accordance with the requirements of Subsection 3.1.6.	3.1.6.	20/95
96-28-511	1996	25-Jun-96	Concerning whether a wall adjacent to a CNR right of way may be constructed of metal panels on a steel frame in lieu of providing a 2 hour fire resistant rating in accordance with 3.2.3.7.(2)	3.2.3.7.(2)	20/95

96-27-510	1996	9-Jul-96	Concerning whether not sprinklering a non-combustible addition to be used for the shelter of scrap metal provides sufficiency of compliance with the requirements in 3.2.2.52	3.2.2.52. , 3.5.2.7.	20/95
96-26-509	1996	9-Jul-96	Concerning whether the proposed "TD" sign on the east side of the building provides sufficiency of compliance with the requirements in 3.8.5.2.(2)	3.8.5.2.(2)	20/95
96-25-508	1996	9-Jul-96	Concerning whether extending the limiting distance for the south wall of the building to the south side of a right of way on the adjacent property to maximize the permitted percentage of unprotected openings or glazed areas provides sufficiency of compliance with 9.10.14.12.(4)	9.10.14.12.(4)	20/95
96-24-507	1996	30-May-96	Concerning whether not providing a standpipe and hose system in a low hazard industrial occupancy where compensating fire protection is provided in the form of fire extinguishers and a fire safety program provides sufficiency of compliance with 3.2.9.1.	3.2.9.1.	20/95
96-23-506	1996	1-Aug-96	Concerning whether the installation of a sliding glass door in the subject exposing building face complies with s 9.10.14.1 and 9.10.14.12.	9.10.14.1. , 9.10.14.12.	20/95
96-22-505	1996	16-May-96	Concerning whether the use of PVC for the termination kit, 100 mm (4inch) Tee and the 50 mm (2 inch) "Y" and cap for the condensation trap assembly may be considered minor combustible components in accordance with 3.4.6.15.(1) and 3.1.5.2.(1)(h)	3.1.5.15.(1) , 3.1.5.2.(1)(h)	20/95
96-21-504	1996	25-Jun-96	Concerning whether a walkway between a temporary festival tent and a permanent kitchen facility located in an adjacent structure may be used as a serving area in accordance with 3.2.3.20. and 3.1.6.3.(2)	3.2.3.20.	20/95
96-20-503	1996	12-Jun-96	Concerning whether electromagnetic locking devices on two exit doors must release immediately upon activation of door release hardware in accordance with s 3.4.6.15.(1) and 3.4.6.15.(4)	3.4.6.15.(1) , 3.4.6.15.(4)	20/95

96-19-502	1996	30-May-96	Concerning whether the aerosol storage cage in Shoppers Drug Mart's Mississauga Distribution Centre should comply with the provisions of 3.3.1.2.(1) or be considered a Group F, Division 1 Occupancy having to meet the fire separation, travel distance and door swing requirements in s 3.3.1.10.(1) and 3.4.2.5.(2)	3.3.1.2.(1), 3.3.1.10.(1) and 3.4.2.5.(2)	20/95
96-18-501	1996	16-May-96	Concerning whether sufficient water closets and shower heads are provided for an outdoor wave action pool in accordance with Subsection 3.11.9.	3.11.9.	20/95
96-17-500	1996	14-Jun-96	Concerning whether the use of electromagnetic hold-open devices to permit doors to remain open on a constant basis in the north and east tower lobby enclosure will provide sufficiency of compliance with 3.1.8.12.	3.1.8.12.	20/95
96-16-499	1996	21-May-96	Concerning whether the installation of a fire alarm system, implementation of a fire safety plan and a fire department response time of not more than three minutes will provide sufficiency of compliance with the requirement to provide a fire-fighters elevator or divide the floor area into 2 zones in accordance with 3.3.1.7.(1)	3.3.1.7.(1)	20/95
96-15-498	1996	16-May-96	Concerning whether an openable roof window installed on a pitched roof provides sufficiency of compliance with the requirements in 9.9.9.1.	9.9.9.1.	20/95
96-14-497	1996	21-May-96	Concerning whether the width of aisles for the addition to the existing church building provides sufficiency of compliance with 3.3.2.4.(4)	3.3.2.4.(4)	20/95
96-13-496	1996	23-Apr-96	Concerning whether ducts in a return air plenum for a commercial building need be insulated and sealed in accordance with 2.1.1.11. and Sub 6.2.1.1.(1)(a)(v)	2.1.1.11. and Sub 6.2.1.1.(1)(a)(v)	20/95
96-12-495	1996	16-Apr-96	Concerning whether a building containing four hockey rinks is to be classified as a single storey building with a mezzanine or whether it should be classified as a two storey building in accordance with 3.2.1.1.(2) and 3.2.1.1.(4)	3.2.1.1.(2) and 3.2.1.1.(4)	20/95

96-11-494	1996	16-Apr-96	Concerning : i) whether electromagnetic locking devices on five exit doors must release immediately upon activation of door release hardware in accordance with 3.4.6.15.(1) of the Building Code; and, ii) whether the installation of two manual pull stations for a fire alarm system incorporating electromagnetic locking devices beyond the maximum allowance of 600 mm from the door will provide sufficiency of compliance with 3.4.6.15.(4)(c)	3.4.6.15.(1) and 3.4.6.15.(4)(c)	20/95
96-10-493	1996	15-Apr-96	Concerning whether the floor drains in a three level open air parking garage can be connected to the storm drainage system, at King Street Parkade, King Street and Louis Street, Peterborough, Ontario.	7.4.2.1.	20/95
96-09-492	1996	15-Apr-96	Concerning whether a fire separation is required between two warehousing areas, in accordance with 3.3.1.1	3.3.1.1.	20/95
96-08-491	1996	15-Apr-96	Concerning whether a new building sewer is permitted to be connected to an existing private sewer which is currently serving other buildings, at 2050 Victoria Park Avenue, North York, Ontario.	7.1.6.1.(1), 7.1.6.2.(1) and 7.1.6.4.(1)	20/95
96-07-490	1996	28-Mar-96	Determine whether an interconnected floor space in a Group A, Division 3 occupancy will provide sufficiency of compliance with the requirements provided for Group A, Division 1 & 2 occupancies in accordance with 3.2.8.2.(6)(c)	3.2.8.2.(6)(c)	20/95
96-06-489	1996	13-Feb-96	Concerning whether a building used to renovate mobile homes and trailers (i.e. install upholstery, plumbing, air conditioning, beds, seats, tables, etc.) must comply with the storage garage requirements in 3.3.5.7. and 3.3.5.5.(4)	1.1.3.2. , 3.3.5.7. , 3.3.5.5.(4)	20/95
96-05-488	1996	13-Feb-96	Concerning whether the interior stair conforms to 9.8.4.1., 9.8.5.2 and 9.8.5.3.	9.8.4.1., 9.8.5.2. and 9.8.5.3.	20/95
96-04-487	1996	13-Feb-96	Concerning whether the guard and handrail on an exterior barrier free access ramp provides sufficiency of compliance with 3.7.3.4.(1)(e) & (f)	3.7.3.4.(1)(e) & (f)	20/95

96-03-486	1996	24-Jan-96	Concerning whether a sprinkler system is required in a greenhouse addition to an existing mercantile occupancy in accordance with 3.2.2.44. and 3.2.2.12.(1)	3.2.2.44. and 3.2.2.12.(1)	20/95
96-02-485	1996	24-Jan-96	Concerning whether the height of the guard on the 2nd floor balcony; guard on top of the retaining wall and openings of the guard around interior stairwell provide sufficiency of compliance with Subsection 9.8.8.	9.8.8.	20/95
96-01-484	1996	24-Jan-96	Concerning whether applying an intumescent fire retardant paint to combustible cladding on an existing north exposing building face will provide sufficiency of compliance with the requirements for noncombustible cladding in 9.10.14.12.	9.10.14.12.(2)	20/95
95-63-483	1995	21-Dec-95	Concerning the determination of the term discharge pressure in 3.2.9.3.(7)	s 3.2.9.3.(1) , 3.2.9.3.(7)	20/95
95-62-482	1995	21-Dec-95	Determine whether the building configuration and the provision of a voluntary sprinkler system will provide sufficiency of compliance in lieu of a standpipe and hose system	3.2.9.2.(1)	20/95
95-61-481	1995	21-Dec-95	Concerning whether reducing the flow of the recirculation system to 3 litres per second (l/s) when the pool is being used and then increasing the flow rate of three times the pool volume in 24 hours in lieu of providing two or more drains will provide sufficiency of compliance with 3.11.8.1.(15)	3.11.8.1.(15)	20/95
95-60-480	1995	12-Dec-95	Concerning whether two semi-recessed, vanity mounted lavatories installed in the barrier free washroom provides sufficiency of compliance with 3.7.3.10.	3.7.3.10	20/95
95-59-479	1995	5-Dec-95	Concerning whether: i) residential occupancies conform to the light and ventilation requirements; and, ii) the north exposing building face complies with the spatial separation provisions	9.7.1.2., 9.32.2.1. , 9.10.14.1. and Part 11	20/95
95-58-478	1995	5-Dec-95	Concerning whether the proposed renovations to improve the egress conditions in five existing 3-storey residential buildings will provide sufficiency of compliance	9.9.9.3., 9.9.2.6. & 9.9.4.5. , 9.9.9.1.(3)	20/95

95-57-477	1995	21-Nov-95	Concerning whether locked open outside post indicator valves controlling the water supply for a sprinkler system must be electrically supervised in order to obtain a roof rating waiver under 3.2.2.12.	3.2.4.16.(5) , 3.2.2.12.	20/95
95-56-476	1995	21-Nov-95	Determine whether an interconnected floor space in a Group A, Division 3 occupancy will provide sufficiency of compliance with the requirements provided for Group A, Division 1 & 2 occupancies in accordance with 3.2.8.2.(6)(c)	3.2.8.2.(6)(c)	20/95
95-55-475	1995	14-Nov-95	Concerning whether the proposed exterior cavity wall construction details will provide sufficiency of compliance with s 3.1.11.2.(1) and (2) [firestopping wall assemblies]	3.1.11.2.(1)(2)	20/95
95-54-474	1995	14-Nov-95	Concerning whether the FT4 cables and smoke detectors that would shut down the HVAC units installed within the air-return plenum space in an office extension in lieu of FT6 cables will provide sufficiency of compliance with 3.5.4.3.	3.5.4.3.	20/95
95-53-473	1995	10-Nov-95	Concerning whether increasing the allowable unsprinklered building area of 2,400 m² (25,800 ft²) by 142 m² (1529 ft²) and providing fire access routes to all four sides of the existing building and proposed addition will provide sufficiency of compliance with the sprinklering provisions in 3.2.2.52.(1)(b)	3.2.2.52.(1)(b)	20/95
95-52-472	1995	10-Nov-95	Concerning whether not providing smoke detectors and sprinkler heads in the prisoner cell areas and prisoner holding areas, and not providing sprinklers in the prisoner elevator shafts provide sufficiency of compliance with s 3.3.3.9. and 3.2.4.12.	3.3.3.9. , 3.2.4.12.	20/95
95-51-471	1995	26-Oct-95	Concerning whether the sprinklered retail store and unsprinklered open air basement parking area provides sufficiency of compliance with the requirements for a fully sprinklered building, thereby eliminating the requirement to provide a standpipe and hose system in the basement parking garage	3.2.9.1.(1)	20/95

95-50-470	1995	26-Oct-95	Concerning whether providing a fully sprinklered building with a 1 hour fire separation between the high school and college in lieu of a party wall (i.e. firewall) provides sufficiency of compliance with 3.2.3.4.	3.2.3.4.	20/95
95-49-469	1995	19-Oct-95	Concerning whether the one rated exit and a caged ladder will provide sufficiency of compliance with s 3.4.2.1.(1) & 3.4.7.1.(1)	s 3.4.2.1.(1) & 3.4.7.1.(1)	20/95
95-48-468	1995	19-Oct-95	Concerning whether the close proximity of an exit door to the property line (i.e. 0.55 m) affords adequate access to a public thoroughfare and if the relationship between the exterior grade and the interior landing requires steps that may obstruct the landing, in accordance with 1.1.3.2. and s 2.2.1.1. and 9.8.4.1.	1.1.3.2., 2.2.1.1. , 9.8.4.1.	20/95
95-47-467	1995	19-Oct-95	Concerning whether a canopy structure over a parking lot at the rear of an existing industrial building can be considered a covered vehicle passageway under 3.2.3.19. and not be subjected to the spatial separation requirements in 3.2.3.1.	3.2.3.1.	20/95
95-46-466	1995	5-Oct-95	an application by 3.2.3.9.(2), 3.4.2.5.(1)(f) and 3.2.2.12. of the Revised Regulation of Ontario 1990, Regulation 61, as amended by O.Regs. 400/91, 158/93, 160/93, 355/94 and 20/95	3.2.3.9.(2), 3.4.2.5.(1)(f) , 3.2.2.12.	20/95
95-45-465	1995	5-Oct-95	Concerning whether a central open area of the corridor system that includes a recessed hexagon pit with fixed benches is required to be separated from the aisle space that surrounds all 6 sides by a 45 minute fire separation	3.3.2.5.(1)(a)	20/95
95-44-464	1995	5-Oct-95	Concerning whether the residential cook top stove and exhaust system used once a month for cooking classes, where the products are precooked provides sufficiency of compliance with 6.2.2.6.	6.2.2.6.	355/94
95-43-463	1995	19-Sep-95	Concerning whether extending the limiting distance required for the west exposing building face onto an adjoining parcel of vacant land to permit the use of unprotected window openings will provide sufficiency of compliance with 3.2.3.1.	3.2.3.1.	20/95

95-42-462	1995	19-Sep-95	Concerning whether not providing a sprinkler system for the addition to one of 6 units in an existing unsprinklered mercantile strip plaza will provide sufficiency of compliance with 3.2.2.44	3.2.2.44.	20/95
95-41-461	1995	22-Aug-95	Concerning whether the dwelling units should be categorized as "Type III" which requires the mechanical ventilation system to be designed under Part 6 of the Building Code.	9.32.3.1.	20/95
95-40-460	1995	22-Aug-95	Concerning whether providing a standpipe and hose system for the two basement levels only and not throughout the two storey building will provide sufficiency of compliance with the technical interpretation of 3.2.9.1	3.2.9.1.	160/93
95-39-459	1995	3-Aug-95	Concerning whether the means of egress from the gymnasium and exercise space provides sufficiency of compliance with the Building Code, Re: 3.4.2.1., Minimum Number of Exits; and, 3.4.4.1., Fire- Resistance Rating of Exit Separations	3.4.2.1. , 3.4.4.1.	20/95
95-38-458	1995	3-Aug-95	Concerning the following two issues: (1) whether the glass on the roof of a greenhouse addition must comply with CAN\CGSB-12.20-M, "Structural Design of Glass for Buildings" in accordance with 4.3.6.1. of the Building Code; and (2) whether a sprinkler system is required in a greenhouse addition to an existing mercantile occupancy in accordance with 3.2.2.44. and s 3.2.2.12.(1) and 3.2.5.13.(1)	4.3.6.1., 3.2.2.44., s 3.2.2.12.(1) , 3.2.5.13.(1)	20/95
95-37-457	1995	3-Aug-95	Concerning whether the use of combustible pipe traps (i.e. ABS material) servicing basins and sinks in a 6 storey noncombustible residential building will provide sufficiency of compliance with the flame spread rating requirements	3.1.5.1. & 3.1.5.15.(1)(a)	20/95
95-36-456	1995	18-Jul-95	Concerning whether the location of a manual pull station for a fire alarm system incorporating electromagnetic locking devices will provide sufficiency of compliance with 3.4.6.15.(4)(c)	3.4.6.15.(4)(c)	20/95

95-35-455	1995	18-Jun-95	Concerning whether not providing a standpipe and hose system to serve three new Junior Kindergarten additions provides sufficiency of compliance with the standpipe and hose system requirements in 3.2.9.1.(1)(b)	3.2.9.1.(1)(b) , 1.1.3.2.	20/95
95-34-454	1995	28-Jun-95	Concerning whether a sprinkler system is required in a greenhouse addition to an existing mercantile occupancy	3.2.2.44. , 3.2.2.12.(1)	355/94
95-33-453	1995	28-Jun-95	Concerning whether the provision of a sprinkler system and a 1 hour fire separation between the public pool and the remainder of the facility will provide sufficiency of compliance with the provision of a two hour firewall and thereby permit the remainder of the facility (i.e. all other portions than the leisure pool) to be developed under the classification of an A-2 occupancy	3.1.3.3. and 2.1.3.1.(1)	355/94
95-32-452	1995	28-Jun-95	Concerning whether the 60 m distance from the fire department connection to a hydrant provides sufficiency of compliance with 3.2.5.16.(2)	3.2.5.16.(2)	355/94
95-31-451	1995	20-Jun-95	Concerning whether not providing sprinkler protection in the attic space of a new four classroom addition to an existing elementary school provides sufficiency of compliance with 3.2.5.13.	3.2.5.13.	355/94
95-30-450	1995	20-Jun-95	Concerning whether a 150 mm (6 inch) galvanized steel pipe to convey potable water is part of the water distribution system and subject to 7.2.6.7.(3) of	7.2.6.7.(3) , 1.1.3.2.	355/94
95-29-449	1995	20-Jun-95	Concerning whether the exhaust system for cooking equipment used for the purpose of customer and staff demonstrations provides sufficiency of compliance with 6.2.2.6.	6.2.2.6.	355/94
95-28-448	1995	30-May-95	Concerning whether a partial fire alarm system that only satisfies the specific requirements for three electromagnetic locking devices installed on exit doors	s 3.4.6.15.(3) , 3.4.6.15.(4)	355/94
95-27-447	1995	30-May-95	Concerning whether the area of unprotected openings in the north exposing building face of the new Speedy Muffler King building shows sufficiency of compliance	Subsection 3.2.3., 3.2.3.1.	355/94

95-26-446	1995	30-May-95	Concerning whether the upper tier seating design that does not provide 660 mm high guards between rows of fixed seats shows sufficiency of compliance	3.3.2.8.(1)(c)	355/94
95-25-445	1995	18-May-95	Concerning whether the provision of a 1 hour vertical fire separation between a Group F, Division 2 and Group D occupancy provides sufficiency of compliance with the requirement to provide a 45 minute fire resistance rating for the adjoining interconnected second floor of the Group D occupancy	3.2.2.52.(2)(a)	355/94
95-24-444	1995	18-May-95	Concerning whether the electromagnetic locking devices on two exterior doors sufficiently comply with 9.9.6.8.	9.9.6.8.	355/94
95-23-443	1995	18-May-95	Concerning whether a Group D or E major occupancy classification is more appropriate for the proposed Teen Activity Centre (TAC) than a Group A-2 classification, thereby eliminating the need to upgrade the vertical fire separation between TAC and the adjacent Drug Store	10.2.1.1., 3.1.2.1.(1) , 1.1.3.2.	355/94
95-22-442	1995	4-May-95	Concerning whether a retaining wall comprised of an engineered system of concrete blocks, known as Risi Stones, anchored by means of woven polymeric geotextile material into cement stabilized soil shows sufficiency of compliance	2.1.2.1.(1)(a) and Sections 4.1 and 4.3	355/94
95-21-441	1995	4-May-95	Concerning whether the proposed ramp to be installed in the pool with a slope of 1 in 12 and a width of 8.83 m, sufficiently complies with the technical requirements	s 3.11.3.1.(4) & 3.11.5.1.(1)	355/94
95-20-440	1995	4-May-95	Concerning whether the construction of a single family dwelling (i.e. house) is in accordance with the log construction requirements of Section 9.37 and the roof and ceiling framing requirements of Subsection 9.23.13.	Section 9.37 & Subsection 9.23.13.	355/94
95-19-439	1995	25-Apr-95	Concerning sufficiency of compliance with the construction and fire resistance rating requirements for the west exposing building face.	3.2.3.7.	355/94

95-18-438	1995	25-Apr-95	Concerning whether the proposed installation for a gas fired forced air heating system to heat 4 apartment units and circulate air to 4 suites, the public corridor and a common exit stair will provide sufficiency of compliance with the requirements	s 6.2.3.11.(2) & 9.9.4.2.(4)	355/94
95-17-437	1995	25-Apr-95	Concerning whether the walkway and two trailers attached to an existing sprinklered building must be also protected by a sprinkler system or whether a noncombustible walkway separated from the building by not less than a 45 min. fire separation must be constructed in accordance with the requirements	3.2.2.55. , 3.2.3.20.	355/94
95-16-436	1995	11-Apr-95	Concerning whether a standpipe and hose system is required for the retail units	3.2.9.1.(1)(a) and 3.2.9.4.(1)	355/94
95-15-435	1995	11-Apr-95	Concerning whether proper door closure hardware is required for the fire separation between Unit #267 and the adjacent public corridor	3.3.1.4.(1)(b), 3.1.8.11. & 3.1.8.13.	355/94
95-14-434	1995	6-Apr-95	Concerning whether sprinkler protection is required for the bus lanes drive through portion of a city and inter-city bus terminal attached to an eleven storey fully sprinklered high-rise office building	s 3.2.5.13.(1) and 3.3.5.5.(8)	355/94
95-13-433	1995	6-Apr-95	Concerning whether the construction between the garages and the dwelling units may conform to 9.10.9.16.(3)	3.3.5.7.	355/94
95-11-431	1995	13-Mar-95	Concerning whether a high mass radiant masonry heater provides sufficiency of compliance	9.22., 9.22.1.4. & 9.22.7.1.	355/94
95-10-430	1995	13-Mar-95	Concerning whether enclosing more than 60% of the carport perimeter with 6 mil poly and an overhead door requires the carport to be considered a garage in accordance with 9.35.2.1	9.35.2.1.	355/94
95-09-429	1995	13-Mar-95	Concerning whether the proposed additional handrail on one side of a stairway and improved lighting condition will provide sufficiency of compliance with the maximum rise requirements in 9.8.3.1.	9.8.3.1.	355/94

95-08-428	1995	28-Feb-95	Concerning whether horizontal bracing members are required to resist horizontal live loads for temporary grandstand structure	4.1.1.4., s 4.1.10.5.(1) , 4.1.10.5.(2)	355/94
95-07-427	1995	28-Feb-95	Concerning whether electromagnetic locking devices on egress doors required to be equipped with door release hardware complies with the technical interpretation of the Building Code	s 3.4.6.15.(1). 3.4.6.15.(3) & 3.4.6.15.(4)	355/94
95-06-426	1995	28-Feb-95	Concerning whether an automatic dry standpipe and hose system in a frozen space (-26 deg C) and other areas, sufficiently complies with the technical interpretation of 3.2.9.3.(9)	3.2.9.3.(9)	355/94
95-05-425	1995	9-Feb-95	Concerning whether the proposed utilization of an open stair, descending from the Second Floor through a two storey high lobby to the Ground Floor level, as a required egress facility, sufficiently complies with the technical interpretation of the Building Code	3.4.2.3., s 3.4.4.1.(1) & 3.4.4.2.(2)	355/94
95-04-424	1995	26-Jan-95	Concerning whether a stand pipe and hose system is required in an addition comprising a library, community rooms and gymnasium	3.2.9.1.(1)(b)(i)	355/94
95-03-423	1995	11-Jan-95	Concerning whether an exterior masonry fire place and chimney required bracing below the roof line to provide lateral stability in compliance with 9.21.4.5	9.21.4.5.	355/94
95-02-422	1995	11-Jan-95	Concerning whether the colour of the pool tiles sufficiently comply with 3.11.3.1.(19)	3.11.3.1.(19)	355/94
95-01-421	1995	26-Jan-95	Concerning whether the proposed new canopy to be located over the fire access route at the outpatient entrance sufficiently complies with 3.2.5.7.(1)(c)	3.2.5.7.(1)(c)	355/94
94-42-417	1994	15-Dec-94	[Refer to decision]	3.3.1.13., 3.4.2.5. & 3.4.4.1.	355/94
94-41-420	1994	2-Dec-94	[Refer to decision]	3.2.9.1.(1)(b)	355/94
94-40-419	1994	9-Dec-94	[Refer to decision]	9.23.17.3.	355/94

94-39-418	1994	2-Dec-94	[Refer to decision]	3.7.2.3.	355/94
94-37-415	1994	22-Nov-94	[Refer to decision]	3.3.5.7.	355/94
94-36-414	1994	22-Nov-94	[Refer to decision]	9.21.4.4.	160/93
94-35-413	1994	10-Nov-94	[Refer to decision]	s 3.3.1.4.(1)	160/93
94-34-412	1994	22-Nov-94	[Refer to decision]	11.3.4.1.(1)(a), and s 11.1.1.3.(1), 11.3.4.1.(3), 11.3.4.1.(7)	160/93
94-33-411	1994	19-Sep-94	[Refer to decision]	s 3.2.7.9.(4)	160/93
94-30-408	1994	24-Aug-94	[Refer to decision]	9.25.4.9. , 9.25.4.10.	160/93
94-29-407	1994	19-Sep-94	[Refer to decision]	3.2.2.55.	160/93
94-28-406	1994	30-Sep-94	[Refer to decision]	9.14.2.1.(2.1)(c)	160/93
94-27-405	1994	10-Nov-94	[Refer to decision]	9.10.14.11. & 9.10.14.12	160/93
94-26-404	1994	30-Sep-94	[Refer to decision]	s 9.8.7.1.(2)	160/93
94-25-403	1994	29-Aug-94	[Refer to decision]	3.10.2.4.(2)(c)	160/93
94-24-402	1994	29-Aug-94	[Refer to decision]	3.7.1.2.	160/93
94-23-401	1994	29-Aug-94	[Refer to decision]	3.1.2.1. , 1.1.3.2.	160/93
94-22-400	1994	29-Sep-94	[Refer to decision]	3.7.1.2.(1)	160/93

94-21-399	1994	18-Aug-94	[Refer to decision]	3.7.3.4.(1)(e)	160/93
94-19-398	1994	21-Jul-94	[Refer to decision]	3.2.9.1.(1)(b) and Table 3.2.9.A.	160/93
94-19-397	1994	21-Jul-94	[Refer to decision]	s 3.1.11.2.(1)&(2)	160/93
94-18-396	1994	21-Jul-94	[Refer to decision]	3.2.9.1.(1) and Table 3.2.9.A.	160/93
94-17-395	1994	29-Sep-94	[Refer to decision]	9.4.4.4. and 4.1.1.3.(1)	160/93
94-16-394	1994	7-Jul-94	[Refer to decision]	9.19.1.3.(2)	160/93
94-15-393	1994	7-Jul-94	[Refer to decision]	3.4.6.2.	160/93
94-14-392	1994	31-May-94	[Refer to decision]	3.3.1.1. and 3.3.1.4.(1)(c)	160/93
94-13-391	1994	31-May-94	[Refer to decision]	9.9.9.3.(1)(a)	160/93
94-12-390	1994	31-May-94	[Refer to decision]	3.3.4.2.(2)(c)	400/91

Ruling No. 04-04-959
Application No. 2003-66

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 3.8.1.1. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Arnon Kaplansky, Kaplansky Development Inc., for the resolution of a dispute with Rocky Cerminara, Chief Building Official, City of London, to determine whether the as-constructed Group C occupancy that is constructed as a three-storey residential house that includes a total of four separate suites, and which does not provide barrier-free access to the GroundFloor, complies with Article 3.8.1.1. of the Ontario Building Code at 1164, 1166, 1168, and 1170 Richmond Street, London, Ontario.

APPLICANT	Arnon Kaplansky Kaplansky Development Inc. London, Ontario
RESPONDENT	Rocky Cerminara (Via Teleconference) Chief Building Official City of London
PANEL	Len King, Vice-Chair Robert De Berardis Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	January 22, 2004
DATE OF RULING	January 22, 2004
APPEARANCES	Kim Karn Larden Muniak Consulting Inc. Toronto, Ontario **Agent for the Applicant**

RULING

1. The Applicant

Arnon Kaplansky, Kaplansky Development Inc., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has constructed four, 4-unit dwellings at 1164, 1166, 1168, and 1170 Richmond Street, London, Ontario.

2. Description of Construction

The Applicant has constructed four, three storey Group C residential occupancy buildings having building areas of approximately 127 m^2 to 128 m^2 (1,370 m^2 to 1,378 ft^2). The structures are comprised of combustible construction and each building contains four units stacked such that there is an apartment on each of floors one, two and three as well as in the basement.

The main floor entrance to each building is positioned at grade. A landing is situated between the basement apartment level and the first storey apartment with approximately six steps up to the first storey and six steps down to the basement apartment. The buildings have not been constructed to provided barrier-free access to the principle entrance storey (first storey).

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-constructed three storey, four-plex buildings, which do not provide barrier-free access to the ground floor, comply with the provisions of Article 3.8.1.1. of the Ontario Building Code.

Article 3.8.1.1. stipulates that the barrier-free design requirements of the Building Code apply to all buildings with certain exceptions. In Clause 3.8.1.1.(1)(a) exceptions are specified as being "houses, including semi-detached houses, duplexes, triplexes, town houses, row houses and boarding or rooming houses with fewer than 8 bodies." Clauses (b) and (c) also provide exceptions for Group F, Division 1 buildings and buildings that are not intended to be occupied daily or on a full time basis, including automatic telephone exchanges, pumphouses and substations.

As noted above, the subject residential buildings each contain four residential units and do not provide barrier-free access to the ground floor level. The matter to be determined, therefore, is whether the Code requires that barrier-free access be provided in this instance when considering the provisions of Article 3.8.1.1.

4. Provisions of the Ontario Building Code

Section 3.8. Barrier-Free Design
Subsection 3.8.1. General

Article 3.8.1.1. Application

(1) The requirements of this Section apply to all *buildings* except
(a) houses, including semi-detached houses, duplexes, triplexes, town houses, row houses and boarding or rooming houses with fewer than 8 boarders or roomers,
(b) *buildings* of Group F, Division 1 *major occupancy*, and

(c) *buildings* which are not intended to be occupied on a daily or full time basis, including automatic telephone exchanges, pumphouses and substations.

5. Applicant's Position

The Agent for the Applicant advised that the subject three storey, Group C buildings fall under Part 9 of the Building Code. He noted that each building contains one suite for each above grade storey and a fourth suite in the below grade (basement) level. Each floor is provided with two exits. He suggested that the design, in this respect, is similar to a triplex and, therefore, should be exempt from the barrier-free requirements found in Section 3.8. of the Code. It was submitted that the intent of Clause 3.8.1.1.(1)(a) was to exempt residential houses which are three storeys or less from having to provide barrier-free access.

The Agent submitted that the Applicant was unaware of the requirements for barrier-free access prior to submitting the permit application drawings. He stated that, on the understanding of the parties that this issue would be brought to the Building Code Commission, the permit drawings were revised to show a lift that would service the first floor suite with the appropriate door sizes to meet the barrier-free requirements. He noted, however, that even if the entrance to the ground floor suite was constructed to be barrier-free, the interior of the suite is not barrier-free in design. He suggested that a person requiring barrier-free access would not likely choose to reside in these particular buildings and noted that the units are marketed as student housing. He pointed out that other accommodations in the area would be the preferred option for individuals requiring barrier-free access.

The Agent also submitted that the provision of a lift to provide access to the first storey suite may be cause for other, non Code-related concerns. He again noted that these units are aimed at students and suggested that the lift may be misused by the target residents. Further, regular maintenance of the lift would required.

In summation, the Agent submitted that the subject buildings, with one storey below grade and three storeys above, could be considered similar to a triplex and, therefore, meet the intent of the Code in respect to permitted exceptions to barrier-free requirements. He reiterated that there are other barrier-free student units in the area and restated his opinion that a lift may pose a safety hazard or liability to potential student residents of the buildings. He noted further that the Applicant's insurance carrier has concerns with the provision of lifts because of the potential for misuse by residents.

6. Respondent's Position

The Respondent submitted that, at the preliminary review of the proposed building design, and again at the plans examination stage of the project, the Applicant was advised by municipal staff of the need to provide barrier-free access to the principal entrance storey of the subject buildings. Although the Applicant disagreed with staff's assessment, the drawings were revised to incorporate a lift to the first storey and a permit was issued on the understanding that the matter would be appealed to the Building Code Commission.

The Respondent stated that, in his opinion, the Code is quite clear. Article 3.8.1.1. provides an exception for certain classes of houses but does not exempt four-plexes. As such, the entrance door from exterior grade level, the path of travel to the suite and doors within the suite to the bedrooms and to one bathroom must comply with the Code requirements for barrier-free accessibility.

The Respondent suggested that the Applicant's argument with respect to the misuse of the lifts should not be considered a significant factor in deciding whether to apply the requirements of the Building Code. He agreed that the units were marketed to students but stated that students require barrier-free designed accommodations as much as the remainder of the population. The Respondent submitted that, while he is sympathetic to the concerns of the Applicant, he is bound by the wording of Article 3.8.1.1. of the Building Code.

In summation, the Respondent submitted that not only is the provision of a lift an obligation of the Applicant under the Building Code but also a requirement of an agreement entered into between the Applicant and the municipality. Further, the Respondent agreed that, if only the above grade levels of the building were occupied, the building could be considered a triplex. He argued, however, that four units have been constructed in this building and, as such, it is being treated as a four-plex which is not exempt by the Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-constructed three-storey residential building plus basement level, which contains four separate dwelling units and that does not provide barrier-free access to the Ground Floor, fails to comply with Article 3.8.1.1. of the Ontario Building Code at 1164, 1166, 1168, and 1170 Richmond Street, London, Ontario.

8. Reasons

i) Sentence 3.8.1.1.(1) of the Ontario Building Code exempts single-unit dwellings, duplexes, and triplexes from the requirements of barrier-free design. Each of the as-constructed residential buildings are four-plexes and are not a permitted exemption listed in Sentence 3.8.1.1.(1) of the Ontario Building Code

Ruling No. 04-09-964
Application No. 2003-68

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 2.4.1.1.(5) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Tae Wan Cheng, Arnold's Sports Bar, for the resolution of a dispute with John Tutert, Manager of Inspection Services, Town of Oakville, to determine whether the existing enclosed canopy, intended for use as an indoor and outdoor patio, which is attached to the wall of an existing Group A, Division 2 occupancy, provides sufficiency of compliance with Sentence 2.4.1.1.(5) of the Ontario Building Code at Arnold's Sports Bar, 485 Morden Road, Town of Oakville, Ontario.

APPLICANT	Tae Wan Cheng Arnold's Sports Bar Oakville, Ontario
RESPONDENT	John Tutert Manager of Inspection Services Town of Oakville
PANEL	Michael Steele, Vice-Chair John Guthrie Robert De Berardis
PLACE	Toronto, Ontario
DATE OF HEARING	March 4, 2004
DATE OF RULING	March 4, 2004
APPEARANCES	Richard Yoon Yoon & Associates Engineering Ltd. Toronto, Ontario **Agent for the Applicant** John Tutert Manager of Inspection Services Town of Oakville **The Respondent**

RULING

1. The Applicant

Tae Wan Cheng, Arnold's Sports Bar, has received an Order to Comply and has applied for a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, in relation to the construction of an addition to an existing establishment known as Arnold's Sports Bar, 485 Morden Road, Town of Oakville, Ontario.

2. Description of Construction

The Applicant is the owner of Arnold's Sports Bar, an existing one storey, Group A, Division 2 occupancy building having a building area of approximately 788 m^2. The existing building is comprised of combustible construction and (according to the Respondent) is equipped with a standpipe and hose system but not a fire alarm or sprinkler system.

The Application to the Building Code Commission concerns the construction of an addition to the existing building to be used for the purposes of a "smoking room". The addition measures 5.3 m (17 ft 6 in) by 11.9 m (39 ft) as indicated on drawing A-02 submitted by the Applicant. It is described as an enclosed patio area for use by a maximum of 20 patrons of the establishment. The walls and sloped roof of the addition are framed in structural steel and will be clad with vinyl coated polyester fabric supplied by Soper's Engineered Fabric Solutions. The exit door on the north face of the existing building opens into the new addition.

In respect of this construction, the Applicant is offering certain measures to mitigate any concerns with respect to the Code requirements for what he describes as a "tent" structure. These compensating measures include two new exit doors that will lead directly from the proposed enclosed patio area, portable fire extinguishers that will be located along each wall of the addition and a Fire Safety Program that will be upgraded including requirements for the training of staff in accordance with an emergency response plan.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the enclosed patio addition, attached to the side wall of an existing A2 occupancy building, provides sufficiency of compliance with Sentence 2.4.1.1.(5) of the Building Code, when considering the compensating measures offered by the Applicant.

Sentence 2.4.1.1.(5) states that a tent (or group of tents) is exempt from the requirement to obtain a building permit and from the provisions of the Building Code provided that the tent is not more than 60 m^2, is not attached to a building and is constructed more than 3 m from another structure.

The subject enclosed outdoor patio addition measures 5.3 m by 11.9 m and is attached to the side of the existing building. It is intended to be a permanent enclosure for use as a "smoking room" associated with the smoke-free interior of the sports bar. As noted above, certain compensating measures are being offered in an attempt to offset any concerns with the construction of the proposed addition.

4. Provisions of the Ontario Building Code

Sentence 2.4.1.1.(5)

(5) A tent or group of tents is exempt from the requirement to obtain a permit under Section 8 of the Act and is exempt from compliance with the Code provided that the tent or group of tents are:

(a) not more than 60 m^2 (646 ft^2) in aggregate ground area,
(b) not attached to a *building*, and
(c) constructed more than 3 m (9 ft 10 in) from other structures.

5. Applicant's Position

The Agent for the Applicant described the enclosed canopy structure and outlined the measures being offered to compensate for the fact that the "tent" structure will be attached to the side of the existing building. He noted that, although the patio area will be used year round, the fabric cover and steel framing will be removed during the summer months and then replaced to provide protection from the elements for the remainder of the year. He advised that the enclosed patio will provide shelter for patrons who smoke. He noted that the Town of Oakville Smoking By-law prohibits smoking inside any building, including the existing restaurant/sports bar.

The Agent submitted that the compensating measures being offered, including the proposal for two fire exits, non-combustible fabric and steel framing, portable fire extinguishers and an upgraded Fire Safety Program, will provide a significant level of safety. The Agent further suggested that the Applicant would be willing to abide by any additional conditions that may be imposed by the Commission in respect of the proposed construction.

6. Respondent's Position

The Respondent submitted that he views the structure as a tent. However, he noted Sentence 2.4.1.1.(5) precludes a tent from being attached to a building and requires a 3 m clearance from other structures. He noted that if only the canopy were to be considered, the Town would not have an issue. He stated, however, that the side walls, enclosing the area, constitute a "tent" and, therefore, the Code requirements surrounding this type of construction must be considered.

7. Commission Ruling

It is the decision of the Building Code Commission that the existing enclosed canopy, intended for use as an indoor and outdoor patio, and which is attached to the wall of an existing Group A, Division 2 occupancy, does not provide sufficiency of compliance with Sentence 2.4.1.1.(5) of the Ontario Building Code at Arnold's Sports Bar, 485 Morden Road, Oakville, Ontario.

8. Reasons

1. The existing canopy structure has not been constructed in accordance with the Ontario Building Code.

2. The existing canopy structure, when enclosed during the winter, is not considered a "tent" under Article 3.13.1.2. of the Ontario Building Code.

Dated at Toronto this **4th** day in the month of **March** in the year **2004** for application number **2003-68**.

Michael Steele, Vice-Chair

Robert De Berardis

Ruling No. 04-27-982
Application No. 2004-19

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 9.8.8.8.(2) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Edward Leerdam, IBM Canada, for the resolution of a dispute with John DeVries, Chief Building Official, Town of Richmond Hill, to determine whether the as-constructed exterior deck serving a Group C occupancy, which is comprised of a composite material referred to as "Life-Long Decking" that is manufactured by Brite Manufacturing Inc., will provide sufficiency of compliance with Articles 9.8.8.8. and 4.1.10.1. of the Ontario Building Code at 193 Sunset Beach Road, Richmond Hill, Ontario.

APPLICANT	Edward Leerdam IBM Canada Richmond Hill, Ontario
RESPONDENT	John DeVries Chief Building Official Town of Richmond Hill
PANEL	John Guthrie, Chair-Designate Gary Burtch Fred Barkhouse
PLACE	Toronto, Ontario
DATE OF HEARING	June 17th, 2004
DATE OF RULING	June 17th, 2004
APPEARANCES	Andrew Rush Brite Manufacturing Inc. **Agent for the Applicant** Morris Lucchetta Manager of Inspections Town of Richmond Hill **Designate for the Respondent**

RULING

1. The Applicant

Edward Leerdam, IBM Canada, has received an Order to Comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to rectify certain alleged deficiencies at 193 Sunset Beach Road, Richmond Hill, Ontario.

2. Description of Construction

The Applicant is the owner of a one storey Group C dwelling for which a permit was issued for the construction of a deck in the rear yard of the subject property. The subject deck has been constructed and measures 24.15 m^2 (260 ft^2).

The construction in dispute involves the materials used in the construction of the subject deck and the installation of the guard. The deck has been constructed using hollow 5/4 deck plank composite material, referred to as "Life-Long Decking", manufactured by Brite Manufacturing Inc. The materials used as both the deck planks and guard have been have undergone testing by Intertek Testing Services NA Ltd. and have been certified by a professional engineer as meeting the performance measures specified in the Code. The materials, however, are not listed in the Supplementary Guidelines to the Building Code nor has the product received approval from either the Canadian Construction Materials Centre (CCMC) or the Building Materials Evaluation Commission (BMEC).

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the use of "Life-Long Decking", manufactured by Brite Manufacturing Inc., provides sufficiency of compliance with Articles 9.8.8.8. and 4.1.10.1. of the Building Code (OBC).

Sentence 9.8.8.8.(1) specifies that, except as permitted in Sentence 9.8.8.8.(2), guards are to be constructed in accordance with Article 4.1.10.1. Article 4.1.10.1. specifies the minimum construction requirements in respect of loads on guards. Sentence 9.8.8.8.(2) states that, where guards are to be constructed in accordance with the Supplementary Guidelines, they shall be deemed to comply with Sentence 9.8.8.8.(1).

The subject deck and associated guard are constructed of a composite material not referenced in the Supplementary Guidelines. As such, the Respondent questions whether the deck and guard, as installed using the subject material, will possess the necessary characteristics to perform their intended functions.

4. Provisions of the Ontario Building Code

9.8.8.8. Construction of Guards

(1) Except as permitted in Sentence (2), *guards* shall conform to the loading criteria in Article 4.1.10.1.

(2) Guards constructed in accordance with the requirements in the Supplementary Guidelines shall be deemed to satisfy the requirements of Sentence 9.8.8.8.(1).

4.1.10.1. Loads on Guards

(1) The minimum specified horizontal load applied inward or outward at the top of every required *guard* shall be

(a) 3.0 kN/m (200 lb/ft) for *means of egress* in grandstands, stadia, bleachers and arenas,

(b) a concentrated load of 1.0 kN (225 lb) applied at any point for access walkways to equipment platforms, contiguous stairs and similar areas where the gathering of many people is improbable, and

(c) 0.75 kN/m (50 lb/ft) or a concentrated load of 1.0 kN (225 lb) applied at any point, whichever governs, for locations other than described in Clauses (a) and (b).

(2) Individual elements within the *guard*, including solid panels and pickets, shall be designed for a concentrated load of 0.5 kN (113 lb) at any point in the element.

(3) The loads required in Sentence (2) need not be considered to act simultaneously with the loads provided for in Sentences (1) and (4).

(4) The minimum specified load applied vertically at the top of every required *guard* shall be 1.5 kN/m (100 lb/ft) and need not be considered to act simultaneously with the horizontal load provided for in Sentence (1).

5. Applicant's Position

The Agent for the Applicant noted that Brite Manufacturing Inc. is a relatively large organization involved in the manufacturing of wood composite decking. He stated that they have been producing the subject product for approximately seven years and have been selling within Ontario for the last four years. They have investigated approvals through CCMC but, in other municipalities, the officials have accepted drawings stamped by a professional engineer as equivalent to the Code requirements.

The Agent submitted that extensive testing has been conducted by Intertek Testing Services NA Ltd. on the composite material and the railing system. He referred to the engineering report submitted as evidence, noting that the composite material had been tested for, among other things, structural load, to determine deck board span; creep relaxation; mechanical fastener testing; freeze-thaw resistance; durability; coefficient of friction; fire resistance; resistance to termites; low temperature effect, etc.

The Agent noted that the Town had issued an Order to Comply in connection with the subject deck, which listed contraventions with the Building Code in connection with the deck installation and materials, guard height and guard installation. The Agent confirmed that the guard height will be remedied, but disputed the Order in connection with the installation and material requirements of the Code. He submitted that the subject deck had been installed in accordance with the manufacturers guidelines and while this material is not listed in the Supplementary Guidelines, in his opinion, testing has shown that sufficiency of compliance with the Building Code requirements will be achieved.

6. Respondent's Position

The Designate for the Respondent submitted that the composite material that has been used in the construction of this deck is not recognized by the Building Code. He advised that the Town had issued a permit based on the provision of wood guards. He suggested that the manufacturer should more appropriately have this product evaluated by a body such as CCMC. This would provide assurance to municipal building officials in respect to material performance and installation requirements. He pointed out that, if proven to be an effective alternative, a Minister's Ruling could be issued to recognize the product for province-wide application.

The Designate submitted that, in his opinion, the guards have not been installed in accordance with the Code requirements and, therefore, cannot be accepted by the municipality. He specified concern with the connections and balusters. Further, he reiterated his position that the material is not referenced in the Building Code and has not being accepted as equivalent by the Town. He noted that the municipality does not have the resources to throughly examine and analyse testing documentation in connection with this innovative product.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-constructed exterior deck serving a Group C occupancy, which is comprised of a composite material referred to as "Life-Long Decking" that is manufactured by Brite Manufacturing Inc., will provide sufficiency of compliance with Articles 9.8.8.8. and 4.1.10.1. of the Ontario Building Code at 193 Sunset Beach Road, Richmond Hill, Ontario, on the condition that:

a) An independent third-party engineer, who is knowledgeable of the materials regarding the composite deck and guard in question, approves the design and construction details of the exterior deck and guard at dispute.

8. Reasons

i) During the hearing, it was advised that the Applicant party is prepared to correct the deficiencies with respect to the guard height and connectors.

ii) Upon fulfilment of the above cited condition, the Commission is satisfied that the as-constructed exterior deck at 193 Sunset Beach Road, Richmond Hill, Ontario will provide sufficiency of compliance with Articles 9.8.8.8. and 4.1.10.1. of the Ontario Building Code.

iii) This decision is site-specific and only applies to the exterior deck located at 193 Sunset Beach Road, Richmond Hill, Ontario.

Dated at Toronto this **17th** day in the month of **June** in the year **2004** for application number **2004-19**.

John Guthrie, Chair-Designate

Ruling No. 04-32-987
Application No. 2004-24

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Clause 3.3.2.1.(1)(c) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Blair Kohlmeier, Stafford Haensli Architects Inc., for the resolution of a dispute with Doug Robertson, Chief Building Official, Town of Tillsonburg, to determine whether the omission of continuous guards between constructed rows of successive fixed seating provides sufficiency of compliance with Clause 3.3.2.8.(1)(c) of the Ontario Building Code at the Tillsonburg Community Centre and Arena Complex, 45 Hardy Avenue, Tillsonburg, Ontario.

APPLICANT	Blair Kohlmeier Stafford Haensli Architects Inc. Mississauga, Ontario
RESPONDENT	Doug Robertson Chief Building Official Town of Tillsonburg
PANEL	Tony Chow, Chair John Guthrie Michael Steele
PLACE	Toronto, Ontario
DATE OF HEARING	July 22, 2004
DATE OF RULING	July 22, 2004
APPEARANCES	Rick Mori Leber Rubes Inc. Toronto, ON **Agent for the Applicant** Doug Robertson Chief Building Official Town of Tillsonburg **The Respondent**

RULING

1. The Applicant

Blair Kohlmeier, Stafford Haensli Architects Inc., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has undertaken an extensive renovation at the Tillsonburg Community Centre and Arena Complex at 45 Hardy Avenue, Tillsonburg, Ontario.

2. Description of Construction

The Applicant has constructed an addition to, and renovation of, a combination Group A, Division 2 and Group A, Division 3 facility, having a building height of 2 storeys and building area of approximately 10,000 m^2. The structure is comprised of a combination of combustible and noncombustible construction and is partially equipped with both sprinkler and standpipe and hose systems. In addition, a fire alarm system serves the entire building.

The construction in dispute involves the fixed seating arrangement where no fixed guard is provided between successive rows of seating. The community centre complex has approximately 750 fixed seats with backs arranged in five tiers with a 600 mm vertical rise between each tier. The risers are constructed of precast concrete steps. The subject stepped seating arrangement has been designed in accordance with NFPA 101 "Life Safety Code" requirements. The fixed seat backs on each level project 228 mm above the adjacent platform and a clearance distance of approximately 500 mm is provided between the seat backs and the seats above (in the unoccupied position). In addition, handrails will be installed at the centre of the stepped aisles serving the seating areas.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed stepped seating arrangement, that does not include a guard between each successive row of fixed seating, provides sufficiency of compliance with Clause 3.3.2.8.(1)(c) of the Building Code.

Clause 3.3.2.8.(1)(c) requires that, where seating is arranged in successive tiers and the rise between the platform measures more than 450 mm, the height of the guards is to be not less than 660 mm along the entire row of seats.

As noted above, the rise between platforms measures 600 mm, however, no guard is proposed between the rows of fixed seating.

4. Provisions of the Ontario Building Code

Clause 3.3.2.8.(1)(c)

(1) Except as required by Sentences (2) to (4) for bleacher seats, guards shall be installed in outdoor and indoor places of assembly with fixed seats so that

> (c) where the seating is arranged in successive tiers and the height of rise between platforms is more than 450 mm (17¾ in), the height of guards is not less than 660 mm (2 ft 2 in) along the entire row of seats at the edge of the platform.

5. Applicant's Position

The Applicant provided the Commission with an overview of the extensive renovation and expansion of the existing facility and highlighted several limitations on the subject construction. He acknowledged the Building Code issue that resulted in this dispute and noted several compensating measures that would ensure the safety of patrons to the stadium. He advised that handrails would be installed in the aisles, bright paint would be applied to the edge of the stairs, and gaps between seat backs would be minimized where possible. He suggested that most falls occur on the stairs rather than in the cross-aisle spaces between seats. In this regard, the handrails at the stepped aisles will increase the overall level of occupant safety, he submitted.

The Agent for the Applicant continued by advising that there is a clear 500 mm row width, which exceeds the requirements established in the Building Code. This would also contribute to the safety of the design, he submitted. He noted that seating is limited to 750 persons and exiting can be accomplished safely. The Agent pointed to the similarities between the subject dispute and an earlier ruling of the Building Code Commission involving the Corel Centre in Ottawa. He also noted that the subject proposal meets the requirements of NFPA 101 "Life Safety Code" which does not require fixed guards between adjacent rows, but admitted that NFPA 101 was not used as the design basis for the entire building.

In summation, the Agent for the Applicant argued that the seat back projection above the walking surface of an adjacent row is not mandated by the Building Code. He submitted that, if no seats were present and the rows were limited to standing room only, there would be no requirement for guards at the edge of the platforms. He questioned why guards would be required where seats are present and suggested that tiers of fixed seats, with fixed seat backs, perform in an acceptable manner without the provision of between-row guards.

6. Respondent's Position

The Respondent submitted that his primary concern is that the back of the seats represent a tripping hazard as the projection is too low and infringes upon the walking surface of the rows behind. He suggested that this tripping hazard is exacerbated by the lack of guard to protect from falling over the top of seats into the rows below.

The Respondent noted that the original design of the seating was not to NFPA 101 and argued that this standard has been used selectively by the Applicant. He submitted that he did not have the authority to permit this alternate design as it deviates from the Building Code and the anticipated acceptance of equivalents as regulated by Section 2.7. of the Code. Although unable to accept the subject proposal, he suggested that by adding handrails in the centre of the stairways, marking the nosing in a contrasting colour and placing guards in any gaps between seats where seat backs are not present, his safety concerns may be somewhat alleviated and a sufficient level of compliance may be achieved.

7. Commission Ruling

It is the decision of the Building Code Commission (the "BCC") that the omission of continuous guards between the constructed rows of successive fixed seating provides sufficiency of compliance with Clause 3.3.2.8.(1)(c) of the 1997 Ontario Building Code (the "Building Code") at the Tillsonburg Community Centre and Arena, 45 Hardy Avenue, Tillsonburg, Ontario, on the condition that:

1. The gaps and spaces between seating within rows be provided with guards to the satisfaction of the Chief Building Official;

2. The handrails will be installed at the centre of the stepped aisles as described in the appropriate section of NFPA 101;

3. The leading edge of the steps on the aisle be identified by stripes of contrasting colour.

8. Reasons

i) The clear width between the back of seats and the projection of seats in the unoccupied position is 500 mm, being 100 mm greater than the requirement of Clause 3.3.2.8.(1)(c);

ii) The back of the seats rise 228 mm above the platform level, which is greater than the dimension of a maximum riser and should minimize the potential of accidental tripping.

Ruling No. 04-33-988
Application No. 2004-28

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 3.4.6.3.(2) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Bebe Arghirescu, President, All Saints Romanian Orthodox Church, for the resolution of a dispute with Bruce Ashton, Deputy Chief Building Official, City of Toronto, to determine whether the as-constructed landing serving a flight of stairs in a Group A, Division 2 occupancy provides sufficiency of compliance with Sentence 3.4.6.3.(2) of the Ontario Building Code at the All Saints Romanian Orthodox Church, 545 Danforth Road, Toronto, Ontario.

APPLICANT	Bebe Arghirescu, President All Saints Romanian Orthodox Church Toronto, Ontario
RESPONDENT	Bruce Ashton Deputy Chief Building Official City of Toronto
PANEL	Len King, Vice-Chair Fred Barkhouse Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	August 5, 2004
DATE OF RULING	August 5, 2004
APPEARANCES	Bebe Arghirescu, President All Saints Romanian Orthodox Church Toronto, Ontario **The Applicant** Jerry Cardwell Senior Inspector City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Bebe Arghirescu, President, All Saints Romanian Orthodox Church, has received an Order to Comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to re-construct a landing serving a flight of stairs at the All Saints Romanian Orthodox Church, 545 Danforth Road, Toronto, Ontario.

2. Description of Construction

The Applicant is renovating a place of worship having a Group A, Division 2 major occupancy classification. The one storey structure is approximately 285 m^2 in building area and is constructed with combustible materials. In addition to the one above-grade storey, the structure includes a subsurface basement level. The building is not equipped with a sprinkler system, a fire alarm system or a standpipe and hose system.

The renovations include the construction of a flight of stairs and a landing that form part of an emergency exit leading from the basement level to the exterior of the structure. There is a second exit stair that connects the basement to the first floor level. The new flight of stairs has a vertical rise of 2,616 mm (8 ft 7 in) and a width of 1,168 mm (3 ft 10 in). The stair treads have a slip resistant finish and the stairway is equipped with a handrail on both sides.

The landing is comprised of concrete slab and measures 686 mm (2 ft 3 in) from the top of the stairs to the exit door. The concrete slab extends 1,524 mm (5 ft) beyond the face of the building and the exit door swings over this slab. The door itself is equipped with panic hardware and swings outward in the direction of exit. It is the landing located at the top of this flight of stairs that is the subject of this dispute.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-constructed landing serving a flight of stairs in a Group A, Division 2 occupancy provides sufficiency of compliance with Sentence 3.4.6.3.(2) of the Ontario Building Code.

Sentence 3.4.6.3.(2) mandates that the length and width of a landing shall be at least the width of the stairway in which it occurs, except that in a straight run the length of the landing need not be more than 1,100 mm (3 ft 7 in). Sentence 3.4.6.3.(5) mandates that a landing be provided at the top and bottom of every flight of stairs.

Regarding the subject construction, a concrete slab, which forms the landing, extends from the top of the stairs beyond the face of the building and an exit door swings over the concrete slab landing. The concrete slab measures 2,210 mm in its entirety; with the interior portion measuring 686 mm (2 ft 3 in) in length and the exterior portion measuring 1,524 mm (5 ft).

4. Provisions of the Ontario Building Code

3.4.6.3. Landings and Maximum Vertical Rise of Stair Flights

(1) No flight of stairs shall have a vertical rise of more than 3.7 m between floors or landings, except that a flight of stairs serving as an *exit* in a Group B, Division 2 or 3 *occupancy* shall have a vertical rise not more than 2 400 mm between floors or landings.

(2) Except as provided in Sentence (6), the length and width of a landing shall be at least the width of the stairway in which it occurs, except that in a straight run the length of the landing need not be more than 1 100 mm.

(3) Where a doorway or stairway empties onto a ramp through a side wall, there shall be a level area extending across the full width of the ramp, and for a distance of 300 mm on either side of the wall opening, or on one side if the opening abuts on an end wall.

(4) Where a doorway or stairway empties onto a ramp through an end wall, there shall be a level area extending across the full width of the ramp and along its length for not less than 900 mm.

(5) A landing shall be provided at the top and bottom of every flight of stairs.

(6) Where the direction of *exit* travel changes at a landing, the landing is permitted to be chamfered or curved in plan, provided the required width of the stair is maintained where measured perpendicular to the direction of *exit* travel across the landing.

5. Applicant's Position

The Applicant began by acknowledging that the landing at the top of the new stair, which forms part of an emergency exit from the basement, was not constructed as planned. The concrete slab, which extends 686 mm (2 ft 3 in) from the top of the stairs to the exterior doorway threshold, is less than the required 1,100 mm (3 ft 7 in) for a landing as prescribed in Sentence 3.4.6.3.(2) of the Code. The renovated basement is additional space intended for use as storage and occasional church business. In describing the as-built stairway, the Applicant noted that handrails have been installed on both sides and that the exterior door, which swings in the direction of exit, is equipped with panic hardware. The door is used for exiting the building only. He emphasized that there is no hardware on the exterior of the door so it cannot be used as an entrance. The concrete slab, which includes the landing, is level, with the exception of an aluminium threshold in the exterior doorway and the slab extends beyond the exterior face of the building.

The Applicant was asked to describe the church business and responded that the area would be used for meetings and work space when preparing for church functions. The Applicant did not anticipate that more than thirty people would occupy the basement level at any one time and submitted that this area would only be used occasionally.

6. Respondent's Position

The Designate for the Respondent submitted that the landing was not constructed according to the plans examined when the building permit was issued. An Order to Comply was issued to the Applicant after the inspection revealed that the landing at the top of the new stairs was 686 mm (2 ft 3 in) in length. The Applicant was ordered to extend the landing at the top of the new stair to not less than 1,100 mm (3 ft 7 in) to meet the requirements of the Building Code.

The Designate stated that while he did not consider this to be a life safety issue the landing does not comply with the Building Code. He confirmed that the new stairs were not the main stairs for the basement level and the stairway leads directly to the exterior of the structure.

In summation, the Designate stated that the issue is one of liability and of safety; the landing is only two-thirds of the minimum length required for a stairway of this width. The provisions of the Building Code in this dispute involve safety and the deficiency is material in nature, the Designate maintains that the landing does not comply with the prescriptive requirements outlined in the Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-constructed landing serving a flight of stairs in a Group A Division 2 occupancy provides sufficiency of compliance with sentence 3.4.6.3.(2) of the Ontario Building Code at the All Saints Romanian Orthodox Church, 545 Danforth Road, Toronto, based on the following conditions:

1) The emergency lighting installed at the top and bottom of the stairs continues to be maintained.

2) The panic hardware on the exterior door providing egress only (with no exterior hardware) continues to be maintained.

3) The maximum occupancy of the cellar be 60 persons and be posted as such.

4) The exit stairs will be used only for exiting and no other purpose. In particular, no storage is to take place in the stairway.

8. Reasons

i) The concrete slab, which contains the landing portion at the top of a flight of stairs that lead to the exterior of the building, exceeds the minimum length for a stairway that is 1.1684 m (3 ft 10) wide.

ii) The exit stairs will be used only for exiting and for no other purpose. The exterior door has panic hardware and provides exterior egress only.

iii) These and the other compensating measures provide sufficiency of compliance in this dispute.

Ruling No. 04-34-989
Application No. 2004-30

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 1.-(1) and Subsection 24.-(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 1.1.3.2.(1) of Regulation 403/97, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Paul Madracki in Trust, Sutton Self Storage, for the resolution of a dispute with Deborah Buck, Chief Building Official, Town of Georgina, to determine whether the existing outdoor portable metal containers that are used for public storage are considered to be "buildings" under Section 1.-(1) of the *Building Code Act, 1992* at Sutton Self Storage, 4428 Baseline Rd., Sutton, Ontario.

APPLICANT	Paul Madracki in Trust Sutton Self Storage Sutton, Ontario
RESPONDENT	Deborah Buck Chief Building Official Town of Georgina
PANEL	Len King, Vice-Chair Fred Barkhouse Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	August 5, 2004
DATE OF RULING	August 5, 2004
APPEARANCES	Robert Madracki Sutton Self Storage Sutton, Ontario **Agent for the Applicant** Glenn Middlebrook Senior Building Inspector Town of Georgina **Designate for the Respondent**

RULING

1. The Applicant

Paul Madracki in Trust has received an Order to Comply, under the *Building Code Act*, S.O. 1992, c. 23, as amended, to apply for and obtain building permits for public storage buildings at Sutton Self Storage, 4428 Baseline Road, Sutton, Ontario.

2. Description of Construction

The Applicant is using metal shipping containers as self-storage units at a public self-storage facility in Sutton, Ontario. The shipping containers were manufactured at another location and then transported to this site and placed on concrete footings. The units measure 2.440 m (8 ft) wide and 2.440 m (8 ft) high. They vary in length from 3.048 m (10 ft) to 12.192 m (40 ft). The building area of the subject containers ranges in size from 14.86 m^2 (160 ft^2) to 29.73 m^2 (320 ft^2). The Applicant has modified some of the storage units by installing roll up type doors to provide access to the units. The self-storage units are arranged in rows and are accessible to the public for the storage of goods.

3. Dispute

The issue at dispute between the Applicant and the Respondent is whether the existing portable metal containers, which are used for public storage, are considered "buildings" under the *Building Code Act, 1992*.

Pertinent to this dispute are various defined terms set out in the *Building Code Act, 1992* and the Building Code. In particular, the definition of "building" in Subsection 1.(1) of the Act includes "a structure occupying an area greater than 10 m^2 consisting of a wall, roof and floor". Further, the term "construct", as defined by the Act, "means to do anything in the erection, installation, extension or material alteration of a building unit fabricated or moved from elsewhere".

Another concept germane to this dispute is the term "occupancy" which is defined in the Building Code as "the use or intended use of a building or part thereof for the shelter or support of persons, animals or property".

As noted above, the subject dispute involves the use of portable metal storage containers as units at a public self-storage facility.

4. Provisions in Dispute

The *Building Code Act, 1992*

Subsection 1.-1 Definitions

1.-(1) In this Act,
"building" means,
(a) a structure occupying an area greater than ten square metres consisting of

a wall, roof and floor or any of them or a structural system serving the function thereof including all plumbing, works, fixtures and service systems appurtenant thereto,

(b) a structure occupying an area of ten square metres or less that contains plumbing, including the plumbing appurtenant thereto,

(c) plumbing not located in a structure,

(c.1) a sewage system

(d) structures designated in the building code;

"construct" means to do anything in the erection, installation, extension or material alteration or repair of a building and includes the installation of a building unit fabricated or moved from elsewhere and "construction" has a corresponding meaning;

The Building Code

1.1.3.2. Defined Terms

(1) The words and terms in italics in this Code have the following meaning for the purposes of this Code, and where indicated, the following meaning for the purposes of the Act as well.

Occupancy means the use or intended use of a *building* or part thereof for the shelter or support of persons, animals or property.

5. Applicant's Position

The Agent for the Applicant explained that the project was begun with the knowledge of the Town of Georgina. In 2001, the Applicant and the owner of an adjacent property submitted applications to the Committee of Adjustment for consent to sever their respective properties. The Applicant planned to use his property as a public self-storage facility and intended on converting shipping containers into self-storage units. In 2002, shipping containers were placed on the property. In April 2003, the Town of Georgina directed that the Applicant remove the shipping containers in order to comply with the Town of Georgina Zoning By-law #500, which prohibits the use of shipping containers for storage.

The Agent submitted a copy of the Order to Comply with the Building Code that was issued by the Town of Georgina on August 20, 2003. This Order required the Applicant to apply for building permits to erect public storage buildings, prohibited the use of the public storage buildings until permits were obtained and required the removal of the public storage buildings if permits could not be issued for any reason.

The Agent submitted that, in his opinion, the storage units retained the character of shipping containers because they were portable and, therefore, a building permit is not required. The Agent described how a shipping container is placed on concrete footings. The container could then be moved to another location on the property or placed on a transport trailer for delivery to another property. In response to questioning, the Agent advised that only a few containers have been moved to and from other properties since the business began operating.

The Agent referred to a site visit made by the Chief Fire Official. He noted that the Chief Fire Official was of the opinion that the self-storage units were not buildings, however the Agent admitted that he did not get that opinion in writing.

The Agent submitted additional exhibits at the hearing. The exhibits included copies of photographs that showed the use of shipping containers as self-storage units.

6. Respondent's Position

The Designate for the Respondent maintained that the Applicant constructed "buildings" when he placed shipping containers, occupying an area greater than 10 m^2, on the property for use as self-storage units. The Designate stated that the definition of *occupancy* in the Building Code would include public self-storage. He further submitted that the definition for *building* in the *Building Code Act, 1992* is fairly general for a reason. The Designate explained that a "building" is defined as "a structure occupying an area greater than ten square metres consisting of a wall, roof and floor or any of them or a structural system serving the function thereof". This definition, he stated, is broad enough so that many of the subject structures can be considered buildings. The Designate further stated that there are some self-storage units that are only 7.43 m^2 (80 ft^2) in size and that the Building Division of the Town of Georgina does not have an issue with those units.

The Designate said that an Order to Comply was issued because the Applicant did not obtain building permits for the subject shipping containers, which occupy an area greater than ten square meters. These shipping containers, he reiterated, are buildings being used as self-storage units.

7. Commission Ruling

It is the decision of the Building Code Commission that the existing outdoor portable metal containers that are used for public storage are considered to be "buildings" under Section 1.-(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended, at Sutton Self Storage, 4428 Baseline Rd., Sutton, Ontario.

8. Reasons

i) These containers consist of a wall, a floor and a ceiling or roof.

ii) Those containers that are occupying an area greater than ten square metres are buildings. The containers that are eight feet by twenty feet or eight feet by forty feet occupy areas greater than ten square metres.

iii) The applicants suggest that they are temporary although the first of which was installed in February 2002. Permanent or temporary, they are buildings.

iv) The containers are used for an occupancy, as defined in Part 1 of the Ontario Building Code. In this case they are intended to be used for the storage of property.

APPLICANT	Bruno Bartel 20 Vic Management Inc., Toronto, Ontario
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Yaman Uzumeri Gerry Egberts
PLACE	Toronto, Ontario
DATE OF HEARING	October 7, 2004
DATE OF RULING	December 20, 2004
APPEARANCES	David Syrett Leber Rubes Inc. Toronto, Ontario **Agent for the Applicant** Hung Yip Building Engineer City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Bruno Bartel, 20 Vic Management Inc., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing an extension to the Yorkdale Shopping Centre, at 3401 Dufferin Street, Toronto, Ontario.

2. Description of Construction

The Applicant is constructing an extension to a large commercial development (Yorkdale Shopping Centre). This shopping centre has undergone several major additions and renovations in its history. The current expansion project consists of the redevelopment of a 3-storey department store (formerly Eaton's) and a 1-storey retail mall expansion having an area of 5,642 m^2. The subject building is classified as Group E and Group F, Division 2 occupancies and is comprised of noncombustible construction. It is equipped with sprinkler, fire alarm and standpipe and hose systems.

The construction in dispute involves a proposed new open truck loading area in the southeast corner of the existing parking garage. Specifically at dispute is a garbage compactor and scrap bin area which sits on a raised concrete platform within the open loading area. The garbage compactor area is separated from the parking garage by a 1,070 mm high pipe guardrail situated along the edge of the concrete platform. The ceiling height of the loading area and parking garage measures approximately 5 m and the east side of the parking garage is open to the outside. Further, the existing garage and the proposed truck loading area are sprinklered (as is the entire shopping centre).

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed garbage compactor and scrap bin area situated on the basement level of the existing shopping centre and separated from the existing parking garage by a pipe guardrail, provides sufficiency of compliance with Articles 3.3.5.6. and 3.6.2.6. of the Building Code.

Article 3.3.5.6. requires that a storage garage be separated from other occupancies by a fire separation having a fire-resistance rating of at least 1.5 hours. Further, Article 3.6.2.6. requires that a room used for the storage of combustible refuse shall be separated from the remainder of the building by a fire separation having a fire-resistance rating of not less than 1 hour and be sprinklered.

As noted above, the area subject to this dispute will house garbage compactors and scrap bins. The area is sprinklered and is proposed to be separated from the parking garage by a metal pipe guard.

4. Provisions of the Ontario Building Code

Article 3.3.5.6. Storage Garage Separation

(1) Except as permitted by Sentences 3.3.4.2.(4) and (5), a *storage garage* shall be separated from other *occupancies* by a *fire separation* with a *fire-resistance rating* not less than 1.5 h.

Article 3.6.2.6. Combustible Refuse Storage

(1) Except as required by Sentence 3.6.3.3.(9), a room for the storage of *combustible* refuse shall be

(a) separated from the remainder of the *building* by a *fire separation* with a *fire-resistance rating* not less than 1 h, and

(b) sprinklered.

5. Applicant's Position

The Agent for the Applicant summarized the nature of this dispute as being whether a fire separation was required between the truck loading area, which includes a raised platform for a trash compactor and bins, and the parking garage. In the opinion of the Agent, the existing 1.5 h fire separation between the existing parking garage and the remainder of the shopping centre satisfies the requirements of Articles 3.3.5.6. and 3.6.2.6. of the Building Code.

As further support for his position in this particular circumstance, the Agent advised that the parking garage has a height of 5 m, while only 2 m is required. He further noted that the truck loading area is fully sprinklered, as is the remainder of the shopping centre. He also explained that the eastern exterior wall of the loading area is completely open to a laneway. The Agent described the construction in dispute and advised that the area is relatively unenclosed, with no overhead door to the truck loading area. He noted that a compactor is situated to the west of the truck loading area, located on a raised platform and separated from the parking garage by a pipe guardrail. He acknowledged that this would create a physical separation of the two areas and believes that a fire separation between the compactor/storage bins and the parking garage is not necessary. He noted that it is often difficult to completely separate a compactor area and referred to similar circumstances that have been accepted in the past.

The Agent for the Applicant also advised the Commission of an opinion provided in 1987 from Code Interpretation staff at the Ministry of Municipal Affairs and Housing, on an unrelated matter, which supports the Applicant's position in this dispute. He noted that the Code requirements have not changed since the time the opinion was given.

The Agent described the function of the area and how garbage/refuse will be deposited by tenants of the shopping centre. The Agent for the Applicant advised that the metal scrap bins used in this location are open at the top. Tenants will use the bins to dispose of metal merchandising fixtures, however, the bins will not be used for the disposal of combustible material. He advised that the garbage compactors are fully enclosed and suggested that tenants would place refuse and empty cardboard containers in the compactors. He further advised that tenants are not to leave combustible materials on the floor within the loading/compactor areas.

In summation, the Agent reiterated that the truck loading area is open to the outside and, given the excess height of the parking garage, the area is naturally ventilated. He emphasized that there is an existing 1.5 hour fire separation between the parking garage and the existing mall, meeting the requirements of the Building Code. In his experience, he advised that it was not unusual to find compactors located on the loading dock without separation from either the loading area or any adjacent parking.

6. Respondent's Position

The Designate for the Respondent submitted that, in his opinion, the compactors and the scrap bins must be separated from the parking area in the basement with a 1.5 hour fire separation in accordance with Sentence 3.3.5.6.(1) of the Building Code. Further, in accordance with Clause

3.6.2.6.(1)(b) the proposed compactor and garbage storage areas must be sprinklered.

The Designate argued that he did not consider the loading area to be open, as suggested by the Applicant, as the laneway referred to, while open to above, is not open to the street. The 30 ft wide laneway only separates the basement level of the shopping centre from the multi-storey parking structure. He explained that the only access point for trucks/vehicles into the loading area is through the basement parking garage. Further, he noted that there is an exit door from an exit corridor than opens into this space. This exit leads to grade level by way of an exterior stair adjacent to the proposed compactor area.

The Designate acknowledged the 1987 opinion of the Ministry of Municipal Affairs and Housing but suggested that this was an old opinion that has never been formalized into an interpretation. He further noted that there was no impediment to constructing a 1.5 hour fire-separation in this area.

In summation, the Designation reiterated that, in his opinion, a fire-separation is required in this instance. He emphasized that the area is intended for refuse storage and noted that a “room” is expected for this purpose as suggested in Article 3.6.2.6. of the Code. A “room” would require walls and those walls, in his opinion, should provide the required fire-resistance rating mandated by the Code. He submitted that the proposed pipe guardrail does not satisfy the requirements of the Building Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed compactor and scrap bin area in the basement level of the subject retail mall provides sufficiency of compliance with Articles 3.3.5.6. and 3.6.2.6. of the Building Code at the Yorkdale Shopping Centre, 3401 Dufferin Street, Toronto, Ontario, on condition that:

a) Refuse materials will only be stored within the compactor and two storage bins and shall not be left outside of these containers on the platform and/or trucking area. Signs to that affect are to be posted in the immediate vicinity.

b) Materials to be disposed of in the scrap bins shall be limited to metal merchandising fixtures. A letter from the Management of the Yorkdale Shopping Centre confirming that the area will not be used for the disposal of combustible material shall be provided to the chief building official of the City of Toronto.

c) The quantity of material stored in this area shall be limited to 50 kg/m^2 of floor area meeting the definition for *low hazard industrial* occupancy as specified in Article 1.1.3.2. of the Building Code.

8. Reasons

i) The ceiling height of the existing parking garage and proposed open truck loading area is 5 m (16.4 ft) above the floor level and the eastern side of the garage is unenclosed.

ii) The compactor/scrap bin area is adjacent to a 9.1 m (30 ft) wide laneway that is open to above, providing direct venting to the exterior.

iii) The compactor and scrap bin area is located immediately adjacent to a fire route.

iv) The floor area is fully sprinklered, as is the retail mall.

v) The conditions of this ruling will effectively restrict the type and quantity of material stored in this area.

Ruling No. 04-51-1006
Application No. 2004-50

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentences 3.2.3.7.(1) and 3.1.5.11.(3) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Walter Harhay, Harhay Construction Management, for the resolution of a dispute with Jim Laughlin, Director & Deputy Chief Building Official, City of Toronto, to determine whether the proposed exterior wall system that incorporates foamed plastic insulation and exterior cladding in an exterior wall of a Group C (Part 3) major occupancy building provides sufficiency of compliance with Sentences 3.2.3.7.(1) and 3.1.5.11.(3) of the Ontario Building Code, at 42-44 Camden Street, Toronto, Ontario.

APPLICANT	Walter Harhay Harhay Construction Management Etobicoke, Ontario
RESPONDENT	Jim Laughlin Director & Deputy Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Susan Friedrich Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	November 4, 2004 - and - January 17, 2005
DATE OF RULING	January 17, 2005
APPEARANCES	Harold Locke Locke & Locke Inc. Vancouver, British Columbia **Agent for the Applicant** Peter Au Manager, Plan Review City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Walter Harhay, Harhay Construction Management, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing a residential apartment building at 42-44 Camden Street, Toronto, Ontario.

2. Description of Construction

The Applicant is constructing a 9 storey, Group C residential apartment building having a building area of 3,851 m^2. The building is to be comprised of noncombustible construction and, when completed, will be sprinklered and equipped with both fire alarm and standpipe and hose systems.

The construction in dispute involves the use of foamed plastic insulation in the exposing building face of the subject building where the walls abut adjacent property lines and where the resulting limiting distance permits unprotected openings of not more than 10%. In this case, the Applicant is proposing the use of the ECO-Block wall system. The components of this wall system include a reinforced concrete core, sandwiched between expanded polystyrene foam (EPS), and a noncombustible ADEX base coat and finish coat measuring 6.35 mm (¼ in) thick, applied to the exterior of the wall forms. The ECO-Block insulating concrete forms terminate at the underside of each reinforced concrete floor slab. Furthermore, no unprotected openings will penetrate the wall assembly where it abuts the adjacent property lines.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed wall assembly, incorporating foamed plastic insulation in the form of ECO-Block insulating concrete forms, provides sufficiency of compliance with the provisions of Sentences 3.2.3.7.(1) and 3.1.5.11.(3) of the Building Code.

Sentence 3.2.3.7.(1) provides that, except as permitted by Articles 3.2.3.9 and 3.2.3.10 of the Code, where a limiting distance is such that it permits an exposing building face to have unprotected openings of not more than 10% of the exposing building face, the construction of the exposing building face shall be of noncombustible construction having a fire-resistance rating of 1 hour. The exposing building face is also to be clad with noncombustible cladding.

Article 3.1.5.11. addresses the use of combustible insulation and its protection. Sentence 3.1.5.11.(3) prescribes protection for combustible insulation in exterior walls of a building where insulation is exposed to the adjacent spaces in the building.

In this particular dispute, the parties disagree as to the application and interpretation of the provisions of the Code. The Applicant argues that, by virtue of the protection prescribed in Sentence 3.1.5.11.(3), the Code would permit the use of foamed plastic insulation in an exterior wall of a building required to comply with Sentence 3.2.3.7.(1). On the other hand, the Respondent maintains that Sentence 3.2.3.7.(7) does not permit foamed plastic insulation for walls that are subject to the construction requirements of Sentence 3.2.3.7.(1) of the Building Code. Sentence 3.2.3.7.(7) provides that, except as permitted by Sentence (9) and, in addition to the requirements of Sentences (2), (3), (5) and (6), foamed plastic insulation must be protected on the exterior surface by

prescribed methods. Further, it is the Respondent's position that the subject ECO-Block insulating concrete forms and "cladding" are a joint system and cannot be considered as independent elements of construction.

A further aspect of the Code referenced in the consideration of this dispute involves the provisions of Sentence 3.1.5.5. as raised in the technical background information report prepared by the Building and Development Branch of the Ministry of Municipal Affairs and Housing in connection with this application. The Branch memo notes that Article 3.1.5.5. prescribes various conditions under which an exposing building face can contain combustible components. The Branch maintains, however, that these conditions do not apply to walls required to conform with Sentence 3.2.3.7.(1) or (4) or where foamed plastic insulation is protected in conformance with Sentences 3.2.3.7.(7) or (8). The Branch memo goes on to state that "Article 3.1.5.11. gives rules for the protection of combustible insulation when it is located in various parts of a building required to be of noncombustible construction. Provided the appropriate thermal barrier is used, and the combustible insulation is protected on the exterior by a cladding system conforming to Article 3.1.5.5. or Sentences 3.2.3.7.(7) and (8). However, this permission does not supersede the noncombustible cladding requirements of either Sentence 3.2.3.7.(1) or Sentence 3.2.3.7.(4)."

In considering all relevant Code provisions and the specific nature of the subject construction, the Commission will consider whether the subject proposal sufficiently complies with the requirements of the Building Code.

4. Provisions of the Ontario Building Code

3.2.3.7. Construction of Exposing Building Face

(1) Except as permitted by Articles 3.2.3.9. and 3.2.3.10., if a *limiting distance* shown in Table 3.2.3.1.A. or Table 3.2.3.1.C. for a Group A, B, C, D or Group F, Division 3 *occupancy* classification permits an *exposing building face* to have *unprotected openings* not more than 10% of the *exposing building face*, the *exposing building* face shall be

(a) of *noncombustible construction* having a *fire-resistance rating* not less than 1 h, and
(b) clad with *noncombustible* cladding.

3.1.5.11. Combustible Insulation and its Protection

(3) *Combustible* insulation having a *flame-spread rating* more than 25 but not more than 500 on an exposed surface, or any surface that would be exposed by cutting through the material in any direction, is permitted in the exterior walls of a *building* required to be of *noncombustible construction*, provided the insulation is protected from adjacent space in the *building*, other than adjacent concealed spaces within wall assemblies, by a thermal barrier as described in Sentence (2), except that in a *building* that is not *sprinklered* and is more than 18 m high, measured between *grade* and the floor level of the top *storey*, or in a *building* that is not *sprinklered* and is regulated by the provisions of Subsection 3.2.6., the insulation shall be protected by a thermal barrier consisting of

(a) gypsum board not less than 12.7 mm thick, mechanically fastened to a supporting assembly independent of the insulation and with all joints either backed or taped and filled,
(b) lath and plaster, mechanically fastened to a supporting assembly independent of the insulation,
(c) masonry or concrete not less than 25 mm thick, or

(d) any thermal barrier that, when tested in conformance with CAN/ULC-S101-M, "Standard Methods of Fire Endurance Tests of Building Construction and Materials", will not develop an average temperature rise more than 140°C or a maximum temperature rise more than 180°C at any point on its unexposed face within 10 min.

5. Applicant's Position

The Agent for the Applicant submitted that the subject matter in dispute is relatively complex and noted that the issue may warrant future consideration, possibly involving an amendment to the Building Code, for clarification of this point. He provided the Commission with a history of Code development in respect to this issue, on both a national and provincial level. He stated that the Code Committees involved in the development of these provisions were not as concerned about the exposure from an exposing building face but, rather, were more concerned with the protection from fire on the interior of the building, i.e., through window openings, etc.

The Agent stated that it is important to note that all of the Code changes on this subject dealt with the cladding system itself and not whether foamed plastic could be used in exterior walls. He suggested that this supports the assumption that foamed plastic can be used if it is properly protected. He emphasized that nothing in the Code prevents the use of noncombustible insulation in an exterior wall assembly. The Code does, however, set limitations on the types of cladding that can be used. In this regard, he submitted, the subject proposal complies with the requirements of the Code.

The Agent for the Applicant suggested that the focus of this dispute should be whether the Code allows the use of combustible insulation in wall assemblies constructed under 3.2.3.7.(1). In his opinion, the Code does allow for combustible insulation provided that it is adequately protected. He submitted that Article 3.1.5.5. and Sentence 3.2.3.7.(7) do not apply. He pointed to the definitions for "Noncombustible" and "Noncombustible Construction" as outlined in the Building Code and submitted that, since many building materials do not meet the test criteria to be classified as "noncombustible", the Code included Subsection 3.1.5. for Noncombustible Construction. This Section sets out those combustible materials that are permitted to be used in a building required to be of "noncombustible construction".

In support of this application, at the request of the Commission, the Applicant also submitted test results for the subject wall assembly, as well as cross-sectional drawings and a copy of the associated Minister's Ruling for ECO-Block, relative to Part 9 applications. In addition, the Commission was also presented with results from testing conducted under CAN4-S114 standards. At the continuation of the hearing, it was noted by the Agent that the ADEX cladding, which has been tested to the standards of CAN4-S114, is separate from the ECO-Block Wall assembly. The Agent stated that the ECO-Block was tested to CAN/ULC-S101-M and pointed out that the foamed plastic vaporized very quickly. This leaves the concrete as the protective element. He noted that the test on the wall assembly was performed for 5 hours and 39 minutes on a 10 ft by 10 ft sample. Further, the test was performed on the worst case scenario at a construction joint and a connector. Even still, he noted, it was given a 4 hour fire rating.

The Agent also responded to issues raised by both the Respondent and staff representing the Building and Development Branch of the Ministry of Municipal Affairs and Housing. He submitted that the implications of their positions would mean that any exterior wall that must comply with

3.2.3.7.(1) or (4) could contain no insulation as there is no insulation that meets the CAN4-S114 standard. He further argued that Sentence 3.1.5.11.(3) permits the use of combustible insulation in buildings required to be of noncombustible construction.

In summation, the Agent for the Applicant concluded that the Building Code, in "Clause 3.2.3.7.(1)(a) requires the exposing building face to be of noncombustible construction and have a fire resistance rating of 1 h. Sentence 3.1.5.1.(1) permits the use of combustible materials in buildings required to be of noncombustible construction by reference to Articles 3.1.5.2. to 3.1.5.23." He further noted that "Sentence 3.1.5.11.(3) allows the use of combustible insulation having a flame spread rating greater than 25 but not greater than 500, provided the insulation is protected from adjacent spaces within the building in accordance with Sentence (2) or any of Clauses (3)(a) to (d)." In his opinion, therefore, the Building Code permits the use of combustible insulation in the construction of an exposing building face that is required to comply with Clause 3.2.3.7.(1)(a). He further submitted that the "relaxation permitted by Sentences 3.2.3.7.(7) and (9) does not apply to Sentence (1). The foamed plastic is not required to be noncombustible in order to meet Sentence 3.1.5.11.(3)." In respect of the subject proposal, the Agent noted that the "cladding system complies with the definition of noncombustible i.e. it meets the acceptance criteria of CAN4-S114, 'Standard Method of Test for Determination of Non-Combustibility in Building Materials'."

6. Respondent's Position

The Designate for the Respondent submitted that the subject building falls under the construction requirements of Article 3.2.2.42. of the Building Code. He further submitted that the exterior walls of the subject building are located adjacent to the property line and, in accordance with the provisions of Sentence 3.2.3.7.(1), the walls must be comprised of noncombustible construction having a fire-resistance rating of at least 1 hour and must be clad with noncombustible cladding. The Designate then referred to the provisions of Sentence 3.2.3.7.(7) which restrict the use of foamed plastic insulation in exterior walls. He pointed out that Sentence 3.2.3.7.(7) states that (except as permitted in Sentence (9)), in addition to the requirements of Sentences (2), (3), (5) and (6), foamed plastic insulation used in an exterior wall is to be protected on the exterior surface by concrete or masonry not less than 25 mm in thickness or noncombustible material that meets the criteria of acceptance under 3.2.3.7.(8) when tested to CAN/ULC-S101-M. In his opinion, therefore, the Building Code, as written, does not permit foamed plastic in a wall assembly that is subject to the construction requirements specified in Sentence 3.2.3.7.(1).

At the continuation of the hearing, the Designate for the Respondent advised that he is in agreement with the position put forward in the technical memorandum prepared by the Building and Development Branch of the Ministry of Municipal Affairs and Housing in connection with this dispute. He reiterated his position that exterior walls, adjacent to the property line, where only up to 10% openings are permitted, do not allow for foamed plastic insulation. His position is that, by virtue of the provisions of 3.2.3.7.(7), foamed plastic insulation would be allowed under the relaxed requirements of 3.2.3.7.(2) because the wall is further away from the property line. He argued that, if the Code was not interpreted to differentiate between Sentence 3.2.3.7.(1) and Sentence 3.2.3.7.(2) then there would be no need to include both as separate provisions in Article 3.2.3.7.

In summation the Designate submitted that, in his opinion, the ECO-Block system coated with ADEX base coat cannot be used in situations where the permitted unprotected openings is less than 10%.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed exterior wall system that incorporates foamed plastic insulation and exterior cladding provides sufficiency of compliance with Sentences 3.2.3.7.(1) and 3.1.5.11.(3) of the Building Code at 42-44 Camden Street, Toronto, Ontario.

8. Reasons

i) The exterior cladding has been tested to CAN4-S114 "Standard Method of Test for Determination of Non-combustibility in Building Materials" and meets the material requirements for noncombustibility as defined in the Code.

ii) The ECO-Block wall forming system has been tested to CAN/ULC-S101-M "Standard Methods of Fire Endurance Tests of Building construction and Materials".

iii) The ECO-Block wall, including insulation, terminates at the underside of each floor slab creating a fire-break and fire compartments at each floor level.

iv) CCMC Evaluation Report no. CCMC 12966-R and Minister's Ruling No. 04-12-116 (12966-R) have approved this wall forming system for limited use. In this particular application, sealed architectural drawings and certification by a Professional Engineer under Part 4 of the Code have been submitted.

v) There are no unprotected openings penetrating this exterior wall assembly.

Ruling No. 04-53-1008
Application No. 2004-45

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 3.2.9.1. as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Allan Schutten, 1201068 Ontario, for the resolution of a dispute with Tom Redmond, Chief Building Official, City of Hamilton, to determine whether the proposed 6,524 m^2 addition to an existing 5,870 m^2 steel shearing and warehouse facility that has been designed without a standpipe and hose system provides sufficiency of compliance with Article 3.2.9.1. of the Ontario Building Code at the Janco Steel Plant, 925 Arvin Avenue, Stoney Creek, Ontario.

APPLICANT	Allan Schutten 1201068 Ontario Stoney Creek, Ontario
RESPONDENT	Tom Redmond Chief Building Official City of Hamilton
PANEL	Len King, Vice-Chair Fred Barkhouse John Guthrie
PLACE	Toronto, Ontario
DATE OF HEARING	November 18, 2004
DATE OF RULING	November 18, 2004
APPEARANCES	Nick VandenOever Quarrystone Construction Limited Beamsville, Ontario **Agent for the Applicant** Tom Redmond Chief Building Official City of Hamilton **The Respondent**

RULING

1. The Applicant

Allan Schutten, 1201068 Ontario, has applied for and received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is proposing to construct a 6,524 m^2 addition to the existing steel shearing and warehouse facility at the Janco Steel Plant, 925 Arvin Avenue, Stoney Creek, Ontario.

2. Description of Construction

The Applicant is proposing the construction of a 6,524 m^2 addition to the existing steel shearing and warehouse structure, which currently has a building area of 5,870 m^2 and a building height of one storey. The combined area of the existing building and the proposed addition would be 12,394 m^2. The building and the proposed addition are of noncombustible construction and are equipped with a fire alarm system, but not a sprinkler system, nor a standpipe and hose system. The structure is classified as a Group F, Division 3 - Low Hazard Industrial occupancy.

The construction in dispute involves the omission of the standpipe and hose system which would be required under the Building Code for a structure of this size and classification. To compensate for the omitted system, the Applicant has proposed to provide additional fire extinguishers. Several other measures are also cited as ensuring a level safety within the facility including fire access route around the premises, a fire alarm system, an annunciator panel connected with the security panel, heat sensors, smoke detectors and pull stations throughout the plant.

The plant is used in the production of rolled steel, specifically plates and coils. It will also be used for the storage of the material produced in the plant, as well as similar material produced elsewhere.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed 6,524 m^2 addition to the existing 5,870 m^2 steel shearing and warehouse facility, that is not equipped with a standpipe and hose system, provides sufficiency of compliance with Article 3.2.9.1. of the Ontario Building Code.

Article 3.2.9.1. requires that a building having an F3 occupancy exceeding 3,000 m^2 must be equipped with a standpipe and hose system. The combined area of the proposed addition and existing building would result in a total building area of 12,394 m^2 . To compensate for the ommission of a standpipe and hose system, the Applicant has proposed an alternative system of fire protection and detection as noted above.

4. Provisions of the Ontario Building Code

Article 3.2.9.1.

(1) Except as provided in Sentences (4) to (7), a standpipe system shall be installed in every building that

(a) is more than 3 storeys in building height

(b) is more than 14 m (45 ft 11 in) high measured between grade and the ceiling of the top storey, or

(c) is not more than 14 m (45 ft 11 in) high measured between grade and the ceiling of the to storey but has a building area exceeding the area shown in Table3.2.9.1. for the applicable building height if the building is not sprinklered.

5. Applicant's Position

The Agent for the Applicant submitted that the building in question is constructed of noncombustible materials, such as concrete and steel. The majority of the material stored at the facility (ie. steel coils and plate) are also considered noncombustible. He noted that there are some combustible materials contained within the building. These items include spacers used between the steel plates and chock blocks, which are used to prevent the coils from moving. The handling and shearing equipment used within the facility are operated by electric motors and therefore this equipment, according to the Agent, is protected with the utmost care.

The Agent for the Applicant began by stating that it is not their intent to create a hazard and that they would like to abide by the Building Code. He went on to explain that the reason for requesting the exemption is that the material being stored in the facility could be more adversely affected by the water used for the purpose of fighting a fire than by the heat of the fire itself.

The Agent reported that several measures will ensure safety within the facility. These measures included fire access route around the premises, a fire alarm system, an annunciator panel connected with the security panel, and additional fire extinguishers beyond the Code requirements. He further reported that the building will also be equipped with heat sensors, smoke detectors and pull stations throughout the plant.

The Agent indicated that they were concerned with the possibility of water damage to the steel in the event of vandalism or accidental breaks in the piping. There would not have to be a fire for water to pose a threat to the product, he stated. He described the steel coils as being stacked two high on skids on the floor and that millions of dollars worth of product could be involved. He went on to state that, not only is their own product stored at the plant, but client inventory as well. In response to questioning as to how the steel would be affected, the Agent stated that the steel would degrade and would then be devalued.

When asked if the Fire Department had commented, the Agent responded that they were contacted and did not indicate a concern. He mentioned that there is a fire hall across the street from the facility and the response time to a call would be approximately 4 minutes. He further noted that there are two fire hydrants located on the property. In response to being questioned by the panel regarding whether a fire safety plan has been submitted to the Fire Department, the Agent for the Applicant admitted that this had not been done. The Agent assured the Commission that the Applicant does not want to put the Fire Department at further risk and offered to establish a fire safety plan.

In summation, the Agent stressed that the owner is very concerned about the introduction of water to the plant and its detrimental affect on the steel stored within the facility. He further reiterated that the building is comprised of noncombustible materials and that most of the contents of the building are also noncombustible. He also claimed that there are other similar facilities, some even larger in area, that have been exempt from the requirement of having to install a standpipe.

6. Respondent's Position

The Respondent submitted that the proposed 6,524 m^2 addition to the existing 5,870 m^2 building would bring the total building area for the new structure well above the limits outlined in Clause 3.2.9.1.(1)(c) of the Building Code. In his submission, he stated that he did not allow relief from the requirement for a standpipe system as the new building area, including the proposed addition, would be almost four times the maximum area permitted by Table 3.2.9.1. of the Code. Moreover, the Respondent stated that the proposed addition would be more than double the current building area. He further stated that this facility already exceeds the building area requirements for standpipe systems and has recevied an exemption from the standpipe requirements by virtue of a previous Building Code Commission ruling.

The Respondent is of the opinion that the majority of the compensating measures being offered by the Applicant are already required by the Code and he does not believe that the proposal provides sufficiency of compliance with the Code provisions.

The Respondent went on to say that he has concerns with respect to the distance between the building and the fire hydrants. A further concern, according to the Respondent, is the Fire Department's expectation that a facility such as this would be equipped with a standpipe system. He indicated that the Applicant should, at the very least, submit a fire safety plan to the Fire Department.

In summation, the Respondent reiterated that he does not feel that this proposal provides an equivalent level of safety to what the Code would require.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed 6,524 m^2 addition to an existing 5,870 m^2 steel shearing and warehouse facility that has been designed without a standpipe and hose system does not provide sufficiency of compliance with Article 3.2.9.1. of the Building Code at Janco Steel Ltd., 925 Arvin Avenue, Stoney Creek, Ontario.

8. Reasons

i) The proposed building, including the existing portion and the addition, will be 12,394 m^2 in area. This area is approximately four times greater than the building limit of 3,000 m^2 specified in Table 3.2.9.1. of the Building Code for a Group F, Division 3 facility.

ii) The majority of the measures being offered as compensation by the Applicant would already be requirements of the Building Code for a 12,394 m^2 Group F, Division 3 structure.

Dated at Toronto this **18** day in the month of **November** in the year **2004** for application number **2004-45**.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentences 3.2.5.7.(1) and 3.2.5.7.(2) of Regulations 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Lory Rickard, Little John Enterprises, for the resolution of a dispute with Greg Krankovich, Chief Building Official, City of Timmins, to determine whether the proposed location of a dry hydrant will provide sufficiency of compliance with Sentences 3.2.5.7.(1) and 3.2.5.7.(2) of the Ontario Building Code for a 929 m^2 one storey sawmill at 1515 Norman Street, City of Timmins, Ontario.

APPLICANT	Lory Rickard Little John Enterprises Timmins, Ontario
RESPONDENT	Greg Krankovich Chief Building Official City of Timmins
PANEL	Len King, Vice-Chair Ed Link Neal Barkhurst
PLACE	Toronto, Ontario
DATE OF HEARING	December 2, 2004
DATE OF RULING	December 2, 2004
APPEARANCES	Sylvano Carlesso Carlesso Barazzutti Timmins, Ontario **Agent for the Applicant** Esa Saarela Plans Examiner and Building Inspector City of Timmins **Designate for the Respondent**

RULING

1. The Applicant

Lory Rickard, Little John Enterprises, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has constructed an addition to the existing saw mill at 1515 Norman Street, Timmins, Ontario. In addition, an Order to Comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, has been issued against the Applicant to rectify certain alleged deficiencies in respect to the subject construction.

2. Description of Construction

The Applicant has constructed an addition to an existing building which, according to the Applicant measures 929 m^2 (10,000 ft^2) or, according to the Respondent, 892.6 m^2 (9,608 ft^2). The structure is one storey in building height and has a Group F, Division 2 occupancy classification. The building is comprised of noncombustible construction and is to be used for the purposes of a saw mill.

The issue at dispute between the parties involves the provision of an adequate water supply for fire fighting purposes and the location of a hydrant in relation to the subject building. In this regard, the Applicant is proposing a dry hydrant, designed to the requirements of NFPA1 1231-1993, "Water Supplies for Suburban and Rural Fire Fighting" and connected by piping to the nearby natural water source (the Mattagami River). It was originally proposed that the dry hydrant be located on the sawmill property, within 90 m of the subject building. The Fire Chief deemed this proposal to be unworkable because of the excess run of connecting pipe required to connect the hydrant to the river. Further, the vertical draft of the fire hydrant would exceed the pumping capacity of fire fighting equipment and there was a potential for freezing in extreme winter conditions.

In lieu of a hydrant situated on the subject property, the Applicant is now proposing that the hydrant be installed near the shoreline, between the river and the existing roadway, approximately 152 m from the building perimeter. Water would be drawn by the equipment of a pumper truck and relayed to other pumper vehicles and then to the subject property as may be required to fight fire.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed location of a dry hydrant for the provision of water for fire fighting purposes, provides sufficiency of compliance with Sentences 3.2.5.7 (1) and (2) of the Building Code.

Sentence 3.2.5.7.(1) requires that an adequate supply of water for fire fighting purposes be provided for every building. Sentence (2) specifies that fire hydrants are to be located within 90 m of any portion of a building perimeter which is required to face a street.

In the case of the subject dispute, the Applicant is proposing to draw water from the nearby Mattagami River for fire fighting purposes. However, due to situational factors and to satisfy concerns of the fire department, the current proposal places the hydrant at a distance greater than 90 m from the perimeter of the building. This option, although preferred by the fire department, does not meet the prescriptive terms of Article 3.2.5.7.

4. Provisions of the Ontario Building Code

3.2.5.7. Water Supply

(1) An adequate water supply for fire fighting shall be provided for every *building*. (See Appendix A.)

(2) Hydrants shall be located within 90 m (295 ft 3 in) horizontally of any portion of a *building* perimeter which is required to face a *street* in Subsection 3.2.2.

5. Applicant's Position

The Agent for the Applicant advised that the original proposal, submitted with the permit drawings, was to install a dry hydrant on the subject property and pipe water approximately 168 m (550 ft) from the nearby river. Upon closer evaluation by the fire department, however, the Applicant was advised by the Fire Chief that this proposal would be unworkable in light of the excess horizontal run of the connecting pipe. The Applicant was advised that it would exceed the capabilities of the fire department's pumping equipment.

The Agent submitted that, based on consultation with the municipality and the fire department, a reasonable compromise would be to locate the dry hydrant on the opposite side of the adjacent roadway, nearer to the river. This proposal requires a shorter horizontal run of pipe resulting in less risk of freezing, which was originally one of the fire department's concerns. The fire department pumper trucks could then transfer water, as needed, to the site.

In response to questioning by the Commission, the Agent advised that the new proposal had not been designed by an engineer but suggested that the only change from the original proposal is the shorter length of pipe connecting the intake/outlet. Further, upon questioning, the Agent confirmed that the Applicant plans to install a fire alarm system in the subject building, including heat detection devices and a link to the fire department. He also noted that the combustible product that may be situated on site has a moisture content of approximately 50% and is stored well away from the building to provide for vehicle access. Processing of the material is carried out within the building itself.

6. Respondent's Position

The Designate for the Respondent advised that the fire department has confirmed that they would be capable of pumping water from the river if the hydrant were to be located as proposed by the Applicant. He noted that the fire department is supportive of locating the hydrant farther from the building than the Code may allow, recognizing that the alternative (original proposal) is unworkable in this instance. The Respondent noted that municipal servicing is not available to this site and stated that there are no plans to extend services to the property.

In response to questioning, the Designate confirmed that it would be unlikely that the pipe from the hydrant would freeze if located as now proposed by the Applicant. He suggested it would certainly be less likely than with the original proposal which would have required piping to run beneath the street.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed dry hydrant which will serve a 929 m^2, one storey sawmill and be located approximately 152 m (500 ft) from the building and placed between a roadway and the river provides sufficiency of compliance with Sentences 3.2.5.7.(1) and 3.2.5.7.(2) of the Building Code at 1515 Norman Street, Timmins, Ontario, on condition that:

a) The Applicant apply for and receive a building permit for installation of a code compliant fire alarm system that will be monitored on a 24 hour basis.

b) No outside storage be permitted within 15.25 m (50 ft) of the building.

c) The fire fighting access routes be established or designated on site.

d) A fire safety plan be established with the local fire department.

e) The dry hydrant system be designed and reviewed by a professional engineer.

f) The dry hydrant system be tested upon completion to the satisfaction of the Chief Building Official.

8. Reasons

i) The Timmins Fire Department is satisfied with the location of the proposed dry hydrant.

ii) There is no municipal water supply at the site and the nearest municipal water supply is approximately 800 m (2625 ft) away.

iii) The wood that is stored and processed at this facility has a moisture content of approximately 50%, thus reducing the fire hazard associated with this combustible element.

Dated at Toronto this 2nd day in the month of **December** in the year **2004** for application number **2004-48**.

Ruling No. 05-01-1015
Application No. 2004-61

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentences 1.1.3.1.(1) and 2.1.1.3.(1), Subsection 3.13.1. and Sentence 9.1.1.4.(1) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by David Starr, owner, to determine whether the storage structure, referred to by the Applicant as a tent, provides sufficiency of compliance with Sentences 1.1.3.1.(1) and 2.1.1.3.(1), Subsection 3.13.1. and Sentence 9.1.1.4.(1) of the Ontario Building Code at 2056 River Road, London, Ontario.

APPLICANT	David Starr, owner London, Ontario
RESPONDENT	Rocky Cerminara Chief Building Official City of London
PANEL	Tony Chow, Chair Donald Pratt Michael Steele
PLACE	Toronto, Ontario
DATE OF HEARING	January 13, 2005
DATE OF RULING	January 13, 2005
APPEARANCES	Barry R. Card Barrister and Solicitor London, Ontario **Agent for the Applicant** Owen Clarke Manager of Inspections London, Ontario **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and has constructed a storage structure, referred to by the Applicant as a tent, at 2056 River Road, London, Ontario.

The subject building is a 1 storey, F2 storage structure having a building area of 120 m^2. The structure is similar to a Quonset hut, having a structural frame of "hoops" tied together by purlins and a wind brace. A polyfabric membrane covers the framework while the ends of the structure are comprised of wood studded walls with fibreglass panels. There is a doorway opening at each end of the building which provides access to the storage space inside. The headroom at the highest point measures 3.35 m.

The structure has been erected 9.14 m from the northern property line, 7.92 m from the western property line, 14 m from an existing house on the property and 7 m from an existing shed, also on the property. The purpose of the structure is to provide year-round shelter for refuse and other material associated with the operation of the salvage yard.

The construction in dispute involves whether the subject structure may be considered a "tent" that provides sufficiency of compliance with Subsection 3.1.13. of the Building Code.

2. Provisions of the Building Code in Dispute

1.1.3.1. Non-defined Terms

(1) Definitions of words and phrases used in this Code that are not included in the list of definitions in this Part shall have the meanings which are commonly assigned to them in the context in which they are used in this Code, taking into account the specialized use of terms with the various trades and professions to which the terminology applies.

2.1.1.3. Part 9

(1) Except as provided in Sentences 2.1.1.4.(2), 2.1.1.6.(1) and Article 2.1.1.5., Part 9 applies to *buildings* occupying an area greater than ten square metres

(a) of 3 *storeys* or less in *building height*,
(b) having a *building area* not exceeding 600 m^2, and
(c) used for
  (i) Group C, *residential occupancies*,
  (ii) Group D, *business and personal services occupancies*,
  (iii) Group E, *mercantile occupancies*, or
  (iv) Group F, Division 2 and 3, *medium* and *low hazard industrial occupancies*.

Tents 3.13.1.

3.13.1.1. Application

(1) Except as provided in this Subsection, tents are exempted from complying with the requirements of this Code.

3.13.1.2. General

(1) Except as provided in Sentence (2), the requirements of this Subsection shall apply to all tents.

(2) Articles 3.13.1.4., 3.13.1.5., 3.13.1.6. and 3.13.1.10. apply to tents that
- (a) do not exceed 225 m^2 in ground area,
- (b) do not exceed 225 m^2 in aggregate ground area and are closer than 3 m apart,
- (c) do not contain bleachers, and
- (d) are not enclosed with sidewalls.

3.13.1.3. Means of Egress

(1) Except as provided in Sentences (2) and (3), tents shall conform to Sections 3.3. and 3.4.

(2) A tent need not conform to Article 3.4.6.11. except where swing type doors are provided.

(3) Where the area between adjacent tents or a tent and the property line is used as a *means of egress*, the minimum width between stake lines shall be the width necessary for *means of egress*, but not less than 3 m.

3.13.1.4. Clearance to Other Structures

(1) Tents shall not be erected closer than 3 m to the property line.

(2) Except as provided in Sentences (3), (4) and (5), tents shall not be erected closer than 3 m to other tents or structures on the same property.

(3) A *walkway* between a *building* and a tent occupied by the public is permitted provided
- (a) the tent is not closer than 3 m from the *building*, and
- (b) the *walkway* conforms to Article 3.1.3.18.

(4) Tents not occupied by the public need not be separated from one another, and are permitted to be erected less than 3 m from other structures on the same property, where such closer spacing does not create a hazard to the public.

(5) Tents located on fair grounds or similar open spaces, need not be separated from one another provided such closer spacing does not create a hazard to the public.

3.13.1.5. Clearances to Flammable Material

(1) The ground enclosed by a tent and for not less than 3 m outside of such structure shall be cleared of all flammable or *combustible* material or vegetation that will carry fire.

3.13.1.6. Flame Resistance

(1) Every tent, and tarpaulins, decorative materials, fabrics and films used in connection with tents, shall be certified to CAN/ULC S-109-M, “Standard for Flame Tests of Flame-Resistant Fabrics and Films”, or NFPA 701 “Standard Method of Fire Tests for Flame-Resistant Textiles and Films”.

3.13.1.7. Design of Framing and Supports

(1) The supporting framing structure and anchorage system for tents shall be designed and reviewed by a *professional engineer*.

3.13.1.8. Bleachers

(1) Where bleachers are provided in tents, they shall be designed in conformance with Articles 3.3.2.8., 3.3.2.10., 4.1.6.11., and 4.1.10.6.

3.13.1.9. Sanitary Facilities

(1) Except as provided in Sentence (3), the minimum number of water closets for tents shall be determined in accordance with Table 3.7.4.3.E.

(2) Article 3.7.4.16. applies to sanitary facilities in Sentence (1).

(3) Sanitary privies, chemical closets or other means for the disposal of human waste may be provided in lieu of toilet fixtures.

3.13.1.10. Provision for Fire-fighting

(1) Access shall be provided to all tents for the purpose of fire-fighting.

9.1.1.4. Tents and Air-Supported Structures

(1) Tents shall conform to the requirements in Subsection 3.13.1.

3. Applicant's Position

The Agent for the Applicant outlined the history of this proposal. He advised that his client has constructed what he considered to be a tent to be used as a shelter for the storage of material related to the salvage yard. Upon inspection of the structure, the municipality requested that a permit be obtained and the Applicant proceeded to apply for a permit for the construction of a tent, meeting the requirements of 3.13.1. of the Building Code. The Agent advised that, in the course of discussions with the City, some issues were raised that required resolution by the Building Code Commission (BCC).

The Agent submitted that the Applicant is willing to modify the structure in any way necessary to comply with the requirements for a tent. However, the Code provides little guidance as to any identifiable requirements for a "tent" as this term is not defined in the Building Code. The Agent described the intended use of the building as a "non-habitable (storage) structure". It is the Applicant's contention that the term "tent" applies to "any product which supports fabric over poles, as per Article 1.1.3.1." He referred to the Canadian Oxford Dictionary definition in this regard.

The Agent contended that the structure is supported by poles, covered in fabric and can be disassembled and erected elsewhere and is, therefore, "portable". The question, he suggested, is whether the structure must be considered "temporary" to be considered as a tent. As the term "temporary" is also not defined by the Code, the Agent requested guidance from the Commission in this regard. If the structure was not considered to be a tent, he asked that the Commission indicate why it is not a tent and what would need to be done to secure such a classification. This would enable the Applicant to modify the structure to meet the intent of the Code in respect to tents, which are exempt from certain construction requirements that would apply to buildings.

The Agent noted that the primary function of the structure is to shelter salvaged material in the winter months so the Applicant would not need to dig the material out from under snow cover. In summation, the Agent reiterated his request for clarification from the Commission on what constitutes a "tent" as anticipated by the Building Code. He noted that, based on the

Commission's decision, the Applicant would modify the structure, if necessary, to comply with 3.13.1. of the Code.

4. Respondent's Position

The Designate for the Respondent submitted that his primary concern is with the use of the structure in that, if this proposal is approved, anyone could erect a fabric covered building for storage or warehousing purposes and call it a tent. In his opinion, a tent is a temporary structure and will, in due course, be removed from the premises. It is not a building to be used for year round storage on a subject property. The subject structure, he suggested, is a storage building, which will house vehicles/tires etc. for the salvage facility. He further stated that, simply because it is covered with fabric, it is not necessarily a tent. He noted that the structure has a frame, is not portable, is not intended for temporary use and does not, in his opinion, meet the intent of the Code. This is a "building", he suggested, that should meet the requirements for a building on the property and does not qualify as a tent which, under 3,13.1., would be exempt from a number of construction requirements for a building.

In response to questioning in regard to the flame spread rating of the fabric covering the structure, the Designate noted that he had no information in relation to whether the fabric complied with the Code requirements for flame spread and noted that he had no identifiable concern with the fabric at the time of the hearing. Rather, he reiterated, the key issue is whether the structure is actually a tent or a building. He noted that, if the structure is classified as a "building" it would not comply with the Code requirements in respect to spatial separation, etc. If the structure is determined to be a "tent", however, it would be exempt from a number of the Part 9 requirements applying to buildings.

The Designate referred to a previous BCC ruling in respect to a Home Depot property whereby the Commission found that a shade screen which was considered to be a permanent, seasonally used structure, was not a tent. In that decision the Commission reasoned that the permanence of the structure precluded it from meeting the definition of a tent.

In summation, the Designate reiterated his contention that the as-built structure is not a tent. He submitted that the structure has been up for almost one year and is used for winter storage. The BCC, he submitted, must rule on the facts presented and should not consider hypothetical possibilities for construction. Moreover, he stated, it is not the role of the Commission to write new Code.

5. Commission Ruling

It is the decision of the Building Code Commission that the proposed storage structure, referred to by the Applicant as a tent, does not provide sufficiency of compliance with Sentences 1.1.3.1.(1) and 2.1.1.3.(1), Subsection 3.13.1. and Sentence 9.1.1.4.(1) of the Ontario Building Code at 2056 River Road, London, Ontario.

6. Reasons

i) The proposed storage use and details of construction of the subject building are inconsistent with the intent of the Building Code as outlined in Appendix A-3.13. and, as a result, Subsection 3.13.1. is not applicable to this building.

ii) Article 1.1.3.1. states that words that are not defined in the Building Code shall have the meanings which are commonly assigned to them in the context in which they are used in the Code. The subject structure cannot be considered a tent when having regard for the dictionary definition for this term which suggests that a tent is both temporary and portable.

iii) The as-constructed storage structure is not intended for use as a temporary shelter as anticipated by the Code for tents. The structure has been constructed as a permanent building for year round use in the storage of material related to the operation of the salvage yard.

iv) No evidence was provided to suggest that the building has been designed in compliance with Article 3.13.1.7. which would ensure that the subject structure would have the capacity to perform the intended function of providing year round shelter for refuse material, etc.

Application No. 2004-73

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 3.1.10.5. of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by John McIntyre, Maple Reinders Constructors Ltd., for resolution of a dispute with Shelly Switzer, Chief Building Official, Town of Oakville, to determine whether the size and positioning of openings in the as-constructed firewalls provide sufficiency of compliance with Article 3.1.10.5. of the Building Code at the Clearview Christian Reformed Church, 2300 Sheridan Garden Drive, Oakville, Ontario.

APPLICANT	John McIntyre Maple Reinders Constructors Ltd.
RESPONDENT	Shelly Switzer Chief Building Official Town of Oakville
PANEL	Tony Chow, Chair Donald Pratt Michael Steele
PLACE	Toronto, Ontario
DATE OF HEARING	January 13, 2005
DATE OF RULING	January 19, 2005
APPEARANCES	Walter Miller, Consulting Engineer Arencon Inc. **Agent for the Applicant** Shelly Switzer, Chief Building Official Town of Oakville **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has received a building permit under the B*uilding Code Act*, *1992*, and has constructed an assembly occupancy building referred to as the Clearview Christian Reformed Church at 2300 Sheridan Garden Drive, Oakville, Ontario.

The subject structure is a 1 storey, Group A, Division 2 major occupancy building, comprised of combustible construction. The structure has been subdivided into three separate "buildings" by firewalls having a 2 hour fire resistance rating. Buildings A (the sanctuary), B (offices) and C (fellowship hall) have areas of 1,483.4 m^2, 397.3 m^2 and 941.5 m^2 respectively. The entire facility is equipped with a fire alarm system.

The construction in dispute involves the openings that penetrate the two firewalls that subdivide the structure. The subject firewalls are penetrated by several openings including doors, ducts and a "pass-through" window. Each opening in the firewall is protected with a 90 minute rated closure (door, shutter or fire damper). Where mechanical ducts penetrate the firewalls they are positioned directly above an opening for a door or "pass-through" window separated from the larger openings below by a 2 hour masonry panel. Further, the duct openings do not surpass the vertical extension of the width of the opening above which they are located.

According to the Applicant, the total width of all door and "pass-through" window openings does not exceed 25% of the lineal length of either firewall. This calculation for percentage openings, however, does not include separate consideration for the width of the mechanical openings.

The issue for consideration is whether placing the duct openings directly above the door and window openings will provide sufficiency of compliance with the provisions of Article 3.1.10.5. of the Building Code.

2. Provisions of the Building Code in Dispute

3.1.10.5. Maximum Openings

(1) Openings in a *firewall* shall conform to the size limits described in Article 3.1.8.6. and the aggregate width of openings shall be not more than 25% of the entire length of the *firewall*.

3. Applicant's Position

The Agent for the Applicant provided the Commission with an overview of the issue at dispute. He submitted several exhibits depicting the as-constructed firewall openings and offered a comparison between what is proposed and what would be permitted by the Code if the door and window openings were vertically extended to incorporate the area where the duct penetrations are positioned. The hypothetical scenario, he submitted, would encompass a greater cumulative area than the current proposal, and yet would still not exceed 25% of the entire length of the firewall.

The Agent submitted that, generally, he agreed that each opening should be measured independently. However, in this instance, greater life safety is provided where openings are positioned directly above one another. He noted further, that the City has now agreed, in principal, to the Applicant's reasoning but, because of the technical opinion provided by the Building and Development Branch of the Ministry of Municipal Affairs and Housing, the Town is

still requiring that this matter be resolved by the Building Code Commission.

In summation, the Agent reiterated that, following the example depicted in Scenario 2 presented in Exhibit 7, significantly larger openings would be permitted than what is proposed in this building. He noted that the walls were constructed in accordance with Article 3.1.8.6. and comply with the requirements of 3.1.10.5. He suggested that the proposed configuration of openings offers better protection than what would be permitted by the Code.

4. Respondent's Position

The Respondent submitted that, in his opinion, the Applicant has achieved sufficiency of compliance with Sentence 3.1.10.5. of the Code. He requested that the Commission, however, still rule on this matter since the Ministry's Building and Development Branch has provided a contrary opinion suggesting that the as-built configuration does not comply with the Code requirements. He noted that the technical background information report prepared in connection with this dispute states that combining openings in this manner is not an option permitted by the Code.

In response to questioning, the Respondent submitted that he did not believe that the structural integrity of the wall system was at issue in respect to the aggregate length of openings. Instead, he suggested, that the issue is related to fire safety and protection (i.e. closures). He stated that the Town would satisfy itself as to the structural integrity of the firewalls and compliance with other relevant provisions of the Building Code. He asked, however, that the Commission rule as to the sufficiency of compliance of the proposal with Sentence 3.1.10.5.

5. Commission Ruling

It is the decision of the Building Code Commission that the size and positioning of openings in the as-constructed firewalls will provide sufficiency of compliance with Article 3.1.10.5. of the Building Code at the Clearview Christian Reformed Church, 2300 Sheridan Garden Drive, Oakville, Ontario, on condition that:

1. The Chief Building Official is satisfied that:
    a) The as-constructed firewalls will meet the definition of "firewall" as set out in Article 1.1.3.2. of the Code in respect to the structural stability of the wall under fire conditions;
    b) The as-constructed firewalls will comply with Sentences 3.1.10.1.(1) and 3.1.10.1.(2) of the Building Code;
    c) The as-constructed firewalls have been designed to meet the requirements of Article 4.1.10.4. of the Building Code; and
    d) Fire dampers and mechanical duct openings in the firewalls will comply with the requirements of 3.1.10.1.(4). of the Code.

2. The mechanical duct openings in the firewalls are to be positioned such that the width of the mechanical opening is entirely within the vertical extension of the width of the door or shutter opening located directly below it.

3. Those portions of the masonry firewalls situated between the door/shutter openings and the mechanical duct openings will remain structurally stable under fire conditions as required by Article 3.1.10.1. of the Building Code.

6. Reasons

i) The mechanical duct openings are positioned directly above the openings for a door or shutter.

ii) The horizontal projection of the individual mechanical duct openings will be within the width of the corresponding door or shutter opening above which the mechanical openings are situated.

iii) The aggregate width of all door and shutter openings in each firewall does not exceed 25% of the entire length of the firewall.

DATE OF HEARING	January 20, 2005
DATE OF RULING	January 20, 2005
APPEARANCES	Nicholas Sum Louis Cheung Architect Inc. **Agent for the Applicant** Larry Ptashynski Manager of Inspection Services City of Vaughan **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies with respect to the as-built demising walls between units in a retail plaza at 8401 Weston Road, Vaughan, Ontario.

The structure is an irregularly shaped building having a building height of two storeys by virtue of a large mezzanine above a portion of the first storey. The building is classified Group E retail plaza, with Group D business and personal service occupancies. It has a building area of 5,671 square metres and is comprised of non-combustible construction and is equipped with both a fire alarm and sprinkler system.

The construction in dispute involves the demising walls that have been erected between Units 18/18A and Unit 15 located on the ground level of the single storey portion of the building. Originally, building plans were approved showing one larger unit, numbered Unit 18. This unit has since been divided into three separate units, now numbered 18, 18A and 15. The demising walls that separate these units are comprised of 12.5 mm drywall on 9mm metal stud extending to the underside of the ceiling.

The issue at dispute in this respect is whether the demising walls, as constructed, provide sufficiency of compliance with Article 3.3.1.1. which would require a fire separation having a 45 minute fire resistance rating in this instance.

2. Provisions of the Building Code in Dispute

3.3.1.1. Separation of Suites

(1) Except as permitted by Sentences (2) and (3), each *suite* in other than *business and personal services occupancies* shall be separated from adjoining *suites* by a *fire separation* having a *fire-resistance rating* not less than 1 h.

(2) The *fire-resistance rating* of the *fire separation* required by Sentence (1) is permitted to be less than 1 h but not less than 45 min provided the *fire-resistance rating* required by Subsection 3.2.2. is permitted to be less than 1 h for

(a) the floor assembly above the *floor area*, or

(b) the floor assembly below the *floor area*, if there is no floor assembly above.

(3) *Occupancies* that are served by *public corridors* conforming to Sentence 3.3.1.4.(5) in a *building* that is *sprinklered*, are not required to be separated from one another by *fire separations* provided the *occupancies* are

(a) *suites* of *business and personal services occupancy*,

(b) fast food vending operations that do not provide seating for customers, and

(c) *suites* of *mercantile occupancy*.

3.3.1.4. Public Corridor Separations

(5) If a *floor area* is *sprinklered*, no *fire separation* is required between a room or a *suite* and a *public corridor* that serves it provided the *public corridor* complies with Sentence 3.3.1.9.(6).

3. Applicant's Position

The Agent for the Applicant stated that he purchased the building in 1994 and that no new construction has been undertaken since that time. He claimed that the units at the heart of this dispute have been in existence in their current state since he purchased the property.

In 2000, the City of Vaughan requested supporting documentation with respect to the demising walls in question, as the previous owner had not provided the information. The Agent provided as-built drawings to the City, and, in applying for a permit as requested by the municipality, outlined the as-built conditions. The Agent maintains that there have been no changes to the building since he purchased it and that the occupancy of the units has not changed since that time.

The Agent indicated that two of the units in question, 18 and 18A, have a means of egress leading directly outside. The remaining unit, number 15, has access to the public corridor which measures 3.8 m wide and approximately 18 m long. He further indicated that the building is fully sprinklered. The Agent stated that while he does not meet the Code requirements to the letter, he believes that he does meet the intent of the Code.

The Agent was questioned as to whether all of the other units within the building comply with the Code. He confirmed that to the best of his knowledge all other units have fire rated separations and that these three units are the only ones that do not meet the separation requirements.

The Agent summed up by asking the Commission to consider that he has undertaken no new construction since he bought the building and that the demising walls in question were already in existence when he purchased the plaza

He reiterated that while the as-built construction does not strictly meet the Code requirements, he contends that he meets the intent of the Code, given that two of the units have a means of egress leading directly outside and the other unit has access to the public corridor. The corridor has an exit at either end and the length of the corridor is approximately 18 m, therefore the travel distance to either exit point is not more than 10 m. The Agent requests that the Commission consider all of this and find that the as-constructed demising walls provide sufficiency of compliance with the Building Code.

4. Respondent's Position

The Designate for the Respondent submitted that the Municipality's records indicate that the building was erected in the early 1990s, and that permits were issued between 1989-1990 for the original construction. The Municipality's records indicate that no building permit was taken out for the construction of the subject demising walls. When the Municipality discovered that construction has taken place in 2000, an Order was issued directing the owner's to obtain a permit for the division of Unit 18 into three independent units, being Units 18, 18A and 15.

The Designate reported that on a recent site visit to the location in question, it was noted that the two exits to the corridor from unit 18A are blocked by shelving and/or merchandise. That being the case, unit 18A is left with only one means of egress directly to the outside.

The Designate indicated that an Order to Comply was issued on September 16, 2004, as it was their view that a 45-minute fire separation was required for the subject demising walls. The Respondent claims that improvements were done without the benefit of a building permit and restated his position that fire separation between suites is required.

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-constructed demising walls between Unit 18 and 18A and between Unit 18/Unit 18A and Unit 15 in the one storey portion of a Group E retail plaza, with Group D business and personal service occupancies, provide sufficiency of compliance with Article 3.3.1.1. of the Building Code at 8401 Weston Road, Vaughan, Ontario, on condition that:

a) The two doors exiting into the public corridor from Unit 18A that are currently blocked by shelving and/or merchandise either be made accessible as alternate exits or any existing exit signage marking the doors as an exit route be removed.

6. Reasons

i) The building is fully equipped with a sprinkler system.

ii) Units 18 and 18A have a means of egress leading directly to the outside.

iii) The as-built units would comply with the proposed change to Building Code Article 3.3.1.4.(4) which would eliminate the requirement for a public corridor to be 5 m wide and alternatively would require the travel distance to be not greater than 45 m. As this building has a total width of only 18.3 m, the maximum distance to either exit from the centre of the corridor would be 9.15 m. Therefore, the maximum travel distance from Unit 18 or Unit 15 is less than 45 m.

iv) The physical arrangement of these units has been in existence since at least 1993 when the building was purchased by the current owners (the Applicant). No new construction or renovation has been undertaken since that time.

PANEL	Len King, Vice-Chair Fred Barkhouse Yaman Uzumeri
PLACE	Toronto, Ontario
DATE OF HEARING	January 20, 2005
DATE OF RULING	January 20, 2005
APPEARANCES	Tom Patton ARXX Building Products Cobourg, Ontario **Agent for the Applicant** Robert Moore Program Manager City of Ottawa **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 3680 John Shaw Road, Ottawa, Ontario**.**

The Applicant has constructed a one and a half storey, Group C residential unit having a building area of 167.2 m^2. The structure is comprised of combustible construction and was constructed using an insulating concrete form (ICF) wall system, referred to as Arxx High Performance Wallsystems. A vapour barrier was not provided.

Arxx High Performance Wallsystems has received approval from the Canadian Construction Materials Centre (CCMC) in Report 12641-R for use in construction up to two storeys high in Part 9 buildings. Similarly, Minister's Ruling No. 98-24-54 has approved its use in Part 9 construction up to two storeys high.

The issue at dispute is whether the ICF wall system, as constructed without the use of a vapour barrier, provides sufficiency of compliance with Article 9.25.4.1, which would require a vapour barrier having an initial permeance of not greater than 45 ng/(Pa•s•m^2).

2. Provisions of the Building Code in Dispute

Article 9.25.4.1. Required Barrier to Vapour Diffusion

(1) Thermally insulated wall, ceiling and floor assemblies shall be constructed with a vapour barrier sufficient to prevent condensation in the wall spaces, floor spaces or *attic or roof spaces*.

3. Applicant's Position

The Agent for the Applicant submitted that the use of a vapour barrier in conjunction with Arxx High Performance Wallsystem is not required and could be detrimental to the performance of the wall assembly. He referred to a report entitled "Moisture in Arxx Wall Assemblies" prepared by R. W. Wright Design as the basis for this conclusion. This report implies that the inclusion of a vapour barrier in the wall assembly did not provide any benefit and, in fact, may be detrimental to the moisture performance of the assembly.

The Agent reported that the ICF wall system being used is a solid wall with no cavity. The wall offers R10 insulation, which he claims exceeds Code values. He noted that both the CCMC Evaluation Report and Building Code are silent on the requirement of a vapour barrier in this type of wall.

The Agent referred to Article 9.25.4.1. and pointed out that the wording of this Article states that the vapour barrier should be sufficient to "…prevent condensation in the wall spaces,…" He again reported that the ICF wall system being used in this project does not have any "wall spaces".

The Agent further stated that it was his belief that the inclusion of a vapour barrier would increase the moisture in the wall. He claimed that this system has been used in the past without a vapour barrier and that there have been no problems reported.

In response to a question regarding what detrimental effect the inclusion of a vapour barrier would have on the wall assembly, the Agent responded with a reference to the report prepared by R. W. Wright Design which states that "…when a vapour barrier is included it effectively restricts the flow of moisture out of the wall assembly. This can result in very high moisture levels building up in the EPS immediately behind the vapour barrier. Consequently, any building elements that penetrate the vapour barrier and are permanently in contact with this high moisture environment may be subject to moisture induced damaged."

When questioned as to the wall assembly material not meeting the minimum permeance of 45ng prescribed in the Code and whether any compensating measures were being offered to off-set this deficiency, the Agent offered no compensating measures to achieve sufficiency of compliance. He clarified that it was his view that the Code requirements for permeancy speaks to cavity walls and the Arxx Wallsystem is not a cavity wall.

In summation, the Agent reiterated that it is his belief that Article 9.25.4.1. relates to conventional wall construction and not to an ICF wall system. He requests that the Commission recognize this difference and find that the requirement for a vapour barrier does not apply in this instance and again referenced the report by R. W. Wright and the finding that the inclusion of a vapour barrier may prove detrimental.

4. Respondent's Position

The Designate for the Respondent submitted that the EPS foam used in the Arxx product has a vapour permeance of 60 ng/pa•m•s, which exceeds the limit of 45 ng/pa•m•s prescribed in the Code. The Designate also emphasized that CCMC 12641-R evaluation report for the Arxx Wallsystem is silent on the acceptance of EPS foam in place of a dedicated vapour barrier.

It is the Designate's position that the Applicant has failed to address the basic underlying issue. In his opinion, Sentence 9.25.4.2.(1) clearly specifies that the threshold for acceptance as a vapour barrier is 45 ng. He further submitted that Sentence 9.25.4.2.(2) stipulates that the use of cladding materials, such as EIFS, would require a vapour barrier with a lower threshold of 15 ng.

The Designate further claimed that there are presently 12 ICF manufacturers listed under the CCMC listings and that the vapour barrier issue at dispute in this instance is common to all ICF manufacturers. He further submitted that "EPS foam insulation is manufactured to varying density (sic) dependent upon the specifications of the end product". The Municipality would require test data from an independent third party testing agency "confirming EPS foam compliance with the prescriptive vapour permeance requirements" found in the Code.

In summary, the Designate for the Respondent stated that CCMC has presently approved 12 manufacturers of EPS foam wall systems and that several manufacturers have submitted test data complying with the Code requirements. He concluded that the Code, in Article 9.25.4.1., requires that a vapour barrier be used and that the Arxx Wallsystem does not meet the requirements contained in Article 9.25.4.2. of the Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-constructed ICF wall system in a 167.2 m^2 Group C dwelling, where no vapour barrier is provided, does not provide sufficiency of compliance with Article 9.25.4.1. at 3680 John Shaw Road, Ottawa.

6. Reasons

i) Article 9.25.4.1. mandates that a vapour barrier be provided.

ii) Article 9.25.4.2.(1) of the Building Code requires the use of a vapour barrier having a permeance of not greater than 45 ng/(Pa•s•m^2) whereas the ICF foam used in the Arxx High Performance Wallsystem has a permeance of 60 ng/(Pa•s•m^2).

iii) The referenced evaluation report, CCMC 12641-R Arxx High Performance Wallsystem, does not provide an exemption to the requirement for a vapour barrier. The Minister's Ruling 98-04-54 (12641-R) does not address the exemption for requirement of a vapour barrier.

iv) No compensating measures were proposed to achieve sufficiency of compliance with the minimum requirements set out in the Code.

v) This proposal may be more appropriately considered by an evaluation body, such as the Canadian Construction Materials Centre (CCMC) or the Building Materials Evaluation Commission (BMEC).

RESPONDENT	Larry Simonato Chief Building Official City of Cambridge
PANEL	Tony Chow, Chair Susan Friedrich Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	February 17, 2005
DATE OF RULING	February 17, 2005
APPEARANCES	Robert Dyck Robert Dyck Architect & Engineer Inc. Kitchener, Ontario **Agent for the Applicant** Hardy Bromberg Deputy Chief Building Official City of Cambridge **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received a permit under the *Building Code Act*, *1992*, and is constructing an office building at Challenger Motor Freight, 300 Maple Grove Road, Cambridge, Ontario.

The subject building is a Group D office building, having a building area of 2,351 m^2. The building is comprised of non-combustible construction and is equipped with a sprinkler and fire alarm system.

The construction in dispute involves the determination of the height of the building, specifically, whether the lowest level of the building can be considered the basement as opposed to the first storey. The dispute has arisen as a result of differing interpretations regarding the calculation of grade, which will then dictate whether a basement is present. If a basement is present then the floor assembly above the basement would be required to provide a minimum 45 minute fire resistance rating.

The Applicant is basing his calculations for grade on the area of the footprint of the lowest level of the building. Two sides of this level are situated above grade, while the other two sides are underground with approximately 4 m above the finished floor. The issue with respect to grade calculation results from the fact that the second level of the building extends beyond the footprint of the lowest level. If calculating grade based on the footprint of the building on the ground level (above the first level), the calculation would result in the lowest level being considered a basement.

2. Provisions of the Building Code in Dispute

1.1.3.2. Defined Terms

(1) The words and terms in italics in this Code have the following meaning for the purposes of this Code, and where indicated, the following meaning for the purposes of the Act as well.

First storey means the *storey* with its floor closest to *grade* and having its ceiling more than 1.8 m above *grade*.

Grade means the average level of proposed or finished ground adjoining a *building* at all exterior walls.

3. Applicant's Position

The Agent for the Applicant submitted that subject structure is a Group D office building, having a building area of 2,351 m^2 and a height of 3 storeys. He also submitted that the lowest level of the building has a smaller footprint than the second and third levels, which extend beyond the lower level at ground level. It is the determination of the average grade based on the exterior walls, which has precipitated this dispute and brought the parties to the Commission.

In the application submitted, the Agent contended that the average grade should be calculated using the perimeter of the lowest level of the building. Using this approach, as is detailed in the average grade calculation submitted by the Agent, the average grade was calculated to be 1.999 m. It was submitted that the ceiling of the lowest level is 0.1016 m below the finish floor level of

the upper floor. Carrying this theory through to its conclusion, in order for the lowest level to qualify as the first storey, its ceiling is required to be 1.8 m above the adjoining average grade. The average grade, using the Agent's calculation approach, was determined to be 1.999 m. 1.999 m minus 0.1016 m (for the ceiling of the lowest level) equals 1.8074 m, which is more than the requirement of 1.8 m. The Agent maintained that the lowest level therefore qualifies as the first storey of the subject building and, there would be no requirement to construct the floor assembly over the lowest level as a fire separation with a 45 minute fire resistance rating.

The Agent presented a diagram of the subject building which detailed the layout and the grade plan. He drew attention to the fact that the lowest level of the building is approximately 930 m^2 while the next level up is approximately 2,323 m^2. He explained how he had determined the average grade using the perimeter of the lowest level and based on that calculation, he concluded that the subject building should be considered a 3 storey building.

The Agent stated that the real concern is the spread of fire from the lowest level to the level above. He speculated that the grade could have been lowered around the building in order to "have the numbers work" for the determination of average grade but contends that this would not make the building any safer.

The Agent described the occupancy of the lowest level as being offices, meeting rooms and a cafeteria. He added that there are a number of means of egress directly to the outside from this level. He explained the reason for not wanting to provide the floor assembly with a rated fire separation is that the owner wants the look of open ceilings and open steel joists in this building.

The Agent suggested that the building should be considered a 3 storey building, and therefore the fire separation would not be required to have a 45 minute rating but rather the separation could be unrated. He noted that the building is fully sprinklered.

In summation, the Agent reiterated that they could adjust the grade around the building such that the lowest level could be considered the first storey, but he stressed that this would not make the building any safer. He went to say that there are many access points for the Fire Department and that two of the four walls are completely exposed. He asked the Commission to look favourably upon their proposal.

4. Respondent's Position

The Designate for the Respondent submitted that the subject structure is a Group D office building, having a building area of 2,351 m^2 and a height of two storeys. The Designate submitted that, based on his calculations, the building, in his opinion, is two storeys with a basement and therefore, the floor assembly above the lowest level is required to have a minimum 45 minute rated fire separation.

The Designate submitted that based on his calculations, the average grade around the perimeter of the building area was determined to be 310.88 m and the elevation of the lower level ceiling was determined to be 312.06 m. This means the average grade, as measured around the building area is 1.21 m below the ceiling of the lower level. Therefore, it is the opinion of the Designate that the subject building is considered a two storey building with a basement.

The Designate stated that the average grade should be calculated using the finished ground adjoining a building at <u>all</u> exterior walls. As such, the calculation of average grade, according to the Designate, should be determined using the entire building exterior which is adjacent to grade. It is the opinion of the Designate that using this approach for calculating average grade, the subject building is considered a two storey building with basement.

The Designate concluded by reiterating that the lowest level of the subject building, in his view, is considered a basement that should be subject to the applicable construction requirements for a basement, including the requirement of a 45 minute rated fire separation for the floor assembly above.

5. Commission Ruling

It is the Decision of the Building Code Commission that the lowest floor of the subject building does not qualify as the first storey when considering the definitions for “grade” and “first storey” as specified in Article 1.1.3.2. of the Building Code at Challenger Motor Freight, 300 Maple Grove Road, Cambridge, Ontario.

6. Reasons

i) “Grade” is calculated based on the average level of proposed or finished ground adjoining the building at all exterior walls and establishes the second level of this building as the “first storey”.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 3.2.2.67., Clause 3.4.2.5.(1)(c) and Sentence 3.4.4.1.(1) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Garry Fraser, TDL Group, to determine whether the proposed automated storage and retrieval system that serves as structural support for the building in addition to support for the racking system components provides sufficiency of compliance with Article 3.2.2.67., Clause 3.4.2.5.(1)(c) and Sentence 3.4.4.1.(1) of the Building Code at the Southgate Distribution Centre, 950 Southgate Road, Guelph, Ontario.

APPLICANT	Garry Fraser TDL Group Oakville, Ontario
RESPONDENT	Bruce Poole Chief Building Official City of Guelph
PANEL	Len King, Vice-Chair Ed Link John Guthrie
PLACE	Toronto, Ontario
DATE OF HEARING	February 3, 2005
DATE OF RULING	February 3, 2005
APPEARANCES	Les Muniak Larden Muniak Consulting Incorporated Toronto, Ontario **Agent for the Applicant** Jeremy Laur Plans Examiner City of Guelph **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and is constructing an automated storage and retrieval system (ASRS) at the Southgate Distribution Centre, 950 Southgate Road, Guelph, Ontario.

The proposed building will be 14,396 m^2 in building area and will have a Group F, Division 2 major occupancy classification. The structure is to be comprised of non-combustible construction and will be equipped with sprinkler, fire alarm and standpipe and hose systems.

The proposed structure is described by the Applicant as a one storey warehouse facility having a Group F, Division 2 major occupancy classification. The subject of this hearing is the Automated Storage and Retrieval System (ASRS), which is approximately 30 m in height, 143 m in length and 18 m in width. The structure will be assembled on site and the structure will support its own walls and roof, as opposed to a "typical" ASRS, which is installed within a building as a self-contained structural system.

The subject ASRS as described by the Applicant is "a high bay rack storage modular rack frame structure built on a mat slab foundation that is used to support the building envelope, pick levels, pallet storage locations, ventilation and/or refrigeration equipment, conveyors and automated cranes called SRMs (Storage and Retrieval Machines). A vestibule area between the Freezer ASRS and the Ambient ASRS is column-supported structure with box beam foundations.

The rack frame structure consists of a system of vertical truss frames made of hollow structural section members. The rack frames are anchored to the mat slab and include cross ties and bracing to transfer loads between the frames. Siding panels and roof deck are fastened to girts supported from the rack frames. Pick levels are supported from the rack frames. Ventilation equipment installed in steel framing is supported from the rack frames. Refrigeration equipment, housed in penthouse enclosures, is installed on grating supported from the rack frames. Conveyors are supported from platforms that are supported from the rack frames. The cranes are supported from the mat slab and guided by rails from the mat slab at the bottom and from the cross ties at the top between the rack frames. One or more elevated levels are for personnel access to perform pallet pick operations. The pick levels may also support conveyors and other distribution equipment."

Several issues are at dispute between the two parties, the first being the height of the structure, the Applicant maintains that the building should be considered to be one storey, while the Respondent believes the building to be between one and three storeys. Specifically, if each of the pick levels are considered to be storeys, then the Code would require these levels to be constructed in accordance with the floor fire separation requirements found in Section 3.2.2.67. To compensate for compliance in this area, the Applicant is proposing to upgrade the sprinkler system to meet Factory Mutual Standards. Further, the travel distance from each pick level would be required to adhere to Clause 3.4.2.5.(1)(c) and not exceed the maximum travel distance of 45 m. In lieu of the travel distance requirements, the Applicant has conducted a time based egress analysis. Additionally, Article 3.4.1.1.(1) would require the exit stairs from the pick levels to be separated from the rest of the building by a fire separation.

A further issue at dispute is the subject structure and the ASRS itself providing the structural frame support for the buildings exterior walls and roof as opposed to the "typical" ASRS where the system is installed "within a building as a self contained structural system."

2. Provisions of the Building Code in Dispute

3.2.2.67. Group F, Division 2, Any Height, Any Area, Sprinklered

(1) Except as permitted by Articles 3.2.2.68. to 3.2.2.72., a *building* classified as Group F, Division 2 shall conform to Sentence (2).

(2) Except as permitted by Article 3.2.2.16., the *building* referred to in Sentence (1) shall be of *noncombustible construction*, and

(a) except as permitted by Sentence 3.2.2.7.(1), the *building* shall be *sprinklered*,

(b) floor assemblies shall be *fire separations* with a *fire-resistance rating* not less than 2 h,

(c) *mezzanines* shall have a *fire-resistance rating* not less 1 h, and

(d) *loadbearing* walls, columns and arches shall have a *fire-resistance rating* not less than that required for the supported assembly.

Clause 3.4.2.5.(1)(c) Location of Exits

(1) Except as permitted by Sentences (2), (3) and 3.3.2.4.(6), if more than one *exit* is required from a *floor area*, the *exits* shall be located so that the travel distance to at least one *exit* shall be not more than

(c) 45 m in a floor area that contains an *occupancy* other than a *high hazard industrial occupancy*, provided it is *sprinklered*,

Sentence 3.4.4.1.(1) Fire-Resistance Rating of Exit Separations

(1) Except as permitted by Sentences (2), (4), 3.3.5.4.(3), 3.4.4.2.(2) and 3.4.4.3.(1), every *exit* shall be separated from the remainder of the *building* by a *fire separation* having a *fire-resistance rating* not less than that required by Subsection 3.2.2., but not less than 45 min, for

(a) the floor assembly above the *storey*, or

(b) the floor assembly below the *storey*, if there is no floor assembly above.

3. Applicant's Position

The Agent for the Applicant submitted that the Building Code does not adequately address the uniqueness of the subject ASRS structure with respect to exiting requirements. It is his submission that a time-based egress analysis is more appropriate when evaluating exiting from the subject structure. The Agent further submitted that the installation of a sprinkler system, which has been increased in design to Factory Mutual standards, provides active fire protection instead of passive fire protection as is usually provided by spray on fireproofing.

The Agent described the structure as being designed with "pick levels" and stated that the majority of the product stored within the system is loaded and unloaded by cranes, adding that there is only a narrow strip in the middle which is occupied by employees. He explained that the first level is accessed by employees and uses manned trucks to move the product. The second and third levels have a limited number of occupants, two per level in the ambient storage area and the freezer storage area. Above that point the system is unoccupied and fully automated.

The Agent went on to say that in order to comply to the Code requirements the floor assembly and the structure would require a fire resistance rating of 2 hours. He explained that structure,

including the storage racks, is fully sprinklered. He referred to Article 3.2.2.2. of the Code which states, in part, "A structure…shall be protected against fire spread and collapse in conformance with good fire protection engineering practice." He elaborated on the design of the sprinkler system, which has been significantly enhanced, being designed and configured to both extinguish product fires and to wet and cool the steel supporting elements of the rack structures. He further explained that the racks have been structurally designed to withstand the weight of the products plus the discharge weight of the sprinkler water. In his opinion, the design of this active, sprinkler water based fire protection system, which has been tested to Factory Mutual standards, provides the equivalency of the Code's requirement of providing a 2-hour fire resistance rating. The Agent also stated that a fire alarm system would be installed, even though this is not a requirement.

With respect to travel distance to an exit point, the Agent advised that exit points are provided at the centre and each end of the levels. He admitted that the travel distance is beyond the 45 m limit and uses open stairs as the means of egress. He informed the Commission that in lieu of meeting the required 45 m travel distance, they have instead used a time-based egress analysis in hopes of providing a sufficiency of compliance with Clause 3.4.2.5.(1)(c) of the Code. The detailed findings of their analysis can be found in Appendix A of the Supporting Documentation report submitted by the Agent for the Applicant. In brief, the actual egress time from the most remote location within the ASRS to the outside of the building was calculated as being 1 minute, 16 seconds. Additionally, a very conservative pre-flow time of 3 minutes was added to account for any delay in egress, such as potential delay in becoming aware of an alarm or delay by an occupant in taking action in case of an emergency, this resulted in a worst case evacuation time of 4 minutes, 16 seconds. It is the Agent's belief that this recognized method meets with the objectives and time periods described in the Supplementary Guidelines of the Code and therefore provides sufficiency of compliance for exiting requirements.

When questioned as to whether the structure would comply with the proposed amendment to the Code numbered 03-15-01, the Agent was able to confirm that it would comply with this amendment in all aspects with the exception of two. The structure is beyond the 24 m maximum height as stipulated in proposed amendment 03-15-01 and it is not a "self-contained structural system within a building".

The Agent summed up by stating that it is his opinion the structure provides sufficiency of compliance. The occupancy of the facility is relatively low and the structure would comply with the proposed amendment 03-15-01 in all but two aspects. The following compensating measures were offered, the building will be equipped with a fire alarm system and the sprinkler system will exceed the requirements of NFPA.

4. Respondent's Position

The Designate began by saying that the City supports the Applicant in this concept. It is his opinion that Article 3.2.2.2. of the Code could apply to the fire rating requirements but it would not apply to the exiting requirements.

The Designate for the Respondent submitted that he had two concerns with respect to this particular ASRS. The first is that in a "typical" ASRS the storage systems are used "within a building as a self-contained structural system" while this building's proposed rack and storage system is not contained within a building but is the structural frame for supporting the building's exterior walls and roof. His second concern is with the height of the structure itself being approximately 30 m.

He then explained that, in looking to proposed amendment number 03-15-01, he determined that this proposal could comply with these requirements except for the fact that the structure is not a

rack and storage system within a building and that the building exceeds the height restriction.

The Designate stated that he accepts the use the time-based egress analysis for most of the structure, however, they believed that this approach should not be applied to the ground floor. It was his belief that the ground floor level would still need to meet the 45 m requirement of the Code.

The Designate would like to see this proposal meet all of the requirements contained in proposed amendment 03-15-01. He made specific mention of the following requirements: draft stops at the opening of stairs, fire alarm system, and conveyor and lift gate requirements. He further stated that a sprinkler system would be required under each platform.

The Designate then questioned the reliability of smoke alarms in the freezer area of the ASRS. The Agent responded that they have been investigating some new products and agreed to install an equivalent detection device in the freezer area.

The Designate summed up by restating that he would expect this proposal to meet the requirements stipulated in proposed amendment 03-15-01.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed automated storage and retrieval system that serves as structural support for the building in addition to support for the racking system components provides sufficiency of compliance with Article 3.2.2.67., Clause 3.4.2.5.(1)(c) and Sentences 3.4.4.1.(1) and 3.4.2.1.(1) of the Building Code at the Southgate Distribution Centre, 950 Southgate Road, Guelph, Ontario, on condition that:

a) The proposed automated storage and retrieval system (ASRS) building is to comply in all respects with the proposed amendment to the Building Code numbered 03-15-01, with the following exceptions:

   i) The 24 m maximum height cited in proposed amendment 03-15-01 may be exceeded in the proposed building by 6.48 m.

   ii) The ASRS and the “building” may be combined as opposed to being a “self-contained structural system within a building” as described in the proposed amendment.

b) Smoke detectors are to be installed under all solid decking and walkways as cited in proposed amendment 03-15-01 with the exception of in the freezer area, where equivalent detection devices will be installed to the satisfaction of the Chief Building Official for the City of Guelph.

c) A sprinkler system meeting Factory Mutual standards 2-8N and 8-9 is to be installed. In the ambient temperature area of the ASRS building, the system will have an in-rack sprinkler design density of 0.40 usgpm/ft^2 over 2,000 ft^2, increased to 0.45 usgpm/ft^2 over the 2,000 ft^2 where plastics are stored. In-rack sprinklers, in both the ambient ASRS and the freezer ASRS, will have a minimum flow of 30 usgpm/head.

d) The building will be equipped with a fire alarm system installed in accordance with the requirement of the Building Code.

6. Reasons

i) The proposed automated storage and retrieval system building would comply with proposed amendment, 03-15-01, in all respects except for the height requirement and the shelf and rack system is self- supporting as opposed to being a “self-contained structural system within a building” as is described in the proposed amendment.

ii) A complete fire alarm system is being provided.

iii) A sprinkler system meeting Factory Mutual standards, and exceeding the requirements of NFPA is being installed.

iv) The highest occupied floor of the building is 9 m above ground level.

v) The facility will operate with relatively low occupancy with only two employees on each pick level.

vi) A time based egress analysis has been conducted, resulting in an actual egress time from the most remote location within the ASRS to the outside of the building to be 1 minute 16 seconds. The worst case results, including a 3 minute pre-flow period before evacuation, results in a time of 4 minutes 16 seconds. The Commission is satisfied that the results of this analysis will provide sufficiency of compliance with the exiting requirements outlined in the Code.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF in Articles 9.10.14.1. and 9.10.14.5. of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by David Speigel, Tribute Communities (York) Inc., for resolution of a dispute with Ann Borooah, Chief Building Official, City of Toronto, to determine whether the proposed direct vent fireplace sidewall terminations, constructed of type 304 stainless steel and located in walls having a limiting distance ranging from 0.55 m to 1.2 m provides sufficiency of compliance with Articles 9.10.14.1. and 9.10.14.5. of the Building Code at the Village at York University (Tribute Communities), Murray Ross Parkway and Sentinel Road, Toronto, Ontario.

APPLICANT	David Speigel, Tribute Communities (York) Inc. Pickering, ON
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Susan Friedrich Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	February 17, 2005 and April 4, 2005
DATE OF RULING	April 4, 2005
APPEARANCES	Andy Vella CFM Corporation Mississauga, ON **Agent for the Applicant** Ben Lievers Building Code Examiner City of Toronto **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received permits under the *Building Code Act*, *1992*, and is constructing approximately 300 single and semi-detached dwellings at York University (Tribute Communities), Murray Ross Parkway and Sentinel Road, Toronto, Ontario. It is proposed that the homes be equipped with direct-vent gas fireplaces, which will be vented to the outside of the dwellings. It is the vent terminations of the proposed fireplaces in dwellings having a limiting distance of less than 1.2 m which has resulted in the dispute between the parties.

The subject buildings are residential, single and semi-detached dwellings having building areas of approximately 140 m^2. The dwellings, which are 2 storeys in building height, are comprised of combustible construction. The structures are not equipped with standpipe and hose, fire alarm or sprinkler systems.

The construction in dispute involves the openings of the vent terminations in exposing building faces having limiting distances less than 1.2 m. The limiting distance from the structures to the lot lines ranges from 0.61 m (2 ft.) to zero. The vent termination assemblies consist of the (0.050 aluminium) vent terminal, a 177.8 mm (7 in.) galvanized steel outer air conduit pipe (0.4572 mm in thickness), a galvanized steel wall sleeve (0.5512 mm in thickness), and a firestop spacer (0.7712 mm in thickness), which is also manufactured out of galvanized steel. The wall terminations are available in both aluminium and an optional type 304 stainless steel. The 304 type stainless steel termination is proposed to be used in the subject installations.

The seams of the joints between the wall sleeve, plate and pipe will be sealed with high temperature sealants. The wall sleeve, firestop spacer and outer pipe form a galvanized steel box behind the vent termination.

The Applicant contends that the venting system, when properly installed, meets the requirements of a 45-minute fire rating as would be required for zero lot line applications. The issue at dispute pertains to the percentage and size of openings in an exposing building face having a limiting distance of less than 1.2 m. The Respondent claims that the size of the opening, approximately 0.025 m^2 (38.5 in^2), is more than double the allowable opening size for an unprotected opening under the Code. The Respondent further claims that since this a vent termination for a fuel fired direct-vent appliance, no closure would be permitted. Therefore, the issue before the Commission is whether the vent termination box and fire stop provide sufficiency of compliance with Articles 9.10.14.1. and 9.10.14.5. of the Building Code.

2. Provisions of the Building Code in Dispute

9.10.14.1. Maximum Percentage Area of Unprotected Openings

(1) Except as provided in Sentence (2) and Articles 9.10.14.3. to 9.10.14.11., the maximum percentage of unprotected openings in an exposing building face shall conform to Table 9.10.14.1. or to Subsection 3.2.3., whichever is the least restrictive for the occupancy being considered.

9.10.14.5. Openings in Walls Having a Limiting Distance Less Than 1.2 m.

(1) Openings in a wall having a limiting distance of less than 1.2 m shall be protected by closures, of other than wired glass or glass block, whose fire protection rating is in conformance with the fire-resistance rating required for the wall.

3. Applicant's Position

The Agent for the Applicant submitted that, in his opinion, the side wall vent system meets the requirement for a 45-minute fire rating.

The Agent assembled the vent in question for the benefit of the Commission. He clarified that the size of the pipe, which penetrates the wall, is 177.8 mm (7 in.) in diameter resulting in a .025 m^2 (38.5 in^2) opening. The walls are constructed using wood studs with the zero clearance sleeve being placed at the drywall and sealed using a high temperature sealant.

In response to questions from the Commission as to how the venting system works in a zero lot line situation, the Agent explained that there were not any applications where the venting system projected to the lot line. He indicated that what they were really referring to was the distance between wall to wall separations and that the distances ranged between 0.61 m and 1.22 m (2 ft. and 4 ft.). He clarified that the openings in question are 0.025 m^2 (38.5 in^2).

The Commission asked the Agent if the vent assembly had been tested for a 45-minute fire

resistance rating. The Agent replied that it had not been tested but, in his opinion, the fact that the assembly is constructed using stainless steel and that it is a completely sealed unit infers that the assembly would provide a minimum of a 45-minute rating. The Agent referred to a letter of opinion, from a professional engineer, which stated that the vent system would meet the 45-minute fire resistance requirement of the Building Code.

In response to the Commission's request for further information, the Applicant submitted a site plan showing each of the subject houses, the location of the side wall vent termination and the corresponding limiting distances between lot lines.

At the continuation of the hearing, the Agent stated that the vent terminations will be staggered and will not be positioned immediately opposite one another in adjacent buildings. He elaborated on this statement by adding that the openings will be staggered horizontally, vertically or a combination of the two.

In clarification, the Agent informed the Commission that the openings are 177.8 mm (7 in.) in diameter and will be separated a minimum of 127 mm (5 in.) from edge to edge. As a further point of clarification, the Agent confirmed that the exterior cladding material for the houses in question is a non-combustible masonry veneer that will be a minimum of 88.9 mm (3½ in.) thick. The Commission referenced the Manufacturer's Installation Manual, which was included in the Applicant's submission, and questioned how the installation procedures will be met. Specifically, the reference, at page 9, which sets out limits for obstructions and the reference of providing at least a 0.61 m (24 in.) clearance from the front of the hood termination. The Agent responded to this inquiry by stating that this reference referred mostly to obstructions such as bushes or trees. The houses in question have a stone walking surface between them and there is only 1.22 m (4 ft.) between the homes, in his view it is unlikely that planted material would obstruct the vent.

In summation, the Agent maintained that the vent terminations will provide a 45-minute fire resistance rating and referenced a letter of support from a professional engineer. He indicated that the Applicant is willing to stagger the positioning of the vent terminations and also noted that the vent terminations will be equipped with a "cool touch" anti-scald/anti-burn cap, which has been tested to CSA standards. He argued that sufficiency of compliance with the Building Code requirements will be achieved in this instance.

4. Respondent's Position

The Designate for the Respondent submitted that the Building Code stipulates the maximum percentage of unprotected openings in an exposing building face with a limiting distance of less than 1.2 m to be 0%. He further submitted that Sentence 9.10.14.1.(2) states that an opening in an exposing building face of not more than 0.013 m^2 (20 in^2) shall not be considered an unprotected opening. The opening for this vent termination, he noted, is 0.025 m^2 (38.5 in^2) and should therefore be considered an unprotected opening. He referenced Sentence 9.10.14.5.(1) as requiring openings to be protected by a closure. However, since this is a vent termination for a gas-fired direct vent appliance, no closure is permitted.

The Designate also expressed a concern with the possibility of vent openings being installed directly across from one another. The Designate advised that the Municipality had not been provided with any test results to prove that a 45-minute fire resistance rating is being achieved.

In response to the Applicant's submission of the further information as requested by the Commission, the Designate reiterated his concerns with respect to the openings being more than double the allowable size for unprotected openings and also reiterated that the Municipality has not received any approved test results to confirm that the installation of the venting system

will meet a 45-minute fire resistance rating.

In summation, the Designate for the Respondent expressed his concerns with respect to the size of the openings for the vent terminations being more than the allowable limit stipulated in the Building Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed direct vent fireplace sidewall terminations, constructed of type 304 stainless steel and located in walls having a limiting distance ranging from 0.55 m to 1.2 m provide sufficiency of compliance with Articles 9.10.14.1. and 9.10.14.5. of the Building Code at the Village at York University (Tribute Communities), Murray Ross Parkway and Sentinel Road, Toronto, Ontario, on condition that:

a) The exterior walls in which the vent terminations are situated shall consist of non-combustible masonry cladding.

b) The direct vent fireplace systems are installed in accordance with the requirements contained in the manufacturer's installation manual.

c) Where vent openings are located in opposite facing walls having a limiting distance ranging from 0.55 m to 1.2 m, the vents are to be offset by a minimum of 457.2 mm (18 in) from edge to edge such that the openings are staggered and will not be positioned across from one another.

d) All vent terminations will include an anti-scald/anti-burn cap feature that will limit surface temperatures so as to prevent burning upon contact.

6. Reasons

i) The sidewall termination assembly for the proposed fireplaces consists of a type 304 stainless steel vent termination, an inner 101.6 mm (4 in) diameter galvanized steel pipe, a 177.8 mm (7 in) diameter galvanized steel outer air conduit pipe, (0.4752 mm thickness), a galvanized steel zero clearance sleeve (0.5512 mm thickness), and a galvanized steel firestop spacer (0.7112 mm thickness).

ii) The proposed assembly forms a galvanized steel box behind the stainless steel vent termination. The seams of the joints between the wall sleeve, plate and pipe will be sealed with high temperature sealants.

iii) The proposed vent termination, in combination with the zero clearance sleeve and firestop spacer will provide a barrier to flame infiltration.

iv) The Commission is satisfied that, subject to the implementation of the conditions noted above, sufficiency of compliance with the provisions of the Building Code will be achieved.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF in Part 7 of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Dario Valente, Cobra Drain, for resolution of a dispute with John Wright, Chief Building Official, Town of Markham, to determine whether the proposed use of high density polyethylene pipe to convey sanitary sewage from a Group B, Division 2 care facility to the municipal sewer main provides sufficiency of compliance with Sentence 7.2.5.9.(1) of the Building Code at Unionville Home Society Long-Term Care Facility, 4300 Highway No. 7, Town of Markham, Ontario.

APPLICANT	Dario Valente Cobra Drain Concord, ON
RESPONDENT	John Wright Chief Building Official Town of Markham
PANEL	Tony Chow, Chair Susan Friedrich Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	February 17, 2005
DATE OF RULING	April 19, 2005
APPEARANCES	Mika Slingerland Stantec Consulting Ltd. Markham, ON **Agent for the Applicant** Anthony Boyko Manager, Building Inspections Town of Markham **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant received a permit under the *Building Code Act*, *1992*, and is constructing a Group B, Division 2 facility at Unionville Home Society Long-Term Care Facility, 4300 Highway No. 7, Markham, Ontario. The Applicant has also received an order to comply to remedy certain alleged deficiencies at the same location.

The subject building is 3 storeys in height with a building area of 3,851 m^2 and is comprised of non-combustible construction material. The facility is equipped with a sprinkler system and a fire alarm system but not a standpipe and hose system.

The issue at dispute pertains to the proposed use of 200 mm (8 in.) high density polyethylene pipe to convey sanitary sewage from the building to the municipal sewer main. According to the current Building Code requirement, the scope of the applicable CAN/CSA-B137.1, "Polyethylene Pipe, Tubing and Fittings for Cold Water Pressure Services" only covers the use of such pipe in potable cold water supply services. There is a proposed Code amendment (07-02-07), which, if adopted, would allow the use of polyethylene pipe conforming to ASTM-F714 - "Standard Specification for Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Outside Diameter" to be used underground in a drainage system for rehabilitation of existing systems using trenchless technology.

The Applicant contends that the proposed use of high density polyethylene piping achieves sufficiency of compliance with the requirements of the Building Code, while the Respondent maintains that the subject pipe is only permitted to be used in underground installations of cold water distribution piping. This difference of opinion has brought the parties to the Building ode Commission for resolution of the dispute.

2. Provisions of the Building Code in Dispute

7.2.5.9. Plastic Pipe, Fittings and Solvent Cement Used Underground

(1) Plastic pipe, fittings and solvent cement used underground outside a building or under a building in a drainage system shall be certified to

(a) CAN/CSA-B181.1, "ABS Drain, Waste, and Vent Pipe and Pipe Fittings",

(b) CAN/CSA-B181.2, "PVC Drain, Waste, and Vent Pipe and Pipe Fittings",

(c) CAN/CSA-B182.1, "Plastic Drain and Sewer Pipe and Pipe Fittings",

(d) CAN/CSA-B182.2, "PVC Sewer Pipe and Fittings, (PSM Type)",

(e) CAN/CSA-B182.4, "Profile (Ribbed) PVC Sewer Pipe and Fittings",

(f) CAN/CSA-B182.6, "Profile Polyethylene Sewer Pipe and Fittings",

(g) CAN/CSA-B137.2, "PVC Injection-Moulded Gasketed Fittings for Pressure Applications", or

(h) CAN/CSA-B137.3, "Rigid Poly (Vinyl Chloride) (PVC) Pipe for Pressure Applications".

3. Applicant's Position

The Agent for the Applicant submitted that a temporary sanitary sewer has been installed by directional drill method using high density polyethylene (HDPE) pipe. He further submitted that this horizontal drilling method, in his opinion, ensures that landscaping and parking areas are not disturbed during the installation process.

In the opinion of the Agent, the proposed use of HDPE pipe to convey sanitary sewage from the building to the municipal sewer main achieves sufficiency of compliance with the requirements of the Building Code. He indicated that HDPE piping has been used for more than thirty years in municipal sewage applications and has demonstrated the necessary resistance to provide reliable long-term performance. He also pointed out that it is a temporary installation until such time as regional sewer lines are brought down Highway 7. The Commission questioned whether the pipe would be dug up once the regional sewer lines are put in and the Agent responded that the pipe would not be dug up, it would, however, be decommissioned.

The Agent explained that this type of pipe was used for the project because the subject pipe runs through existing landscape in a retirement community and the contractor did not want to open cut the land. This type of pipe, according to the Agent, can be installed using trenchless technology, which will not disturb the surface materials of the surrounding area. The Agent advised that an auger drill is used to bore a tunnel for the pipe to be fed through. The auger drill has a detector at the front of the drill which sets the line to grade. The pipe is fused at 6m – 7 m lengths as it is being pulled back through the bored tunnel.

At the request of the Commission, the Applicant provided confirmation from the manufacturer that the solid wall HDPE pipe, being used for this project, is manufactured to standard ASTM F714 and that the pipe is suitable for direct burial under a wide range of burial conditions that include the applications of live loads.

In summary, the Agent restated his position that the pipe has been used for more than thirty years in municipal sewage applications and has demonstrated that it has the necessary resistance to provide reliable long term performance, despite the scope of the applicable Code referenced standard only covering for the use in potable cold water supply services. He further argued that he believes he has provided sufficient information to support the proposed use of high density polyethylene piping in this type of application. He reaffirmed his position that he believes the proposal provides sufficiency of compliance with the requirements of the Building Code.

4. Respondent's Position

The Designate for the Respondent submitted that the subject pipe has not been certified to the standards listed in Sentence 7.2.5.9.(1) of the Building Code. He maintained that the current Code only permits this type of pipe to be used in underground installations of cold water distributing piping and not as part of an underground drainage system.

The Designate stated that he understands the reason for using this type of pipe and trenchless technology; however, he does not believe that the material is referenced in the Building Code and therefore the municipality does not have the authority to approve the use of it in this type of application. He contended that the municipality is not prepared to accept the proposal as an equivalency because the municipality is not convinced that this pipe provides an equivalent level of performance as would materials permitted by the Code. Furthermore, the municipality is unable to properly inspect the installation of the pipe. He elaborated by saying that with trenched installation, the municipality would look for the proper bedding and soil conditions,

however, with trenchless installations, the municipal inspectors are unable to thoroughly inspect the work. He acceded that he can see the benefit of using this type of pipe and technology but pointed out that, at this point, the municipality has no assurance that it provides sufficiency of compliance with the requirements of the Code.

The Designate asserted that the municipality is looking for some assurance that the pipe has been installed properly and suggested that a ball test be performed to ensure that the slope is adequate for proper drainage. He further suggested that an engineer should be on site to certify that the pipe has been installed in accordance with the required standard.

In summation, the Designate reiterated that the subject pipe is not addressed in the current Building Code for use in an underground drainage application as is proposed by the Applicant. He added that, if the use of the pipe is allowed, the municipality would like to see a ball test performed and that an engineer should certify that the piping has been installed properly.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed use of high density polyethylene pipe to convey sanitary sewage from a Group B, Division 2 care facility to the municipal sewer main provides sufficiency of compliance with Sentence 7.2.5.9.(1) of the Building Code at Unionville Home Society Long-Term Care Facility, 4300 Highway No. 7, Markham, Ontario, on condition that:

a) A Professional Engineer is to certify that the pipe has been installed in accordance with the ASTM-F714 standard.

b) A ball test is to be performed in order to certify that the slope is sufficient to ensure proper drainage.

c) A manhole is to be installed at or near the midpoint of the run of pipe.

6. Reasons

i) The 203.2 mm high density polyethylene pipe (HDPE) used in the construction of this drainage system is manufactured to conform to ASTM-F714 - “Standard Specification for Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Outside Diameter”.

ii) Proposed Code amendment, 07-02-07, would allow polyethylene piping conforming to the above noted ASTM standard to be used underground in a drainage system for rehabilitation of existing systems using trenchless technology.

iii) Regular discharge sewage from the building will not likely exceed 60^{o}C and any excessive hot water temperature will be cooled within the building drain before being discharged through the pipe. The manufacturer has provided documentation certifying that the pipe meets the temperature requirements.

iv) The high density polyethylene pipe, manufactured by KWH Pipe (Canada) Ltd., has been used in municipal sewage applications for more than thirty years and has demonstrated the necessary resistance to provide long-term performance.

PANEL	Judy Beauchamp, Chair-Designate Jim Wilkinson Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	March 10, 2005
DATE OF RULING	March 10, 2005
APPEARANCES	Stan and Sheila Chudziak Owners Pickering, ON **The Applicant** Brad Clark Sewage System Inspector Peterborough County-City Health Unit **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and is proposing to construct a Class 4 sewage system at Lot 5 Conc. 10, #551 Fire Rt 27, Peterborough, Ontario.

The Applicant is proposing to install a new Class 4 sewage system to serve an existing, three bedroom, Group C occupancy. The building is described as a one storey, single-family cottage constructed on piers and used as a seasonal dwelling. The building contains 8.5 fixture units and has total finished area of 100 m^2. The calculated daily design flow is 1600 L/day and the water supply for the building is provided by an existing drilled well. The cottage had previously been serviced by a composting toilet, which was not sufficient in the owner's opinion and a new Class 4 sewage system was proposed.

The proposed sewage system will consist of a 4,500 L septic tank connected to a 28 m^2 filter bed containing four runs of distribution pipe. The filter bed is proposed to be dug into the existing soil, however, due to site conditions, including the presence of large rocks; the filter bed will be partially raised. Sentence 8.7.4.2.(9) of the Building Code states that the clearance distances set out in Table 8.2.1.6.B. of the Code must be increased by twice the height that the leaching bed is raised above the original grade.

The issue in dispute between the Applicant and the Respondent involves the clearance distances from the filter bed to the structure, the drilled well, the lake and the property line. As the filter bed is required to be raised the clearance distances must be increased as a result. Therefore, the issue in dispute is whether the partially raised Class 4 sewage system with reduced clearance distances provides sufficiency of compliance with the Article 8.2.1.4., Sentences 8.2.1.6.(2), 8.7.4.2.(9) and Table 8.2.1.6.B of the Building Code.

2. Provisions of the Building Code in Dispute

8.2.1.4. Clearances

(1) Unless it can be shown to be unnecessary, where the *percolation time* is 10 minutes or greater, the location of all components within a *sewage system* shall be in conformance with the clearances listed in Articles 8.2.1.5. or 8.2.1.6.

8.2.1.6. Clearances for a Class 4 or 5 Sewage System

(2) Except as provided in Sentences 8.2.1.4.(1) and (2), a *distribution pipe* shall not be located closer than the minimum horizontal distances set out in Table 8.2.1.6.B. and these distances shall be increased when required by Sentence 8.7.4.2.(9).

Table 8.2.1.6.B.
Minimum Clearances for Distribution Piping
Forming Part of Sentence 8.2.1.6.(2)

Column 1	Column 2
Object	Minimum Clearance, m
Structure	5
Well with a watertight casing to a depth of 6 m	15
Any other well	30
Lake	15
Pond	15
Reservoir	15
River	15
Spring not used as a source of *potable* water	15
Stream	15
Property Line	3

8.7.4.2. Construction Requirements

(9) The distances as set out in Column 2 of Table 8.2.1.6.B. shall be increased by twice the height that the *leaching bed* is raised above the original grade.

3. Applicant's Position

The Applicant submitted that he applied for a permit in July and that he was unclear as to what the issue at dispute involved. The Applicant stated that initially he was advised that a deck, located on the property, was required to be removed in order for the permit to be approved. The Applicant advised that he decided to investigate the validity of needing to remove the deck, as in his opinion, since the deck was constructed on piers, the deck would not impact on the sewage system.

The Applicant stated that he was then advised by the municipality that the issue was not the deck but rather the minimum clearance distances outlined in Table 8.2.1.6.B. of the Code. The Applicant maintained that it is his belief that there is sufficient space to install the sewage system while still maintaining the appropriate clearance distances from the lot line, drilled well and the lake. He further submitted that the deck is not a permanent fixture and will not, in his view, affect or impede the operation of the sewage system.

When questioned as to the on-site conditions, the Applicant suggested that the Commission contact the installer for the proposed sewage system so that the questions can be adequately addressed. In response to questions from the Commission during the hearing, the installer acknowledged that as a result of site conditions, the bed will be partially raised. He advised that it is necessary to raise the bed partially on the cottage side of the bed. He further advised that it is necessary to raise the bed approximately 1 m on the lake side. When questioned as to whether imported sand was to be used, he reported that imported sand was not being used. The installer advised that the minimum clearance distances as outlined in Table 8.2.1.6.B. of the Code can be met as long as the distances are not increased. He argued that the bed is not fully raised and therefore should not be subject to the increased clearance distances prescribed in Sentence 8.7.4.2.(9) of the Code.

In summation, the Applicant reiterated that he believes the proposed sewage system achieves sufficiency of compliance with the Code requirements.

4. Respondent's Position

The Respondent stated that the deck will not impact on the sewage system and therefore it is unnecessary to remove the deck. The Respondent indicated that the issue at dispute pertains to the required clearance distances.

The Respondent described the proposed sewage system as having a raised bed. He explained that, based on his calculations, the bed would be raised by approximately 1 m and therefore in accordance with the requirements of Sentence 8.7.4.2.(9) of the Code, the minimum clearance distances must be increased by 2 m. He advised that, based on the requirement to increase the clearance distances, in his opinion, there is insufficient space to install the proposed system.

While the Respondent admitted that the bed would not be raised on all sides, he declared that the Code does not refer to partially raised beds. He indicated that, in his interpretation, the Code speaks only to raised beds and the subject bed, for the purposes of the Code and in his opinion, is a raised bed. Therefore, pursuant to Sentence 8.7.4.2.(9) of the Code, the clearance distances must be increased by twice the height that the bed is raised above the original grade.

Summarizing the position of the municipality, the Respondent stated that the necessity to raise the filter bed and the resultant increase in the required clearance distances creates a situation whereby there is insufficient space to install the proposed sewage system. In his opinion, sufficiency of compliance with the minimum clearance distances as outlined in Table 8.2.1.6.B. when considering Sentence 8.7.4.2.(9) of the Code cannot be achieved.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed Class 4 sewage system provides sufficiency of compliance with Article 8.2.1.4., Sentences 8.2.1.6.(2), 8.7.4.2.(9) and Table 8.2.1.6.B of the Building Code at Lot 5 Conc. 10, # 551 Fire Rt. 27, Peterborough, Ontario, on condition that:

a) The Peterborough County-City Health Unit inspect the existing excavation in the spring of 2005 (as ground conditions permit) and find that the water table is at a depth greater than 900 mm below existing ground surface, and that bedrock is at a depth greater than 900 mm below existing ground surface.

6. Reasons

i) The proposed system includes an in-ground leaching bed. Imported sand will not be used to construct the base and no mantle is required.

ii) The distribution piping will be setback 6 m from the house and, although the deck will be within the 5 m setback requirement, in the opinion of the Building Code Commission, it will not have an impact on the proposed sewage system.

Dated at Toronto this **10th** day in the month of **March** in the year **2005** for application number **2004-71.**

PLACE	Toronto, Ontario
DATE OF HEARING	March 10, 2005
DATE OF RULING	March 10, 2005
APPEARANCES	Allan Avery 914007 Ontario Inc. Woodlawn, ON **The Applicant** Terry Davidson Director of Regulations Ottawa Septic Systems Office **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and is proposing to install a Class 5 sewage system (holding tank) to service a convenience store and gas bar at the Constance Bay Gas Bar, 117 Constance Bay Rd, Woodlawn, Ontario.

The Applicant is proposing to install a Class 5 holding tank to service a one storey, convenience store and gas bar, having a building area of approximately 90 m^2. The water supply to the building is from a sand point well and the building has a total of seven plumbing fixtures. The total daily design flow rate will be 2,630 L/day. According to the Respondent, the site is described as fairly level, having a slope of less than one percent, and with a depth of greater than 2,000 mm to the high groundwater table. Existing soils are proposed to be used and the percolation time ranges from six to eight minutes per centimetre.

The construction in dispute involves the proposed installation of a Class 5 holding tank to service the facility. According to the Applicant, there is insufficient space on the site to install anything other than a Class 5 sewage system. The Building Code prohibits the installation of a Class 5 sewage system except in specific circumstances.

Article 8.8.1.2. of the Code outlines specific circumstances under which it is acceptable to install a holding tank. The issue at dispute between the parties is whether the proposed installation of the Class 5 sewage system provides sufficiency of compliance with Article 8.8.1.2. of the Building Code.

2. Provisions of the Building Code in Dispute

8.8.1.2. Acceptable Installation

(1) A Class 5 sewage system may be installed in the following circumstances:

(a) where the proposed use of the sewage system is for a temporary operation, excluding seasonal recreational use, not exceeding 12 months in duration,

(b) to permit the extension of an existing single-family dwelling provided that

(i) the extension will not increase the wastewater load, and

(ii) the building is already served by a Class 5 sewage system,

(c) to remedy an unsafe sewage system where the remediation of the unsafe condition by the installation of a Class 4 sewage system is impracticable,

(d) to upgrade a sewage system serving an existing building, where upgrading through the use of a Class 4 sewage system is not possible due to lot size, site slope or clearance limitations, or

(e) as an interim measure for a lot or parcel of land until municipal sewers are available, provided that the municipality undertakes to ensure the continued operation of an approved hauled sewage system until the municipal sewers are available.

(2) Where a Class 5 sewage system is installed, a written agreement for the disposal of sanitary sewage from the sewage system shall be entered into with a hauled sewage system operator.

3. Applicant's Position

The Applicant stated that he understands that the Building Code does not permit the installation of holding tanks; however, he advised that because of the size of the lot, there is insufficient space to install a Class 4 sewage system while still maintaining the required clearance distance to the property line. He advised the Commission that it would be his preference to install a Class 4 sewage system if there were sufficient room. The Applicant explained that, in his opinion, a holding tank is the only option for the property in question.

The Applicant advised that the sewage system would not be used frequently as it would be primarily for the use of employees of the gas bar. He further advised that he believes that a holding tank is better for the environment since the property is located very close to the Ottawa River.

In summary, the Applicant claimed that there is insufficient space for a Class 4 sewage system and therefore the only option is to install a Class 5 sewage system.

4. Respondent's Position

The Respondent stated that a permit application was received in October 2004 requesting approval to install a holding tank to service the subject property. He advised that the permit was denied because of the provisions of Article 8.8.1.2. of the Building Code. The Respondent reported that a letter was sent to the Applicant advising of the denial of the permit and advising that the Code prohibits the installation of Class 5 sewage systems except in the specific circumstances outlined in Article 8.8.1.2. of the Building Code. He advised that in his opinion the subject proposal does not fall within the criteria outlined in Article 8.8.1.2. of the Code for acceptance of a Class 5 sewage system and therefore the permit was denied.

The Respondent informed the Commission that, in his opinion, the Applicant has not demonstrated that a Class 4 sewage system will not fit on the property. He further explained that he believes there is sufficient building area to install a Code compliant Class 4 sewage system. He advised that the Applicant constructed the building without determining how the building would be serviced and that, in his opinion, it is inappropriate to construct a building and then state that there is insufficient space to properly service the building.

In summation, the Respondent reiterated that the Building Code prohibits installation of Class 5 sewage systems except in the specific circumstances outlined in Article 8.8.1.2. He advised that in his opinion, this proposed installation does not meet any of the requirements outlined in Article 8.8.1.2. and therefore does not comply with the requirements of the Building Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed installation of a Class 5 holding tank does not comply with Article 8.8.1.2. of the Building Code at the Constance Bay Gas Bar, 117 Constance Bay Rd, Woodlawn, Ontario.

6. Reasons

i) While the Commission may sympathize with the Applicant's frustration with the permit approval process, Article 8.8.1.2. prohibits the installation of holding tanks except in certain circumstances. None of these explicit circumstances apply to this proposed development.

ii) No evidence was presented to suggest that the site (prior to the construction of the new building for which a permit had not yet been issued) could not accommodate a Class 4 system.

Dated at Toronto this **10** day in the month of **March** in the year **2005** for application number **2004-75.**

APPLICANT	Avi Gottlieb Avcon Construction Inc. Toronto, Ontario
RESPONDENT	Jim Laughlin Deputy Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Fred Barkhouse Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	April 7, 2005
DATE OF RULING	April 14, 2005
APPEARANCES	Leszek Muniak Larden Muniak Consulting Inc. **Agent for the Applicant** Prabhakar Mahant Manager, Plan Review City of Toronto **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and proposes to use the basement level of an existing mixed-use building as a self-storage facility at 427 Parliament Street, City of Toronto, Ontario.

The subject building is two storeys in building height with a basement level and has a building area of 1,003 m^2. Both combustible and non-combustible materials have been used in the construction of the building. The ground floor and the basement level are fully sprinklered. Only the east portion of the second floor is sprinklered and the structure is equipped with a fire alarm system but not a standpipe and hose system.

The building is a mixed-use building containing a Group C residential occupancy on the second floor and Group E mercantile occupancy on the ground floor. The floor assemblies between the ground floor and the second floor provide a 2 h fire-resistance rating. The floor assemblies between the basement and the ground floor provide a 1 h fire-resistance rating.

It is proposed that the basement level of the building be used as a public self-storage facility. This use would result in a Group F, Division 2 – medium hazard industrial occupancy for the basement level. Floor assemblies between the basement level and the ground floor are constructed using concrete floor on a metal deck. Steel beams, joists and a metal floor deck have a 1 h rated spray fireproofing. All columns, which support the structures above, are 2 h fire rated.

The construction in dispute involves the resulting combination of occupancies. In particular, the combination of a Group F, Division 2 major occupancy and a Group C, residential major occupancy within the same building. In this regard, the issue in dispute involves the whether the proposed public self-storage facility located in the basement of the existing mixed-use building provides sufficiency of compliance with the provisions outlined in Sentences 3.1.3.2.(2) and 3.1.3.2.(4) of the Building Code.

2. Provisions of the Building Code in Dispute

3.1.3.2. Prohibition of Occupancy Combinations

(2) Except as provided in Sentence (4) and Sentence 3.10.2.4.(9), not more than one *suite* of *residential occupancy* shall be contained within a *building* classified as a Group F, Division 2 *major occupancy*.

(4) A Group F, Division 2 *major occupancy* is permitted in a *building* containing only *live/work units* and is for the exclusive use of the occupants of the *live/work units*.

3. Applicant's Position

The Agent for the Applicant submitted that the building is a two-storey building with a basement. The structure faces one street for fire fighting access. The ground floor has a floor area of approximately 1000 m^2 and is used for retail purposes. The second floor, has a floor area of approximately 800 m^2, and is used for residential purposes. It is proposed that the basement level of the building be used as a self-storage facility for persons in the neighbourhood. The rental and use of the proposed storage units would be available to the general public and would not be confined to the use of the tenants in the building.

The Agent outlined some key elements as assurance that the level of safety in the building is adequate to ensure the safety of the occupants. He noted that the building will be equipped with a sprinkler system as well as a fire alarm and smoke detection system and fire separations are provided between the occupancies. He also informed the Commission that, in his opinion, the travel distance of 45 m would allow adequate time for person to evacuate the basement floor area. Additionally, he pointed out that the entrance to the basement level would be from Parliament Street and would be separate from the entrance for the residential occupancy. It is his belief that, based on the existing conditions, an adequate protection against fire spread from occupancy to occupancy is achieved.

The Agent further submitted that the basement had previously been used as a storage area for the retail occupancy located on the ground floor. The building changed ownership in 2000 and the new owner now wishes to convert the basement level to a self-storage facility as the retail occupancy located on the ground floor no longer uses the basement for storage.

The Agent stated that the Building Code appears to disallow the inclusion of a Group F, Division 2 self-storage facility because of the existing Group C occupancy. Sentence 3.1.3.2.(2) of the Code restricts buildings classified as F2 major occupancy to having not more than one suite of residential occupancy, except as provided by Sentence 3.1.3.2.(4). Sentence 3.1.3.2.(4) of the Code refers to conditions under which more than one suite of residential occupancy may be contained within a building having a Group F, Division 2 major occupancy. This Sentence permits a Group F, Division 2 major occupancy in a building containing only live/work units and is for the exclusive use of the occupants of those live/work units.

The Agent indicated that in discussing the issue with National Building Code staff as to why these references were included in the Code, the reason given was that at one time factories had truck deliveries and the truck drivers wanted a place to rest, therefore one unit of residential occupancy was allowed. This provision has been in the National Building Code since 1960. He further indicated that the Ontario Building Code was amended to permit the use of residential spaces for business purposes. It is the Agent's opinion that both of these Sentences were included in the Code for specific purposes. He went on to suggest that the Building Code does not prohibit an F2 occupancy in a building from containing a Group C occupancy. He cited a dry cleaning establishment as an example. It was the opinion of the Agent that the Code is being applied to this specific situation in a way that it was not intended.

The Agent was questioned as to how it was determined whether the proposed self-storage facility should be classified as a Group F, Division 2 or Group F, Division 1 occupancy. He explained that the Code refers to self-storage facilities as an F2 classification. He stated that an F1 classification includes the storage of highly flammable or explosive contents. Self-service storage buildings are listed in A-3.1.2.1.(1) of the Code as an example of the type of use that might be considered a Group F, Division 2 major occupancy.

Upon being questioned as to how the material being stored within the facility could be controlled, the Agent advised that the facility would be monitored by video cameras and contracts would be entered into with the users of the facility in order to stipulate the restrictions on allowable materials to be stored. He further advised that there would be on-site supervision during business hours.

The Agent also stated that emergency lighting would be provided. In response to being questioned as to whether the fire alarm and the sprinkler systems are required, the Agent stated that the fire alarm system is a requirement and the sprinklering is required in the basement and the retail floor as they are over 6,000 m^2. The Agent went on to say that smoke detectors could also be installed as a compensating measure. The detectors would offer early warning in the event of a fire and would not be required by the Building Code.

The Agent summarized his position by stating that the building in question is a multiple use building, having a residential occupancy on the top floor, a mercantile occupancy on the ground level and a proposed medium hazard industrial occupancy in the basement. In his opinion the Code does not prohibit the combination of residential and medium hazard industrial occupancies in the same building. He also referenced the Applicant's willingness to install smoke detection devices in the basement of the building as a compensating measure.

4. Respondent's Position

The Respondent submitted that the proposed use of the existing basement as a medium hazard industrial occupancy when combined with the existing residential occupancy, results in non-compliance with the Building Code. He further submitted that building permits were issued for the ground floor retail occupancy and the second floor residential occupancy. The permits do not refer to any occupancy in the basement portion of the building.

The Respondent is of the opinion that the Municipality has not been provided with sufficient information to determine the proper classification of the proposed self-storage use in the basement. In the Respondent's view, there has been no determination of the hazardous content that may be stored within the proposed facility and this is why the Municipality is questioning the occupancy classification.

The Respondent stated that Part 11 of the Building Code does not provide any relief from having to comply with Article 3.1.3.2. of the Code. He went on to say that Sentence 3.1.3.2.(1) of the Code prohibits a Group F, Division 1 major occupancy in a building containing Group A, B or C occupancies. The Respondent submitted that he would like to have some confirmation that the proposed facility would not contain an F1 occupancy and claimed that he had not received any information which would provide him with a level of comfort in this regard.

The Respondent referenced Sentences 3.1.3.2.(2) and 3.1.3.2.(4) of the Code and argued that these exceptions do not apply to the facility in question. He maintained that Sentence 3.1.3.2.(2) allows for not more than one suite of residential occupancy to be contained within a building classified as having a Group F, Division 2 major occupancy. Since this facility has more than one suite of residential occupancy, this exception does not apply to this facility. He further maintained that Sentence 3.1.3.2.(4) does not apply to the facility either, as the F2 use is not for the exclusive use of the occupants of the building. It was his opinion that a building could not contain a Group C occupancy and a public self-storage facility.

The Respondent also voiced a concern as to whether Section 3.10. should apply to the self-storage use in the basement. Section 3.10. of the Building Code outlines specific requirements for self-service storage buildings. It would appear that since the entire building is not a self-storage facility that the requirements of that Section would not apply. He explained that he felt the self-storage industry is more regulated than the self-storage use would be in this facility.

In summation, the Respondent reiterated that it is his belief that the Code restricts an F2 use within a building containing a Group C occupancy to being for the exclusive use of the residents of the building. This is not the case with this building. The residents living in the residential portion of the building would not have any control over what is being stored in the basement of their building.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed public self-storage facility, Group F, Division 2, medium hazard industrial major occupancy located in the basement level of a building currently designated as Group C, residential major occupancy on the second storey and Group E, retail major occupancy on the first storey, provides sufficiency of compliance with Sentences 3.1.3.2.(2) and 3.1.3.2.(4) of the Building Code at 427 Parliament Street, Toronto, Ontario, on condition that:

a) The floor assembly between the proposed Group F, Division 2 occupancy and the existing Group E occupancy shall be upgraded to provide a fire resistance rating of not less than 2 hours.

b) All stairwell enclosures shall provide a fire resistance rating of not less than 2 hours.

c) Smoke detection devices, connected to the fire alarm system, shall be installed in each suite or portion of the proposed Group F, Division 2 occupancy, such that all areas will be covered.

d) A single stage fire alarm system shall be installed throughout the building. The system shall be designed to notify the fire department that an alarm signal has been initiated.

e) On site supervision by an employee of the self-storage facility shall be provided and public access to the storage facility shall be restricted to those hours during which on site supervision is provided.

f) Material permitted to be stored within the facility will be restricted to medium hazard industrial content. Contracts shall be entered into between patrons of the facility and the self-storage management, informing the patrons of the restriction on permitted storage items and identifying items, which are not permitted (i.e. high hazard industrial material).

6. Reasons

i) The proposed Group F, Division 2 medium hazard industrial occupancy is to be located in the basement of the subject building while the Group C residential occupancy is located on the second storey. The Group E mercantile occupancy, located on the first storey, separates the uses.

ii) The basement, first storey and a portion of the second storey of the subject building are equipped with a sprinkler system.

iii) The proposed storage facility will be monitored by video cameras.

iv) The subject building is only two storeys in building height.

v) The Commission is satisfied that, subject to the implementation of the conditions noted above, the subject proposal will achieve sufficiency of compliance with the provisions of the Building Code.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Articles 8.7.4.1., 8.7.4.2. and Clause 8.9.1.2.(1)(c) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Steve Jackson, property owner, for resolution of a dispute with Terry Davidson, Director of Regulations, Ottawa Septic Systems Office, to determine whether the existing Class 4 sewage system fails to comply with Articles 8.7.4.1., 8.7.4.2. and Clause 8.9.1.2.(1)(c) of the Building Code at 5644 South Island Park Drive, Manotick, Ontario

APPLICANT	Steve Jackson Property owner Manotick, ON
RESPONDENT	Terry Davidson Director of Regulations Ottawa Septic Systems Office
PANEL	Len King, Vice-Chair Judy Beauchamp Jim Wilkinson
PLACE	Toronto, Ontario
DATE OF HEARING	April 21, 2005
DATE OF RULING	April 21, 2005
APPEARANCES	Steve Jackson Property owner Manotick, ON **The Applicant** Terry Davidson Director of Regulations Ottawa Septic Systems Office **The Respondent**

RULING

1. Particulars of Dispute

The Applicant is the owner of the property located at 5644 South Island Park Drive, Manotick, Ontario. The issue at dispute, as described by the Applicant, involves the design and construction of the existing Class 4 sewage system located on his property. The Respondent's position is that there is no dispute.

At the outset of the hearing, the Commission questioned whether it had the jurisdiction to resolve this issue since Mr. Jackson is not the applicant for a permit, the holder of a permit nor has an order been given to him. The Parties spoke to the issue of jurisdiction.

2. Applicant's Position

The Applicant submitted that the Class 4 sewage system located on his property does not comply with the construction requirements of the Building Code. He agreed that he is not the holder of the permit nor has he applied for a permit or been issued an order. It is his submission that as owner of the property, he is the de facto holder of the permit and therefore should be afforded the opportunity to have the Commission make a determination on the technical requirements of the Building Code as they relate to the sewage system located on his property.

3. Respondent's Position

The Respondent submitted that, since the certificate of completion has been issued, the Ottawa Septic Systems Office considers the Class 4 sewage system located at 5644 South Island Park Drive to be in general compliance with the requirements of the Building Code and therefore there is no dispute.

4. Commission Ruling

It is the Decision of the Building Code Commission (BCC) that the BCC has no jurisdiction to determine the dispute relating to whether the existing Class 4 sewage system fails to comply with Articles 8.7.4.1., 8.7.4.2. and Clause 8.9.1.2.(1)(c) of the Building Code at 5644 South Island Park Drive, Manotick, Ontario.

5. Reasons

i) The mandate of the Building Code Commission is set out in Subsection 24(1) of the *Building Code Act, 1992* which stipulates that "(i)f there is a dispute between **an applicant for a permit or holder of a permit or a person to whom an order is given** (emphasis added) and the chief building official or an inspector, any party to the dispute may apply to the Building Code Commission…".

ii) Although there may be a dispute between Mr. Jackson and the municipal officials involving the pre-existing on-site sewage system, Mr. Jackson is neither the permit applicant nor holder of a permit and no order to comply has been issued in respect to the alleged failure of the subject septic system. Any dispute between the subject individuals must be resolved in another forum, as the Commission has no authority to exceed its established mandate.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 1.1.3.2. of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Tim Sullivan, Everyday Septic Solutions, for the resolution of a dispute with Terry Davidson, Director of Regulations, Ottawa Septic Systems Office, to determine whether the installation of a septic field remediation technology known as the White Knight™ into an existing septic tank provides sufficiency of compliance with the Building Code when considering Part 11 and the definition of "septic tank" as outlined in Article 1.1.3.2. at 1358 Potter Drive, Manotick, Ontario.

APPLICANT	Tim Sullivan Everyday Septic Solutions Nepean, ON
RESPONDENT	Terry Davidson Director of Regulations Ottawa Septic Systems Office
PANEL	Len King, Vice-Chair Judy Beauchamp Jim Wilkinson
PLACE	Toronto, Ontario
DATE OF HEARING	April 21, 2005
DATE OF RULING	April 21, 2005
APPEARANCES	Tim Sullivan Everyday Septic Solutions Nepean, ON **The Applicant** Terry Davidson Director of Regulations Ottawa Septic Systems Office **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 1358 Potter Drive, Manotick, Ontario.

The Applicant has applied for a permit and is proposing to install a septic field remediation technology known as the White Knight™ into an existing septic tank located at 1358 Potter Drive, Manotick, Ontario.

The building on the subject property is a Group C, residential dwelling having a building area of approximately 260 m^2. The dwelling contains four bedrooms with a total of 28.5 fixture units and has a total daily design flow rate of 2,600 L/day. The subject dwelling is served by an existing drilled well.

The White Knight™ is a technology combining patented, non-pathogenic, aerobic bacteria and an aeration system that claims to remediate septic beds that are failing due to biological clogging or the excessive build up of biomat. The aeration unit is placed in the second chamber of an existing septic tank. An external, forty-watt, linear air pump will provide air to the aeration unit. Bacteria grow in the effluent, on a fixed film media in the aeration unit as well as on the effluent filter provided with the unit. The bacteria are then carried out into the leaching field by the oxygenated effluent. In the field, the bacteria consume the biomat and restore the percolation capacity of the soil.

Part 11 of the Code allows for material alteration and/or repair of an existing sewage system, however, the Code does not specifically dictate how such an alteration or repair be conducted. Sentence 11.3.1.1.(1) of the Code states that where an existing building system is materially altered or repaired, the performance level of the building after the material alteration or repair shall be at least equal to the performance level of the building prior to the material alteration or repair.

The Building Code defines a septic tank, in Article 1.1.3.2., as “a watertight vault in which sanitary sewage is collected for the purpose of removing scum, grease and solids from the liquid without the addition of air and where solids settling and anaerobic digestion of sanitary sewage takes place.”

The issue in dispute involves the proposed installation of a septic field remediation technology known as the White Knight™ into the existing septic tank and whether the installation of the White Knight™ provides sufficiency of compliance with the Building Code when considering Part 11 and the definition of “septic tank” as outlined in Article 1.1.3.2. of the Code. Specifically, the dispute pertains to whether air can be supplied to the White Knight™ when installed in the septic tank while still maintaining sufficiency of compliance with the definition of a septic tank as outlined in the Building Code.

2. Provisions of the Building Code in Dispute

1.1.3.2. Defined Terms

(1) The words and terms in italics in this Code have the following meaning for the purposes of this Code, and where indicated, the following meaning for the purposes of the Act as well.

Septic tank means a watertight vault in which sanitary sewage is collected for the purpose of removing scum, grease and solids from the liquid without the addition of air and where solids settling and anaerobic digestion of the sanitary sewage takes place.

Proposed Construction Section 11.3.

New and Existing Building Systems 11.3.1.

11.3.1.1. Material Alteration or Repair of a Building System

(1) Where an existing *building system* is materially altered or repaired, the *performance level* of the *building* after the material alteration or repair shall be at least equal to the *performance level* of the *building* prior to the material alteration or repair.

11.4.1. General

11.4.1.1. Performance Level

(1) The performance level of a building after construction shall not be less than the performance level of the building prior to construction.

(2) For the purposes of Sentence (1), reduction of performance level shall be determined in accordance with Subsection 11.4.2.

(3) Where the proposed construction would reduce the performance level of an existing building, compensating construction shall be required in conformance with Subsection 11.4.3

11.4.2.5. Sewage Systems

(1) The performance level of an existing building is reduced where the existing building is extended or subject to material alteration or repair and a sewage system serving the existing building is adversely affected by the extension, alteration or repair of the existing building.

3. Applicant's Position

The Applicant submitted that the White Knight™ unit has been tested over a period of five years and has been installed with successful results in more than five hundred cases. He further submitted that, while the White Knight™ is an addition to an existing septic system, it does not materially change or alter any part of the existing septic system into which it is installed. The addition of the White Knight™ does not change the size of the load, septic tank or leach field and the volume of effluent displaced in the tank is minimal at approximately 9 L.

The Applicant described the White Knight™ system as being a leaching field recovery technology. The device is installed into the septic tank and the tank is then inoculated with task specific bacteria to consume the biomat. He indicated that air is supplied to the device to support the growth of the bacteria as bacteria growth is based on nutrients in the tank and oxygen. He stated that the phrase "without the addition of air" contained in the definition of septic tank, in his opinion, is meant to differentiate between a septic tank and a treatment unit. He asserted that this product is not a treatment unit and advised that this product does not change the flow, the volume of the tank or the size of the drainage field.

When questioned as to the length of time that the White Knight™ unit would remain in the tank, the Applicant replied that it would become a permanent fixture. In response to being questioned as to whether the permanency of the White Knight™ unit in the tank makes the system a tertiary treatment unit, the Applicant reiterated that White Knight™ is not, and does not, claim to be a treatment unit.

In summation, the Applicant stated that the White Knight™ is installed in systems that are already in failure mode, where an effluent breakout has already occurred. He further advised that, in his opinion, the performance level of the sewage system will not be reduced. He added that if the White Knight™, once installed correctly, does not remediate the situation, then the sewage system must still be repaired. He offered that the use of this product provides a lower cost option for recovery of a leaching field. He maintained that if the breakout is eliminated as a result of the addition of the White Knight™ to the septic tank then the sewage system is performing better than it was prior to the installation of the White Knight™ and, therefore, sufficiency of compliance with the requirements of the Building Code has been achieved.

4. Respondent's Position

The Respondent submitted that, in his opinion, the installation of the White Knight™ unit into a septic tank violates the definition of "septic tank" because air is added to the tank and also because the unit agitates the contents of the septic tank thereby adversely affecting the settling of solids.

The Respondent noted that the existing Class 4 sewage system was approved by the Ministry of the Environment in 1989. He further noted that a use permit was issued in December 1989 which clearly states that the sewage system consists of a 4,500 L tank with a filter media bed. The Respondent maintained that the site is accessible with ample room for replacement of the leaching field.

The Respondent asserted that the Building Code is clear in its definition of "septic tank" and stressed the inclusion of the words "without the addition of air" contained within the definition. He maintained that, in his opinion, the installation of the White Knight™ contravenes the definition of "septic tank" not only with respect to the addition of air but also with respect to the agitation of the contents of the septic tank.

The Respondent related the dictionary definition for anaerobic digestion as being "growing without air or requiring oxygen free conditions to live"; in addition he stated that if air is added then digestion is no longer anaerobic but rather aerobic. He added that, in his opinion, this further demonstrates that a septic tank cannot have air injected into it. Furthermore, he noted that agitating the tank goes against the principle of tank design in terms of solids settling. He also expressed a concern as to whether the task specific bacteria inoculation described by the Applicant is safe for groundwater and indicated that evidence had not been presented to attest to the safety of this practice.

The Respondent stated that he believes he has demonstrated that, in accordance with the Building Code definition, a septic tank performs anaerobic digestion without the addition of air. The addition of the White Knight™ unit introduces air into the septic tank and creates turbulence, in his opinion, the performance of the septic tank is reduced. Furthermore, in his view, the Applicant has not demonstrated that the performance of the tank is increased, in fact, he argued that the performance is decreased with the addition of air and therefore does not sufficiently comply with the requirements of the Building Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the installation of a septic field remediation technology known as the White Knight™ into an existing septic tank does not provide sufficiency of compliance with the Building Code when considering Part 11 and the definition of “septic tank” as outlined in Article 1.1.3.2. at 1358 Potter Drive, Manotick, Ontario.

6. Reasons

i) Article 11.3.1.1 of the Building Code allows for the alteration or repair of an existing building system where the performance level of the system remains at least equal to the performance level of the system prior to the alteration or repair. The Commission, however, is not satisfied, based on the evidence presented, that the introduction of this remediation technology into the septic tank will not adversely affect the intended operation and function of the system.

ii) The introduction of air into the septic tank may adversely impact this component of the system where the settling of solids and anaerobic digestion of sanitary sewage are to take place. Further, increased turbidity as a result of the agitation of effluent in the second chamber of the septic tank will impact settling and may have the effect of increasing the total suspended solids leaving the tank.

iii) Based on the performance data submitted as evidence, the Commission is not satisfied that this remediation measure will consistently function as intended to recover the leaching field.

iv) The proposal to install this remediation technology in an existing septic tank may be more appropriately considered and thoroughly evaluated by a body, such as the Canadian Construction Materials Centre (CCMC) or the Building Materials Evaluation Commission (BMEC).

Ruling No. 05-21-1035
Application No. 2005-15

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Regulation 403/97, as amended, (the Building Code).

AND IN THE MATTER OF an application by Lawrence Ryan, 1353837 Ontario Inc., for the resolution of a dispute with David Carroll, Chief Building Official, City of Stratford, involving the issuance of an Unsafe Order and whether a permit should be issued for the proposed construction of three non-load bearing demising walls to create a general store within an existing Group F, Division 3 major occupancy building at 105 St. Patrick Street, City of Stratford, Ontario.

APPLICANT	Lawrence Ryan 1353837 Ontario Inc.
RESPONDENT	David Carroll Chief Building Official City of Stratford
PANEL	Len King, Vice-Chair Ed Link Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	June 7, 2005
DATE OF RULING	June 7, 2005
APPEARANCES	Lawrence Ryan 1353837 Ontario Inc. **The Applicant** David Carroll Chief Building Official City of Stratford **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has attempted to apply for a permit under the *Building Code Act*, *1992*, and is proposing the construction of three demising walls within an existing building. Further, an Unsafe Order was issued on June 26, 2001 requiring that the Applicant remedy certain alleged deficiencies at 105 St. Patrick Street, City of Stratford, Ontario.

The subject building is comprised primarily of non-combustible construction with some combustible roof elements. The building is one storey in building height and approximately 16,815 m^2 (181,000 ft^2) in building area. The original building was constructed in 1907 with an addition constructed in 1949. At one time the structure was used for Group F, Division 1 occupancy purposes, primarily for the repair of railway engines. Upon discontinuation of that use, the building was, in the submission of the Applicant, classified as Group F, Division 3.

The current proposal is to construct three demising walls within the existing building that would facilitate the creation of a proposed general store having a Group E major occupancy classification and measuring approximately 190 m^2 (2,044 ft^2).

The dispute between the parties appears to involve several issues, including whether the Applicant may use the subject building for retail purposes at this time, whether sufficient information has been provided to the municipality pursuant to their municipal building by-law and whether the municipality was within its rights to issue an Unsafe Order dated June 26, 2001 and whether the Applicant has, or is required to, address the issues itemized in said Unsafe Order.

2. Provisions of the Building Code in Dispute

The parties did not identify any specific Building Code provisions in dispute in reference to the proposed construction of the three demising walls. Rather, the dispute appeared to involve the interpretation and implementation of the legislative requirements of the *Building Code Act, 1992*, specifically subsections 8(2) and 15(2) and (3) of the Act.

3. Applicant's Position

The Applicant summarized the history of the property advising that the building, known as the CNR Centre, is situated on a 14-acre property in the City of Stratford. He noted that the building is a "superstructure" built in 1907 and comprised of steel and concrete. It was his position that the property is fully serviced.

Aside from the four washrooms within the building, the Applicant noted that there are no other internal walls. His proposal is to construct three demising walls for the purpose of operating a general store in one section of the building. In this regard, he advised that he attempted to submit a building permit application to the City of Stratford for the proposed construction. He noted that the City refused to accept this application and, instead, provided him with a list of 23 items that must be dealt with before they would consider the matter further. The Applicant submitted that many of these items had nothing to do with the proposed demising walls. Further, he advised, the Chief Building Official (CBO) would not consider issuing a conditional permit to allow the construction of the walls while other issues were being resolved. The Applicant also noted that City staff are involved in litigation in regard to matters relating to this property and noted that other issues were to be resolved by the courts.

The Applicant noted the Respondent's position that no Building Code provisions were in dispute and suggested that, if this was the case, a permit should have been issued. He argued that the dispute should involve only the proposal for the creation of three, 12.2 m (40 ft) demising walls within a fully serviced, structurally sound building. He noted that he has responded to the CBO's request to remove other unsafe structures on the property and has focused his development on the main building. He advised that his engineering report confirms that there is no structural deterioration of this main structure.

In respect to the continued use of the building, the Applicant advised that the interior of the structure has been occupied for limited use and that part of the building is being used as an office. He noted that the structure is classified as F3, low hazard industrial. The general store would be a subsidiary use. In response to questioning, the Applicant argued that he was not proposing a change in occupancy, merely the construction of three demising walls. Further, he disputed the City's claim that the building is vacant, derelict and unserviced. He noted that systems are in place but needed some repair and remedial work. However, his current proposal would not require all systems to be functional.

The Applicant advised that he has attempted to meet with the City to discuss any unresolved issues but the City has refused to meet with him personally and, instead, has asked to meet with his architect and/or engineer. He argued that the City has unreasonably chosen not to process his building permit application and requested that the Commission rule on two points. Namely, that a building permit be issued in respect to the three non-load bearing walls as they comply with the Building Code and secondly, that the Unsafe Order issued on June 26, 2001 have no force and effect as it failed to provide details as to what remedial action was required to render the building(s) safe.

4. Respondent's Position

The Respondent submitted that the dispute essentially revolves around what constitutes a complete application and what information would be necessary for the municipality to process and fully consider an application for a building permit. He noted "(t)here are no Building Code provisions in dispute at this time because the City of Stratford does not currently have a permit application." He suggested that, by filing this application for hearing to the BCC, the Applicant was attempting to have the Commission rule that a permit application must be accepted for the construction of three non-load bearing demising walls to create a general store, despite the fact that the submission does not comply with the City of Stratford's municipal building by-law. In the opinion of the Respondent, this dispute goes beyond the jurisdiction of the Building Code Commission.

The Respondent noted that the municipality's building by-law requires the submission of a site plan, site service, mechanical and electrical drawings that have been stamped by a professional engineer, plus an engineering report addressing issues itemized in the Unsafe Order and two emergency orders that were issued against the subject property. He advised that, following an inspection some time ago, it was determined that the building was vacant and all systems had been stripped out. He suggested that there was barely a shell of a structure remaining, noting that holes in the roof had been observed.

To proceed with the proposed construction, the Respondent advised that staff would need to satisfy themselves of the safety of the structure, compliance with the Building Code and adherence to other applicable law by reviewing the appropriate documentation in accordance with the municipal building by-law. He stated that, as the Applicant did not have all requisite documentation when he initially attempted to file his permit application, staff advised him to obtain and submit the information before the application could be considered. In this regard, he

noted that municipal staff have offered to meet with the Applicant's architect and engineer to discuss what would be required for the general store proposal to proceed.

5. Commission Ruling

It is the decision of the Building Code Commission that, under subsection 24(1) of the *Building Code Act, 1992*, the Commission does not have the jurisdiction to make a determination on the subject dispute at 105 St. Patrick Street, City of Stratford, Ontario.

6. Reasons

a) Subsection 24(1) of the *Building Code Act, 1992* provides the Building Code Commission (BCC) with the jurisdiction to resolve disputes between the chief building official or building inspector and the applicant for a permit, holder of a permit or a person to whom an order has been given in connection with the *interpretation of, or sufficiency of compliance with, the technical requirements of the Building Code* (emphasis added). In this case, while the Commission recognizes that there is a dispute between the parties, it does not appear to be related to the technical requirements of the Building Code. Rather, the dispute results from provisions contained within the *Building Code Act, 1992* and the municipal building by-law.

b) The primary dispute appears to involve the actions of municipal officials and their application of municipal building by-law #67-2001 and provisions contained within the *Building Code Act, 1992*. The Building Code Commission, as noted above, has a very narrow jurisdiction outlined in subsection 24(1) of the Act. It cannot overrule or overturn the wording in a municipal building by-law in respect to what constitutes a complete application. Moreover, the BCC does not have the authority to issue building permits in place of a municipality nor make a determination that an Unsafe Order has no force or effect under the Act. Again, the mandate of the BCC is to make a determination on whether the technical construction requirements set out in the Building Code have been sufficiently satisfied.

c) It would appear that this dispute involves a question of law that may more appropriately be considered by the Courts under Section 25 of the Act or through some other mechanism as counsel for the parties may advise.

Ruling No. 05-22-1036
Application No. 2005-18

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 9.8.8.5.(1) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Allen Hovey, owner, to determine whether the as-constructed guardrail, consisting of metal pickets with decorative elements at their mid-points, around the main stairs in a one storey, Group C building provides sufficiency of compliance with Sentence 9.8.8.5.(1) of the Building Code at 738 Moore Avenue, City of Thunder Bay, Ontario.

APPLICANT	Allen Hovey Owner Thunder Bay, ON
RESPONDENT	Jim Buie Chief Building Official City of Thunder Bay
PANEL	Len King, Vice-Chair Ed Link Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	June 7, 2005
DATE OF RULING	June 7, 2005
APPEARANCES	Marianne Thompson Colonial Elegance Inc. Montreal, Quebec - and - Michael Lio Executive Director Ontario Railing Manufacturers Association **Agents for the Applicant** Warren Johnson Manager, Inspections City of Thunder Bay **Agent for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an order to comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 738 Moore Avenue, City of Thunder Bay, Ontario.

The subject building is a 1 storey Group C residential dwelling occupying a building area of 135 m^2. The house is built using combustible construction materials and is not equipped with a sprinkler system, fire alarm system or a standpipe and hose system.

The construction in dispute involves the design of the guard that has been installed around the landing of the main stair leading to the basement. The guard in question is constructed using 89 mm by 89 mm (3 ½ in by 3 ½ in) hemlock posts and a 94 mm (2 ½ in) wide oak handrail. The posts are bolted to the rim-joists. The pickets consist of wrought iron panels with decorative elements near the top and at the mid-point of the centre picket. Each wrought iron panel is screwed to the bottom of the handrail and to the floor. The panels measure 153 mm (6 in) in width and are constructed using 9.53 mm by 9.53 mm (⅜ in by ⅜ in) wrought iron pickets. Each panel consists of three pickets set approximately 76.2 mm (3 in) apart from the adjacent picket. The middle picket of the panel includes the first ornamental feature, located at approximately 386 mm above the walking surface. The "birdcage" is described as a twisted basket consisting of four 4.76 mm by 4.76 mm ($^3/_{16}$ in by $^3/_{16}$ in) rods. The clearance between the "birdcage" and the adjacent picket is 39.7 mm (1 ½ in). The second ornamental feature, located at approximately 730 mm above the walking surface, consists of a horizontal bar with ornamental scrollwork connecting the two outer pickets of the panel.

The Applicant contends that the as-installed guard does not facilitate climbing while the Respondent is of the opinion that the inclusion of two design features within the 800 mm non-climbing zone does facilitate climbing.

The issue at dispute between the Applicant and the Respondent is whether the as-installed guard provides sufficiency of compliance with Sentence 9.8.8.5.(1) of the Building Code.

2. Provisions of the Building Code in Dispute

9.8.8.5. Design to Prevent Climbing

(See Appendix A)

(1) *Guards* required by Article 9.8.8.1. and serving *buildings* of *residential occupancy* shall be designed so that no member, attachment or opening located between 100 mm and 900 mm above the floor or walking surface protected by the *guard* will facilitate climbing.

3. Applicant's Position

The Agent for the Applicant, Marianne Thompson, submitted that Colonial Elegance is headquartered in Montreal and is part of the Ontario Railing Manufacturers Association (ORMA). ORMA represents over 40 railing companies from across Ontario representing the large majority of railing installations in the province.

She stated that Colonial Elegance would not manufacture a product that had any liability associated with it and noted that the company has been manufacturing and selling staircase components to home improvement retailers for 30 years. She assured the Commission that there has never been an issue with any of their interior guards.

The Agent for the Applicant, Michael Lio, explained the difficulties faced by railing manufacturers across the province due to the inconsistency in interpreting the Building Code with respect to the issue of climbability. In his opinion the Building Code needs to be revised so as to address this inconsistency.

The Agent referred to Sentence 9.8.8.5.(1) and stated that the intent of this Sentence is not to prevent climbing but rather to not invite climbing. He then referred to BCC Ruling 02-03-858 which he felt was instructive as to how the Commission interpreted the Building Code. He referenced an analysis of the abilities of children at different ages and suggested that the prime concern would be with respect to children between the ages of 2 and 3 years. It was his submission that children younger than 2 years would not have the physical strength or coordination to climb up and over the guard and that older children, between the ages of 3 and 4 years, would possess better judgement and have an understanding of the danger associated with climbing the guard.

In examining the design of the guard in question, the Agent stated that the protruding elements do not create a ladder effect and indicated that the decorative scrollwork at the top of the railing does not provide enough space for a toehold. He noted that the “birdcage” element is positioned on the picket in such a way that the surface of the “birdcage” is angled downward approximately 55^{o} and is approximately 40 mm from the adjacent picket. It is his belief that as a result of the angling of the “birdcage”, a child would not be able to gain a toe hold on this element. He demonstrated using the guard in question that a toddler’s shoe does not fit between the vertical pickets. Furthermore, he stated that in order for the “birdcage” to be used as a toehold the child’s leg would have to be angled to an uncomfortable, if not impossible, degree. He also offered that he had reviewed literature on child injuries in the home and cited that garage doors and cabinetry cause more injuries than guards. The Agent admitted that the shoe used in his demonstration is not the standard to which guards should be held. He referred to the proposed code amendment regarding guards and stated that a 45 mm distance between pickets is acceptable. He further alleged that the guard in question meets all of the requirements contained in the proposed code amendment.

In summation, the Agent contended that this guard does not facilitate climbing nor does it provide a toehold for children between the ages of 2 and 3 years. He further claimed that a ladder effect is not present in this guard. He asked the Commission to consider that this guard has been installed in many locations, over the past 5 years, without incidence. He reiterated his opinion that the design of this guard does not facilitate climbing and therefore complies with the intent of the Code.

4. Respondent’s Position

The Respondent submitted that the two decorative elements in the design of this guard make the guard climbable. In his opinion, the “birdcage” located at the midpoint of the middle picket is spaced at 39.7 mm from the adjacent picket and creates a toehold which would facilitate climbing. He stated that the ornamental scrollwork, located within the 800 mm restricted area at the top of the guard, creates a handhold and further facilitates climbing.

The Respondent maintained that the guard is climbable and pointed to two areas of concern with respect to this guard. The “birdcage”, located at a height of 386 mm above the floor, is less than

40 mm from the adjacent picket and the ornamental scrollwork located at the top of the guard. The combination of these two elements, in the opinion of the Respondent, presents a toehold and a handhold, which facilitate climbing.

In summary, the Respondent contended that the guard does facilitate climbing and as such, does not meet the requirements set out in Sentence 9.8.8.5.(1).

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-constructed guardrail, consisting of metal pickets with decorative elements at their mid-points, around the main stairs in a one storey, Group C building does not provide sufficiency of compliance with Sentence 9.8.8.5.(1) of the Building Code at 738 Moore Avenue, City of Thunder Bay, Ontario.

6. Reasons

i) The ornamental “birdcage”, located approximately 386 mm above the floor or walking surface and within 40 mm from the adjacent baluster, provides a toehold, which facilitates climbing.

ii) The ornamental scrollwork, situated at 750 mm above the floor, is located within the restricted 100 mm – 900 mm area above the floor or walking surface. This design feature provides a handhold, which facilitates climbing.

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, to construct a multi-purpose sports arena, known as the Oshawa Sports and Entertainment Facility, at 90 Athol Street East, City of Oshawa, Ontario.

The Applicant is proposing the construction of an arena-type facility, which will be classified as having a Group A, Division 3 major occupancy, having a building area of approximately 10,500 m^2 and being two storeys in building height. The facility will be comprised of noncombustible construction and will be equipped with sprinkler, standpipe and hose, fire alarm systems. The arena will be constructed in accordance with Article 3.2.2.29. of the Building Code. Floors will be constructed as fire separations having a 2 hour fire-resistance rating and the mezzanine will be constructed as a fire separation having a 1 hour fire-resistance rating.

The arena is proposed to have a maximum seating capacity of approximately 5,590 persons, 4,223 persons in the lower concourse (stands) level and approximately 1,345 additional patrons located in the upper concourse (suites) level. It is also anticipated that an additional 1,650 seats could be accommodated on the central ice surface or “event floor” for concert venues, etc. During a centre stage concert, the facility will a have a maximum occupant load of approximately 7,500 persons, including staff, event performers, security personnel, etc.

The ice/event surface will be located at the basement level, the first storey will contain the lower concourse and the second storey will contain the upper concourse (suites). The principal entrance will be located at a mid-landing level and will provide access to all floor levels via open stairs. In addition, barrier-free access to all floor levels will be provided via an elevator. The architectural floor plans indicate that the facility will consist of two ice rinks with spectator stands (southwest and northeast) arranged in the configuration of an inverted “L” with common amenity areas in between. The ice surface located at the southwest side of the building is within a one storey portion of the building and includes a mezzanine. The size and area of the mezzanine will represent approximately 21% of the room/storey in which it is to be located. The construction and exiting for the mezzanine will comply with the requirements of the Building Code.

The ice surface located at the northeast side of the building will be provided with spectator stands around the entire perimeter and viewing sites on both the north and south sides. It is the proposed design of the northeast ice rink that is at the centre of this dispute. The architect for the Applicant has proposed that the seating layout, aisles, vomitories and exits for the northeast ice rink be designed to comply with the requirements for smoke-protected assembly seating of NFPA 101-2000, “Life Safety Code” and to provide smoke control in conformance with NFPA 92B, “Smoke Management Systems in Malls, Atria and Large Arenas” in lieu of complying with the requirements contained in Articles 3.3.2.3., 3.3.2.4., 3.4.3.4. and 3.4.4.1. of the Building Code.

The Applicant has indicated that the requirements of the Building Code do not adequately address large indoor facilities such as this, including seating layouts that typically involve aisles that dead end into dasher boards, long row lengths, open concourse and event floor seating.

The issue at dispute between the Applicant and the Respondent is whether the proposal to design the arena in conformance with the requirements of NFPA 101 and NFPA 92B provides sufficiency of compliance with Articles 3.3.2.3., 3.3.2.4., 3.4.3.4. and 3.4.4.1. of the Building Code.

2. Provisions of the Building Code in Dispute

3.3.2.3. Fixed Seats

(1) Except for the requirements of Article 3.3.2.7. for bench-type seats and except as required or permitted by Sentence (2) and Articles 3.3.2.9. and 3.3.2.10., fixed seats in places of assembly shall be

(a) attached or secured to the floor, platform or platform riser,
(b) provided with arms and back, and
(c) arranged in rows having an unobstructed passage not less than 400 mm wide measured horizontally between plumb lines from the backs of the seats in one row and the edges of the furthest forward projection of the seats in the next row in the unoccupied position.

(2) For fixed seats with backs and with folding tablet arms, the value of 400 mm required by Clause (1)(c) shall be measured when the tablet arms are in the use position, but is permitted to be measured in the stored position provided

(a) there are not more than 7 seats between any seat and the nearest aisle,
(b) the seats are located in a lecture hall or an auditorium used for instructional purposes, and
(c) the tablet arm, when raised manually to a vertical position, falls by the force of gravity to the stored position.

(3) Except as permitted by Sentences (4) and (5), aisles shall be located so that there are not more than 7 seats with backs or 20 seats without backs between any seat and the nearest aisle.

(4) The requirements of Sentence (3) do not apply if

(a) egress doorways are provided to serve both ends of rows of seats,
(b) each doorway referred to in Clause (a) serves not more than 3 rows of seats, and
(c) each row contains not more than 100 seats.

(5) The requirements of Sentence (3) do not apply if

(a) there are not more than 7 seats between any seat and the nearest aisle, where the seats are served by a single aisle,
(b) there are not more than 20 seats between any seat and the nearest aisle, where the seats are served by two aisles,
(c) each row has an unobstructed passage with minimum width of 400 mm plus 6.1 mm for each additional seat above 16 seats in the row, and
(d) the travel distance is not more than 45 m measured along the path of travel from any seat to an exit or to an egress doorway.

(6) Seating arrangements that do not conform to the requirements of Sentences (3) to (5) are permitted provided the standard of safety is not reduced and the time required for egress is not increased.

3.3.2.4. Aisles

(1) Except as required by Articles 3.3.2.7., 3.3.2.9. and 3.3.2.10., aisles leading to egress doors or exits shall be provided in conformance with Sentences (2) to (24) in places of assembly which contain fixed seats.

(2) In this Subsection, a converging aisle is an aisle into which the occupants of 2 or more aisles converge in travelling to an exit.

(3) An aisle shall terminate at
(a) a converging aisle,
(b) an egress doorway from the seating area, or
(c) an exit from the seating area.

(4) A converging aisle shall terminate at
(a) an egress doorway from the seating area, or
(b) an exit from the seating area.

(5) The minimum clear width of aisles shall be not less than 1 100 mm, except that the width is permitted to be reduced to not less than
(a) 750 mm if serving not more than 60 seats, and
(b) 900 mm if serving seats on one side only.

(6) The minimum clear width of each aisle shall be measured at the point in the aisle furthest from
(a) an egress doorway referred to in Clause (12)(a),
(b) an exit referred to in Clause (12)(b), or
(c) an exit referred to in Sentence (13).

(7) Except for an aisle serving bleacher seats, where rows of seats discharge into an aisle, the minimum clear width required by Sentence (6) shall be increased by 25 mm for each metre of length of the aisle measured in the direction towards an exit.

(8) The width of a converging aisle shall be not less than the required width of the widest aisle plus 50% of the total required width of the remaining aisles that it serves.

(9) If rows of seats discharge directly into the converging aisle, the width required by Sentence (8) shall be increased by 25 mm for each metre of length of the aisle where the rows of seats discharge into the aisle.

(10) The width of an egress doorway or an exit leading directly from the seating area shall be not less than the required width of the widest aisle or converging aisle plus 50% of the total required width of the remaining aisles and converging aisles that it serves.

(10.1) The requirements in Sentences (5) to (10) and Sentence (14) do not apply if
(a) the minimum clear width of an aisle is in accordance with Article 3.3.1.16., but is not less than 900 mm if serving seats on one side only,
(b) the minimum clear width of an aisle is in accordance with Article 3.3.1.16., but is not less than 1 200 mm if serving seats on both sides,
(c) the minimum clear width of a converging aisle is in accordance with Article 3.3.1.16., but not less than the width of the widest aisle leading to the converging aisle,

(d) the minimum clear width of an exit leading directly from the seating area is in accordance with Article 3.4.3.4.,
(e) except as provided in Clause (f), the minimum clear width of an egress doorway leading directly from the seating area is in accordance with Article 3.3.1.16., but not less than the required width of the aisle or the converging aisle leading to the doorway, and
(f) if more than one vomitory is provided
  (i) the minimum total clear width of the egress doorways leading from one vomitory is not less than the required width of the aisle or the converging aisle leading to the doorways, and
  (ii) the minimum clear width of egress doorways from additional vomitories is in accordance with Article 3.3.1.16.

(11) Except as provided in Sentences (11.1) and (11.2), dead-end aisles shall be not more than 6 m long.

(11.1) Dead-end aisles are permitted to be more than 6 m long, but not more than 10 m long if
(a) the seating area is separated from other seating areas and adjacent occupancies, including a corridor serving any seating area, by a fire separation in accordance with Sentences 3.3.2.2. (1) and (2),
(b) the travel distance is not more than 25 m measured along the path of travel from any seat to an exit, to an egress doorway or to an opening into a vomitory,
(c) at least one means of egress, comprising not less than 30% of the required exit capacity, is through an exterior exit, an exit stairway or a corridor not containing an occupancy,
(d) each row served by the dead-end aisle has a minimum unobstructed width of 400 mm plus 6.1 mm for each additional seat above 7 seats in a row, but not more than 550 mm,
(e) the minimum ceiling height above the seating area is 3 m,
(f) the activation of a fire detector or a sprinkler head in the seating area will
  (i) cause the shutdown of the projection system serving the seating area, and
  (ii) turn on the normal lighting in the seating area, and
(g) the floor area is sprinklered.

(11.2) Dead-end aisles are permitted to be more than 10 m long, but not more than 13 m long if
(a) the seating area is separated from other seating areas and adjacent occupancies, including a corridor serving any seating area, by a fire separation in accordance with Sentences 3.3.2.2. (1) and (2),
(b) the travel distance is not more than 25 m measured along the path of travel from any seat to an exit, to an egress doorway or to an opening into a vomitory,
(c) at least one means of egress, comprising not less than 30% of the required exit capacity, is through an exterior exit, an exit stairway or a corridor not containing an occupancy,
(d) each row served by a dead-end aisle has a minimum unobstructed width of 400 mm plus 6.1 mm for each additional seat above 7 seats in a row, but not more than 550 mm,
(e) the activation of a fire detector or a sprinkler head in the seating area will
  (i) cause the shutdown of the projection system serving the seating area, and
  (ii) turn on the normal lighting in the seating area,

(f) a voice communication system is installed in conformance with Article 3.2.4.22.,
(g) a smoke control system is installed to control movement of smoke in the seating area or a smoke exhaust system is provided so that, in the event of detection of smoke by a smoke detector in the seating area, air handling equipment is activated to extract air directly from the seating area at the rate of at least 6 air changes per hour, and
(h) the floor area is sprinklered.

(12) Where a seating area is separated as required by Sentences 3.3.2.2.(1) and (2) or 3.3.2.2.(8), the length of travel by any aisle shall be not more than 45 m measured from the most remote point of the aisle to
(a) an egress doorway in the required separation, or
(b) an exit leading directly from the seating area.

(13) Where a seating area is not required to be separated by Sentences 3.3.2.2.(1) and (2) or 3.3.2.2.(8), the travel distance shall be not more than 45 m measured from the most remote point of the aisle to an exit.

(14) Side aisles shall be not less than 1 100 mm wide if seating is provided in conformance with Sentence 3.3.2.3.(4).

(15) An aisle that has a slope not more than 1 in 8 shall not be stepped.

(16) An aisle that slopes more than 1 in 8 shall be stepped.

(17) The passageway between rows of seats served by a stepped aisle shall be level at right angles to the line of travel.

(18) The riser of a step in an aisle shall be
(a) not less than 110 mm high, and
(b) not more than 200 mm high.

(19) Variations are permitted in riser height provided
(a) the height of adjacent risers does not vary by more than 6 mm, and
(b) the depth of a tread or a platform in the direction of travel is not less than 430 mm.

(20) Steps in an aisle shall
(a) have a run not less than 230 mm exclusive of nosings,
(b) have a tread depth not less than 250 mm,
(c) extend to the adjacent rows of seats in a manner that will not create a hazard from tripping, and
(d) have a finish on the treads conforming to Sentence 3.4.6.1.(1).

(21) The location of every riser in an aisle shall be made apparent from both directions of travel by strategically placed lighting or contrasting marking stripes.

(22) A platform in an aisle shall be level, except that a slope not more than 1 in 50 is permitted for a platform that is not less than 430 mm deep in the direction of exit travel.

(23) If a step is used at the entry to a row of seats from a stepped aisle, an unobstructed platform not less than 800 mm square shall be provided adjacent to the aisle.

(24) The finish of the surface of a platform in or adjacent to a stepped aisle shall conform to Sentence 3.4.6.1.(1).

3.4.3.4. Exit Capacity

(1) Except as permitted by Sentence (3), the aggregate required width of exits serving floor areas intended for assembly occupancies, residential occupancies, business and personal services occupancies, mercantile occupancies, and industrial occupancies shall be determined by multiplying the occupant load of the area served by
- (a) 6.1 mm per person for ramps with a slope not more than 1 in 8, doorways, corridors and passageways,
- (b) 8 mm per person for a stair consisting of steps whose rise is not more than 180 mm and whose run is not less than 280 mm, or
- (c) 9.2 mm per person for
  - (i) ramps with a slope more than 1 in 8, or
  - (ii) stairs, other than stairs conforming to Clause (b).

(2) The aggregate required width of exits serving floor areas intended for care or detention occupancy shall be determined by multiplying the occupant load of the area served by 18.4 mm per person.

(3) The required width of means of egress serving a Group A, Division 4 occupancy shall be determined by multiplying the occupant load of the area served by
- (a) 1.8 mm per person for
  - (i) aisles,
  - (ii) stairs other than exit stairs, and
  - (iii) ramps and passageways in vomitories and exits, and
- (b) 2.4 mm per person for exit stairs.

3.4.4.1. Fire-Resistance Rating of Exit Separations

(1) Except as permitted by Sentences (2), (4), 3.3.5.4.(3), 3.4.4.2.(2) and 3.4.4.3.(1), every exit shall be separated from the remainder of the building by a fire separation having a fire-resistance rating not less than that required by Subsection 3.2.2., but not less than 45 min, for
- (a) the floor assembly above the storey, or
- (b) the floor assembly below the storey, if there is no floor assembly above.

(2) The fire-resistance rating of the fire separation referred to in Sentence (1) need not be more than 2 h.

(3) If an exit stair in an assembly hall or theatre serves more than one balcony level, the exit stair shall be separated from the remainder of the building in conformance with Sentence (1).

(4) The path of exit travel may lead from an exit door or exit enclosure through open air parking that is located below a roof or floor assembly that is part of the building served by the exit door or exit enclosure where
- (a) the portion of the path of exit travel that leads through the open air parking is not more than 9 m in length measured from the exit door to a point at ground level at the perimeter of the building,
- (b) measures are taken to prevent vehicles intended to park in spaces adjacent to the path of exit travel from encroaching on the path of exit travel, and

(c) an alternate means of egress not leading through the open air parking is available from the interior side of the door opening onto the path of exit travel through the open air parking area.

3. Applicant's Position

The Agent for the Applicant stated that, in his opinion, the standards for assembly occupancies set out in the Code do not adequately address large arenas of the type anticipated in this situation. Rather, the Code provisions apply more appropriately to smaller indoor areas or large outdoor venues. He contended that the Code had not been updated to address large arena designs.

The Agent maintained that it is impractical to comply with the requirements of the Code in a project such as is being undertaken here. In lieu of strict compliance with the Code, the Applicant has proposed to design the main arena seating bowl including open stairways with "smoke-protected" seating and egress routes in conformance with NFPA 101-2000 "Life Safety Code". The Agent argued that the proposed design, which would include compliance with NFPA 92B "Smoke Management Systems in Malls, Atria and Large Areas", would achieve sufficiency of compliance with the requirements outlined in the Building Code in respect to fixed seating, exits and vomitory widths. He referred to several other arenas throughout the province that have used this same concept for achieving an equivalent level of performance. He further advised that they have been involved with utilizing these design principles in the Air Canada Centre in Toronto, the Corel Centre in Ottawa, the John Labatt Centre in London and the arena for the Brampton Battalion.

The Agent, in his presentation, which was included as part of his submission, stated that smoke-protected seating and egress routes are required for a facility such as is being proposed. He indicated that NFPA 101 specifically addresses indoor assembly seating areas and that their proposal is to follow the requirements of NFPA 101 for seating layout, means of egress and smoke-protection. He explained that smoke-protection would be achieved by the inherent height and volume of the bowl and concourse in conjunction with an engineered smoke control system, which will be designed in conformance with NFPA 92B, "Smoke Management Systems in Malls, Atria and Large Areas." It is his opinion that such measures are not required under the literal application of the minimum Building Code requirements, however, they are necessary to achieve smoke-protected assembly seating and egress routes under the proposed application of NFPA 101 and NFPA 92B. These measures include smoke exhaust and make-up air provisions for the bowl and the concourse, as well as the provision of an emergency air supply to the exit stairs.

The Agent further advised that although the facility is not considered to be a high-rise building, many of the safety features generally applicable to high-rise buildings are also proposed for this facility. These features would include the provision of emergency voice communication, fire protection of electrical conductors, a 2 hour emergency power supply for life safety equipment, a central alarm and control facility, and an active fire alarm annunciator and control panel. These proposed measures are based on the application of NFPA 101 standards and would not be required under the provisions of the Building Code.

In response to being questioned as to whether it has been determined how long it would take to evacuate the building, the Agent indicated that it would take approximately 8 minutes.

The Agent argued that it is appropriate, in this instance, to use an alternate standard for areas where the requirements of the Code cannot reasonably be achieved. He asserted that by using NFPA 101 and NFPA 92B standards jointly with the Building Code, an equivalent level of life safety would be provided in lieu of the prescriptive requirements of the Code.

In summary, the Agent contended that the proposed egress system, which includes seating configuration, row width and aisle width, exits and access to exits, designed in accordance with NFPA 101, “Life Safety Code”, including the use of the main entry “open stair” as a means of egress provided with smoke-protection per NFPA 101 and NFPA 92B, and contained in a building equipped with a smoke management system conforming to NFPA 92B, “Smoke Management Systems in Malls, Atria and Large Areas” provides sufficiency of compliance with Articles 3.3.2.3., 3.3.2.4., 3.4.3.4. and 3.4.4.1. of the Building Code.

4. Respondent’s Position

The Respondent submitted that while he may agree, in principle, with the proposal, as presented, he is of the opinion that there is no authority under the Building Code for a Chief Building Official (CBO) to accept the alternative design. Section 2.7 of the Code provides for a CBO to accept alternative materials or systems as an equivalent but it does not provide for the acceptance of an alternative design.

In summation, the Respondent stated that the Municipality is satisfied that the smoke-protected seating proposed by the Applicant would provide an equivalent level of safety as would be achieved by conformance with the requirements of the Building Code. He maintained that the Municipality simply does not have the authority to accept a design as an equivalency.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed main arena seating bowl, in particular the seat configuration, row width, vomitory and aisle widths, exit capacity/width, fire separation of main entry/exit “open stair”, designed in accordance with NFPA 101-2000, “Life Safety Code” and NFPA 92B, “Smoke Management Systems in Malls, Atria and Large Areas”, provides sufficiency of compliance with Articles 3.3.2.3., 3.3.2.4.. 3.4.3.4. and 3.4.4.1. of the Building Code for the Oshawa Sports and Entertainment Consortium, 90 Athol Street East, City of Oshawa, Ontario, on condition that:

a) All requirements and/or provisions contained in NFPA Standard 101-2000, “Life Safety Code” are to be followed so as to provide smoke-protection for the seating and egress routes. NFPA 101-2000, specifically addresses large indoor assembly seating areas such as the proposed facility.

b) An engineered smoke control system designed in conformance with NFPA Standard 92B, “Smoke Management Systems in Malls, Atria and Large Areas” is to be installed so as to achieve smoke-protection for the seating and egress routes. This smoke control system will also address the open entry/egress stair at the suite level.

c) The exit stairs, which service the main bowl, are to be equipped with emergency pressurization.

d) Quick response sprinklers are to be installed in the concession areas.

e) The arena is to be equipped with emergency voice communication, a central alarm and control facility and a live graphic annunciator and control panel.

f) Critical electrical conductors are to be fire protected and critical wiring is to be electrically supervised.

g) A 2-hour emergency power supply is to be provided.

h) The aisles of the building are to be equipped with uniform treads and handrails.

i) Smoke detection is to be provided for the concourses.

j) The independent peer review, which was commenced by LMDG Building Code Consultants Ltd., is to continue so as to ensure that the requirements of NFPA 101-2000 and NFPA 92B are satisfied.

6. Reasons

i) Sufficiency of compliance with Articles 3.3.2.3., 3.3.2.4. and 3.4.3.4. of the Building Code will be achieved, for the arena seating bowl, through adherence to the provisions contained in both NFPA 101-2000 and NFPA 92B in respect of smoke protected arena seating and egress by fulfilling the conditions stated above.

ii) Sufficiency of compliance with Article 3.4.4.1. of the Building Code will be achieved, for the open main entry/exit stair design, based on the provision of an engineered smoke management system designed in accordance with NFPA 92B and by fulfilling the conditions noted above.

Ruling No. 05-26-1040
Application No. 2005-17

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 4.1.1.3.(1) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Beverly Hills Home Improvements, for resolution of a dispute with John DeVries, Chief Building Official, Town of Richmond Hill, to determine whether the proposed use of "Panelcraft™ Honeycomb Roof System" honeycomb sandwich panels in a sunroom provides sufficiency of compliance with Sentence 4.1.1.3.(1) of the Building Code at 42A Graydon Crescent, Town of Richmond Hill, Ontario.

APPLICANT	John Witten Beverly Hills Home Improvements Mississauga, ON
RESPONDENT	John DeVries Chief Building Official Town of Richmond Hill
PANEL	Tony Chow, Chair Susan Friedrich Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	July 7, 2005
DATE OF RULING	July 7, 2005
APPEARANCES	Bart Bremmers CraftBilt Materials Ltd. Markham, ON **Agent for the Applicant** Michael Janotta Deputy Chief Building Official Town of Richmond Hill **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, to construct sunroom addition to the existing dwelling at 42A Graydon Crescent, Town of Richmond Hill, Ontario.

The subject building is a two storey single detached dwelling comprised of combustible construction that is not equipped with a standpipe and hose system, fire alarm system or a sprinkler system.

The construction in dispute involves the proposed use of "Panelcraft™ Honeycomb Roof System" honeycomb sandwich panels to construct the roof of the sunroom addition. The roof panels are comprised of 114 mm (4½ in) thick sandwich panels with extruded "H" connectors, consisting of an aluminium outer skin, which is bonded to a cellulose honeycomb filler. The length of the panel, shown on the plan, from top of wall to ridge beam is 3.45 m (11 ft 4 in) and has a governing load condition of 80 lb/ft^2.

The Applicant feels that the sandwich panel is suitable for use as a roof and that the panel meets the serviceability and structural requirements of the Code. The Respondent's position is that the information provided was not adequate and therefore, the municipality was unable to accept a design based on Sentence 4.1.1.3.(1) of the Code.

2. Provisions of the Building Code in Dispute

4.1.1.3. Design Requirements

(1) Buildings and their structural members including formwork and falsework shall be designed to have sufficient structural capacity and structural integrity to resist safely and effectively all loads and effects of loads and influences that may reasonably be expected, having regard to the expected service life of buildings, and shall in any case satisfy the requirements of this Section.

3. Applicant's Position

The Agent for the Applicant explained the history of the dispute by saying that he is the manufacturer of the sandwich panels in question and that these types of panels have been selling for more than 25 years in Canada. The Applicant applied for a building permit in order to construct a sunroom addition using the "Panelcraft™ Honeycomb Roof System" and the permit was denied by the municipality. The reason for the Town of Richmond Hill's denial of the permit was, in the opinion of the Agent, due to the innovative design of the sandwich panels.

The Agent believes that the sandwich panels provide sufficiency of compliance with the requirements of the Building Code. He advised the Commission that he provided allowable load tables to the municipality when he applied for the building permit. The Agent explained that he became aware of the municipality's concern regarding the safety factor being used in March. He argued that he has worked with many engineering firms over the years and they have all been satisfied with using a safety factor of 1.5. It appears to the Agent that the Town of Richmond Hill is not satisfied with a safety factor of 1.5.

The Agent stated that Craft-Bilt retained the services of a third-party professional engineer to determine the appropriate safety factor and deflection to be used when building with aluminium

and it was determined that a safety factor of 1.875 is appropriate. As supported by the testimony of the professional engineer appearing at the hearing on behalf of the Applicant, the Commission was advised that the current version of CSA S157 “Strength Design in Aluminium”, “using a load factor of 1.5 and a resistance factor of 0.8, gives an overall factor of 1.875”. The Agent advised that, as result of this finding, new tests were performed and new load tables were prepared using the revised safety factor of 1.875. The panels used for testing are described as 3.7 m (12 ft) with extruded “H” connectors. According to the allowable load charts for honeycomb core sandwich panels, submitted to the Commission as Exhibit 7, a 114 mm (4½ in) thick honeycomb core panel with “H” stiffener results in a maximum allowable roof load (PSF) of 90 psf lbs per square foot.

The Agent also maintained that L/120 is adequate deflection. Originally the Agent had considered L/60 to be acceptable as competitors use L/60 and engineer designers use L/60 based on past experiences for aluminium. However, L/120 has been applied to this application in an attempt to be consistent with a BMEC authorization for a slightly different product. He also noted that the United States Building Code references L/120 as being adequate for aluminium.

When questioned as to how the product before this Commission differs from the product approved by the Building Materials Evaluation Commission (BMEC), the Agent responded by saying that the product approved by BMEC had a polystyrene core and this product has a honeycomb core.

In summary, the Agent argued that the substantial evidence submitted by the experts in attendance at the hearing on behalf of the Applicant supports his position that this proposal meets the requirements of the Building Code. In closing, he stated that he believes that he has shown that this product achieves sufficiency of compliance with the provisions of Sentence 4.1.1.3.(1).

4. Respondent’s Position

The Designate for the Respondent submitted that in his view the Applicant has not provided sufficient information to demonstrate the product complies with the provisions of the Code and therefore, the municipality was unable to issue a building permit.

The Designate explained that it was difficult to understand the data provided by the Applicant and advised that answers were not provided to the many questions that arose during the process of reviewing the permit application. The municipality was not convinced that the proposed use of the subject sandwich panels would provide the same level of safety as would be required by the Code.

The Designate elaborated by saying that deflection and safety is the main issue. He informed the Commission that the Applicant had used safety factors ranging from 1.5 up to 3 and the municipality sought clarification on what should be the appropriate safety factor. The Designate contended that a safety factor of 1.5 is not appropriate and claimed that a safety factor of closer to 3 would be more acceptable. He also noted that the municipality has never been provided with information regarding the durability of this product. Upon being questioned as to whether an 80 lb psf load had been agreed upon, the Designate agreed that this was the case.

In summation, the Designate indicated that the municipality was not comfortable with the data provided. He reiterated his opinion that the municipality had not received sufficient information to determine whether the use of the sandwich panels would achieve compliance with the requirements of the Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed use of “Panelcraft™ Honeycomb Roof System” honeycomb sandwich panels in a sunroom provides sufficiency of compliance with Sentence 4.1.1.3.(1) of the Building Code at 42A Graydon Crescent, Town of Richmond Hill, Ontario.

6. Reasons

i) The Commission was satisfied that the expert testimony, documentation and data provided by the Applicant, signed and sealed by a professional engineer, demonstrated sufficiency of compliance with Sentence 4.1.1.3.(1) of the Code.

ii) The proposed “Panelcraft™ Honeycomb Roof System” built using 114 mm (4½ in) thick sandwich panels with extruded “H” connectors, consisting of an aluminium outer skin which is bonded to a cellulose honeycomb filler, has been designed for a snow load accumulation of 80 psf lbs per square foot. The anticipated accumulation in this area of the province would be significantly lower than 80 psf.

iii) This decision is site-specific and only applies to the sunroom addition located at 42A Graydon Crescent, Richmond Hill, Ontario.

AND IN THE MATTER OF Articles 3.3.1.1. and 3.3.1.4., when considering Article 3.3.4.3. of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Avi Gottlieb, Avcon Construction Inc., for resolution of a dispute with Jim Laughlin, Deputy Chief Building Official, City of Toronto, to determine whether the proposed metal screen storage cubicles with wire-mesh roofs in a self-service storage facility located in the basement of a multiple occupancy building provides sufficiency of compliance with Articles 3.3.1.1. and 3.3.1.4., when considering Article 3.3.4.3. of the Building Code at 427 Parliament Street, City of Toronto, Ontario.

APPLICANT	Avi Gottlieb Avon Construction Inc Toronto, ON
RESPONDENT	Jim Laughlin Deputy Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Rick Florio Michael Steele
PLACE	Toronto, Ontario
DATE OF HEARING	August 4, 2005
DATE OF RULING	August 4, 2005
APPEARANCES	Leszek Muniak Larden Muniak Consulting Incorporated Toronto, ON **Agent for the Applicant** Prabhakar Mahant Manager, Plan Review City of Toronto **Designate to the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and proposes to use the basement level of an existing building for self-storage purposes at 427 Parliament Street, City of Toronto, Ontario.

The subject building is two storeys in building height plus basement level. It is comprised of combustible construction and has a building area of 1,003 m^2. The ground floor and the basement level of the building are fully sprinklered while only the eastern portion of the second floor level is sprinklered. The structure is equipped with a fire alarm system but not a standpipe and hose system. The floor assemblies between the ground floor and the second floor provide a 2 h fire-resistance rating and steel beams, joists and a metal floor deck are provided with 1 h rated spray fireproofing. All supporting columns have a fire resistance rating of 2 hours.

The building has a mixed-use occupancy classification and includes a Group C residential occupancy on the second floor, a Group E mercantile occupancy on the ground floor and subject to conditions, Group F, Division 2 – medium hazard industrial occupancy in the basement level (BCC Ruling 05-13-1027). The Applicant had previously appeared before the Building Code Commission regarding the proposed use of the basement level of this building as a self-storage facility. The Commission ruled that, subject to certain conditions, the basement level of the building could be used as an F2 self-storage facility.

The construction in dispute at this time involves the design of the self-storage facility. In particular, whether the tenant storage cubicles are to be considered suites and therefore required to be separated from adjoining cubicles by a fire separation having a fire resistance rating of 1 h in accordance with Article 3.3.1.1. and be provided with a public corridor in accordance with Sentence 3.3.1.4.(3).

The basement level of the building, where the self-storage area is to be located, has an area of 1,003 m^2. It is proposed that metal screen storage cubicles with wire-mesh roofs will be situated in the basement level to form individual storage units. The average cubicle size will be approximately 3 m by 3 m and there will be approximately 90 units in total.

All corridors between the cubicles are a minimum of 1.5 m wide. The individual cubicles are not fire-separated from one another nor is a public corridor being proposed. The entrance to the self-storage area is separate from the entrance for the residential occupancy. The floor assemblies above the basement level provide a 2 h fire-resistance rating and are constructed using concrete floor on a metal deck. Further, the stairs located in the basement level will be separated from the remainder of the building by a 2 h fire separation.

2. Provisions of the Building Code in Dispute

3.3.1.1. Separation of Suites

(1) Except as permitted by Sentences (2) and (3), each suite in other than business and personal services occupancies shall be separated from adjoining suites by a fire separation having a fire-resistance rating not less than 1 h.

(2) The fire-resistance rating of the fire separation required by Sentence (1) is permitted to be less than 1 h but not less than 45 min provided the fire-resistance rating required by Subsection 3.2.2. is permitted to be less than 1 h for

(a) the floor assembly above the floor area, or

(b) the floor assembly below the floor area, if there is no floor assembly above.

(3) Occupancies that are served by public corridors conforming to Sentence 3.3.1.4.(5) in a building that is sprinklered, are not required to be separated from one another by fire separations provided the occupancies are

(a) suites of business and personal services occupancy,

(b) fast food vending operations that do not provide seating for customers, and

(c) suites of mercantile occupancy.

3.3.1.4. Public Corridor Separations

(1) Except as otherwise required by this Part or permitted by Sentences (2) to (7), a public corridor shall be separated from the remainder of the building by a fire separation having a fire-resistance rating not less than 1 h.

(2) The fire-resistance rating of a fire separation between a public corridor and the remainder of a floor area is permitted to be less than 1 h but not less than 45 min provided the fire-resistance rating required by Subsection 3.2.2. is permitted to be less than 1 h for

(a) the floor assembly above the floor area, or

(b) the floor assembly below the floor area, if there is no floor assembly above.

(3) If a floor area is sprinklered, no fire-resistance rating is required for a fire separation between a public corridor and the remainder of the floor area provided the corridor does not serve a care or detention occupancy or a residential occupancy.

(4) If a floor area is sprinklered, no fire separation is required between a public corridor and the remainder of the floor area provided the public corridor

(a) is more than 5 m in unobstructed width, and

(b) does not serve

(i) a care or detention occupancy, or

(ii) a residential occupancy.

(5) If a floor area is sprinklered, no fire separation is required between a room or a suite and a public corridor that serves it provided the public corridor complies with Sentence 3.3.1.9.(6).

(6) A floor assembly of a public corridor above a crawl space that conforms to Sentence 3.2.2.9.(2) is not required to be a fire separation.

(7) If a floor area is sprinklered, no fire separation is required between a public corridor and a room containing water closets and lavatories provided the room and the public corridor are separated from the remainder of the floor area by a fire separation that has a fire-resistance rating not less than that required between the public corridor and the remainder of the floor area.

(8) The sprinkler system in Sentences (3), (4), (5) and (7) shall be electrically supervised in conformance with Sentence 3.2.4.9.(2) and, upon operation, shall cause a signal to be transmitted to the fire department in conformance with Sentence 3.2.4.7.(4) when the corridor serves a Group E or Group F, Division 1 or 2 occupancy.

3.3.4.3. Storage Rooms

(1) Sprinklers shall be installed in a storage room provided for the use of tenants in a residential occupancy within a floor area but not contained within a suite.

(2) Except as permitted by Sentence (3), a storage room referred to in Sentence (1) shall be separated from the remainder of the building by a fire separation having a fire-resistance rating not less than 1 h.

(3) The fire-resistance rating of the fire separation required by Sentence (2) is permitted to be less than 1 h but not less than 45 min provided the fire-resistance rating required by Subsection 3.2.2. is permitted to be less than 1 h for

(a) the floor assembly above the floor area, or

(b) the floor assembly below the floor area, if there is no floor assembly above.

3. Applicant's Position

The Agent for the Applicant submitted that the issue before the Commission is the design of the self-storage facility. In his opinion, the storage cubicles should not be considered as suites despite being leased/rented by individual tenants. His position was that there is only one tenant and that owns the self-storage facility. He compared the scenario to that of a flea market or executive office space. In the office scenario there is the company who leases a space and then divides the floor plate into individual offices. He maintained that the storage cubicles would always be under the full control of the landlord and likened the storage cubicles to storage lockers in residential occupancies. As such, it is his view that the cubicles should not be required to comply with Article 3.3.1.1. of the Code.

The Agent described the proposed layout of the cubicles within the basement level of the building as consisting of approximately 90 cubicles having wire-mesh roofs and roll-up type doors. The cubicles range in size with the largest cubicle being approximately 14 m^2 (150 ft^2). He noted that the corridors between blocks of cubicles will be 1.5 m wide.

The Agent maintained that the dispute is not with respect to contravention of the Code but rather that the Code does not specifically address a self-storage facility such as the one in this building. It is his belief that the self-storage cubicles should not be required to comply with Articles 3.3.1.1. and 3.3.1.4. Since this self-storage facility is located in the basement of a mixed occupancy building, he suggested that the area could be considered as similar to storage areas located in buildings of residential occupancy and that Article 3.3.4.3. of the Code should apply. Article 3.3.4.3. requires that a residential storage area be separated from the remainder of the building

by an adequate fire separation. He stated that an adequate fire separation would be provided in accordance with Article 3.3.4.3. of the Code. He explained that the facility will also have on-site supervision; access will be restricted to hours when supervision is available; it will be equipped with smoke detectors, and; no hazardous materials will be allowed to be stored in the facility. He added that the area is sprinklered and has 2 h rated floor assemblies.

In summation, the Agent stated that the Code does not address this specific self-storage facility and that Articles 3.3.1.1. and 3.3.1.4. of the Code do not apply in this case. It is his belief that an appropriate level of safety is achieved in the building with the additional safety measures previously noted. He compared this self-storage facility to that of a storage area in buildings of residential occupancy and stated that there will be no significant difference between this use and that of a storage area in a building of residential occupancy.

4. Respondent's Position

The Respondent submitted that the tenant storage cubicles should be considered individual suites and therefore are required to be separated from adjoining cubicles by a fire separation in accordance with Article 3.3.1.1. He further submitted that, in an F2 occupancy such as this, Sentence 3.3.1.4.(3) requires fire separations between public corridor walls and the remainder of the floor area.

The Respondent began by citing the definition of "suite" contained in Part 1 of the Code. In his view, the cubicles are considered suites and therefore are required to comply with Articles 3.3.1.1. and 3.3.1.4.

Article 3.3.1.1. requires a fire separation having a fire resistance rating of not less than 1 h. He cited Sentence 3.3.1.1.(3) as allowing some relief to Group D and Group E occupancies but stated that this does not apply to this particular facility as it is a Group F, Division 2 occupancy. In his opinion, the cubicles are required to comply with Article 3.3.1.1. and should be fire separated accordingly.

The Respondent indicated that Article 3.3.1.4. is also at dispute in this case. It is his view that 3.3.1.4.(3) applies to this facility because the area is sprinklered. Therefore a fire separation is required between a public corridor and the remainder of the floor; however, no fire resistance rating is required for the separation.

Further, the Respondent referenced Sentence 3.3.1.10.(1) as applying to this case as well. This would require doors opening into the corridor to swing on a vertical access. In responding to the Applicant's contention that Article 3.3.4.3. is the closest Code requirement that applies to this specific storage facility, the Respondent disagreed. He noted that the requirements contained within Article 3.3.4.3. apply only to storage rooms provided for the use of tenants in a residential occupancy. That is not the case here. He elaborated by saying that storage rooms in a residential occupancy would typically contain household storage items, while this facility is classed as a Group F, Division 2 occupancy and could contain such items as paper, furniture and tires. He does not believe this specific facility should be compared to storage rooms associated with a residential occupancy.

Summarizing his position, the Respondent reiterated his opinion that the storage cubicles are considered suites. Hence, a fire separation is required between the suites and also between the public corridor and the remainder of the floor area. In his opinion, the proposal does not comply with the requirements of Article 3.3.1.1. or Sentence 3.3.1.4.(3).

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed metal screen storage cubicles with wire-mesh roofs in a self-service storage facility located in the basement of a multiple occupancy building provides sufficiency of compliance with Articles 3.3.1.1. and 3.3.1.4., when considering Article 3.3.4.3. of the Building Code at 427 Parliament Street, City of Toronto, Ontario, on condition that:

a) The self-service storage facility shall be subdivided, by a fire separation having a 1 hour fire resistant rating, into areas not more than 500 m^2.

6. Reasons

i) The Commission is satisfied that, subject to the above noted condition along with the conditions imposed by BCC ruling number 05-13-1027, the proposal will achieve sufficiency of compliance with the provision of the Building Code.

DATE OF HEARING	September 22, 2005
DATE OF RULING	September 22, 2005
APPEARANCES	Roy Turner Atkins Group Corporation, Architects Mississauga, ON **Agent for the Applicant** John Kedzierski Senior Plans Examiner City of Niagara Falls **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at the Wolfgang Puck / Café Tutu Tango Restaurant, 6300 Fallsview Boulevard, City of Niagara Falls, Ontario

The subject structure is a 2 storey, Group A, Division 2 major occupancy building comprised of combustible construction. The facility, having a building area of 708.07 m^2, is equipped with a fire alarm system. Neither a standpipe and hose system nor a sprinkler system has been installed.

The construction in dispute involves the design of the guard which has been installed around the exterior patio seating area. The guard has been constructed with continuous horizontal members located between 140 mm and 900 mm above the level being protected by the guard. It is a required guard as the difference in grade is in excess of 600 mm. The guard is comprised of approximately ten 2.4 m (8 ft) panels between steel posts. The posts are constructed using 69.9 mm x 69.9 mm (2¾" x 2¾") steel tubing which is welded to a 152 mm x 152 mm (6" x 6") base plate. The panels are formed when the two posts are connected with 25 mm x 69.9 mm (1" x 2¾") steel tubing at the top and bottom of the posts, creating a frame-like structure for the horizontal and vertical members. The horizontal and vertical members are fabricated using 4.8 mm x 69.9 mm (3/16" x 2½") flat steel bars. The vertical members are positioned at 254 mm (10") on centre and the horizontal members are positioned at 69.9 mm (2¾") on centre.

It is the design of the guard and in particular whether the guard will facilitate climbing that is the centre of this dispute before the Building Code Commission.

2. Provisions of the Building Code in Dispute

3.4.6.5. Guards

(8) Unless it can be shown that the location and size of openings do not present a hazard, a guard shall be designed so that no member, attachment or opening located between 140 mm and 900 mm above the level being protected by the guard will facilitate climbing.

3. Applicant's Position

The Agent for the Applicant contended that since the guard protects the patio of a fine dining restaurant, patrons will be standing only when going to and from their tables and not standing at the guard/railing as in a "bar situation".

The Agent argued that Sentence 3.4.6.5.(8) of the Code states "unless it can be shown that the location and size of openings do not present a hazard". It is his position that the location of the subject guard within this fine dining restaurant does not present a hazard. He contended that any children would be accompanied and supervised by their parents, guardians or other responsible adult and it should not be expected that they would be allowed to climb the guard.

In summation, the Agent stated that the horizontal members are more closely spaced than the rungs of a ladder so it would not be an easy climb. He reiterated his position that the location of the guard within the restaurant and the use of the building as a fine dining establishment support his opinion that the guard does not present a hazard.

4. Respondent's Position

The Designate for the Respondent submitted that in his opinion the guard facilitates climbing. The continuous horizontal members located within the 140 mm to 900 mm restricted area above the level being protected by the guard provide toeholds that would facilitate climbing. He is looking to the Building Code Commission for a determination on this issue.

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-installed guard, serving a restaurant patio and having been constructed with several continuous horizontal members running throughout the height of the guard and, in particular, located between 140 mm and 900 mm above the level being protected, does not provide sufficiency of compliance with Sentence 3.4.6.5.(8) of the Building Code at Wolfgang Puck / Café Tutu Tango Restaurant, 6300 Fallsview Boulevard, City of Niagara Falls, Ontario.

6. Reasons

i) The design of the subject guard creates a ladder effect having continuous horizontal members located within the restricted 140 mm to 900 mm area above the level being protected by the guard. Each horizontal member is 4.8 mm ($^{3}/_{16}$ in) thick positioned at 69.9 mm (2 ¾ in) on centre creating both toeholds and handholds that would facilitate climbing.

ii) The difference in grade varies between 635 mm and 1219 mm, which is in excess of the 600 mm minimum distance in grade requiring a guard.

iii) The restaurant is adjacent to a road allowance with significant pedestrian traffic.

iv) The facility is currently considered an adult style restaurant, however, in time the facility could be used as a family style restaurant or other use for which no change of use permit would be required.

Dated at Toronto this **22nd** day in the month of **September** in the year **2005** for application number **2005-32.**

AND IN THE MATTER OF Sentence 9.8.5.2.(1) of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Robert Martin, Homeowner, for resolution of a dispute with Rocky Cerminara, Chief Building Official, City of London, to determine whether the as-constructed spiral stairs having a minimum run of less than 150 mm provides sufficiency of compliance with Sentence 9.8.5.2.(1) of the Building Code at 40 Mayfair Drive, City of London, Ontario.

APPLICANT	Robert Martin Homeowner London, ON
RESPONDENT	Rocky Cerminara Chief Building Official City of London
PANEL	Len King, Vice-Chair Neal Barkhurst Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	September 22, 2005
DATE OF RULING	September 22, 2005
APPEARANCES	Robert Martin Homeowner London, ON **The Applicant** Owen Clarke Manager of Inspections City of London **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Make Safe under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 40 Mayfair Drive, City of London, Ontario.

The subject building is a two storey single detached residence having a building area of approximately 90 m^2. The dwelling is of combustible construction and is not equipped with a sprinkler, standpipe and hose or a fire alarm system.

The construction in dispute involves the spiral stairs leading from the main floor family room to the office located in the basement. The building contains two staircases that provide access to the basement. The primary staircase meets the requirements of the Building Code while the spiral stairs are a secondary means of access to the basement level. It is the design and dimensions of the spiral stairs, in particular the run of the stairs, which is at issue in this dispute.

The as-installed stairs have a central column that is approximately 125 mm (5 in) in diameter with each riser having a tread width of approximately 710 mm (28 in). A latched gate has been installed at the top of the spiral stair. The Applicant and the Respondent have differing opinions on the measurements for the minimum run of the stairs. The Applicant believes the minimum run to be 150 mm (5 ⅞ in). The Respondent maintains that the minimum run is less than the required 150 mm. The minimum run is measured at the portion of the tread where the stair dimensions are reduced as the curved stair converges to a central post. The requirements prescribed in Article 9.8.5.2. of the Code would apply to the stairs that are the centre of this dispute before the Commission.

2. Provisions of the Building Code in Dispute

9.8.5.2. Curved Stairs not in Exits

(1) Except as permitted in Article 9.8.5.3., a curved stair not required as an exit shall have an average run of not less than 200 mm and a minimum run of 150 mm and shall have risers conforming to Article 9.8.3.1.

3. Applicant's Position

The Applicant submitted that the issue at dispute is the run of the spiral stairs. He stated that the parties are in agreement that these stairs are secondary stairs and that the requirements prescribed in Article 9.8.5.2. of the Code are applicable.

The Applicant contends that the stairs comply with the requirements contained in the Code. He referred to a series of photographs (Exhibit 5), which depict the as-built staircase. He described the width of the treads as being 710 mm (28 in) and indicated that photograph #1 demonstrates that the run of the stairs measured at a distance 241 mm (9 ½ in) from the outer stair railing results in a run of 200 mm (7 ⅞ in). It is the opinion of the Applicant that this photograph demonstrates that the stairs sufficiently comply with the average run requirement of 200 mm (7 ⅞ in) as prescribed by the Code.

The Applicant stressed that the stairs are secondary stairs and provide for an easy transition from the main floor family room to the office located below. He further claimed that the stairs will not be used for everyday family life and that the only reason to use them would be to access the

office. He went on to describe a swinging, locking gate that has been installed at the top of the stairs. The Applicant referenced two previous Building Code Commission rulings, which dealt with run requirements of spiral stairs and maintained that the current situation before the Commission is similar. He cited both of the previous cases which resulted in sufficiency of compliance rulings and suggested that, in his opinion, this case should also result in a sufficiency of compliance ruling.

In summation, the Applicant stated that the stairs do not pose a safety risk and that the locking gate, which has been installed at the top of the stairs, provides an additional safety feature. He expressed his opinion that the 710 mm (28 in) width of the risers provides sufficient tread to allow for safe and easy travel from the family room to the office. He reiterated his belief that the stairs, as constructed, achieve sufficiency of compliance with the requirements of the Code.

4. Respondent's Position

The Respondent submitted that the spiral stairs, as installed, do not comply with the provisions contained in Sentence 9.8.5.2.(1) of the Building Code. He explained that the main issue with the stairs is the minimum run requirements. The Code stipulates that curved stairs not required as an exit shall have a minimum run of not less than 150 mm and the Respondent indicated the as-constructed stairs do not comply with this provision.

The Respondent explained the history of the dispute to the Commission stating that the Applicant applied for a building permit for an addition to his home in 1998, the permit drawings included spiral stairs. The municipality advised the Applicant that the spiral stairs shown on the plans would not meet the requirements of the Building Code. The plans were then revised by the Applicant to indicate a curved stair design and the permit was issued. The work for the addition was completed in 2001 without the curved stairs being installed and the permit was closed off. The Building Division received a complaint in April 2005 regarding stairs being installed without a building permit. In May 2005, an Order to Make Safe was issued by the municipality to the Applicant and shortly thereafter the Applicant filed this application with the Building Code Commission.

The Respondent outlined the municipality's position by explaining that the as-installed stairs do not comply with the prescriptive requirements of the Code with respect to the minimum run requirements. He went on to say that the municipality could not waive the minimum run requirements. He added that the inspector who attended at the property believes that the Applicant measured the tread width of the stair and not the minimum run. This could account for the different measurements submitted by the Applicant and the Respondent. According to the measurements taken by the inspector, the minimum run is substantially less than 150 mm (5 ⅞ in). A measurement of 60 mm (2 ⅜ in) is indicated on the Respondent's diagram of the stairs, although it appears from the diagram that the stair treads narrow further as they converge to the central post.

The Respondent summarized his position by stating that the stairs do not comply with the requirements of the Code as stated in Sentence 9.8.5.2.(1) as a minimum run of 60 mm is significantly less than the 150 mm requirement prescribed in the Code.

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-constructed spiral stairs having a minimum run of less than 150 mm does not provide sufficiency of compliance with Sentence 9.8.5.2.(1) of the Building Code at 40 Mayfair Drive, City of London, Ontario.

6. Reasons

i) Sentence 9.8.5.2.(1) of the Code requires a minimum run of 150 mm (5 ⅞ inches). The minimum run provided is substantially less than the required 150 mm (5 ⅞ inches).

ii) The only compensating measure proposed was the installation of a locking gate at the top of the stair, which, in the Commission's opinion, was not considered adequate compensation for a stair that does not meet the minimum set of construction requirements outlined in the Code.

AND IN THE MATTER OF an application by Albert Ashley, Stone Mansion Inc., for resolution of a dispute with Bruce Poole, Chief Building Official, City of Guelph, to determine whether the construction of a third floor loft area, which includes open stairwells from the second floor to the third floor loft area, provides sufficiency of compliance with Clause 9.9.9.1.(1)(a) and Sentence 9.9.9.1.(2) of the Building Code at 22 Oxford Street, City of Guelph, Ontario.

APPLICANT	Albert Ashley Stone Mansion Inc. Guelph, ON
RESPONDENT	Bruce Poole Chief Building Official City of Guelph
PANEL	Len King, Vice-Chair Neal Barkhurst Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	September 22, 2005
DATE OF RULING	September 22, 2005
APPEARANCES	Albert Ashley Stone Mansion Inc. Guelph, ON **The Applicant** Tammy Hogg Plans Examiner City of Guelph **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received a permit under the *Building Code Act*, *1992*, and has constructed a loft space above the existing second storey of a three unit dwelling at 22 Oxford Street, City of Guelph, Ontario.

The subject building is an existing Group C residential dwelling containing three dwelling units and having a building area of approximately 225 m^2. The dwelling is comprised of combustible construction and is not equipped with standpipe and hose, sprinkler or fire alarm systems. The building is divided into three residential suites. One side of the building contains a single, two storey dwelling unit (Unit 3) while the other side of the building contains two dwelling units. The main floor contains a one storey unit (Unit 1) and the upper floor, directly above Unit 1, contains a second dwelling unit, (Unit 2).

The construction in dispute involves the Applicant's proposal to construct loft space above the existing second storey dwelling unit (Unit 2), which will be accessed by open stairs, effectively creating a third storey within the building.

The construction of the third storey loft area creates a situation whereby occupants of the third storey loft area of Unit 2 would be required to travel more than one storey to reach a level served by an egress door or exit. Article 9.9.9.1. of the Code addresses travel limits to exits or egress doors for dwelling units. Clause 9.9.9.1.(1)(a) states that every dwelling unit containing more than one storey, as is the case in Unit 2, shall have exits or egress doors located so that is not necessary to travel more than one storey to reach a level served by an egress door to a public corridor, enclosed exit stair or exterior passageway. The third storey loft area, in this instance, is served by an open stair leading down to the egress door located on the first storey of the building.

Sentence 9.9.9.1.(2) states that where a dwelling unit is not located above or below another suite, as is the case with Unit 3, the travel limit from a floor level in the dwelling unit to an exit or egress door is permitted to exceed one storey, provided that floor level is served by an openable window or door. The openable window or door is required to provide an unobstructed opening of not less than 1,000 mm in height and 550 mm in width, and is to be located so that the sill is not more than 1,000 mm above the floor and not more than 7 m above the ground level.

The issue at dispute between the parties is whether the proposal to provide an unenclosed stair to access the third storey loft area of Unit 2 provides sufficiency of compliance with Clause 9.9.9.1.(1)(a) and Sentence 9.9.9.1.(2) of the Code.

2. Provisions of the Building Code in Dispute

9.9.9.1. Travel Limit to Exits or Egress Doors

(1) Except as provided in Sentences (2) and (3), every dwelling unit containing more than 1 storey shall have exits or egress doors located so that it shall not be necessary to travel up or down more than 1 storey to reach a level served by

(a) an egress door to a public corridor, enclosed exit stair or exterior passageway, or

(b) an exit doorway not more than 1 500 mm above adjacent ground level.

(2) Where a dwelling unit is not located above or below another suite, the travel limit from a floor level in the dwelling unit to an exit or egress door is permitted to exceed 1 storey where that floor level is served by an openable window or door

(a) providing an unobstructed opening of not less than 1 000 mm in height and 550 mm in width, and

(b) located so that the sill is not more than

(i) 1 000 mm above the floor, and

(ii) 7 m above adjacent ground level

3. Applicant's Position

The Applicant submitted that he took ownership of the property in February 2005 and described the building as containing five dwelling units at that time. He stated that the building was constructed sometime between 1852 and 1870 and told the Commission that the building has a heritage designation.

The Applicant advised the Commission that the building was in a state of disrepair at the time of purchase and of his intention to restore the building. He further advised that in March 2005 the final tenant vacated the building and he began renovating and restoring the structure.

The Applicant explained that he proposed to renovate the building so that it would contain three separate dwelling units. He described his proposal to renovate so that one side of the building would contain a single, two storey dwelling unit (Unit 3) while the other side of the building would contain two dwelling units of one storey each. The main floor is to contain a one storey unit (Unit 1) and the upper floor, directly above Unit 1, is to contain a second dwelling unit, (Unit 2). Upon beginning construction, the Applicant stated that he noted there was sufficient room to create a loft space for Unit 2. He indicated that an open stair was constructed to access the loft area. It is his opinion that the open stair is more visually appealing than an enclosed stair and advised that this design is more in keeping with the heritage designation of the building. Upon being questioned as to the heritage designation, the Applicant confirmed that historical preservation covers the exterior of the building only.

The Applicant directed the Commission to pictures of the construction, which were included as part of Exhibit 5 submitted by the Applicant, specifically pointing to photos which depicted possible alternate routes of egress from the dwelling units. He further stated that he believed that some of the interior renovations have resulted in upgrades which, in his opinion, provide additional safety to the occupants of the dwelling units.

In response to questions regarding what was previously constructed with respect to the third level of the building, the Applicant advised that the third storey loft area was newly constructed and did not exist previously.

In summation, the Applicant suggested that the requirement to provide an enclosed stair is not in keeping with the historical character of the building and reiterated his opinion that the changes made to the units have made the building safer than it was before the renovations.

4. Respondent's Position

The Designate for the Respondent submitted that the construction of the loft area creates a situation where it is necessary to travel more than one storey to an egress door or enclosed exit stair as required by Sentence 9.9.9.1.(1) of the Building Code. In the opinion of the Designate, Sentence 9.9.9.1.(1) of the Code clearly states that it shall not be necessary to travel more than one storey to an egress door or enclosed exit stair. Therefore, in her opinion, the construction contravenes the requirements of the Building Code.

The Designate informed the Commission that alternative options were discussed with the Applicant. She reported that the Applicant was advised that in order to comply with the requirements of Clause 9.9.9.1.(1)(a) of the Code, an enclosed exit stair from the second floor dwelling unit (Unit 2) must be provided. She added that a further option was available for Unit 3, as it is not located above or below another dwelling unit, and that was the option to provide an openable window that would be in conformance with the requirements outlined in Sentence 9.9.9.1.(2).

Summarizing the Respondent's position, the Designate stated that creating the third storey loft in Unit 2 results in a situation where it becomes necessary to travel more than one storey to an enclosed exit stair or an egress door. She maintained that the Code requirements at issue are very clear and specific; therefore, an enclosed exit stair is required to be provided for the second floor dwelling unit (Unit 2). She restated that there is the further option of providing an openable window meeting the requirements of Sentence 9.9.9.1.(2) for Unit 3.

5. Commission Ruling

It is the Decision of the Building Code Commission that the construction of a third floor loft area, which includes open stairwells from the second floor to the third floor loft area, does not provide sufficiency of compliance with Clause 9.9.9.1.(1)(a) and Sentence 9.9.9.1.(2) of the Building Code at 22 Oxford Street, City of Guelph, Ontario.

6. Reasons

i) The proposal does not comply with the minimum set of construction requirements outlined in the Building Code. No compensating measures were proposed to offer a sufficient level of compliance with the Building Code requirements.

ii) Compliance with the Building Code requirements could be readily achieved.

Ruling No. 05-45-1059
Application No. 2005-16

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Part 8 of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Stuart Blaber, homeowner, for resolution of a dispute with Mark Green, Chief Building Official, Leeds, Grenville & Lanark District Health Unit, to determine whether the proposed home effluent pasteurization system provides sufficiency of compliance with Part 8 of the Building Code at 576 Slack Road, Township of Athens, Ontario.

APPLICANT	Stuart Blaber Homeowner Athens, ON
RESPONDENT	Mark Green Chief Building Official Leeds, Grenville & District Health Unit
PANEL	Judy Beauchamp, Chair-Designate Jim Wilkinson Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	October 6, 2005
DATE OF RULING	October 6, 2005
APPEARANCES	Stuart Blaber Homeowner Athens, ON **The Applicant** Mark Green Chief Building Official Leeds, Grenville & District Health Unit **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Comply under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 576 Slack Road, Athens, Ontario.

The subject building is a solar powered residential dwelling having a finished area of approximately 65 m^2. The dwelling is served by a drilled well and situated on a property having area of approximately 3.2 hectares (8 acres).

The dispute before the Commission is two-fold. The first issue is related to the construction of a Class 5 (holding tank) sewage system, as was indicated in the Order to Comply. This holding tank has been installed without the benefit of the required permit and, according to the Respondent, does not comply with the requirements of the Building Code. The Building Code prohibits the use of Class 5 sewage systems except in specific circumstances. The second issue centres on the Applicant's intent to use the holding tank as part of a "home effluent pasteurization" system, which is being developed by the Applicant.

The proposed "home effluent pasteurization" system is an innovative design that would consist of three main components: a sewage-holding tank, a batch pasteurizer and a potable water heat exchanger. The sewage-holding tank will collect the raw wastewater from all household drains and will include a cutter blade that will break up paper and soft solids. Level sensors in the tank will start and stop the pump when appropriate. The batch pasteurizer will consist of a high temperature, tri-purpose circulation and emptying pump, three level sensors, an electric heater and specially designed control valves with leak detection. The system will also be equipped with an audible alarm system, which will sound an alarm and turn the interior water supply off in the event of an alarm condition. While it is possible to manually turn off the alarm sound, the system cannot be restarted until the alarm condition has been resolved.

It is the Applicant's intent to heat the wastewater to a significant degree for a specified period so as to pasteurize it and thereby eliminate all pathogens. The system is also proposed to be equipped with a special sensor to monitor the holding tank for volatile liquids such as paint thinners and gasoline. If such solvents are detected, it is intended that the system will shut down until such time as the solvents are removed.

There is no associated filter or leaching bed for the distribution of effluent following the pasteurization process. The treated effluent, referred to by the Applicant as potable water, would be collected in a cistern for distribution as an on-site "top dressing".

The proposed use of this home effluent pasteurization system as an alternative to the types of systems prescribed in Part 8 of the Building Code is the main focus of this dispute. The Leeds, Grenville & District Health Unit has not approved the use of this system, as, in the opinion of the Chief Building Official, the Applicant has not proven that the system will provide the level of performance that would be achieved by conformance with the requirements of Part 8 of the Building Code.

2. Provisions of the Building Code in Dispute

Part 8 – Sewage Systems

(Please see Part 8 of the Building Code)

3. Applicant's Position

The Applicant stated that he does not want to pollute the environment and he firmly believes that it is not the intention of the Code to force the general public to pollute the environment. He explained that, in his opinion, septic waste could be reused and indicated that he had been working on a system that would accomplish this task.

The Applicant said that he believes his submission had been well presented though he was hoping to be able to provide the Commission with some test results of his system. He contended that his proposal will work and that his submission included the opinion of a doctor who had performed significant work in the field of solar pasteurization in foreign countries. His research indicated that pasteurization should make the wastewater safe. The Applicant indicated that his property is located close to a stream, and the heavy clay soil on his property is not suitable for a septic system. He added that he cannot afford to install a septic system and noted that the existing Code compliant system did not work very well.

The Applicant remarked that there are a number of problems with traditional septic systems, as regulated by the Building Code. He referred to various articles, which were included in his submission, as being supportive of his argument that a septic system may not be the best solution. Two points that he referenced as being relevant were the lack of snow coverage threatening to freeze septic systems and that many countries are starting to ban septic systems. He indicated that his proposal to pasteurize wastewater would be a viable alternative to standard septic systems.

When questioned by the Commission as to whether he had explored the process of obtaining approval for treatment units with the Building and Development Branch, the Applicant advised that he had not. Nor had he examined other routes to approval for innovative technology.

In response to the suggestion that he may consider putting his pasteurization system in front of a standard septic system with a leaching bed, the Applicant argued that this would still pollute the land. He claimed that a standard septic system is not safe as far as he is concerned and that it is not a viable option for him. When questioned as to whether the proposed pasteurization system includes a disinfection procedure, the Applicant responded that there could be one included but that he was trying to avoid using chemicals, and that the heating of the wastewater would kill all of the pathogens. He insisted that the output would be 99.999% pure following treatment.

In summation, the Applicant reaffirmed his position that he is against any kind of sewage system that would pollute the environment and that he is trying to improve environmental conditions. The Applicant indicated that he had applied for a permit to install a holding tank and was turned down by the Municipality. He reiterated his desire to work with the Municipality in order to achieve some type of agreement. He stated that he believes his innovative system has some merit and should not be dismissed lightly. The Applicant contends that he should be permitted to use his system so as to verify that it works and argued that the Municipality should be supportive of his desire to clean up the environment.

4. Respondent's Position

The Respondent submitted that the Applicant had installed a homemade holding tank, which does not comply with the requirements of the Building Code and which was installed without the benefit of a permit. He claimed that greywater was being disposed of onto the surface of the ground and, as such, an Order to Comply was issued to the Applicant. The Order to Comply directed the Applicant to apply for a permit to install a Class 1, 2, 3, or 4 sewage system in

accordance with the Building Code; to install the new system as per the approved design and to cease the use of the existing unapproved system. The Respondent added that the Applicant had submitted information pertaining to a "home effluent pasteurization" system, which the Chief Building Official (CBO) was unable to accept as an equivalent as the information submitted was insufficient to convince the CBO that the proposed system would provide the level of performance that would be achieved by conformance with the requirements of the Building Code.

As part of an historic review for this property, the Respondent advised the Commission that the Municipality had received a call from a concerned citizen which prompted the Respondent to visit the Applicant's property. The Respondent stated that once he attended the site, he was unsure as to what type of sewage system was being used so he arranged to meet with the Applicant at the property.

The Respondent indicated that during this meeting he noted that a holding tank had been installed without the benefit of a permit. The Respondent researched the Municipality's records and determined that a temporary building permit had been issued in 1977 for the construction of a residence and a second permit was issued in 1986 for the construction of a garage. Based on these two permits, he determined that the Applicant had applied for a temporary building permit to construct an experimental cottage which was to be heated with solar power and that no plumbing was to be installed. It was noted that, at the time of the construction of this cottage, a Class 1 system could have been installed and no permit for a Class 1 system would have been required.

The Respondent stated that he advised the Applicant on what type of sewage systems could be installed and he further advised that the holding tank, which had been installed, was not acceptable as it did not meet the requirements of Part 8 of the Building Code. Specifically, the Respondent advised that a Class 5 sewage system would not be acceptable but that the Applicant could apply for a permit to install a Class 1, 2, 3 or 4 sewage system.

The Respondent claimed that the Applicant proceeded with the installation of the Class 5 sewage system prompting the issuance of an Order to Comply on January 7, 2004. It was noted that a makeshift sewer line was crossing the yard and discharging into a holding tank. The Respondent advised the Commission that the Order to Comply has not been complied with to date and that the Applicant has continued with construction of his "home effluent pasteurization" system.

The Respondent submitted that he had reviewed the information submitted by the Applicant in respect of the proposed pasteurization system and was unable to accept the proposal as providing an equivalent level of performance to the requirements of the Building Code. He told the Commission that he had not been provided with any substantive test results or information on the proposed system, therefore, he was not satisfied that an equivalent level of performance would be achieved.

The Respondent contended that a Code compliant sewage system could be installed on the Applicant's eight acre property. He acceded that it may be necessary to import leaching bed fill to accommodate such a system, however, he was very confident that there was ample room to install a Code compliant sewage system.

In summary, the Respondent reaffirmed that it is his opinion that the property can support the installation of a Code compliant Class 1, 2, 3, or 4 system. He indicated that the Municipality is simply looking for the Applicant to comply with the requirements of the Building Code. He added that he has advised the Applicant, both in person and in writing, why the Municipality has not accepted the proposed "home effluent pasteurization" system as an alternative. He reiterated

that the Order to Comply, which was issued, clearly stated that “in the opinion of the Chief Building Official the proposed system has not been adequately tested and evaluated to establish whether it can provide the level of performance achieved by conformance with requirements of the Building Code.”

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed home effluent pasteurization system does not provide sufficiency of compliance as a secondary or tertiary treatment unit under Part 8 of the Building Code at 576 Slack Road, Athens, Ontario.

6. Reasons

i) The documentation, evidence and information provided by the Applicant was insufficient to support the claim that the proposed home effluent pasteurization system will provide an equivalent level of performance as would be achieved by conformance with the requirements of the Building Code.

ii) No long-term empirical test data was provided to support the Applicant’s claims as to the systems performance.

iii) The *Safe Drinking Water Act* provides for the control and regulation of drinking-water systems and drinking-water testing. The Building Code Commission does not have jurisdiction over the provisions contained in the *Safe Drinking Water Act.*

iv) Article 8.8.1.2. of the Building Code prohibits the installation of holding tanks except in specific circumstances. None of these explicit circumstances apply in the proposal presented in this case.

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 9.8.5.2.(1) of the Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Don Geldart, Homeowner, for resolution of a dispute with Wib Bethune, Chief Building Official, Township of Seguin, to determine whether the as-installed spiral staircase having a minimum run of 82.5 mm provides sufficiency of compliance with Sentence 9.8.5.2.(1) of the Building Code at 75 Sunset Cove, Parry Sound, Ontario.

APPLICANT	Don Geldart Homeowner Mississauga, ON
RESPONDENT	Wib Bethune Chief Building Official Township of Seguin
PANEL	Len King, Vice-Chair Gary Burtch Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	November 3, 2005
DATE OF RULING	November 3, 2005
APPEARANCES	Don Geldart Homeowner Mississauga, Ontario T**he Applicant** Peter Shoebottom Deputy Chief Building Official Township of Seguin **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received a permit under the *Building Code Act*, *1992*, and has constructed a set of spiral stairs at 75 Sunset Cove, Parry Sound, Ontario.

The subject building is a two storey Group C seasonal residential dwelling having a building area of 69.7 m^2. The dwelling is comprised of combustible construction and is not equipped with fire alarm, sprinkler or standpipe and hose systems.

The construction in dispute involves the spiral stairs that have been installed to provide access to the second storey loft of the dwelling. The plans submitted for permit indicated the original design of the stair to be a straight run rather than the curved type of stair that was installed.

According to the inspection report, the stairs are comprised of a central column that is approximately 350 mm (14 in) in diameter with each tread measuring approximately 890 mm (35 in) from the central column to the outside railing. Each tread measures 82.5 mm (3¼ in) in depth at the point closest to the central column, 228 mm (9 in) at the midpoint of the tread and approximately 400 mm (15¾ in) in depth at the outermost point near the handrail.

It is the minimum run of the as-installed stair that is the centre of this dispute between the Applicant and the Respondent. The Applicant submitted that the minimum run of the stair was measured to be 128 mm while the Respondent claimed that the minimum run of the stair was measured to be 82.5 mm.

The Building Code by virtue of Sentence 9.8.5.2.(1) would require the stairs to provide a minimum run of 150 mm and an average run of not less than 200 mm. The minimum run of the stairs in question, as reported by both the Applicant and the Respondent, is less than the required 150 mm.

2. Provisions of the Building Code in Dispute

9.8.5.2. Curved Stairs not in Exits

(1) Except as permitted in Article 9.8.5.3., a curved stair not required as an exit shall have an average run of not less than 200 mm and a minimum run of 150 mm and shall have risers conforming to Article 9.8.3.1.

3. Applicant's Position

The Applicant submitted that he applied for a building permit to construct a seasonal dwelling and that a stair leading from the first storey to the second storey was included in the original permit drawings. He acceded that the stairs, as shown on the permit drawings, were designed differently than what was installed. He informed the Commission that he was not aware that Building Code requirements pertained to internal features.

The Applicant advised that once he became aware that the stairs did not comply with the requirements of the Code, he made an attempt to modify the stair treads in order to comply with the Code requirements. He explained that he had fashioned a metal step that would sit on top of the original stair tread, and that he hoped that this would address the issue of the minimum run.

In response to being questioned as to the width of the tread from the post to the outer railing, the Applicant stated that it measures 889 mm (35 in), adding that it is 25 mm (1 in) more than the Code would require. Upon being asked whether there were any spatial constraints within the building that would prohibit installing Code compliant stairs, the Applicant replied that there was no issue with space but that it was more of a personal preference to install the more attractive spiral stair.

4. Respondent's Position

The Designate for the Respondent submitted that stairs do not meet the minimum requirements of the Building Code. He stated that the original permit plans included a set of conventional straight run stairs from the first floor to the second floor loft area. He advised that spiral stairs had been installed instead of the conventional stairs and that, upon inspection, it was determined that the stairs did not meet the Code requirements for minimum run. It is the opinion of the Designate that the as-installed stairs do not provide proper access to the second storey as they do not meet the Code requirements.

The Designate acceded that the Applicant was willing to work on modifying the stairs in order to bring the stairs into compliance with the Code requirements; however, neither the Applicant nor the Respondent could find a way to modify the stairs so as to make them Code compliant. He noted the Applicant's proposal to add a fabricated stair tread but submitted that this would not address the issue of minimum run. While the addition of the metal steps results in a deeper tread, it does not alter the minimum run of the stair and, therefore, the modifications have not been accepted as achieving compliance with Article 9.8.5.2. of the Code.

In summary, the Designate declared that curved stairs pose a safety concern for emergency service personnel at the best of times. He reiterated that the stairs do not comply with the requirements of the Building Code with respect to the minimum run and therefore, it is his opinion that the stairs pose a safety hazard.

5. Commission Ruling

It is the Decision of the Building Code Commission that the as-installed spiral staircase having a minimum run of 82.5 mm and an average run of 241 mm does not provide sufficiency of compliance with Sentence 9.8.5.2.(1) of the Building Code at 75 Sunset Cove, Parry Sound, Ontario.

6. Reasons

i) The minimum run of the existing staircase is substantially less than the minimum run requirement of 150 mm as prescribed in the Building Code.

ii) There were no compensating measures proposed to offset the substantial deviation from the Code requirements.

iii) The original drawings included a staircase that was compliant with the Code. There were no evident construction difficulties present in the building, which would prevent the construction of a staircase complying with the Code requirements.

Dated at Toronto this 3rd day in the month of November in the year 2005 for application number 2005-58.

PANEL	Tony Chow, Chair Rick Florio Susan Friedrich
PLACE	Toronto, Ontario
DATE OF HEARING	January 12, 2006
DATE OF RULING	January 12, 2006
APPEARANCES	Judy Jeske Morrison Hershfield Limited Ottawa, Ontario **Agent for the Applicant**
	Henri Diotte Program Manager, Permit Approval City of Ottawa **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has applied for a permit under the *Building Code Act*, *1992*, and is proposing to construct a residential townhouse development known as The Moorcroft. The three units subject to this dispute are located at 100, 102, and 104 Bellwood, City of Ottawa, Ontario.

The proposed buildings will be comprised of combustible construction, and will not be equipped with fire alarm, standpipe and hose, or sprinkler systems. The structures will have a Group C major occupancy classification.

The proposed development will consist of five individual dwelling units, separated by a party wall, on a site bounded by Bellwood Avenue, Willard Street and Scotia Place in the City of Ottawa. It is proposed that two of the buildings will include one or more townhouse unit designs that incorporate a "loft" area above the third storey. The Applicant describes the buildings as being three storeys in building height, while the Respondent describes them as being four storeys in building height. This discrepancy in building height forms part of the dispute between the parties.

The units in question will contain a partial crawl space beneath a ground floor. The ground floor will include the main entry, den and private parking garage. The second level will contain the primary living quarters with the bedrooms being located on the third level. The "loft" area is proposed to be used as an additional den, family room or an open concept sleeping room. The "loft" area is described by the Applicant as a partial floor at level four of the dwelling. It is this proposed "loft" area that is at the centre of this dispute.

It is the Applicant's contention that the buildings are considered three storeys in building height with a "mezzanine" loft. The Respondent considers the buildings to be four storeys in building height and construction would therefore be required to comply with the design requirements of Part 3 of the Building Code.

If the "loft" area is considered to be a mezzanine, as per the Applicant's submission, the building would be considered to be three storeys in building height and the provisions of Part 9 of the Building Code would be applicable. If the "loft" area is considered to be a separate storey, as per the Respondent's reasoning, the building would be considered a four storey building and would then have to comply with the requirements set out in Part 3 of the Building Code. The differences in Building Code design requirements for Part 3 vs Part 9 are quite significant.

The issue at dispute between the parties is whether the proposed fourth level "loft" area provides sufficiency of compliance with the definition of "mezzanine" contained in Sentence 1.1.3.2.(1) and with the provisions of Sentence 9.10.4.1.(2) of the Building Code.

2. Provisions of the Building Code in Dispute

1.1.3.2. Defined Terms

(1) The words and terms in italics in this Code have the following meaning for the purposes of this Code, and where indicated, the following meaning for the purposes of the Act as well.

Mezzanine means an intermediate floor assembly between the floor and ceiling of any room or storey and includes an interior balcony.

9.10.4.1. Mezzanines not Considered as Storeys

(2) Mezzanines shall not be considered as storeys for the purpose of determining building height where they occupy an aggregate area not exceeding 40% of the area of the room or the storey in which they are located provided the space above the mezzanine floor has no visual obstructions more than 1 070 mm above such floors.

3. Applicant's Position

The Agent for the Applicant submitted that the "loft" area of the subject units has been designed as a mezzanine that meets the provisions of Sentence 9.10.4.1.(2) of the Building Code. In support of the claim that the "loft" meets the requirements of Sentence 9.10.4.1.(2), the Agent argued that the aggregate area of the mezzanine does not exceed 40% of the room or the storey in which it is located. Further, she advised that the space above the mezzanine floor has no visual obstructions more than 1 070 mm above the mezzanine floor. The Agent stated that although bathrooms are shown in dashed lines on the drawings submitted, this issue is separate and apart from the scope of this application to the Building Code Commission (BCC). She stated that the Applicant is not pursuing a ruling from the BCC that includes bathrooms on the loft level. She suggested that the fundamental issue was deciding whether the "loft" area provided sufficiency of compliance with the Part 9 mezzanine requirements. The bathroom concept, she advised, may become an issue later but it is not part of the dispute before the Commission.

The Agent proposed that the "loft" area be treated as a mezzanine that complies with the provisions of Sentence 9.10.4.1.(2) of the Code. She stated that the Applicant has always deemed the "loft" area to be a mezzanine as, in the opinion of the Applicant, it meets the definition of mezzanine. A mezzanine is defined in the Code as being an intermediate floor assembly between the floor and ceiling of any room or storey. The Agent maintained that the "loft" area is an intermediate floor assembly above the floor of the third storey and therefore should be considered a mezzanine.

The Agent stated that the City had indicated that the "loft" area could not be considered a mezzanine as it did not have visual continuity to the floor below. In response to this argument, the Agent claimed that the requirement for visual continuity to the floor below is limited to Sentence 3.2.8.2.(1) only and does not, in her opinion, apply to 40% mezzanines under Part 9 of the Code. However, in an effort to address the City's concerns regarding life safety, the Applicant proposed to install interconnected smoke alarms in each room on the storey above and below the "loft" area, except for bathrooms and closets, as well as installing a smoke alarm in the corridor on the third storey and in the open area of the "loft". Further, the fire separation between the affected units and all other units will be upgraded to provide a minimum 1 ½ hour fire resistance rating. In this regard, the Agent believed that the City's life safety concerns involving visual continuity would be addressed.

In summation, the Agent asserted that, even though the Applicant believes that the proposed design already meets the requirements of the Building Code, the additional measures proposed would ensure sufficiency of compliance with the requirements of the Building Code. She reiterated her belief that the "loft" area should be considered a mezzanine meeting the definition outlined in Sentence 1.1.3.2.(1) and the provisions detailed in Sentence 9.10.4.1.(2) of the Code. She reaffirmed her position that the subject building is a three storey building with a mezzanine and therefore falls within the provisions of Part 9 of the Code. She added that the proposal to install smoke alarms and upgrade the fire separation between affected units addresses the life safety issues raised by the City and, therefore, the Agent believes that sufficiency of compliance has been achieved.

4. Respondent's Position

The Designate for the Respondent submitted that the dispute centres on the proposed "loft" area to be located on the fourth level of three of the Applicant's townhouse units. He advised that the City reviewed the plans and drawings submitted for building permit. The City determined, contrary to the Applicant's position, that the proposed "loft" area should be considered as a fourth storey and not a mezzanine.

The Designate submitted that, in the City's opinion, the proposed "loft" design did not meet the provisions of Sentence 9.10.4.1.(2) with respect to visual obstruction. He added that, based on this determination, the "loft" area should be considered a storey for the purposes of building height and, therefore, the building must comply with the provisions of Part 3 of the Code.

The Designate stated that the plans examiner reviewed the drawings submitted and established that the garage area is at grade and, therefore, would be considered the first storey. The kitchen and media area are located on the second storey, the bedrooms on the third storey and the proposed "loft" area is on the fourth level of the building. He explained that based on this review, the City determined the "loft" area to be the fourth storey of the building.

The Designate referenced the definition of mezzanine as outlined in the Code and when questioned as to whether the "loft" area is an intermediate floor area, the Respondent replied that, in his opinion, the "loft" is enclosed, except for the stairway, and therefore it is not considered an open mezzanine. He drew the Commission's attention to the phrase "provided the space above the mezzanine floor has no visual obstructions more than 1 070 mm above such floors" contained in Sentence 9.10.4.1.(2) of the Code, and stated that, in the City's opinion, the proposed loft has visual obstructions. He went on to say that the Code does not define what constitutes a visual obstruction but the City is of the opinion that a mezzanine should provide a view to the floor below. He commented that the intent of the Code is for mezzanines to provide an open view so that a fire, either above or below, would be apparent to all occupants. He reasoned that the proposed design lacks visual continuity to the floor below and, therefore, would not provide the occupants of the "loft" area with the ability to gather sufficient information by sight, sound or smell, that a fire was present on the storey below.

In response to being asked to confirm that the "loft" has one wall with a balustrade that is open to below, the Designate acknowledged that there is a wall with a balustrade but argued, even with this balustrade for the stair, an unobstructed view of the floor below is not provided.

The Designate summarized the City's position by saying that the "loft" area cannot be considered a mezzanine as it does not meet the prescriptive requirements of the Code with respect to visual obstructions. He reiterated that the "loft" area is fully enclosed on three sides of the perimeter of the area with a balustrade along the stairwell. In the opinion of the City, the buildings are considered four storeys in building height and, as a result, the provisions of Part 3 of the Code must be applied.

5. Commission Ruling

It is the Decision of the Building Code Commission that the 4th level "loft" design in a residential townhouse development provides sufficiency of compliance with the definition of "mezzanine" contained in Sentence 1.1.3.2.(1) and with the provisions of Sentence 9.10.4.1.(2) of the Building Code at The Moorcroft, 100, 102 and 104 Bellwood Avenue, City of Ottawa, Ontario, on condition that:

a) Interconnected smoke alarms shall be installed in each room, except bathrooms, on the storey immediately below the "loft". This is in addition to the smoke alarms in the

corridor on the 3rd level and in the open area of the “loft”.

b) The fire separation between the affected units and all other units shall be upgraded to provide a minimum 1½ hour fire resistance rating.

6. Reasons

i) The aggregate area of “lofts” does not exceed 40% of the storey in which they are located.

ii) The provision of additional smoke alarms and the increased fire resistance rating of the fire separation between the affected units enhances the performance of the “loft”.

iii) There are no visual obstructions above 1070 mm of the floor of the individual “lofts”.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Subsection 3.2.2.45. of Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Michele Farley, FCS Fire Consulting Services Ltd., for resolution of a dispute with Brian Gass, Chief Building Official, Town of Penetanguishene, whether the existing Group C residential condominium building consisting of a below grade parking garage and four levels of residential suites, where a close proximity sprinkler system is proposed to compensate for the deficient fire resistance rating of the exterior load bearing walls, provides sufficiency of compliance with Section 3.2.2.45. of the Building Code at 4 Beck Boulevard, Town of Penetanguishene, Ontario.

APPLICANT	Michele Farley FCS Fire Consulting Services Ltd. Innisfil, ON
RESPONDENT	Brian Gass Chief Building Official Town of Penetanguishene
PANEL	Len King, Vice-Chair Gary Burtch Gerry Egberts
PLACE	Toronto, Ontario
DATE OF HEARING	January 19, 2006
DATE OF RULING	January 19, 2006
APPEARANCES	Michele Farley FCS Fire Consulting Services Ltd. Innisfil, ON **The Applicant** Brian Gass Chief Building Official Town of Penetanguishene **The Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an order and applied for a permit under the *Building Code Act*, *1992*, to remedy certain deficiencies at 4 Beck Boulevard, Town of Penetanguishene, Ontario.

The subject building, having a building area of approximately 1,100 m^2, is a 26 unit, Group C residential condominium building consisting of a below grade parking garage and four levels of residential suites. The structure is equipped with standpipe and hose and fire alarm systems as well as a partial sprinkler system. The subject building has been constructed with a timber roof assembly, and as such, is comprised of combustible construction.

The building in question was constructed in 2001, with an occupancy permit being issued in 2002. The original construction permit application and plans described the subject building as being a five storey residential building intended to be designed and constructed in accordance with the requirements of Article 3.2.2.43. of the Building Code. In October 2003, an independent building audit revealed a number of Building Code deficiencies. The Agent for the Applicant does not dispute the deficiencies and many of the issues have been satisfactorily addressed.

There are two remaining issues at dispute, the first being a determination of whether the building, as-constructed, can be considered four storeys in building height. It is the Applicant's opinion, based on reviews by the builder's architect, civil engineer and surveyor, that it is a four storey building required to meet the requirements of Article 3.2.2.45. of the Code. The Respondent describes it as a five storey building as per the plans submitted for the original building permit. This difference of opinion is germane to the dispute before the Commission because the requirements of Articles 3.2.2.43. and 3.2.2.45. differ significantly. Article 3.2.2.43. requires the building to be of non-combustible construction while Article 3.2.2.45. allows a building to be constructed of combustible material. Both Article 3.2.2.43. and 3.2.2.45. require load bearing walls to have a 1 hour fire resistance rating. Article 3.2.2.45. requires the building to be sprinklered and does not require a rating for the roof, while Article 3.2.2.43. does not require the building to be sprinklered but does require a rating for the roof assembly.

Assuming the building in question can be considered a four storey building required to comply with the requirements of Article 3.2.2.45. of the Building Code, the issue then becomes whether the close proximity sprinkler system proposed to compensate for the deficient fire resistance rating of the exterior load bearing walls provides sufficiency of compliance with the intent of the Building Code.

2. Provisions of the Building Code in Dispute

3.2.2.45. Group C, up to 4 Storeys, Sprinklered

(1) A building classified as Group C is permitted to conform to Sentence (2) provided

(a) except as permitted by Sentence 3.2.2.7.(1), the building is sprinklered,

(b) it is not more than 4 storeys in building height, and

(c) it has a building area not more than

(i) 7 200 m^2 if 1 storey in building height,
(ii) 3 600 m^2 if 2 storeys in building height,
(iii) 2 400 m^2 if 3 storeys in building height, or

(iv) 1 800 m^2 if 4 storeys in building height.

(2) The building referred to in Sentence (1) is permitted to be of combustible construction or noncombustible construction used singly or in combination, and

(a) except as permitted by Sentences (3) and (4), floor assemblies shall be fire separations with a fire-resistance rating not less than 1 h,

(b) mezzanines shall have a fire-resistance rating not less than 1 h, and

(c) loadbearing walls, columns and arches shall have a fire-resistance rating not less than that required for the supported assembly.

(3) In a building that contains dwelling units that have more than 1 storey, subject to the requirements of Sentence 3.3.4.2.(2), the floor assemblies, including floors over basements, which are entirely contained within these dwelling units, shall have a fire-resistance rating not less than 1 h but need not be constructed as fire separations.

(4) In a building in which there is no dwelling unit above another dwelling unit, the fire-resistance rating for floor assemblies entirely within the dwelling unit is waived.

3. Applicant's Position

The Applicant began by describing the history of this building and how the matter has been brought to the Commission. The building was designed by an architect, plans were submitted to the building department, a permit was issued, the building was constructed as per the plans submitted, required municipal inspections were made, occupancy permits were applied for and granted and the building permits were cleared. Subsequently, an independent audit revealed construction deficiencies and these deficiencies were brought to the attention of the municipal building department. An Order (as to Unsafe Condition) was issued by the municipality as a result of the deficiencies identified during the independent audit. The builder then retained FCS Fire Consulting Services Ltd. (the Applicant) to facilitate an agreement with the Chief Building Official in regards to addressing the construction deficiencies identified.

The Applicant stated that the builder wants to rectify the identified deficiencies, adding that most of them have been addressed. She detailed the steps that have been taken so far in order to rectify the situation. She stressed that the building is an existing building that is currently occupied. As a result, the builder is trying to rectify the deficiencies so as to ensure life safety without causing extensive disruption to the residents.

The Applicant argued that the existing building is consistent with the design parameters of a four storey building, as confirmed through survey and third party architectural review, and therefore Article 3.2.2.45. of the Code should be applicable to the design of the building. This Article would allow for the use of either combustible or non-combustible construction material, meaning that the roof assembly with the wood sheathing would be permitted to remain. This Article also requires the entire building to be sprinklered, the Applicant conveyed that the entire building will be sprinklered as required. In addition, the Applicant proposed that close proximity sprinkler heads be installed and directed at all load bearing walls having a deficient fire resistance rating in order to compensate for the inadequate fire resistance rating of those walls. In addition, the Applicant advised the Commission that the building will be fully sprinklered, including the attic and that the design of the sprinkler system exceeds Building Code and NFPA 13R requirements.

In summation, the Applicant reiterated that documentation from an independent architect and survey has confirmed that the existing building is in fact a four storey structure required to

comply with Article 3.2.2.45. of the Code, allowing the combustible roof assembly to remain. She suggested that the proposal to provide close proximity sprinkler heads within the building at all deficient exterior load bearing walls improves building safety, exceeds Code requirements and further contributes to the effectiveness of the suppression system as a compensating measure. The Applicant argued that the proposal will improve the safety without being intrusive and disruptive for the residents, and that, in her opinion, sufficiency of compliance would be achieved.

4. Respondent's Position

The Respondent stated that it is incumbent on the designing architect to demonstrate to the authority having jurisdiction, through design and supporting documentation, that the building design will be compliant with the chosen 3.2.2. classification and all other applicable code provisions relating to the design of the building. He explained that the drawings on file classify the building as a five storey building required to comply with the provisions of Article 3.2.2.43. of the Building Code. He further explained that the existing building does not comply with Article 3.2.2.43. requirements as the building includes a combustible roof assembly and the exterior load bearing walls have a fire resistance rating of less than 1 hour.

The Respondent claimed that the municipality does not oppose the building being classified as a four storey building provided the appropriate plans and drawings are submitted by the architect responsible for the design. He indicated that the municipality previously advised the Applicant that an architect must provide a repair design and that part of that repair design would involve a 3.2.2. classification of the building by the architect.

With regard to the Applicant's proposal to address the deficient fire resistance rating of the exterior load bearing walls by incorporating close proximity sprinklers, the Respondent claimed that, in his view, a Chief Building Official is not empowered to authorize the replacement of required materials with a system. Furthermore, he advised that detailed design plans for the close proximity sprinkler system have not been submitted for consideration by the municipality.

Summarizing the position of the municipality, the Respondent reiterated that the Chief Building Official does not have the authority to allow the substitution of a system for a required material and therefore he could not accept the Applicant's proposal regarding close proximity sprinkler heads.

5. Commission Ruling

It is the Decision of the Building Code Commission that the existing Group C residential condominium building consisting of a below grade parking garage and four levels of residential suites, where a close proximity sprinkler system is proposed to compensate for the deficient fire resistance rating of the exterior load bearing walls provides sufficiency of compliance with Section 3.2.2.45. of the Building Code at 4 Beck Boulevard, Town of Penetanguishene, Ontario, on condition that:

a) The building, including the attic, shall be fully sprinklered. The sprinkler system shall be designed and installed in accordance with NFPA 13R.

b) The close proximity sprinkler heads, located at exterior load bearing walls having a deficient fire resistance rating, shall be designed and installed in accordance with NFPA 13.

c) In addition, sprinkler heads are to be installed in all washrooms and closets located on the penthouse level of the building.

d) The owner's engineer shall verify that the exterior walls are structurally adequate and not dependent on the interior drywall finish for structural integrity.

6. Reasons

i) The existing building is being upgraded by installing a sprinkler system throughout the building in accordance with NFPA Standard 13R and close proximity sprinklers, in accordance with NFPA Standard 13, along the exterior walls, which have recently been identified as not meeting the fire resistance rating requirements prescribed in the Building Code.

ii) The performance of the exterior walls, with respect to the fire resistance rating, will be improved by the installation of the close proximity sprinkler heads.

iii) The building is substantially non-combustible with the exception of the roof deck, which has been treated with a fire retardant spray. The Building Code would permit a four storey building to be comprised of combustible construction.

iv) The Fire Safety Plan will be revised to provide a permanent record of the sprinkler system close proximity provision as compensation for the exterior load bearing wall fire resistance deficiency.

v) A Fire Safety Plan box is installed in the building lobby and will include a copy of the Fire Department Accepted Plan. This is not required by the Building Code.

vi) The Fire Department will be made aware of the compensation measures and will be asked to include this information in the Operation Guideline for the Penetanguishene Fire & Emergency Services Response to 4 Beck Boulevard.

vii) The Board of Directors of 4 Beck Boulevard, Corporation SSCC#260, have agreed to develop a building evacuation plan and to train occupants on the evacuation plan.

viii) Each suite has a balcony in addition to the required means of egress.

ix) There is an existing fire route around the entire complex and a municipal fire hydrant located at the face of the building.

PLACE	Toronto, Ontario
DATE OF HEARING	March 23, 2006
DATE OF RULING	March 23, 2006
APPEARANCES	Andrew Rush Brite Manufacturing Inc. Bolton, ON **Agent for the Applicant** Stephen Barks Manager of Permits City of Barrie **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant is the owner of a Group C, residential dwelling and has applied for a permit under the *Building Code Act*, *1992*, to construct a backyard deck at 10 Brookwood Drive, City of Barrie, Ontario.

The subject dwelling is comprised of combustible construction material and is not equipped with standpipe and hose, fire alarm or sprinkler systems. The proposed deck is intended to be a 17.6 m^2 (190 sq. ft.) free standing deck and will not be connected to the dwelling. The deck will not be equipped with guards as it will be approximately 460 mm (18 in.) in height and, therefore, a guard would not be required. The deck is to be constructed on deck blocks attached to wooden joists. The substructure of the deck will be constructed using pressure treated dimensional lumber.

The construction in dispute involves the proposal to use a composite lumber product in place of conventional lumber for the walking surface of the subject deck. The walking surface of the deck is to be constructed using 5/4 inch hollow deck board product, referred to as Life Long Decking, manufactured by Brite Manufacturing Inc. Life Long Decking Material is a manufactured composite product that consists of approximately 50% wood fibre and 50% polyethylene.

The issue at dispute between the parties is whether the proposed use of “Life Long Decking” provides sufficiency of compliance with Parts 4 and 9 of the Building Code. The material proposed to be used for the walking surface of the subject deck has undergone testing by Intertek Testing Services. However, the material is not recognized by the Building Code nor has the product received approval from either the Canadian Construction Materials Centre (CCMC) or the Building Materials Evaluation Commission (BMEC).

2. Provisions of the Building Code in Dispute

Part 4 – Structural Design

(Please see Part 4 of the Building Code)

Part 9 – Housing and Small Buildings

(Please see Part 9 of the Building Code)

3. Applicant’s Position

The Agent for the Applicant stated that Brite Manufacturing (Brite) has spent two years in research and development of the subject composite decking material and has been manufacturing and selling this product for seven years. He indicated that Brite is currently undergoing an evaluation of this product with the Canadian Construction Materials Centre (CCMC). He stated that the CCMC process is quite lengthy, having taken approximately 18 months to two years so far with the process not yet complete. He added that there are a couple of tests, such as the 4000 hour weathering test, which are not yet finalized.

The Agent noted that the composite decking material has a good balance of properties. He indicated that the material typically outperforms construction grade softwood lumber in hardness, side compression, fastening strength, dimensional stability and durability but is weaker in

bending strength, stiffness, toughness and creep performance.

The Agent submitted that Intertek Testing Services has performed extensive testing on the composite decking material. He further submitted that other municipalities have accepted this product, based on stamped engineering drawings, as being equivalent to the Code requirements. As part of the Agent's presentation it was noted that the material has been tested for, among other things, fungi and decay; flame spread; resistance to termites; structural load, to determine deck board span; creep relaxation; mechanical fasteners; freeze-thaw resistance; durability; coefficient of friction; and moisture effect. Intertek Testing Services summarized their testing and indicated that, in the opinion of Intertek, the deck board in question sufficiently complies with the requirements of the Building Code.

In summary, the Agent stated that he believes that sufficient information has been presented to indicate that composite decking material provides sufficiency of compliance with the requirements of the Building Code and, therefore, an approval should be granted.

4. Respondent's Position

The Designate for the Respondent submitted that the proposed composite decking material is not a recognized material prescribed in either Part 4 or Part 9 of the Building Code. He further submitted that the Applicant has not provided the municipality with any information to show that the material has been approved for use by either the Canadian Construction Materials Evaluation Centre or the Building Materials Evaluation Commission.

The Designate stated that the composite material in question is new and innovative and that there are currently no established standards for such a product. He submitted that without prescribed tests, the municipality is not able to determine the equivalency of the product under Section 2.7 of the Building Code. He further submitted that the test results provided do not compare the composite material to a known product approved for use as a decking material by the Building Code.

The Designate suggested that the product should be evaluated by a body, such as CCMC, as this organization is designed for the testing and approval of new and innovative products.

The Designate summarized the City's position by stating that there is no mention of the subject composite decking material in the Building Code and, therefore, there are no standards or criteria outlined to which the product must be tested. He indicated that the municipality did not approve the material as an equivalent material as it was not, in the opinion of the Chief Building Official, shown to provide an equivalent level of performance that would be achieved by conforming to the requirements of the Building Code. He further stated that there may be other criteria that should be taken into consideration in respect of this material in order to determine whether the product will possess the necessary characteristics to perform as an equivalent to conventional lumber. He reiterated that this product is not mentioned in the Building Code and, therefore, his position is that the product should be fully assessed by a body designed to test and evaluate new and innovative material.

5. Commission Ruling

It is the Decision of the Building Code Commission that the proposed use of a composite lumber product, referred to as Life Long Decking System, for the exterior walking surface of the proposed deck serving a residential dwelling does not provide sufficiency of compliance with Parts 4 and 9 of the Building Code at 10 Brookwood Drive, City of Barrie, Ontario.

6. Reasons

i) The subject deck has been constructed using a new and innovative composite lumber material. Although the Commission recognizes that significant test data is available for this particular composite lumber product, and that the structural requirements of Part 4 of the Building Code may be satisfied through proper engineering, the Commission remains concerned with the performance of the subject decking in other areas.

ii) The Commission is cognizant of other considerations in relation to the sufficiency of compliance of this innovative product with the Building Code. These considerations include, but may not be limited to, the toughness of the material, creep and bending. Evidence was presented to suggest that the material is weaker in these areas than lumber regulated by the Code. Furthermore, in respect of Canadian Construction Materials Centre (CCMC) there may be other limitations with respect to this product in terms of point loads or interaction with commonly used substances such as sun block or bug spray.

iii) No documentation, drawings or specifications were submitted regarding the actual construction and installation of the subject deck. Furthermore, there was no evidence presented to suggest that the subject deck at 10 Brookwood Drive has been constructed in accordance with recommended manufacturer's guidelines or accepted engineering standards.

iv) Evidence was presented to confirm that the Life Long Decking System is currently being evaluated by CCMC and much of the CCMC testing has been completed for this product. The CCMC evaluation, however, is not yet complete and a final evaluation has not been prepared. The Commission cannot be assured that any evaluation report produced by CCMC would not limit or restrict the use of this product. Furthermore, the Commission heard evidence that the CCMC technical guides for similar (i.e. thermoplastic wood decking) products deem the composite lumber material to be equivalent to a subfloor sheathing and not equivalent to lumber decking. For use as exterior decking each of these innovative products may, or may not, involve additional specific terms and conditions best defined following a comprehensive evaluation by a body such as CCMC.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 9.8.8.1.(1) of the Regulation 403, as amended, (the Building Code).

AND IN THE MATTER OF an application by Roger Ball, EDB Financial Planners Inc., for resolution of a dispute with Ann Borooah, Chief Building Official, City of Toronto, to determine whether the 0.6 m wide stationary platform located at the rear of the garage, within which an automated platform operates, having been constructed without guards provides sufficiency of compliance with Sentence 9.8.8.1.(1) of the Building Code at 1840 Lakeshore Boulevard East, City of Toronto, Ontario.

APPLICANT	Roger E Ball EDB Financial Planners Inc Toronto, ON
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Tony Chow, Chair Gerry Egberts Rick Florio
PLACE	Toronto, Ontario
DATE OF HEARING	June 22, 2006
DATE OF RULING	June 22, 2006
APPEARANCES	Roger Ball EDB Financial Planners Inc. Toronto, ON **The Applicant** Martin Elksnitis Building Inspector City of Toronto **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant has received an Order to Remedy Unsafe Building under the *Building Code Act*, *1992*, to remedy certain alleged deficiencies at 1840 Lakeshore Boulevard East, City of Toronto, Ontario.

The subject building is a Group C residential dwelling. It is the garage of this residential dwelling that is the central location for the subject dispute. The garage is one storey in building height and has a 1.8 m deep "pit" below grade. The garage is approximately 20 m^2 in area and is comprised of combustible construction material.

The single car garage is equipped with a car elevating device which allows for occupants of the dwelling unit to park more than one vehicle within the garage. In the centre of the garage there is a below grade pit within which the automated platform operates and there is a stationary platform located at the rear of the garage. A car is driven into the garage and onto the automated platform. Occupants of the vehicle then exit the vehicle and proceed to the stationary platform located at the rear of the garage. Once the occupant is safely on the stationary platform, a key is used to activate the elevating device and the vehicle is lowered into the below grade pit. A second platform, located directly above the first platform, simultaneously lowers into place. Once the first platform has reached the bottom of the pit, the second platform is level with the garage floor and is available for a second car to be parked in the garage. When the platform is in motion and not level with the garage floor, there is a difference in elevation of more than 600 mm. In accordance with Sentence 9.8.8.1.(1) of the Building Code, where there is a difference in elevation of more than 600 mm between adjacent surfaces, every surface shall be protected by a guard.

The issue at dispute between the Applicant and the Respondent is whether a guard is required to protect the stationary platform located at the rear of the garage when the car elevating device is in motion.

2. Provisions of the Building Code in Dispute

9.8.8.1. Required Guards

(1) Except for the edges of floor pits in *repair garages* and loading docks, every surface to which access is provided for other than maintenance purposes, including but not limited to exterior landings, porches, decks, balconies, *mezzanines*, galleries, raised *walkways* and roofs, shall be protected by a *guard* on each side which is not protected by a wall and where there is a difference in elevation to adjacent surfaces of more than 600 mm.

3. Applicant's Position

The Applicant submitted that he believes, if a guard is required, the installation of the type of guard suggested by the municipality, creates difficulties with accessing the vehicles in the garage and the overall use of the garage. He referred to the pictures included in his submission and described the car elevating device as having two platforms which move up and down simultaneously. He informed the Commission that it takes approximately 45 seconds to elevate the platform from the below grade pit level to the level of the garage floor. In describing the daily use of the elevating device, he stated that the elevating device is used an average of three to

four times a day and therefore the platform is in motion approximately two to three minutes a day.

The Applicant agreed that safety may be a concern when the platform is in motion but maintained that the occupants of the dwelling unit are aware of the associated risks and understand how to operate the mechanism in a safe and responsible manner. He advised the Commission that a key is required to be turned and a button pushed in order to operate the elevating device. He further advised that the elevating device is prevented from operating when the overhead garage door is open and this feature, in essence acts as a guard for the laneway side of the garage.

The Applicant stated that once a car is parked in the garage there is very little space left to manoeuvre in that area. His initial position was that a guard should not be required and that the current situation complied with the intent of the Building Code. Alternatively, he submitted, if the Commission felt that the existing construction did not comply, he offered two options which he believed would be preferable to the solution dictated by the municipality. He described two options of providing compliance with the Code requirements while still maintaining the functionality of the garage. The first involved installing a moveable guard across the 0.6 m stationary platform located at the end of the garage. This moveable guard would be interlocked with the electrical system to prevent operation of the elevating device unless the guard is in position. The second proposal was to relocate the operating key switch to the outside of the garage and to interconnect the key switch with the electrical system. By interconnecting the key switch with the electrical system, the elevating device would be prevented from operating unless both doors to the garage are closed. When questioned as to which option would be his preference, the Applicant responded that he would prefer to relocate the spring-loaded key switch.

The Applicant summed up his position by stating that he believes his proposal adequately addresses the life safety concerns of Sentence 9.8.8.1.(1) of the Building Code while still maintaining the functionality of the design and intended use of the elevating device and the garage.

4. Respondent's Position

The Respondent submitted that an Order to Remedy Unsafe Building was issued to the Applicant in January 2006. The Order indicated that, pursuant to Sentence 9.8.8.1.(1) of the Building Code, guards were required to be provided within the single car garage. He stated that when the car elevating device is not level with the garage floor, the difference in elevation is greater than 600 mm, therefore, in his opinion, a guard is required on the sides of the pit to prevent injury from falls.

The Respondent indicated that the Building Code does not specifically speak to car elevating devices such as is installed in the Applicant's garage. He further indicated that when the elevating platform is in motion and not level with the grade of the garage floor, there is a significant difference in elevation and therefore a guard is required. He advised the Commission that a code consultant firm had been contracted by the builder to develop a proposed guard system meeting the objective of Sentence 9.8.8.1.(1) of the Code. The Respondent stated that the Applicant has refused the installation of this guard to date and thus an Order was issued.

When questioned as to whether the municipality had considered the options proposed by the Applicant, the Respondent responded that his preference would be option number two involving the relocation of the key switch.

In summation, the Respondent reaffirmed that, since there is a difference in elevation of more than 600 mm between surfaces when the platforms are in motion, Sentence 9.8.8.1.(1) stipulates that a guard is required. He further stated that, since no guard is presently installed, compliance with the technical requirements of the Building Code has not been achieved.

5. Commission Ruling

It is the Decision of the Building Code Commission that the 0.6 m wide stationary platform located at the rear of the garage, within which an automated platform operates, having been constructed without guards provides sufficiency of compliance with Sentence 9.8.8.1.(1) of the Building Code at 1840 Lakeshore Boulevard East, City of Toronto, Ontario, on condition that:

a) The spring-loaded key switch, which operates the automated platform, shall be relocated to the outside of the exterior wall of the garage on the hinge side of the swing door. Furthermore, the key switch shall be interconnected with the swing door as well as the overhead garage door, so as to prevent the elevating platform from being operated unless both doors are closed. The interconnected doors shall only be opened when one of the automated platforms is level with the stationary platform.

6. Reasons

i) The requirements for guards as outlined in Sentence 9.8.8.1.(1) of the Building Code are based on the premise that, where there is a difference in elevation of 600 mm or more between two surfaces, the potential risk of injury in a fall is sufficient that there must be some kind of barrier to reduce the chances of such a fall. The relocation of the key switch and the interconnecting of the garage doors, so as to prevent the elevating platform from being operated unless the doors are closed will, in the opinion of the Commission, achieve sufficiency of compliance with the intent of the Code.

ii) The interlocking of the key switch will prevent the elevating platform from being operated unless the doors are closed, thereby protecting persons from a fall during normal operation. The relocation of the key switch will make it impossible for the person operating the elevating platform to physically be in the garage while the elevating platform is in motion, thereby protecting the operating person from a fall. There is also a window in the swing door through which the person operating the elevating platform can view the interior of the garage to ensure that the overhead garage door is closed and that no one else is in the garage before operating the platform.

iii) The difference in grade between the 0.6 m stationary platform and the “pit” level of the garage is only an issue when the elevating platform is in motion, as when the elevating platform is in place; both the stationary platform and the elevating platform are at the same level.

Dated at Toronto this **22nd** day in the month of **June** in the year **2006** for application number **2006-09.**

Ruling No. 06-36-1106
Application No. P-2006-38

BUILDING CODE COMMISSION

IN THE MATTER OF Clause 24(1)(b) of the *Building Code Act*, S.O. 1992, c. 23 ("Act").

AND IN THE MATTER OF Subsections 8(2.2) and (2.3) of the Act and Sentence 2.4.1.1.B.(1) of O. Reg. 403/97 ("Building Code").

AND IN THE MATTER OF an application for a permit by Ravenda Homes Ltd. under subsection 8(1) of the Act for the construction of a building at 26 Abbott Street West, St. Catharines.

AND IN THE MATTER OF a dispute between Ravenda Homes Ltd. and Sandra Korakis, Chief Building Official of the City of St. Catharines, about whether the Chief Building Official informed the Applicant, within the time period prescribed in the Building Code, of the decision to refuse to issue a building permit and of all of the reasons for the decision.

APPLICANT	John Ravenda Ravenda Homes Ltd. Welland, Ontario
RESPONDENT	Sandra Korakis Chief Building Official City of St. Catharines
PANEL	Tony Chow, Chair Yaman Uzumeri Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	August 24, 2006
DATE OF RULING	August 24, 2006
APPEARANCES	John Ravenda, President Ravenda Homes Ltd. **The Applicant** Brian Thiessen Chief Building Inspector City of St. Catharines **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant applied for a permit under subsection 8(1) of the Act to construct a one storey, five unit townhouse block at 26 Abbott Street West, St. Catharines.

The dispute between the parties is whether the Chief Building Official complied with subsections 8(2.2) and (2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code and, in particular, whether the Respondent informed the Applicant of the decision to refuse to issue a permit, and of all of the reasons for the decision, within the time period prescribed in Table 2.4.1.1B. of the Building Code.

2. Provisions of the Act and Building Code in Dispute

Act: subsections 8(2.2) and (2.3)

Decision

(2.2) When an application for a permit contains the prescribed information, the chief building official is required to determine within the period prescribed by regulation whether to issue the permit or to refuse to issue it.

Same, reasons for refusal

(2.3) If the chief building official refuses to issue the permit, he or she shall inform the applicant of all of the reasons for the refusal of the permit and shall do so within the period prescribed by regulation.

Building Code:

2.4.1.1B. Period Within Which a Permit is Issued or Refused

(1) Subject to Sentences (2) and (3), if an application for a permit under Subsection 8 (1) of the Act that meets the requirements of Sentence (5) is submitted after December 31, 2005 to a *chief building official*, the *chief building official* shall, within the time period set out in Column 3 of Table 2.4.1.1B. corresponding to the class of *building* described in Column 2 of Table 2.4.1.1B. for which the application is made:

(a) issue the permit, or

(b) refuse to issue the permit and provide in writing all of the reasons for the refusal.

TABLE 2.4.1.1B.

Period Within Which Permit Shall be Issued or Refused Forming Part of Article 2.4.1.1B.

Row Number	Class of *Building*	Time period
1	(a) A detached house, semi-detached house, townhouse, or row house where no *dwelling unit* is located above another *dwelling unit.* (b) A detached structure that serves a *building* described in Clause (a) and does not exceed 50 m^2 in *building area*. (c) A tent to which Section 3.13. applies. (d) A sign to which Section 3.14. applies.	10 days
2	(a) *Buildings* described in Clauses 2.1.1.3.(1)(a), (b) and (c), other than *buildings* described in Column 2 of any of Rows 1 and 4 of this Table. (b) *Farm buildings* that do not exceed 600 m^2 in *building area*.	15 days
3	(a) *Buildings* described in Clause 2.1.1.2.(1)(a) or (b), other than *buildings* described in Column 2 of any of Rows 1 and 4 of this Table. (b) *Farm buildings* exceeding 600 m^2 in *building area*.	20 days
4	(a) *Post-disaster buildings*. (b) *Buildings* to which Subsection 3.2.6. or any provision in Articles 3.2.8.3. to 3.2.8.11. applies.	30 days
Column 1	Column 2	Column 3

3. Applicant's Position

The Applicant stated that on July 20, 2006 the application for a building permit in this matter was submitted to the building department of the City of St. Catharines and payment was made of certain of the fees required to be paid when a permit application is made. The Applicant stated that payment of the balance of the required fees was made on July 24, 2006. The Applicant provided a copy of a "Payment Transaction" receipt from the City of St. Catharines, dated July 24, 2006, which lists fees collected in respect of proposed residential construction at 26 Abbot Street West, St. Catharines. The payment receipt lists no fees as being outstanding.

The Applicant submitted that the one storey, five unit townhouse building at issue is subject to the ten day time period set out in Table 2.4.1.1B. of the Building Code.

The Applicant stated that the Respondent's decision in respect of the permit application was first communicated in an e-mail of August 17, 2006, which contained as an attachment a letter from the Respondent, dated August 16, 2006. The Applicant did not provide a printed copy of this e-mail, although a copy of the letter attached to the e-mail was provided. This letter informed that the Respondent had reviewed the Applicant's building permit application, and that "[w]hen you have complied with the following [four] conditions, we will complete the processing of your application". The Applicant understood from this letter that the Respondent had refused to issue the permit, and that the Applicant's failure to satisfy the four "conditions" listed in the letter were the reasons why the permit had been refused.

The Applicant advised that the building permit in question had not been issued as of the date of the Commission hearing. The Applicant stated that he had not yet provided to the Respondent documentation evidencing compliance with an applicable law requirement, and expected to provide this shortly.

In summation, the Applicant submitted that the date on which the Respondent had informed him of the decision to refuse to issue the building permit, and of the reasons for the decision, was

outside of the ten day time period within which the Respondent was obliged to provide this information.

4. Respondent's Position

The Respondent stated that the Applicant submitted the building permit application in this matter on July 21, 2006 and that the application met the requirements of Sentence 2.4.1.1B.(5) of the Building Code. The Respondent agreed that it was on July 24, 2006 that payment in full was made of all fees required to be paid when an application is made.

The Respondent submitted that, according to Sentence 2.4.1.1B.(6) of the Building Code, the time period for making a decision about the issuance of a permit began on July 25, 2006, which was the day after the later of the day on which Applicant's building permit application met the requirements of Sentence 2.4.1.1.B.(5) and the day on which payment was made of all fees required to be paid when an application is made.

The Respondent indicated that, initially, the construction proposed under the permit application in question was considered, by the municipality, to be as described in Column 2 of Row 2 of Table 2.4.1.1B. and therefore to be subject to the fifteen day time period set out in Column 3 of Row 2 of the Table. At the Commission hearing, however, the Respondent stated that it accepted that the proposed construction was as described in Column 2 of Row 1 of Table 2.4.1.1B and was therefore subject to the ten day time period in Column 3 of Row 1 of the Table.

The Respondent stated that it informed the Applicant of the decision to refuse to issue a building permit, and of the reasons for the decision, in the Respondent's letter of August 16, 2006. The Respondent agreed that this letter was sent as an attachment to an e-mail; however, the Respondent submitted that this e-mail was sent to the Applicant on August 16, 2006. The Respondent did not provide a printed copy of this e-mail. The Respondent also indicated that it had on August 16, 2006 faxed a copy of the letter to the owner of the property where the construction was to take place and had tried, without success, to fax the letter to the Applicant.

The Respondent submitted that the four "conditions" listed in their letter of August 16, 2006 comprised all of the reasons why it had refused to issue the permit at issue to the Applicant.

The Respondent agreed that documentation evidencing compliance with an applicable law requirement was still outstanding as of the date of the Commission hearing and indicated that, upon being provided with this documentation in satisfactory form, a building permit could be issued.

In summation, the Respondent submitted that the time period for informing the Applicant of the decision to refuse to issue the permit and the reasons for the decision in respect of the permit application at issue commenced on July 25, 2006. The Respondent further submitted that it provided this information to the Applicant in the letter of August 16, 2006 which was e-mailed to the Applicant on that date. While the Respondent had initially taken the view it was required to provide this information within a fifteen day time period, as of the hearing the Respondent took the view that a ten day time period was applicable.

5. Commission Ruling

It is the Decision of the Building Code Commission that the Respondent did not comply with the requirements under Subsections 8(2.2) and (2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code to issue or refuse to issue the permit and, in the case of a refusal to issue the

permit, to provide in writing all of the reasons for the refusal, within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

While the Respondent did inform the Applicant of the decision to refuse to issue the permit and all of the reasons for the decision, the Respondent did not do so within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

6. Reasons

i) Sentence 2.4.1.1B.(6) of the Building Code specifies when the time periods set out in Table 2.4.1.1B. commence:

> The time period described in Sentences (1) to (3) shall begin on the day following the later of
>
> (a) the day on which an application meeting the requirements of Sentence (5) is submitted to the chief building official, and
>
> (b) the day on which payment is made of all fees that are required, under a by-law, regulation or resolution made under Clause 7 (1) (c) of the Act, to be paid when the application is made.

The parties disagreed about whether the building permit application at issue was submitted by the Applicant to the Respondent on July 20 or July 21, 2006. The Respondent accepted that the permit application was complete for the purposes of Sentence 2.4.1.1B.(1) (that is, the application satisfied the requirements of Sentence 2.4.1.1.B.(5)). However, both parties agreed that it was on July 24, 2006 that payment was made by the Applicant of all fees that are required to be paid when the application was made.

As a result, regardless of the date on which the permit application was submitted to the Respondent, it is July 25, 2006 (the date on which payment was made of all fees required to be paid) that the applicable time period set out in Table 2.4.1.1B. commenced in this case.

ii) The parties agreed that the construction proposed under the application in question was subject to the ten day time period set out in Column 3 of Row 2 of Table 2.4.1.1B.

Sentence 2.4.1.1B.(7) provides that the time periods described in Column 3 of Table 2.4.1.1B. does not include Saturdays, holidays and all other days when the offices of a principal authority are not open for the transaction of business with the public.

In the present case, the applicable ten day time period ended on August 8, 2006, and the Respondent was required by that date to issue or refuse to issue a permit in respect of the Applicant's permit application and, if the permit was refused, to provide in writing all reasons for the refusal.

iii) There was no dispute between the parties about whether the Respondent had informed the Applicant of the decision to refuse to issue the permit and provided all of the reasons the refusal: the parties agreed that the Respondent did this in the letter of August 16, 2006. The dispute between the parties was whether the Respondent had had done so within the time period set out in the Table 2.4.1.1B; that is by August 8, 2006.

The parties submitted that the letter of the Respondent containing this information was sent by the Respondent either on August 16, 2006 (Respondent's submission) or on August 17, 2006 (Applicant's submission). The Commission accepts that the e-mail containing the letter was sent on one of these dates, but notes that both of these dates are after the expiry of the applicable ten day time period on August 8, 2006. The letter of the Respondent informing the Applicant of the decision to refuse to issue a permit and of the reasons for the refusal was therefore not provided to the Applicant within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

iv) The Commission notes that, at the hearing, the Applicant stated that he intends to shortly provide to the Respondent certain documentation evidencing compliance with an applicable law requirement, and the Respondent indicated that upon being provided with satisfactory documentation the building permit could be issued.

Dated at Toronto this **24th** day in the month of **August** in the year **2006** for application number **2006-38.**

Ruling No. 06-48-1118
Application No. P-2006-56

BUILDING CODE COMMISSION

IN THE MATTER OF Clause 24(1)(b) of the *Building Code Act*, S.O. 1992, c. 23 ("Act").

AND IN THE MATTER OF Subsections 8(2.2) and 8(2.3) of the Act and Sentence 2.4.1.1.B.(1) of O. Reg. 403/97 ("Building Code").

AND IN THE MATTER OF an application for a permit by Brian Fernandes under subsection 8(1) of the Act for the construction of townhouse dwellings at Block 28, Brookside Street, Township of Cavan, Millbrook and North Monaghan.

AND IN THE MATTER OF a dispute between 1087086 Ontario Inc. and Andy Van Hoof, Chief Building Official of the Township of Cavan, Millbrook and North Monaghan, about whether the Chief Building Official complied with the requirements under Subsections 8(2.2) and 8(2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code to issue or refuse to issue the permit and, in the case of a refusal to issue the permit, to provide in writing all of the reasons for the refusal within the time period set out in Table 2.4.4.1B. of the Building Code regarding Block 28, Brookside Street, Township of Cavan, Millbrook and North Monaghan, Ontario.

APPLICANT	Brian Fernandes 1087086 Ontario Inc.
RESPONDENT	Andy Van Hoof Chief Building Official Township of Cavan, Millbrook and North Monaghan
PANEL	Tony Chow, Chair Ed Link Alison Churchill
PLACE	Toronto, Ontario
DATE OF HEARING	November 21, 2006
DATE OF RULING	November 21, 2006
APPEARANCES	Alex Talwood Talwood Group Architects Inc. Toronto, Ontario **Agent for the Applicant** Karen Ellis Director of Planning and Building Services Township of Cavan, Millbrook and North Monaghan **Designate for the Respondent**

RULING

1. Particulars of Dispute

The Applicant applied for a permit under subsection 8(1) of the Act to construct a one storey, five unit townhouse block referred to as Block 28, Brookside Street, Township of Cavan, Millbrook and North Monaghan.

The dispute between the parties involves whether the Chief Building Official complied with subsections 8(2.2) and 8(2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code and, in particular, whether the Respondent informed the Applicant of the decision to refuse to issue a permit, and specified all of the reasons for the decision, within the time period prescribed in Table 2.4.1.1B. of the Building Code.

2. Provisions of the Act and Building Code in Dispute

Act: subsections 8(2.2) and (2.3)

Decision

(2.2) When an application for a permit contains the prescribed information, the chief building official is required to determine within the period prescribed by regulation whether to issue the permit or to refuse to issue it.

Same, reasons for refusal

(2.3) If the chief building official refuses to issue the permit, he or she shall inform the applicant of all of the reasons for the refusal of the permit and shall do so within the period prescribed by regulation.

Building Code:

2.4.1.1B. Period Within Which a Permit is Issued or Refused

(1) Subject to Sentences (2) and (3), if an application for a permit under Subsection 8 (1) of the Act that meets the requirements of Sentence (5) is submitted after December 31, 2005 to a *chief building official*, the *chief building official* shall, within the time period set out in Column 3 of Table 2.4.1.1B. corresponding to the class of *building* described in Column 2 of Table 2.4.1.1B. for which the application is made:

(a) issue the permit, or

(b) refuse to issue the permit and provide in writing all of the reasons for the refusal.

TABLE 2.4.1.1B.

Period Within Which Permit Shall be Issued or Refused Forming Part of Article 2.4.1.1B.

Row Number	Class of *Building*	Time period
1	(a) A detached house, semi-detached house, townhouse, or row house where no *dwelling unit* is located above another *dwelling unit.* (b) A detached structure that serves a *building* described in Clause (a) and does not exceed 50 m^2 in *building area*. (c) A tent to which Section 3.13. applies. (d) A sign to which Section 3.14. applies.	10 days
2	(a) *Buildings* described in Clauses 2.1.1.3.(1)(a), (b) and (c), other than *buildings* described in Column 2 of any of Rows 1 and 4 of this Table. (b) *Farm buildings* that do not exceed 600 m^2 in *building area*.	15 days
3	(a) *Buildings* described in Clause 2.1.1.2.(1)(a) or (b), other than *buildings* described in Column 2 of any of Rows 1 and 4 of this Table. (b) *Farm buildings* exceeding 600 m^2 in *building area*.	20 days
4	(a) *Post-disaster buildings*. (b) *Buildings* to which Subsection 3.2.6. or any provision in Articles 3.2.8.3. to 3.2.8.11. applies.	30 days
Column 1	Column 2	Column 3

3. Applicant's Position

The Agent for the Applicant provided the Commission with a brief history and overview of the subdivision development. He conveyed that the plan of subdivision had been developed in three phases, Phase I, Phase II and Phase III respectively, and consisted of 81 single family homes and 32 townhomes. He advised that the subdivision was approved on October 9, 2002 and that this approval included the involvement of the Otanabee Region Conservation Authority (ORCA) and the Ontario Municipal Board concerning conservation, grading and fill issues.

The Agent stated that Phase III of the development is the subject of this hearing. He informed the Commission that on May 1, 2006 the application for a building permit was submitted to the building department of the Township of Cavan, Millbrook and North Monaghan along with a cheque for the payment of the fees required to be paid when a permit application is made. The Agent advised that the permit application proposed the construction of five, one storey townhomes at Block 28 on the south side of Brookside Street within the Town of Millbrook.

The Agent submitted that, in his opinion, the permit application in question was complete on September 12, 2006. He further submitted that the permit application at issue is subject to the ten day time period set out in Table 2.4.1.1B. of the Building Code.

The Agent confirmed that the Respondent's decision in respect of the permit application was communicated in a letter dated November 15, 2006. The letter informed the Applicant that the Respondent had reviewed the building permit application and that the Township could not issue the building permit because the applicant had not received a permit from ORCA. The Agent argued that ORCA provided its approval of the subdivision, including the townhomes that are the subject of this dispute, four years ago. He advised the Commission that the 2002 subdivision agreement did not contain any conditions or provisions pertaining to further Conservation Authority approval. He further advised that the 2006 site plan agreement made no reference to further approvals being required. In the opinion of the Agent, ORCA gave their approval in 2002 and he stated that he believes that a second approval by ORCA is not warranted and should not be a reason fro refusal of the building permit at this point in the process. He referred to other

building permits that have been obtained for this plan of subdivision where there was no similar Conservation Authority permit required.

In summation, the Agent maintained that a building permit application including all of the prescribed information was before the Township as of September 12, 2006. He affirmed that his client had not received any written communication from the Township suggesting that the permit would not be issued until the November 15, 2006 letter was received. He argued that the reason provided by the Town for not issuing the permit was not valid. He maintained that the Township has not complied with the legislated time frames for making a determination in respect of this building permit application.

4. Respondent's Position

The Designate for the Respondent maintained that the building permit application does not contain all of the prescribed information, even as of the date of this hearing. She advised that the building permit application does not include a permit under the *Conservation Authorities Act* and *Ontario Regulation 167/06* and further advised that a permit from ORCA is required. The Designate argued that the building permit application does not include the approval permit in respect of these applicable law requirements and therefore, in her opinion, the permit application is not complete.

The Designate confirmed that there are no Building Code related issues remaining in respect of the plans. In response to being questioned as to whether the ORCA permit is the only outstanding issue, the Designate answered in the affirmative. She admitted that a permit application was submitted by the Applicant on May 1, 2006 but added that the site plan agreement was not received until September 12, 2006. The Designate agreed that on September 12, 2006 the building permit application contained all of the prescribed information, with the exception of the ORCA permit. She noted that the Township became aware that an ORCA permit was required in the middle of October 2006. She added that the Township received a copy of a letter, dated November 14, 2006, from the Otonabee Region Conservation Authority which advised the Applicant that a permit under the *Conservation Authorities Act* and Ontario Regulation 167/06 is required.

The Designate advised that upon receiving a copy of the letter from ORCA requiring a permit under the *Conservation Authorities Act* and Ontario Regulation 167/06, a letter dated November 15, 2006 was sent by the Respondent to the Applicant advising that the building permit was not being issued and citing the reasons for the refusal to issue the permit.

In summary, the Designate claimed that, in her opinion, the building permit application is considered incomplete until such time as the permit from ORCA is obtained. As a resulted, she stated that the Township is unable to issue the permit until such time as the ORCA permit is obtained. Further, she advised that the Township, by way of the November 15, 2006 letter to the Applicant, has made a determination to not issue the building permit and has provided, in writing, all of the reasons for the refusal.

5. Commission Ruling

It is the Decision of the Building Code Commission that the Respondent did not comply with the requirements under Subsections 8(2.2) and 8(2.3) of the Act and Sentence 2.4.1.1B.(1) of the Building Code to issue or refuse to issue the permit and, in the case of a refusal to issue the permit, to provide in writing all of the reasons for the refusal, within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

While the Respondent did inform the Applicant of the decision to refuse to issue the permit and all of the reasons for the decision, the Respondent did not do so within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

6. Reasons

i) Sentence 2.4.1.1B.(6) of the Building Code specifies when the time periods set out in Table 2.4.1.1B. commence:

> The time period described in Sentences (1) to (3) shall begin on the day following the later of
>
> (a) the day on which an application meeting the requirements of Sentence (5) is submitted to the chief building official, and
>
> (b) the day on which payment is made of all fees that are required, under a by-law, regulation or resolution made under Clause 7 (1) (c) of the Act, to be paid when the application is made.

The parties agreed that the building permit application was submitted to the Township on May 1, 2006. Further, the parties generally concurred that, on September 12, 2006, the building permit application met the requirements prescribed in Sentence 2.4.1.1B.(5).

As a result, it is September 13, 2006 (the day following the day on which an application meeting the requirements of Sentence (5)) that the applicable time period set out in Table 2.4.1.1B. commenced in this case.

ii) The parties agreed that the construction proposed under the application in question was subject to the ten day time period set out in Column 3 of Row 1 of Table 2.4.1.1B.

Sentence 2.4.1.1B.(7) provides that the time periods described in Column 3 of Table 2.4.1.1B. do not include Saturdays, holidays and all other days when the offices of a principal authority are not open for the transaction of business with the public.

In the present case, the applicable ten day time period ended on September 27, 2006, and the Respondent was required by that date to issue or refuse to issue a permit in respect of the Applicant's permit application and, if the permit was refused, to provide in writing all reasons for the refusal.

iii) The parties submitted that the letter of the Respondent informing the Applicant of the decision to refuse to issue a permit and of the reasons for the refusal was sent on November 15, 2006. The Commission accepts that the letter was sent on November 15, 2006 but notes that this date is after the expiry of the applicable ten day time period on September 27, 2006. Therefore, the refusal to not issue a permit, including the written reasons for refusal, was not provided to the Applicant within the applicable time period set out in Table 2.4.1.1B. of the Building Code.

The Commission notes, however, the validity, legality or reasonableness of the reasons for refusal of a permit identified in writing by the municipality is not within the mandate of the Commission to determine.

iv) The Commission notes that, pursuant to s. 8(2.2.) of the *Building Code Act, 1992*, where an application for a permit contains the prescribed information, the service

level duties of the Chief Building Official are triggered. The “prescribed information” is set out in Clauses 2.4.1.1B.(5)(a) to (e) of the Building Code. Upon receipt of an application for permit containing the prescribed information, the CBO is obligated, by virtue of Sentence 2.4.1.1B.(1), to, within the time period set out in Column 3 of Table 2.4.1.1B., either issue the permit or refuse to issue the permit and provide in writing all reasons for the refusal.

Dated at Toronto this **21st** day in the month of **November** in the year **2006** for application number **P-2006-56.**

Ruling No. 03-54-952
Application No. 2003-64

Ontario

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 6.2.3.2. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Grace Sweatman, Christie Gardens, for the resolution of a dispute with Ann Borooah, Chief Building Official, City of Toronto, to determine whether the as-installed vertical exhaust shafts serving a residential high rise building which extend three storeys in height, and which are constructed using paper-lined gypsum shaftboard liners, comply with the intent of Sentence 6.2.3.2.(1) of the Ontario Building Code (OBC) or, in the alternative, whether these same shafts provide sufficiency of compliance with Sentence 6.2.3.2.(2) of the OBC at 600 Melita Crescent, Toronto, Ontario.

APPLICANT	Grace Sweatmam Christie Gardens Toronto, Ontario
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Len King, Vice-Chair Gary Burtch Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	December 4, 2003
DATE OF RULING	December 4, 2003
APPEARANCES	Randy Brown Randy Brown & Associates Willowdale, Ontario **The Applicant** Peter Kaczmarek Building Inspector City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Grace Sweatman, Christie Gardens, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing an addition to an existing building referred to as Christie Gardens, 600 Melita Crescent, Toronto, Ontario.

2. Description of Construction

The Applicant is constructing an addition to an existing building that contains a Group A, Division 2 assembly occupancy, Group B, Division 2 care and treatment occupancy, Group C residential occupancy, and Group F, Division 3 low hazard industrial occupancy. The structure is seven storeys in building height, with a three storey addition being constructed on top of the existing building. The building is approximately 4, 642 m^2 in building area and is comprised of non-combustible construction. The building is partially sprinklered and is equipped with both a fire alarm and standpipe and hose system.

The construction at dispute pertains to the vertical exhaust shafts that have been used in the three storey addition. The subject exhaust shafts are constructed as extensions of brick-lined exhaust shafts serving the residential units in the existing seven storey building. The subject exhaust shafts are located within the new building envelope rising vertically to the roof and are finished with an enclosed exhaust fan. There are 24 shafts at issue. They range in size between 203 mm x 305 mm (8 in x 12 in) and 203 mm x 457 mm (8 in x 18 in). The various connector ducts supplying these exhaust shafts are 101 mm (4 in) in diameter. The subject exhaust shafts are constructed as 1 hr. fire separations in accordance with cUL Design No. U 469, using paper-lined shaftboard liners.

3. Dispute

The issue at dispute between the Applicant and Respondent pertains to whether the as-installed vertical exhaust shafts serving a residential high rise building which extend three storeys in height, and which are constructed using paper-lined gypsum shaftboard liners, comply with the intent of Sentence 6.2.3.2.(1) of the Ontario Building Code (OBC) or, in the alternative, whether these same shafts provide sufficiency of compliance with Sentence 6.2.3.2.(2) of the OBC.

Sentence (1) of Article 6.2.3.2. of the OBC outlines the various materials that are permitted to be used in the construction of ducts, duct connectors, associated fittings and plenums used in air duct systems. As per the requirements of Sentence 6.2.3.2.(1), all ducts "shall be constructed of steel, aluminum alloy, copper, clay, asbestos-cement or similar *noncombustible* material." Noncombustible is a defined term in the Code. Its meaning is found in Article 1.1.3.2.; "*Noncombustible* means that a material meets the acceptance criteria of CAN4-S114, "Standard Method for Determination of Non-Combustibility in Building Materials".

It should be noted that Article 3.1.5.2. of the Code provides a list of minor combustible components that are permitted to be found in a building that is required to be of non-combustible construction. Of particular importance to the issue at dispute is Clause 3.1.5.2.(1)(b), which permits the use of tightly adhering paper covering not more than 1 mm (0.039 in) thick applied to noncombustible backing

provided that the assembly has a flame-spread rating not more than 25. The as-installed exhaust shafts at dispute have been constructed using paper-lined gypsum shaftboard liners and have a flame-spread rating of 20.

Sentence 6.2.3.2.(2) is an exception to Sentence 6.2.3.2.(1) of the Code in that it permits ducts, associated fittings, and plenums to contain combustible material provided that they comply with the stipulated clauses that are assigned therein. In Clause 6.2.3.2.(2)(a), ducts, associated fittings, and plenums are permitted to contain combustible material provided they conform to the appropriate requirements for Class 1 duct materials in CAN/ULC-S110-M, "Standard Methods of Test for Air Ducts". The Standard CAN/ULC-S110-M includes tests with respect to surface burning, flame penetration, corrosion, mould growth and humidity, temperature, puncture, static load, impact, erosion, tension, pressure, collapse, bending and leakage. In terms of fire safety, the standard permits combustible air ducts and connectors provided that they have a flame spread rating of not more than 25 and a smoke developed classification of no greater than 50. It should also be noted that the standard requires mould growth and humidity tests in situations where a duct carries air that contains excessive moisture or is exposed to moisture. The ducts must also have no appreciable loss of strength when wet and must be corrosion resistant.

Also relevant to the case at dispute is Clause 6.2.3.2.(2)(e), which limits the use of ducts containing combustible materials to vertical runs serving only two storeys in a non-combustible building. The purpose of this Code provision is to minimize the fire load and heat generation in the case of fire, as well as limit the spread of fire and production of combustion products, such as smoke, in air distribution systems. As previously mentioned, the subject exhaust shafts rise vertically through the three storey addition and, as such, are in contravention with the two-storey vertical run limit stipulated in Clause 6.2.3.2.(2)(e) of the Code.

The root of the issue at dispute, therefore, appears to be whether the exemption for combustible materials found in Clause 3.1.5.2.(1)(b) of the OBC is intended to extend also to the requirement for noncombustible shafts found in Sentence 6.2.3.2.(1). If so, there is no need to examine the as-installed exhaust shafts against the requirements found in Sentence (2). In other words, the exemption found there is not necessary and not applicable. If, however, the duct material is considered to be combustible, then Sentences 6.2.3.2.(2) to 6.2.3.2.(4) are applicable. Moreover, if the criteria set out in Sentences (2) to (4) are not met then the proposal will be assessed for its sufficiency of compliance with these Sentences.

4. Provisions of the Ontario Building Code

6.2.3.2. Materials in Air Duct Systems

(1) Except as provided in Sentences (2) to (4) and in Article 3.6.4.3., all ducts, duct connectors, associated fittings and *plenums* used in air duct systems shall be constructed of steel, aluminum alloy, copper, clay, asbestos-cement or similar *noncombustible* material.

(2) Ducts, associated fittings and *plenums* are permitted to contain *combustible* material provided they

(a) conform to the appropriate requirements for Class 1 duct materials in CAN/ULC-S110-M, "Standard Methods of Test for Air Ducts",

(b) conform to Article 3.1.5.14. in a *building* required to be of *noncombustible construction*,

(c) conform to Subsection 3.1.9.,

(d) are not used in horizontal runs in a *building* required to be of *noncombustible construction*,

(e) are not used in vertical runs serving more than 2 *storeys* in a *building* required to be of *noncombustible construction*, and

(f) are not used in air duct systems in which the air temperature may exceed 120°C (248°F).

(3) Duct sealants shall have a *flame-spread rating* of not more than 25 and a smoke developed classification of not more than 50.

(4) Duct connectors that contain *combustible* materials and that are used between ducts and air outlet units shall

(a) conform to the appropriate requirements for Class 1 air duct materials in CAN/ULC-S110-M, "Standard Methods of Test for Air Ducts",
(b) be limited to 4 m (13 ft 1 in) in length,
(c) be used only in horizontal runs, and
(d) not penetrate required *fire separations*.

(5) Materials in Sentences (1) to (4) which when used in a location where they may be subjected to excessive moisture shall have no appreciable loss of strength when wet and shall be corrosion-resistant.

5. Applicant's Position

The Agent for the Applicant began by providing a brief overview of the building at dispute. He stated that the project involves a three storey addition on top of an existing seven story residential building. The Agent advised that the issue at dispute pertains to the construction of the exhaust shafts that serve the kitchens and bathrooms of both new and existing residential units. As described by the Agent, the shaft walls consist of one layer of ⅝ inch Type X gypsum wallboard on steel studs with 25 mm shaft liner panels. As per the Agent, this design is in accordance with cUL Design No. U469, and achieves a 1 hour fire-resistance rating.

The Agent submitted that while gypsum board has combustible properties, it is his belief that the as-constructed exhaust shafts comply with Sentence 6.2.3.2.(1) of the OBC. He stated that since Clause 3.1.5.2.(1)(b) of the Code specifically permits the use of tightly adhered paper on noncombustible backing provided the assembly has a flame spread rating of not more than 25, it is his opinion that the as-constructed exhaust shafts, with a flame spread rating of 20, meet the intent of noncombustibility inherent within Sentence 6.2.3.2.(1). In this regard, the Agent submitted that since the as-installed exhaust shafts comply with Sentence 6.2.3.2.(1), there is no need to assess them on the basis of their compliance with Sentences 6.2.3.2.(2) to (4) of the Code.

The Agent stated that he disagrees with the Respondent's position that the subject exhaust shafts are combustible since they are constructed using paper-lined gypsum, and as a result their construction is required to meet the provisions of Sentence 6.2.3.2.(2) of the OBC. He noted that the Respondent is of the view that the subject shafts do not comply with Clause (a) or (e) of this provision, nor do they comply with the CAN/ULC-S110-M "Standard Method of Test for Air Ducts" or the two storey vertical rise limit respectively. In response, the Agent acknowledged that the shafts do rise three storeys, however, he reiterated his position that, in his view, the gypsum constructed shafts are an equivalent to the ducts specified in Sentence 6.2.3.2.(1) of the Code.

The Agent then stated that he also disputed the Respondent's concern regarding whether the subject exhaust shafts are prone to excessive moisture and will thereby experience mould and mildew growth. He indicated that while some condensation may occur, it his opinion that the shafts will not be subjected to excessive moisture. He argued that as the exhaust shafts serving the residential units are only marginally humidified and are located in interior walls, the dew point of the exhausted air will not be reached. Consequently, mould and mildew will not grow in the as-built shafts, existing and new. As support for this argument, the Agent referenced a letter from the project's mechanical engineer indicating that the conditions for condensation and thus potential mould and mildew growth would not occur in the subject building. The Agent continued by stating that Sentence 6.2.3.2.(5) of the Code

addresses the issue of excessive moisture and that this would not be a problem in the building at dispute and the shafts will not experience an appreciable loss in strength as a result.

When questioned, the Agent advised that the Applicant was not made aware of the fact that the 24 subject air shafts were an issue until after the renovation was complete, which was in the summer of 2003. He also stated that he found the municipality's position to be surprising, because there is ample precedence of the use of the exhaust shafts at dispute and that their installation is quite common.

In summary, the Agent submitted that while gypsum board has combustible properties, it is his belief that the subject exhaust shafts can be viewed as an equivalent to those required under Sentence 6.2.3.2.(1) of the OBC, since Clause 3.1.5.2.(1)(b) of the Code specifically permits the use of tightly adhered paper on noncombustible backing with a flame spread of less than 25. The Agent maintained that compliance has, in his opinion, been achieved with Sentence 6.2.3.2.(1) and, therefore, the as-installed exhaust shafts do not need to be assessed on the basis of their compliance with Sentences 6.2.3.2.(2) to (4) of the Code.

6. Respondent's Position

The Designate for the Respondent submitted that Sentences 6.2.3.2.(1) and (2) of the OBC address materials acceptable for duct system construction and also provide for exceptions. He stated that it is the Respondent's position that the construction of the subject exhaust shafts do not comply with Sentence 6.2.3.2.(1) as they are viewed as being of combustible construction. The Designate submitted that, in his opinion, drywall is not a realistic material when one is exhausting a kitchen or bathroom and he stated that one cannot say that gypsum board is classified in the OBC as a non-combustible material. In this regard, the subject exhaust shafts, in his view, do not comply with Sentence 6.2.3.2.(1) of the Code and, as a result, he directed the Commission's attention to Sentence 6.2.3.2.(2) of the Code.

Sentence 6.2.3.2.(2) of the Code, the Designate explained, permits the use of ducts that are constructed of combustible material provided that they comply with the specific clauses contained therein. He then specifically addressed Clause 6.2.3.2.(2)(a) of the Code, which permits the use of ducts, associated fittings, and plenums, provided that they conform to the appropriate requirements for Class 1 duct materials in CAN/ULC-S110-M, "Standard Method of Test for Air Ducts". The Designate submitted that this Clause was of particular importance to the issue at dispute, because he does not know whether the subject exhaust shafts would be able to pass the tests associated with CAN/ULC-S110-M, "Standard Method of Test for Air Ducts".

The Designate then raised the issue of allowable height limits and stated that Clause 6.2.3.2.(2)(e) maintains that ducts constructed of combustible material shall not be used in vertical runs serving more than 2 storeys. He stated that the purpose of this particular Code provision is to prevent the growth of mould and mildew in the exhaust shaft. He advised that this issue was of particular importance to the City, because the building at dispute is a home for senior citizens who are extremely vulnerable and susceptible to potential health risks. In addition to this, he added that no information was submitted by the Applicant party to indicate that gypsum board has been tested to be resistant to moisture and would therefore make this material acceptable under Sentence 6.2.3.2.(5) of the Code.

In summary, the Designate maintained that gypsum board is not an acceptable material for duct system construction. He stated that the subject exhaust shafts do not provide sufficiency of compliance with Sentences 6.2.3.2.(1) and (2) of the OBC and that both their materialistic properties and installation are an inappropriate application of the Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the as in-stalled exhaust shafts extending three storeys in height, which are constructed using paper-lined gypsum shaftboard liners, do not comply with the intent of Sentence 6.2.3.2.(1) of the Ontario Building Code at 600 Melita Crescent, Toronto, Ontario.

It is also the decision of the Building Code Commission that these same shafts do not provide sufficiency of compliance with Sentence 6.2.3.2.(2) of the Code at the subject building.

8. Reasons

i) Sentence 6.2.3.2.(1) states that except as provided in Sentences (2) to (4) and in Article 3.6.4.3., all ducts, duct connectors, associated fittings and plenums used in air duct systems shall be constructed of steel, aluminum alloy, copper, clay, asbestos-cement or similar *non-combustible* material.

ii) *Non-combustible*, as defined, means that a material meets the acceptance criteria of CAN4-S114 "Standard Method of Test for Determination in Building Materials".

iii) Appendix A-3.1.5.2.(1)(b) of the Ontario Building Code states: "[g]ypsum board of the typical thickness used in building construction and that is paper faced will not generally comply with the criteria in CAN4-S114-M, "Standard Method of Test for Determination of Non-Combustibility in Building Materials", even though there are no combustible components in the core. Gypsum board has satisfactory properties for resisting the spread of fire and Clause 3.1.5.2.(1)(b) has been included to specifically permit the use of paper faced gypsum board in a building of noncombustible construction." The exemption found in provision 3.1.5.2.(1)(b), however, in the BCC's view, is intended for the general noncombustible construction requirements of Part 3. The OBC does not state that this exemption may be extended to a Part 6 mechanical system.

iv) Sentence 6.2.3.2.(2) prohibits the use of combustible elements in a vertical shaft serving more than 2 storeys. The subject building at dispute is seven stories in height, with a three storey addition.

v) There were no compensating measures provided by the Applicant party.

Dated at Toronto this **4th** day in the month of **December** in the year **2003** for application number **2003-64**.

Len King, Vice-Chair

Gary Burtch

Donald Pratt

Ruling No. 03-52-950
Application No. 2003-55

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 1.1.3.2. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Roy Fletcher, Fletcher Associates Consulting Engineers & Planners, for the resolution of a dispute with Doug Kopp, Chief Building Official, Township of Southgate, to determine whether the proposed replacement of a Class 4 sewage system that is located on a "lot or parcel of land" that is serviced by additional Class 4 systems complies with the definition of *sewage system* in Article 1.1.3.2. of the Ontario Building Code, when considering that the lot is located adjacent to two lots that are all under the same ownership at Homestead Resort/Golf Course, RR 4, 263530 Wilder Lake Road, Durham, Ontario.

APPLICANT	Roy Fletcher Fletcher Associates Consulting Engineers & Planners Toronto, Ontario
RESPONDENT	Doug Kopp Chief Building Official Township of Southgate
PANEL	Bryan Whitehead
PLACE	Toronto, Ontario
DATE OF HEARING	December 4, 2003 and February 10, 2004
DATE OF RULING	March 1, 2004
APPEARANCES	Roy Fletcher Fletcher Associates Consulting Engineers & Planners Toronto, Ontario **The Applicant** Doug Kopp Chief Building Official Township of Southgate **The Respondent**

RULING

1. The Applicant

Roy Fletcher, Fletcher Associates Consulting Engineers & Planners, has applied for a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is proposing to replace an existing Class 4 sewage system at Homestead Resort/Golf Course, RR 4, 263530 Wilder Lake Road, Durham, Ontario.

2. Description of Construction

The Applicant is proposing to replace an existing Class 4 septic system comprised of a septic tank and leaching bed serving a "Recreation Hall" on a site referred to as the Homestead Resort/Golf Course. At present, there are two Class 4 systems servicing an area of land the Agent refers to as the "Part Lot" upon which the "Recreation Hall" is situated. The Applicant's proposal is to replace one of the two systems and has calculated the new combined total daily design flow rate at 8,050 L/d.

The site referred to as Homestead Resort/Golf Course is located on a 123-acre holding of land consisting of Part Lots 2, 3, and 4, Concession 21., Egremont (R.P. 16R6386 Parts 1, 2, and 3). Part Lot 2 has a farm house, Part Lot 3 has the "Recreation Hall" plus an office/pro shop, and Part Lot 4 has several cottages. All three Part Lots are held by the same owner. Each of the three Part Lots is serviced by separate Class 4 sewage systems.

The issue at dispute pertains to the whether the three contiguous Part Lots are considered to be one or three separate and delineated "lots or parcels of land". The Respondent party has denied the Applicant a building permit, as he is of the view that the site in question consists of one "lot" and, as such, the total design capacity of all septic systems on the "lot" exceeds 10,000 L/d. This is an issue because one of the defining criteria of a *sewage system*, as per Article 1.1.3.2. of the Ontario Building Code, is that the system have a design capacity of 10,000 L/d or less.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed replacement of a Class 4 sewage system that is located on a "lot or parcel of land" that is serviced by additional Class 4 systems complies with the definition of *sewage system* in Article 1.1.3.2. of the Ontario Building Code, when considering that the lot is located adjacent to two lots that are all under the same ownership at Homestead Resort, RR 4, 263530 Wilder Lake Road, Durham, Ontario.

Article 1.1.3.2. of the OBC provides the definition of certain terms with respect to how they are used and/or applied in the context of the Code. As per the OBC, the term *sewage system* refers to "a chemical toilet, an incinerating toilet, a recirculating toilet, a self-contained portable toilet and all forms of privy; a greywater system; a cesspool; a leaching bed system; or a system which requires or uses a holding tank". Also included in this definition are three conditions, to which a *sewage system*, in order to be defined as such, must comply. These are: i) a design capacity of 10,000 L/d or less; ii) a total design capacity of 10,000 L/d or less where more than one of these are located on a lot or parcel of land; and iii) located wholly within the boundaries of the lot or parcel of land on which is located the building or buildings that they serve. If a septic system, or series of septic systems, yield a design capacity that is greater than 10,000 L/d then it is not considered a *sewage system* as defined in the OBC, but rather a *sewage works* as defined in the *Ontario Water Resources Act*. The regulation of *sewage works* is the responsibility of the Ministry of Environment.

Central to this dispute, therefore, is whether the property known as Homestead Resort/Golf Course consists of one lot or three separate "lots". The interpretation of "lot" is critical, because if it is found that the property is one "lot" then the sewage flows emanating from the proposed replacement of the Class 4 septic system on Part Lot 3 must be included in the total design capacity for all septic systems located on the "lot". If, however, the Building Code Commission (BCC) finds that the property consists of three separate "lots", then each "lot" can have a total design capacity of up to, but not more than, 10,000 L/d as per the definition of *sewage system* outlined in the OBC.

4. Provisions of the Ontario Building Code

1.1.3.2. Defined Terms

(1) The words and terms in italics in this Code have the following meaning for the purposes of this Code, and where indicated, the following meaning for the purposes of the Act as well.

Sewage system means

(a) a chemical toilet, an incinerating toilet, a recirculating toilet, a self-contained portable toilet and all forms of privy including a *portable privy*, an *earth pit privy*, a *pail privy*, a *privy vault* and a composting toilet system,
(b) a *greywater* system,
(c) a cesspool,
(d) a *leaching bed* system, or
(e) a system which requires or uses a *holding tank* for the retention of *hauled sewage* at the site where it is produced prior to its collection by a *hauled sewage system*,

where these

(f) have a *design capacity* of 10,000 litres per day or less,
(g) have, in total, a *design capacity* of 10,000 litres per day or less where more than one of these are located on a lot or parcel of land, and
(h) are located wholly within the boundaries of the lot or parcel of land on which is located the *building* or *buildings* they serve.

5. Applicant's Position

The Applicant began by submitting that the issue at dispute stems from a proposal to replace an existing Class 4 septic system located at a site referred to as Homestead Resort/Golf Course. He then advised that he wished to clarify the matter germane to this dispute, which is determining whether the property in question is one "lot" or three separate "lots". He stated that he was not prepared at this point to speak to issue of total design capacities, and stated that he wished to limit the scope of this particular hearing to whether the property in question consists of one or three "lots".

The Applicant continued by advising that the difficulty in determining the number "lots" results from the fact that although the term "lot" is used throughout the Code, there is no definition provided in Section 1.1.3.2. of the OBC. This has resulted in the parties having conflicting views on what a "lot" is and the number of "lots" that constitute the property in question.

The Applicant indicated that the nub of this dispute rests on the interpretation of the term "lot". He advised that since the term "lot" is not defined in the Code, he turned to the Concise Oxford Dictionary

for its meaning. According to the Concise Oxford Dictionary, the term "lot" means a "plot or allotment of land". Furthermore, he advised the word "lot" is clearly defined in Part I of the *Land Titles Act*, R.S.O. 1990, Chapter L.5 as including a "block, reserve and any other delineation of land on a plan". The Agent then drew the Commission's attention to Registered Plan 16R6386, which, he advised, shows the property as consisting of three separate Part Lots.

The Applicant then went on to provide some detail on the property and proposal at dispute. As outlined by the Applicant, Homestead Resort/Golf Course consists of, in his view, three adjacent "lots" which are all under the same ownership. He submitted that the proposed Class 4 sewage system replacement is located Part Lot 3, which is currently serviced by two Class 4 sewage systems. As per the Applicant's proposal, these systems are intended to service the Recreation Hall, the office/pro shop, one bedroom, and one toilet. The Applicant advised that, upon the proposed replacement, the sewage load for Part Lot 3 would be 8,050 L/d, with System 1 having a design flow of 550 L/d and System 2 having a design flow of 7,500 L/d.

In summary, the Applicant advised that he wished to limit the scope of this particular BCC hearing to the determination of whether the property in question consists of one or three "lots". He reiterated that although the term "lot" is not defined in the Code, the term, as defined in the *Land Titles Act*, supports his contention that there are three parcels of land held by Homestead Resort/Golf Course. In this regard, the Agent concluded by stating that the property in question consists of three separate "lots", since Registered Plan 16R6386 shows three Part Lots.

6. Respondent's Position

The Respondent submitted that his position on the matter is straightforward. He advised that the property referred to as Homestead Resort/Golf Course is made up of Part Lots 2, 3, & 4, Concession 21 (Egremont) and is an *amalgamated* (*emphasis added*) parcel of land owned by 1028541 Ontario Limited (Homestead Resort/Golf Course). In this regard, the Respondent advised that the entire 123-acre holding of land in question is a single "lot" that would require consent to sever from a Land Division Committee if any part(s) were to be sold in the future.

The Respondent continued by advising that since the property in question is one, amalgamated "lot", the total design capacity for all septic systems on the property must not exceed 10,000 L/d in order to comply with the definition of *sewage system* outlined in the OBC. He submitted that the 10,000 L/d limit is exceeded when considering the total design capacity for all septic systems located on the "lot" and, as such, advised that the application to replace the existing Class 4 system should be made to the Ministry of the Environment (MOE), who deal with the regulation of *sewage works*. Despite having raised the issue of total design capacity, the Respondent, when questioned, did agree to limit the scope of this particular BCC hearing to the number of "lots" that constitute the property in question.

In summary, the Respondent argued that the property known as Homestead Resort/Golf Course is an amalgamated parcel of land that would require consent to sever if a part were to be sold in the future. Although not germane to this BCC hearing, the Respondent did advise that he believes the application to replace the existing Class 4 sewage system should be made to the MOE, since, in his interpretation, the total design capacity for all septic systems on the property likely exceeds 10,000 L/d.

7. Commission Ruling

It is the decision of the Building Code Commission that, when considering Article 1.1.3.2. (definition

of "lot" or "parcel of land" as it pertains to a *sewage system*) in relationship to the lands owned by 1028541 Ontario Ltd (Homestead Resort/Golf Course), the entire 123 acre-holding identified as Part Lots 2, 3 and 4 RP 16R6386 are considered to be one lot.

8. Reasons

The regulation of on-site sewage system construction in Ontario is divided between the Ontario Building Code (OBC) for projects with a total daily design sanitary sewage flow of 10,000 litres per day or less and the *Ontario Water Resources Act* (OWRA) for flows over 10,000 litres per day. Review and enforcement of proposals under the OBC is done through local municipalities, health units, and conservation authorities. In the case of the OWRA, review and enforcement is done through the Ministry of Environment (MOE). For all sewage applications, the assessment of the total daily design sanitary sewage flow is made in accordance with Article 8.2.1.3. of the OBC, which requires consideration of Tables 8.2.1.3.A and B, or the highest metered flow of three similar establishments.

Although the design, construction and operation of an on-site sewage system should be carried out with due consideration to the local environment (particularly the groundwater), the purpose of the division in responsibilities for approval is to afford the MOE an opportunity to scrutinize proposed larger (over 10,000 litres per day) *sewage works* relative to the local environmental conditions and potential impacts of effluent disposal. In particular, the proponent of the larger sewage works must consider the impact of dissolved nitrogen species on the local groundwater and down gradient uses of the water (Reasonable Use Policy).

In the case at hand, the Applicant has applied under the OBC to his local municipality with a proposal to replace the tanks and leaching bed serving the bank barn "Recreation Hall", which was renovated to include bar and dining facilities. The recreation centre is located on a 123-acre holding of land under single ownership along with additional uses including eight cottages, one occupied house, one unoccupied house and several other buildings without sanitary facilities. The sanitary facility that is the subject of this dispute is one of several *sewage systems* on the 123-acre holding.

On this matter, the Commission agrees with the Respondent that the subject 123-acre holding of land is one lot. The reason for this is that the Applicant would require consent from a Land Division Committee in order to sever the property into individual parcels. This would also be a necessary step prior to the step prior to the selling and/or transferring of this property.

Accordingly, it is the decision of the Commission that the 123-acre property known as "Homestead Resort" is a single lot or parcel, when referencing Article 1.1.3.2. of the OBC.

Dated at Toronto this **4th** day in the month of **December** in the year **2003** for application number **2003-55**.

Bryan Whitehead

Ruling No. 03-50-948
Application No. 2003-53

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Articles 3.2.2.26., 3.2.9.1., and Sentence 3.13.2.2.(3) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Ken Bright, University of Ontario, for the resolution of a dispute with Michael Leonard, Chief Building Official, City of Oshawa, to determine whether the proposed temporary air-supported structure, which has a Group A, Division 2 occupancy, that is not equipped with a sprinkler system or a standpipe and hose system, provides sufficiency of compliance with Articles 3.2.2.26. and 3.2.9.1., when considering Sentence 3.13.2.2.(3) of the Ontario Building Code, at Durham College/UOIT Tennis Facility, 50 Conlin Road West, Oshawa, Ontario.

APPLICANT	Ken Bright University of Ontario Oshawa, Ontario
RESPONDENT	Michael Leonard Chief Building Official City of Oshawa
PANEL	John Guthrie, Chair-Designate Fred Barkhouse Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	November 20, 2003
DATE OF RULING	November 20, 2003
APPEARANCES	Demir Delen Morrison Hershfield Ltd. Toronto, Ontario **Agent for the Applicant** Cvjeta Prgin Chief Building Official City of Oshawa **Designate for the Respondent**

RULING

1. The Applicant

Ken Bright, University of Ontario has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing an air-supported structure at Durham College/UOIT Tennis Facility, 50 Conlin Road West, Oshawa, Ontario.

2. Description of Construction

The Applicant is constructing an air-supported, fabric-covered structure having a Group A, Division 2 occupancy. The proposed structure is one storey in building height and approximately 4, 085 m^2 in building area. The building is comprised of combustible construction and is not equipped with a fire alarm system, a sprinkler system, nor a standpipe and hose system. The proposed air-supported structure is intended to be used during the winter months as a shelter for six existing tennis courts.

The construction in dispute involves the requirement to install a sprinkler system and a standpipe and hose system in the proposed air-supported structure. The Applicant maintains that the proposed as-supported structure does not require a sprinkler system nor a standpipe and hose system, since it is a temporary structure, which will be removed for five months every year. The Respondent, however, maintains that the proposed air-supported structure is required to be sprinklered due to its size. Furthermore, the Respondent is of the opinion that if a sprinkler system is not required, then a standpipe and hose system should be installed.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed temporary air-supported structure, which has a Group A, Division 2 occupancy, that is not equipped with a sprinkler system or a standpipe and hose system, provides sufficiency of compliance with Articles 3.2.2.26. and 3.2.9.1., when considering Sentence 3.13.2.2.(3) of the Ontario Building Code (OBC).

The term *air-supported structure* is defined in the OBC as "a structure consisting of a pliable membrane which achieves and maintains its shape and support by internal air pressure". Subsection 3.13.2. of the Code governs the construction of such structures. As per Sentence 3.13.2.1.(1), air-supported structures shall comply with the requirements of the Code except as permitted in Subsection 3.13.2.

Sentence 3.13.2.2.(3) of the OBC, exempts air-supported structures from complying with Articles 3.2.2.20. to 3.2.2.83., with the exception of maximum building size. The reference to maximum building size in this Sentence is not to determine whether the construction is to be combustible or non-combustible, but rather to determine the requirements for sprinklering. The building area and classification determined for the subject air-supported structure result in it falling under Article 3.2.2.26. of the Code, which requires sprinkler protection to be provided.

In addition, Article 3.2.9.1. of the Code outlines the various buildings where a standpipe system is required. Since the subject air-supported structure has a building area greater than 2, 500 m^2, Table 3.2.9.1. requires that a standpipe and hose system be installed.

4. Provisions of the Ontario Building Code

3.2.2.26. Group A, Division 2, up to 2 Storeys, Increased Area, Sprinklered

(1) A *building* classified as Group A, Division 2 is permitted to conform to Sentence (2) provided
- (a) except as permitted by Sentence 3.2.2.7.(1), the *building* is *sprinklered*,
- (b) it is not more than 2 *storeys* in *building height*, and
- (c) it has a *building area* not more than
  - (i) 4 800 m^2 (51,700 ft^2) if 1 *storey* in *building height*, or
  - (ii) 2 400 m^2 (25,800 ft^2) if 2 *storeys* in *building height*.

(2) The *building* referred to in Sentence (1) is permitted to be of *combustible construction* or *noncombustible construction* used singly or in combination, and
- (a) floor assemblies shall be *fire separations* and, if of *combustible construction*, shall have a *fire-resistance rating* not less than 45 min,
- (b) *mezzanines* shall have, if of *combustible construction*, a *fire-resistance rating* not less 45 min, and
- (c) *loadbearing* walls, columns and arches supporting an assembly required to have a *fire-resistance rating* shall
  - (i) have a *fire-resistance rating* not less than 45 min, or
  - (ii) be of *noncombustible construction*.

3.2.9.1. Standpipe Systems, Where Required

(1) Except as provided in Sentences (4) to (7), a standpipe system shall be installed in every *building* that
- (a) is more than 3 *storeys* in *building height*,
- (b) is more than 14 m (45 ft 11 in) high measured between *grade* and the ceiling of the top *storey*, or
- (c) is not more than 14 m (45 ft 11 in) high measured between *grade* and the ceiling of the top *storey* but has a *building area* exceeding the area shown in Table 3.2.9.1. for the applicable *building height* if the *building* is not *sprinklered*.

(2) A standpipe system shall be installed in every *basement* of a *building* that requires a standpipe system above *grade*.

(3) A standpipe system shall be installed in every *basement* of a building that is regulated by Sentence 3.2.2.15.(2).

Table 3.2.9.1.
Building Limits without Standpipe Systems
Forming Part of Sentence 3.2.9.1.(1)

Occupancy Classification	*Building Area*, m^2 (ft^2)		
	1 *Storey*	2 *Storeys*	3 *Storeys*

A C D F, Division 2 F, Division 3	2 500 (24,200) 2 000 (21,500) 4 000 (43,100) 2 000 (21,500) 3 000 (32,300)	2 000 (21,500) 1 500 (16,100) 3 000 (32,300) 1 500 (16,100) 2 000 (21,500)	1 500 (16,100) 1 000 (10,800) 2 000 (21,500) 1 000 (10,800) 1 000 (10,800)
Column 1	2	3	4

(4) A standpipe system is not required to be installed in the lowest *storey* in a *building* if this *storey* is a *service room* which has an area not more than 50 m^2 (538 ft^2).

(5) A standpipe system is not required to be installed in a roof-top enclosure if this enclosure has an area not more than 50 m^2 (538 m^2).

(6) A standpipe system is not required to be installed in a *storage garage* conforming to Article 3.2.2.83. provided the *building* is not more than 15 m (49 ft 3 in) high.

(7) A standpipe system is not required to be installed in a *dwelling unit* which
(a) extends not more than 3 *storeys* above adjacent ground level,
(b) is completely cut off from the remainder of the *building* so that there is no access to the remainder of the *building*, and
(c) has direct access to its interior by means of an exterior doorway located not more than 1 500 mm (4 ft 11 in) above or below adjacent finished ground level.

3.13.2.2. Air-Supported Structures, General

(3) Except as provided in Sentence (5), *air-supported structures* are exempt from complying with Articles 3.2.2.20. to 3.2.2.83., except for maximum *building* size.

5. Applicant's Position

The Agent for the Applicant began by offering a brief overview of the construction at dispute and distributing photos of the subject air-supported structure for the Commission's review. He submitted that there are two issues at dispute: i) whether the as-constructed air-supported structure should be provided with sprinkler protection and ii) whether a standpipe and hose system should be installed.

The Agent then continued by stating that Sentence 3.13.2.2.(3) exempts air-supported structures from complying with the requirements contained in Articles 3.2.2.20. to 3.2.2.83. of the OBC, except for maximum building size. He then added that it is the Respondent's opinion that, based on building size, the air-supported structure at dispute, falls under Article 3.2.2.26., which requires it to be sprinklered. The Agent stated that, in his opinion, Article 3.2.2.26. applies to *permanent* air-supported structures that are of a greater size, such as large golf domes, as opposed to *temporary* structures, such as the as-constructed tennis bubble at dispute (*emphasis* added). In this regard, the Agent argued that the subject air-supported structure should be exempt from the provision of sprinklering, since it is a temporary structure that will be removed for five months every year.

As outlined by the Agent, air-supported structures have been included in the Code since its inception

in 1975. Despite this, it was not until the 1997 Code when interior walls, mezzanines, or intermediate floors were permitted in these structures, provided that these complied with the applicable construction requirements. As per the Agent, no provisions were added to the 1997 OBC that required temporary air-supported structures to be sprinklered and, furthermore, he argued that no other building code in North America requires sprinklers to be installed in an air-supported structure. In addition, he stated that the National Building Code of Canada continues to permit an air-supported structure of any area without sprinklers, provided it complies with the requirements of Subsection 3.1.6.

The Agent continued by outlining the implications associated with providing sprinkler protection in the subject air-supported structure. He submitted that, if required, the sprinkler system would have to comply with Article 3.2.5.13. of the Code, which stipulates, in Sentence (1), that an automatic sprinkler system shall be designed, constructed, installed, and tested in conformance with NFPA 13 "Standard for the Installation of Sprinkler Systems". As per the Agent, the requirements of NFPA 13 mandate that sprinkler piping be supported by a building's structure. The Agent advised that this is a feasible requirement to fulfil when a building structure is non-dynamic. However, as submitted by the Agent, providing sprinklers in the subject structure would be extremely difficult, if not impossible, because rigid piping would have to be hung in a building that is supported by internal air-pressure.

With respect to the second issue at dispute, the Agent submitted that the subject air-supported structure should also be exempt from the requirements of a standpipe and hose system, because there is virtually no fire load in the building. Since the air-supported structure at dispute will be used to cover six existing tennis courts, the Agent advised that there will be very few elements present in the building that will contribute to the fire load, for example tennis nets and a minimal number of chairs for seating. He also stated that the fabric used for the air-supported structure complies with both NFPA 701 "Standard Method of Fire Tests for Flame-Resistant Textile and Films" and CAN/ULC S-109 "Standard for Flame Test of Fabrics and Films" as required by Sentence 3.13.2.5.(1) of the OBC.

In addition, the Agent advised that the manufacturer of the air-supported structure does not recommend that a standpipe and hose system be installed, because, if a fire were to occur, it is not recommended that it be fought internally. In this regard, the Agent advised that a standpipe and hose system, installed inside the structure, would not be of much use. He then added that the Building Code Commission had made a previous decision (Ruling 98-21-626), which permitted an air-supported structure without a sprinkler system, without a standpipe and hose system, and with an occupant load of 160 persons.

The Agent then went on to outline the various compensating measures that the Applicant is willing to provide in lieu of providing sprinkler protection and installing and standpipe and hose system. He submitted that fire extinguishers will be provided inside the air-supported structure and hydrants will be located outside the structure for fire suppression capabilities. The Agent also stated that the air-supported structure will have five 1.2 m (4 ft) wide exit doors, which will provide an exit capacity for 999 persons. This exit capacity, as per the Agent, is much higher than the actual maximum occupant load of 50 persons. He added that the travel distance to an exit does not exceed the maximum limit specified for an unsprinklered building; thereby, mitigating any problems that might be associated with evacuation.

In summary, the Agent submitted that temporary air-supported structures, which are not provided with sprinkler systems, have been installed over tennis courts and swimming pools during the winter months in North American since the early 1980s and that no adverse effects have been experienced. He concluded by stating that both he and the Applicant believe that there is no history, nor technical reason, to justify the installation of a sprinkler system or standpipe and hose system in a temporary building, such as the air-supported structure at dispute.

6. Respondent's Position

The Designate for the Respondent began by submitting that she agrees with the Agent in the respect that providing sprinkler protection in the subject air-supported structure is not practical. She also stated that she is aware of the fact that the National Building Code differs from the OBC with respect to the provision of sprinkler protection in an air-supported structure, but that it is the responsibility of the City of Oshawa's Development Services Department to enforce the provisions of Ontario's Code. In this regard, the Designate submitted that sprinkler protection is required in the air-supported structure at dispute by virtue of the building's size as per Article 3.2.2.26. of the Code. She also submitted that the current OBC contains no special provisions, or exemptions, for temporary structures with respect to the requirements for sprinklering. As such, the Designate advised that this was the reason why the issue was brought before the Commission.

The Designate then continued by submitting that if sprinkler protection was not required, then she believes that a standpipe and hose system should be installed. She argued that since the building area is larger than 2, 500 m^2, Table 3.2.9.1. of the OBC requires that a standpipe and hose system be installed. Again, the Designate submitted that the Code does not contain any special exemptions for temporary structures in this regard, and that the City of Oshawa is not in the position to permit this technical deviation from the Code.

In summary, the Designate submitted that she is cognizant of the difficulties that are associated with providing sprinkler protection in the subject air-supported structure, but that it is her responsibility to enforce the provisions of the OBC. She then reiterated that there are no special provisions in the Code, which exempt temporary structures from the requirements of sprinkler protection, nor the installation of a standpipe and hose system.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed temporary air-supported structure, which has Group A, Division 2 occupancy, and is not provided with a sprinkler system or a standpipe and hose system, does not provide sufficiency of compliance with Articles 3.2.2.26. and 3.2.9.1., when considering Sentence 3.13.2.2.(3) of the Ontario Building Code, at Durham College/UOIT Tennis Facility, 50 Conlin Road West, Oshawa, Ontario.

8. Reasons

i) The intention of Sentence 3.13.2.2.(3) of the OBC is to limit the size of unsprinklered buildings.

AND IN THE MATTER OF an application by Terry Kaufman, 995347 Ontario Ltd., for the resolution of a dispute with Ann Borooah, Chief Building Official, City of Toronto, to determine whether the as-built exterior concrete front entrance stairs, which have more than two risers and two treads and are supported by concrete patio stones, provide sufficiency of compliance with Sentence 9.8.9.1.(1) of the Ontario Building Code at 18B, 20, 22, 44, 76, 78, 80, 82, and 84 Osler Street, Toronto, Ontario.

APPLICANT	Terry Kaufman 995347 Ontario Ltd. Toronto, Ontario
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	John Guthrie, Chair-Designate Fred Barkhouse Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	November 20, 2003
DATE OF RULING	November 20, 2003
APPEARANCES	Dave Johnson, Senior Project Manager/Associate Randal Brown and Associates Ltd. Toronto, Ontario **Agent for the Applicant** Carl Baron, Senior Buildings Inspector City of Toronto Toronto, Ontario **Designate for the Respondent**

RULING

1. The Applicant

Terry Kaufman, 995347 Ontario Ltd., has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a residential townhouse complex located at 18B, 20, 22, 44, 76, 78, 80, 82, and 84 Osler Street, Toronto, Ontario.

2. Description of Construction

The Applicant has constructed a complex of townhomes having a Group C occupancy. The individual dwellings are two storeys in building height and approximately 115 m^2 in building area.

The construction at dispute involves the front entrance stairs that provide access to the individual townhomes. The as-constructed stairs are precast concrete step stairs that consist of four risers. Specifically, the issue at dispute pertains to the method that was used to support the concrete stairs in question. Presently, the as-constructed stairs are supported by concrete patio stones that have been placed over compacted soil.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-built exterior concrete front entrance stairs, which have more than two risers and two treads and are supported by concrete patio stones, provide sufficiency of compliance with Sentence 9.8.9.1.(1) of the Ontario Building Code (OBC).

Article 9.8.9.1. of the OBC sets out the requirements with respect to the construction of exterior concrete stairs. Sentence (1) of this Article states that stairs with more than 2 risers and 2 runs are required to be supported on unit masonry, concrete walls, piers, or must be cantilevered from the main foundation wall. The unit masonry or concrete walls referenced in Clause (a) of this Sentence, refer to foundation walls in most cases. Where concrete stairs are cantilevered from the foundation wall, as referenced in Clause 9.8.9.1.(1)(b), they are required to be installed to support the loads that they are subjected to, anchored as required, and mounted to prevent damage due to frost.

4. Provisions of the Ontario Building Code

9.8.9.1. Exterior Concrete Stairs

(1) Exterior concrete stairs with more than 2 risers and 2 treads shall be

(a) supported on unit masonry or concrete walls or piers not less than 150 mm (5⅞ in) in cross section, or

(b) cantilevered from the main *foundation* wall.

5. Applicant's Position

The Applicant for the Agent began by providing a brief overview of the stairs in dispute. He indicated that the exterior stairs in question are precast concrete stairs, which consist of four risers. The Agent stipulated that the issue at dispute specifically pertains to the method of support that was employed when installing the subject stairs. As per the Agent, the exterior concrete stairs were installed approximately two years ago and are supported by concrete patio stones.

The Agent advised that when the stairs were installed, the Applicant relied on product information provided by the manufacturer, which did not indicate that a foundation support was required. In this regard, the Agent stated that the Applicant supported the stairs on concrete patio stones, which are mounted on top of compacted soil. The Agent submitted that the Applicant was notified of the Code infraction shortly after having installed the stairs through an Order to Comply that was issued on May 28th, 2002.

The Agent continued by submitting that the Applicant retained the services of a structural engineer upon discovering that the subject stairs were allegedly not installed according to the provisions outlined in the OBC. The Agent then referred to an opinion letter that was issued by the retained structural engineer, which stipulates that the compacted soil is capable of sustaining the load imposed by the entrance stairs in its current configuration. In this regard, he advised that it is the Applicant's position that the stairs are not required to be constructed on a unit masonry foundation.

The Applicant then advised that he wished to address the Commission with respect to the safety of the exterior stairs at dispute. He submitted that the stairs have been in place for two years now and that he has not experienced any problems with respect to movement of the stairs. He also submitted that the subject stairs are sold across the province and that he would have never installed them if he believed that were unsafe.

In summary, the Agent argued that the Applicant relied on product information when installing the exterior stairs at dispute. As per the Agent, the product information did not stipulate that the stairs were required to be supported on foundation and, as a result, the Applicant chose to install them on concrete patio stones laid upon compacted soil. As per the Agent, it is the Applicant's belief that the stairs provide sufficiency of compliance with OBC, as it is the opinion of a Structural Engineer that the compacted soil is capable of sustaining the imposed loads.

6. Respondent's Position

The Designate for the Respondent began by submitting that Sentence 9.8.9.1.(1) of the Code clearly stipulates that exterior concrete stairs shall be supported on unit masonry or cantilevered from the main foundation wall. In this regard, the Designate submitted that the exterior stairs in question are currently in violation of the Code, because they have been simply laid upon concrete patio stones and have not been anchored or attached to the main foundation wall in any manner.

The Designate then submitted that during a recent site visit, he noticed that approximately 40% of the exterior stairs belonging to the individual townhomes showed substantial signs of sloping, movement, and instability. In his opinion, this is ample evidence to indicate that the soil is not adequately compacted and, therefore, unable to sustain the imposed loads. In this regard, the Designate submitted that the exterior concrete stairs, as currently installed are uneven and irregular, and represent a potential hazard and, therefore, need to be rectified.

When questioned as to whether the exterior concrete stairs were approved by the City of Toronto's

Building Division, the Designate submitted that the original drawings submitted for approval indicated the stairs would be constructed from wood and supported on piers. The Designate added that the City has received several calls from homeowners residing in the townhouse complex with respect to the safety of the exterior stairs at dispute. In this regard, the Designate submitted that the City is concerned in terms of liability, as there is a tremendous possibility of slipping and tripping on the subject stairs. He concluded by stating that he believes it would be negligent on the City's part if they were to accept the stairs as they are currently installed.

In summary, the Designate for the Respondent argued that the as-installed exterior stairs do not comply with Sentence 9.8.9.1.(1) of the OBC, as they are not supported on unit masonry or cantilevered from the main foundation wall. The Designate advised that the subject exterior stairs show substantial signs of movement and, as such, are unsafe and should be remedied.

7. Commission Ruling

It is the decision of the Building Code Commission that the exterior concrete front entrance stairs, which have more than two risers and two treads, and are supported by concrete patio stones do not provide sufficiency of compliance with Sentence 9.8.9.1.(1) of the Ontario Building Code at 18B, 20, 22, 44, 76, 78, 80, 82, and 84 Osler Street, Toronto, Ontario.

8. Reasons

i) Stairs with more than two risers and two treads must be supported by foundations, which provide frost protection.

Dated at Toronto this **20th** day in the month of **November** in the year **2003** for application number **2003-47**.

Donald Pratt

Ruling No. 03-34-932
Application No. 2003-41

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 3.7.4.1.(3) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Frank Mills, Westside Cemeteries Ltd., for the resolution of a dispute with Ms. Ann Borooah, Chief Building Official, City of Toronto, to determine whether the proposed addition to a Group F, Division 3 occupancy that will not be equipped with water closets, but is located 250 metres away from an adjacent building on the same property that contains water closets, provides sufficiency of compliance with Sentence 3.7.4.1.(3) of the Ontario Building Code at Westminster Cemetery Mausoleum, 3850 Bathurst Street, Toronto, Ontario.

APPLICANT	Frank Mills Westside Cemeteries Ltd Weston, Ontario
RESPONDENT	Ms. Ann Borooah Chief Building Official City of Toronto
PANEL	Tony Chow, Vice-Chair Robert De Berardis Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	August 28, 2003
DATE OF RULING	August 28, 2003
APPEARANCES	David Hine Hine Reichard Tomlin Inc. Markham, Ontario **Agent for the Applicant** Tony Fiorino Building Engineer City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Frank Mills, Westside Cemeteries Ltd., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing an addition to a mausoleum at Westminster Cemetery Mausoleum, 3850 Bathurst Street, Toronto, Ontario.

2. Description of Construction

The Applicant is constructing a second-storey addition to an existing single-storey mausoleum having a Group F, Division 3 occupancy. The second-storey addition is proposed to have an area of approximately 311 m^2, while the existing single-storey facility has a building area of 946 m^2. Both the existing facility, and the proposed addition, are of non-combustible construction.

The issue at dispute pertains to the requirement of providing a plumbing system to serve occupants in the subject mausoleum. The Applicant is of the opinion that a plumbing system, specifically water closets, is not required, because the subject mausoleum is not normally occupied and there are barrier-free public washrooms provided in a nearby building located approximately 250 m away. While the Respondent agrees that the water closets can be excluded, he is also of the opinion that the 250 m travel distance is too great. Since the Ontario Building Code does not require a minimum travel distance to a washroom, at issue is whether the distance of 250 m is reasonable for a visitor to travel.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed addition to a Group F, Division 3 occupancy that will not be equipped with water closets, but is located 250 metres away from another building located on the same property that contains water closets, provides sufficiency of compliance with Sentence 3.7.4.1.(3) of the Ontario Building Code (OBC).

Since its inception, the OBC has required buildings to be provided with, or have accessible to its occupants, a plumbing system. Despite this, the first edition of the Code did provide an exemption to this provision in situations when the installation of a sanitary drainage system was not possible because of the absence of a water supply. In cases such as this, however, the Code also required that other means for the disposal of human waste be provided, for instance, sanitary privies or chemical closets.

In 1978, an amendment to the Code was introduced stipulating that plumbing facilities may be omitted in a building that is not normally occupied by persons, where such installations are impractical, and where other facilities are available in nearby buildings when the subject building is in use. The current Code [as prescribed in Sentence 3.7.4.1.(3)] continues to include this exemption; however, the Sentence numbering has changed from the 1978 amendment.

4. Provisions of the Ontario Building Code

3.7.4.1. Plumbing and Drainage Systems

(3) *Plumbing fixtures* need not be provided in a *building* which is not normally occupied by persons where such installations are impractical and other *fixtures* are available in nearby *buildings* when the subject *building* is in use.

5. Applicant's Position

The Agent for the Applicant began by offering a brief description of the site on which the subject mausoleum is located. The Agent advised that the site consists of burial plots, access roads, and a total of fifteen mausoleums. The subject mausoleum is located on the southwest corner of the access road that provides entrance into the mausoleum complex.

The Agent continued by advising that the subject mausoleum consists of an above grade, indoor cemetery where the deceased are buried in crypts. He stated that the subject mausoleum is both nominally heated, as well as nominally cooled. The Agent submitted that despite the fact that the subject mausoleum is not serviced by a municipal water main, potable water is available. He added that there is no assembly space, per se, offered in the mausoleum, and that there are relatively few services held in the facility. As per the Agent, the crypts in the subject mausoleum are approximately 60% occupied, thereby, resulting in the need to construct the second storey addition.

As indicated by the Agent, a permit was issued for the addition to the subject mausoleum. Shortly thereafter, however, a revision to the permit was applied for that pertained to the removal of the proposed janitor closets and the water closets shown on the original permit application drawings. The Agent submitted that the proposal to remove the water closets was based on the fact that the subject mausoleum is not normally occupied and is located within a reasonable distance to an adjacent building that has barrier-free washrooms. Furthermore, he submitted that while constructing the addition results in an increase in the number of crypts, it does not translate to an increase in the occupant load. As per the Agent, the addition will simply assist in re-establishing visitation to the mausoleum, as it has been found that the number of visits to a mausoleum decrease as time from date of burial increases. In this regard, the Agent maintained that the existing water closets, located in an adjacent building 250 m away, should be adequate as the occupant load is not increasing as a result of the addition.

The Agent then submitted that while the City of Toronto Building Department agrees that washrooms are not required by the OBC in the subject mausoleum, they feel that the travel distance to the nearest water closet, is too far. He submitted that the crux of the matter before the Commission is a subjective determination of whether 250 m is too far to travel to the washroom, since in this instance the OBC does not require a minimum travel distance to a washroom.

In summary, the Agent argued that the subject mausoleum should not be required to have water closets, because the building is not normally occupied. Furthermore, he submitted that the proposed addition will not result in an increase in occupancy, but will rather assist in maintaining current visitation levels to the mausoleum. Finally, the Agent argued that water closets should not be required on the basis that barrier-free washrooms are located within 250 m of the subject mausoleum which, in his opinion, is a reasonable distance for visitors to travel.

6. Respondent's Position

The Designate for the Respondent submitted that drawings for the original permit application showed two washrooms for the subject mausoleum, but that a revision to remove these was later made due to fiscal constraints. He then stated that the OBC does not specifically address the provision of water closets in mausoleums, but that the expectation on the part of visitors to find these types of sanitary facilities still exists, as mausoleums are typically buildings with controlled environments. Furthermore, the Agent submitted that while there are no expectations in an open, outdoor cemetery to have plumbing facilities available, there are within buildings were funeral services are held.

The Designate continued by submitting that the Applicant is proposing to use the sanitary facilities

located in a building 250 m away in lieu of providing water closets in the proposed mausoleum addition. As per the Designate, this is not a reasonable distance for occupants to travel, especially given the mental and physical state that occupants may be in when they are within subject mausoleum. Furthermore, he added that the plumbing facilities may be difficult to access during inclement weather.

The Designate then advised that he believes a travel distance of 250 m is unreasonable, especially since an occupant will have to leave the subject mausoleum, travel a distance of 250 m, and then enter a second mausoleum to access sanitary facilities. He submitted that while he acknowledges that Sentence 3.7.4.1.(3) of the OBC permits the exemption of plumbing fixtures when these are available in a nearby building, he does not believe that a travel distance of 250 m meets the intent of the Code.

In summary, the Designate argued that while the OBC does not specifically address the provision of water closets in mausoleums, there still exists the expectation that these types of sanitary facilities will be provided. He also acknowledged that Sentence 3.7.4.1.(3) of the Code permits the exemption of plumbing fixtures in certain building when these fixtures are provided in a nearby building. Despite this, the Designate submitted that he believes the proposed travel distance of 250 m is excessive for a visitor to travel.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed addition to a Group F, Division 3 occupancy that will not be equipped with water closets will provide sufficiency of compliance with Sentence 3.7.4.1.(3) of the Ontario Building Code at the Westminister Cemetery Mausoleum, 3850 Bathurst Street, Toronto, Ontario, on the condition that:

a) Signage is provided within the subject building, indicating the location of the available washrooms.

8. Reasons

i) There is no dedicated space for entombment services to be conducted within the subject building, thereby reducing the likelihood of large funerary services, which may necessitate the need for washroom facilities.

ii) The Applicant is proposing an addition to an existing building, which currently does not have a sanitary drainage system.

iii) There are water closets provided in an existing mausoleum, which is also located on this cemetery property.

Ruling No. 03-33-931
Application No. 2003-32

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 7.2.2.5.(1) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Arash Beheshti, Concord Adex Development Corporation, for the resolution of a dispute with Ann Borooah, Chief Building Official, City of Toronto, to determine whether the as-installed fixture drainage outlets in the lavatories of a Group C occupancy comply with Sentence 7.2.2.5.(1) of the Ontario Building Code, at the Optima Condominium Tower, 65 Navy Wharf Court, Toronto, Ontario.

APPLICANT	Arash Beheshti Concord Adex Development Corporation Toronto, Ontario
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Tony Chow, Vice-Chair Robert De Berardis Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	August 28, 2003
DATE OF RULING	August 28, 2003
APPEARANCES	Allan Larden Larden Muniak Consulting Inc. Toronto, Ontario **Agent for the Applicant** Dave Deonarine Manager, Inspections, South District City of Toronto **Designate for the Respondent**

RULING

1. The Applicant

Arash Beheshti, Concord Adex Development Corporation, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a Group C occupancy referred to as the Optima Condominium Tower at 65 Navy Wharf Court, Toronto, Ontario.

2. Description of Construction

The Applicant has constructed a Group C residential high-rise condominium. The structure is 34 storeys in building height and approximately 1,750 m^2 in building area. The building is comprised of non-combustible construction and is equipped with sprinkler, fire alarm, and standpipe and hose systems.

The item particular to this dispute involves the drainage outlets that serve the lavatories in the washrooms of the residential units. The lavatories in question have not been provided with overflow drains, nor are they installed with grid drains. Instead, the disputed lavatories are currently fitted with standard fixture drainage outlets, which include mechanical, pop-up style stoppers.

A grid drain is generally described as a draining device equipped with a flat grid located at its uppermost point where the water exits the lavatory basin and enters the drain. Grid drains are specifically intended not to be equipped with plugs, mechanical stoppers or blockers of any type. "Centre outlet waste fitting" is a trade term used by some in the plumbing industry to refer to grid drains. Grid drains and centre outlet waste fitting are not defined terms in the Ontario Building Code (OBC).

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-installed fixture drainage outlets in the lavatories of a Group C occupancy comply with Sentence 7.2.2.5.(1) of the Ontario Building Code (OBC).

Sentence 7.2.2.5.(1) of the OBC mandates that a lavatory that does not have an overflow must be equipped with a centre outlet waste fitting. The intent of this Sentence is to minimize the impact of damage should overflowing occur, especially within high-rise units. The premise of this Sentence is to require installation of drain fittings that would be less likely to get plugged. At issue, is whether the as-installed drain fittings, which are not grid drains, meet the definition of "centre outlet waste fitting" found in OBC.

Also germane to the dispute at hand is Article 1.1.3.1. of the Code, which addresses non-defined terms. This Article notes that phrases and words which are not defined in the Code are to assume the meaning most commonly assigned to them in the context in which they are used in the Code, while also taking into account the specialized use of terms with the various trades and professions to which the terminology applies. The intent of this Article is to clarify that some of the words and phrases used in the OBC do not require explicit definition, since they are specialized terms used within various trades and professions. Article 1.1.3.1. is significant to the issue at dispute because, there is no definition of "centre outlet waste fitting" in the Code. This means that the Commission must, in its consideration of this matter, rely upon the commonly assigned meaning and specialized trade use of the words "centre outlet waste fitting" in order to determine whether the disputed drain fittings comply with Sentence 7.2.2.5.(1) of the OBC.

4. Provisions of the Ontario Building Code

7.2.2.5. Lavatories

(1) A lavatory that does not have an overflow shall be equipped with a centre outlet waste fitting.

5. Applicant's Position

The Agent for the Applicant began by submitting that the issue at dispute pertains to the drainage outlets that have been installed in the lavatories of the subject Group C occupancy. He submitted that the lavatories in question have not been provided with overflows and are equipped with mechanical pop-up style drain fittings. The Agent explained that the dispute arose because the Respondent party is of the opinion that the as-installed drain fittings do not comply with Sentence 7.2.2.5.(1) of the Code, which requires that a lavatory without an overflow be equipped with a "centre outlet waste fitting".

The Agent continued by advising that the term "centre outlet waste fitting" is not defined in the Code and that, furthermore, there is nothing in the term that would lead a Code reader to believe that a conventional drain is unacceptable when fulfilling the requirements of Sentence 7.2.2.5.(1). He then argued that, when taken apart, the definition of the term "centre outlet waste fitting" does not imply that a conventional drain does not fall within its meaning. The Agent submitted, when taken literally, the term "centre" means in the middle, the term "outlet" means a device where water comes out of, the term "waste" means water that has been used, and the term "fitting" means a device that is tightly adhered. In this regard, he maintained that the term simply means a tightly adhered drainage outlet located in the centre of a lavatory where used water passes through. The Agent stated that this literal definition does not exclude a conventional drain.

The Agent then submitted that, as per Article 1.1.3.1. of the Code, non-defined terms are to have the meanings that are commonly assigned to them in the context in which they are used in the Code, taking into account the specialized use of terms with the various trades and professions to which the terminology applies. With this in mind, the Agent stated that he conducted an informal survey of three consulting mechanical engineers and one retail plumbing supply shop in order to gauge professional and trade understanding of the term "centre outlet waste fitting". He submitted that the results from his survey indicate that there are some inconsistencies with regards to the definition of "centre outlet waste fitting" and what this device is intended for. The Agent argued that this ambiguity amongst even those in the trades and professions can very well exist amongst average readers of the Code.

Finally, the Agent argued that there are several residential high-rise developments in the City of Toronto that have lavatories without overflows and which are fitted with standard drain outlets. He submitted that, in his opinion, the Respondent party is being unfair to the Applicant by citing non-compliance of a situation that exists in several other instances.

In summary, the Agent for the Applicant argued that the term "centre outlet waste fitting" is broad, even among those involved in the trades. He submitted that this ambiguity likely exists among average users/readers of the Code. Furthermore, he submitted that the term's elusive meaning does not suggest that a standard drain outlet is unacceptable when applying Sentence 7.2.2.5.(1) of the OBC.

6. Respondent's Position

The Designate for the Respondent submitted that Sentence 7.2.2.5.(1) of the Code clearly states that a

lavatory without an overflow shall be equipped with a centre outlet waste fitting. In this regard, he stated that an order to comply was issued upon discovering the as-installed standard drainage outlets in the lavatories of the subject high-rise building. As per the Designate, two methods for achieving compliance were identified on the order: i) provide lavatories with overflows or ii) replace drain with a centre outlet waste fitting.

The Designate continued by stipulating that he began noticing lavatories without overflows in the mid-to-late 1990s and contacted the Ministry of Municipal Affairs and Housing's Building and Development Branch to obtain their opinion on the matter. The Designate noted that the opinion offered by the Building and Development Branch identified "centre outlet waste fitting" as a trade term, which manufacturers specify to be a grid drain for use in washbasins without overflows.

As identified by the Designate, centre outlet waste fittings are required in lavatories that are not equipped with overflows, because there are relatively fews methods of clogging the device, unless one were to place tape over the grid or block it with a rag. In this regard, a lavatory that is equipped with a centre outlet waste fitting is less likely to overflow; thereby, minimizing potential damages to other areas of a building.

Finally, the Designate submitted that the City of Toronto's Building Division is required to enforce the requirements of the Code and, therefore, the subject lavatories must be equipped with a centre outlet waste fitting, i.e. grid drain. The Designate stated that, simply put, the City of Toronto's Building Division is striving for compliance with the Code.

In summary, the Designate submitted that Sentence 7.2.2.5.(1) of the Code clearly states that a lavatory that does not have an overflow shall be equipped with a centre outlet waste fitting. He argued that the subject lavatories should either be replaced with those equipped with overflows or retrofitted with centre outlet waste fittings.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-installed fixture drainage outlets in the lavatories of a Group C occupancy comply with Sentence 7.2.2.5.(1) of the Ontario Building Code, at the Optima Condominium Tower, 65 Navy Wharf Court, Toronto, Ontario.

8. Reasons

i) The term "centre outlet waste fitting" is not defined in the Ontario Building Code. The as-installed fixture drainage outlets comply with the literal meaning ascribed to the term "centre outlet waste fitting" and, as such, the Building Code Commission maintains that the as-installed devices conform with Sentence 7.2.2.5.(1) of the Code.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 3.1.13.7.(1) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Steve Trach, Alterra / Barnett, for the resolution of a dispute with George Kotsifas, Acting Chief Building Official, City of Burlington, to determine whether the as-installed combustible plumbing fixtures in a Group C occupancy, which have a Smoke Developed Classification of 375, provide sufficiency of compliance with Sentence 3.1.13.7.(1) of the Ontario Building Code at 2085 Amherst Heights Boulevard, Burlington, Ontario.

APPLICANT	Steve Trach Alterra / Barnett Toronto, Ontario
RESPONDENT	George Kotsifas Acting Chief Building Official City of Burlington
PANEL	Michael Steele, Vice-Chair Fred Barkhouse John Guthrie
PLACE	Toronto, Ontario
DATE OF HEARING	August 7, 2003
DATE OF RULING	September 9, 2003
APPEARANCES	Steve Trach Alterra / Barnett Toronto, Ontario **The Applicant** Terry Hewitson Supervisor of Inspections City of Burlington **Agent for the Respondent**

RULING

1. The Applicant

Steve Trach, Alterra / Barnett, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a Group C occupancy located at 2085 Amherst Heights Boulevard, Burlington, Ontario.

2. Description of Construction

The Applicant has constructed a high-rise Group C occupancy building. The structure is seven stories in building height and approximately 2,492 m^2 in building area. In addition to the seven above-grade storeys, the facility includes an underground single storey parking garage. The building is comprised of non-combustible construction and is equipped with a standpipe and hose and fire alarm system. Only the underground parking garage has been equipped with a sprinkler system.

The structure in dispute is considered to be a high building under the Ontario Building Code (OBC), since its floor level is more than 18 m above grade. In fact, the building in question exceeds the height threshold outlined in Subsection 3.2.6. of the OBC by 0.6 metres. Accordingly, as a high building, the construction requirements as per the provisions outlined in Subsection 3.2.6. of the Code are also applicable.

The issue at dispute involves the as-installed combustible plumbing fixtures, which have a smoke developed classification that exceeds the value permitted in Sentence 3.1.13.7.(1) of the Code. As mentioned above, the building at dispute must comply with the flame spread ratings and smoke developed classification values outlined in Sentence 3.1.13.7.(1) of the OBC since it is classified as a high building. In comparison with the smoke developed classification value of 300 outlined in Table 3.1.13.7. of the Code, the as-installed combustible plumbing fixtures, which have a smoke developed classification of 375, are in excess by a value of 75.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-installed combustible plumbing fixtures in a high-rise Group C occupancy, which have a smoke developed classification of 375, provide sufficiency of compliance with Sentence 3.1.13.7.(1) of the Ontario Building Code.

It should be noted that Article 3.1.5.16. of the OBC permits the use of combustible plumbing fixtures, including wall and ceiling enclosures that form part of the pluming fixtures, in buildings required to be of non-combustible construction provided they are constructed of material having a flame-spread rating and smoke developed classification not more than that permitted for the wall surface of the room or space in which they are installed.

Article 3.2.6.1. of the OBC considers residential buildings which have a storey that is more than 18 m above grade to be "high buildings". In high buildings, the interior walls and ceiling finishes are further regulated by Sentence 3.1.13.7.(1) which states that the interior wall, ceiling, and floor finishes in a building regulated by the provisions of Subsection 3.2.6., shall conform to the flame-spread ratings and smoke developed classification values outlined in Table 3.1.13.7. of the Code. From Table 3.1.13.7., a maximum smoke developed classification of 300 for walls and 50 for ceilings is set for bathrooms.

Despite this, Sentence 3.1.13.7.(2) permits the smoke developed classification for walls and ceilings to exceed the maximum values specified in Table 3.1.13.7. when the building does not contain a Group B major occupancy and is provided with a sprinkler system that is electronically supervised in conformance with the provisions outlined in Sentence 3.2.6.4.(1) of the Code. Since the building at dispute contains a Group C occupancy, and is not provided with sprinkler protection, the maximum smoke developed classification values outlined in Table 3.1.13.7. of the Code are applicable to the matter at hand.

4. Provisions of the Ontario Building Code

3.1.13.7. High Buildings

(1) Except as permitted by Sentences (2) and (3), the interior wall, ceiling and floor finishes in a *building* regulated by the provisions of Subsection 3.2.6. shall conform to the *flame-spread rating* requirements in Articles 3.1.13.2. to 3.1.13.6. and to the *flame-spread rating* and smoke developed classification values in Table 3.1.13.7.

5. Applicant's Position

The Agent for the Applicant began by offering a brief description of the construction at dispute, which is an upscale condominium project that consists of two seven-storey towers constructed on a single-storey joined parking garage. The Agent added that the issue at dispute, which pertains to the as-installed combustible plumbing fixtures, only applies to one of the subject buildings located on the property, since only one of the towers is considered a "high building" as defined in Article 3.2.6.1. of the Code. The Agent submitted that the combustible plumbing fixtures in dispute are the as-installed acrylic soaker tubs and shower basins that are featured in the residential suites.

The Agent continued by stating that the Applicant did not know that the combustible plumbing fixtures were a problem until after they had been installed. The Agent added that it was the Designate for the Respondent who discovered that the plumbing fixtures in question have a smoke developed classification that exceeds the value outlined in Article 3.1.13.7. of the OBC. The Agent submitted that following this discovery, the Applicant searched the market to find a soaker tub and shower basin that would comply with the Code's maximum smoke developed classification value of 300. After having completed their search, the Applicant came to realize that there is no product on the market, except for metal fixtures, that meet the maximum smoke developed classification value of 300. The Agent added that the Applicant party was extremely surprised when they learnt that the plumbing fixtures in question were not in compliance with the Code, because these very fixtures have been, and are currently being, installed in almost every residential condominium building constructed in Toronto and the Greater Toronto Area (GTA). As a result, the Agent submitted that the outcome of this hearing before the Building Code Commission will have widespread implications, even though he acknowledged that the decision of the Commission is site specific.

The Agent added that the Applicant does not consider the acrylic tubs and shower basins in question to pose a huge threat with respect to combustibility, because the tubs are protected by a ceramic tile tub skirt that consists of ceramic tiles bonded to a 12.7mm (½") cement board. It is the Applicant's position that this ceramic tub skirt will prevent any fire, occurring outside of the tub, from contacting the soaker tub and thereby resulting in its ignition. Furthermore, the Agent noted that each residential suite is equipped with a fire alarm system that is located within reasonable distance to the bathroom; thereby, enhancing fire protection.

The Agent continued by stating that the Applicant had even tried to alter the grading so that the height of the building would not exceed the 18 m "high building" height threshold; however, the parties could not reach an agreement on this proposal and thus, the notion was abandoned. According to the Agent, the only measures that could be taken to ensure compliance would be to provide sprinkler protection in the building, which would be cost prohibitive, or retrofitting the as-built bathrooms with metal fixtures, which are difficult to install in condominium projects. When asked whether the Applicant would consider installing sprinkler heads only above the soaker tubs and shower basins at dispute, the Agent maintained that anything was possible, but that he felt that this would be extremely intrusive to occupants. The Agent added that the combustible plumbing fixtures should be accepted on the basis that the building only marginally exceeds the height threshold that classifies it as a "high building" and the smoke developed classification value of the combustible plumbing fixtures only marginally exceeds the value outlined in Table 3.1.13.7. of the Code.

In summary, the Agent for the Applicant submitted that there are no combustible plumbing fixtures on the market which comply with the smoke developed classification values outlined in Table 3.1.13.7. of the Code, except for metal fixtures that are both expensive and impractical. The Agent added that he believes that the Applicant has done everything to achieve compliance with the Code, short of retrofitting in metal fixtures.

6. Respondent's Position

The Respondent submitted that the building permit for the structure at dispute was issued on November 30th, 1999 and that construction was completed in 2002. At that time occupancy was permitted in the building despite the fact that the soaker tubs and shower basins were listed as a deficiency. The Respondent stated the flame spread rating of the as-installed soaker tubs and shower basins complies with Code requirements and that it is only the smoke developed classification value that is an issue. The Respondent submitted that the acrylic soaker tubs and shower basins in question do not have a smoke developed classification value that is less than or equal to the requirements of Article 3.1.13.7. of the Code and, as such, are clearly in contravention with the provisions of the OBC.

The Respondent continued by stating that he is aware that the building in question only marginally exceeds the 18 m "high building" height threshold and that he had advised the Applicant to alter the grading by approximately 0.762 m (2.5 ft.) so that the building might be exempted from the high building requirements found in Subsection 3.2.6. of the Code. The Respondent added that he had also suggested as an alternative that sprinkler protection be provided throughout the entire building, which would, in turn, relieve the Applicant party from the issue at dispute. He continued by stating that, to date, the Applicant party has not acted on this suggestion.

The Respondent maintained that he is cognizant of the fact that the combustible plumbing fixtures at dispute have been, and are presently being, installed in many condominium projects across the City of Toronto and the wider GTA. Despite this, the Respondent argued, that it is the mandate of the City of Burlington's Building Department to ensure that the provisions of the OBC are enforced. As such, the Respondent stated that the Code does permit the use of combustible plumbing fixtures in "high buildings" as long as the fixtures in question comply with the flame-spread rating and smoke developed classification values outlined in Table 3.1.13.7. of the Code. The Respondent noted, however, that the combustible plumbing fixtures at dispute are clearly in contravention with the Code as the smoke developed classification value exceeds 300. The Respondent submitted that he believes that the City of Burlington does not have the authority to permit this deviation from the technical requirements of the OBC, which explains why this issue was brought before the Building Code Commission.

In summary, the Respondent maintained that the combustible plumbing fixtures in questions are clearly in contravention with the provisions of the OBC. The Respondent party also submitted that the City of Burlington is not a position to permit this deviation from the technical requirements of the Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-installed combustible plumbing fixtures in a high-rise Group C occupancy, which have a smoke developed classification of 375, do not provide sufficiency of compliance with Sentence 3.1.13.7.(1) of the Ontario Building Code at 2085 Amherst Heights Boulevard, Burlington, Ontario.

8. Reasons

i) The subject building is considered a high rise as per Subsection 3.2.6. of the Code and, consequently, Table 3.1.13.7. applies.

ii) No compensating measures were offered by the Applicant party with respect to:

a) The height of the building, which exceeds the height threshold of Sentence 3.2.6.1 of the Ontario Building Code.

b) The Smoke Developed Classification requirements of Sentence 3.1.13.7.(1) of the Ontario Building Code.

AND IN THE MATTER OF an application by Joe DiCosimo, owner, for the resolution of a dispute with John Castrilli, Chief Building Official, City of Niagara Falls, to determine whether the proposed manufactured mouldings intended for use in a building required to be of non-combustible construction provide sufficiency of compliance with Article 3.1.5.7. of the Ontario Building Code at the Niagara Falls Hilton Hotel, 6361 Fallsview Boulevard, Niagara Falls, Ontario.

APPLICANT	Joe DiCosimo, Owner Hospitality Motel Limited Niagara Falls, Ontario
RESPONDENT	John Castrilli Chief Building Official City of Niagara Falls
PANEL	Len King, Vice-Chair Robert De Berardis Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	July 3, 2003
DATE OF RULING	July 3, 2003
APPEARANCES	Allan Larden Larden Muniak Consulting Inc. Toronto, Ontario **The Agent** Robert Romanuk Building Services Coordinator City of Niagara Falls **Designate for the Respondent**

RULING

1. The Applicant

Joe DiCosimo, Owner, Hospitality Motel Limited, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a building referred to as the Niagara Falls Hilton Hotel, 6361 Fallsview Boulevard, Niagara Falls, Ontario.

2. Description of Construction

The Applicant has constructed a hotel that contains both Group A, Division 2 and Group C occupancies. The structure is 35 storeys in building height and approximately 2,300 m^2 in building area. The building is comprised of non-combustible construction and has been equipped with sprinkler, fire alarm, and standpipe and hose systems.

The construction at dispute pertains to the interior moulding profiles that have been installed in the subject building. The moulding profiles in question, known as Trimroc mouldings, consist of an expanded polystyrene (EPS) foam core coated with a glass fibre-reinforced cementitious base layer and plaster liner finish. The Trimroc mouldings have been used at lighting coves on ceilings in public corridors and meeting rooms on the first and second floors of the building. In addition, they have also been used as pilasters on walls of public corridors serving the residential suites.

Specifically, at issue, is the polystyrene core of the subject moulding profiles, which have been identified as a prohibited combustible element in a building that is required to be of non-combustible construction. It should be noted that the moulding profiles in question are similar to other Trimroc mouldings that have been approved by the Building Materials Evaluation Commission (BMEC).

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed manufactured mouldings intended for use in a building required to be of non-combustible construction provide sufficiency of compliance with Article 3.1.5.7. of the Ontario Building Code (OBC).

Article 3.1.5.7. of the OBC permits the use of combustible millwork in buildings that are required to be of non-combustible construction. Combustible millwork permitted in Article 3.1.5.7. include interior trim, doors and door frames, show windows together with their frames, aprons and backing, handrails, shelves, cabinets, and counters. As previously indicated, the as-installed moulding profiles have been used as interior trim in the subject building, specifically as lighting coves on ceilings and as pilasters on walls of public corridors.

Similar mouldings manufactured in exactly the same manner were recently approved by the BMEC (see Authorization #03-02-281). Although some Trimroc moulding profiles have been granted BMEC approval, the Applicant has installed other profiles which have not been reviewed or authorized by the BMEC. Specifically, the as-installed moulding profiles are larger than those approved by the BMEC and have been installed at locations that have not been identified in the Specific Terms and Conditions of Authorization #03-02-281. At issue therefore is whether the moulding profiles at dispute, which are not recognized as a combustible material permitted in a noncombustible building under Article 3.1.5.7., and which are not specifically authorized under the BMEC, may be used in the subject hotel.

4. Provisions of the Ontario Building Code

Article 3.1.5.7. Combustible Millwork

(1) *Combustible* millwork including interior trim, doors and door frames, show windows together with their frames, aprons and backing, handrails, shelves, cabinets and counters is permitted in a *building* required to be of *noncombustible construction*.

5. Applicant's Position

The Agent for the Applicant began by offering a brief overview of the structure at dispute. He submitted that the subject building is a 35 storey hotel which is fully sprinklered. As indicated by the Agent, the issue at dispute pertains to the interior moulding profiles that have been installed at various locations throughout the building. He advised that these moulding profiles, known as Trimroc mouldings, are manufactured by Canamould Extrusions Inc. (Canamould) and that three different profiles have been used. As per the Agent, the profiles in question have been used at lighting coves on the ceilings in the public corridors and in meeting rooms on the first and second floors of the building. He also advised that they have been used as pilasters on the walls of public corridors serving the residential suites.

The Agent continued by submitting that the Respondent party objected to the use of the Trimroc moulding on the basis that its polystyrene core is not identified in Article 3.1.5.7. of the Code as an allowable element in a building required to be of noncombustible construction. As a result, Canamould applied to the Building Materials Evaluation Commission (BMEC) for an authorization that would allow Trimroc, as an innovative product, to be installed as interior elements in buildings required to be of non-combustible construction. As part of the BMEC approval process, certain Trimroc products were subject to the ASTM E84 flame-spread and UL 1715 room burn tests at Underwriters' Laboratories of Canada (ULC) and performed successfully. The BMEC subsequently authorized the installation of the specific Trimroc profiles that were tested, provided that such products cover not more than 10% of the wall or ceiling on which they are installed.

The Agent then advised that the subject dispute at hand arose because the City of Niagara Falls has indicated that they will not accept the BMEC authorization for Trimroc as a basis for accepting the moulding profiles at dispute. As per the Agent, this is due to the fact that the as-installed profiles are not the specific profiles that were tests at ULC, and consequently authorized by the BMEC.

The Agent argued that, in his opinion, sufficiency of compliance has been met, because successful testing on Trimroc moulding has been conducted; albeit, not particularly on those profiles at dispute. He also submitted that the profiles in question are thinner than those tested at ULC and coverage on surface areas is a fraction of the condition stipulated under the BMEC authorization. As per the Agent, the profiles in question cover no more than 3.5% of the surface area on which they have been installed. In addition, the Agent argued that the building is entirely sprinklered thereby minimizing the impacts associated with the as-installed moulding profiles.

In summary, the Agent for the Applicant argued that sufficiency of compliance with Article 3.1.5.7. of the Code has been met because successful testing has been conducted on similar profiles, the moulding profiles in question are limited in their application, and the building is fully sprinklered.

6. Respondent's Position

The Designate for the Respondent submitted that the City of Niagara Falls looks to formal product approvals when approving materials for use in a proposed building. In this case, he submitted that he looked to the BMEC's Authorization when considering the moulding profiles at dispute. As per the Designate, the as-installed moulding profiles do not comply with the BMEC's Authorization in two important respects: location and size.

The Designate then directed the Commission's attention to Item 4 on the BMEC's Authorization, which details the Specific Terms and Conditions under which the tested Trimroc moulding profiles may be used. As detailed by the Designate, the subject moulding profiles installed at the perimeter of the lighting cove openings are not at a location identified in the Specific Terms and Conditions of the BMEC Authorization. He also advised that the size of the subject moulding profiles installed as pilasters in the public corridors serving suites of residential occupancies exceeds the maximum dimensions of the same Specific Terms and Conditions.

In summary, the Designate argued that City of Niagara Falls simply does not feel that the conditions outlined in the BMEC Authorization have been met and, as such, cannot accept the as-installed moulding profiles as a permissible combustible element in a building required to be of non-combustible construction.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed manufactured mouldings intended for use in a building required to be of non-combustible construction provide sufficiency of compliance with Article 3.1.5.7. of the Ontario Building Code at 6361 Fallsview Boulevard, Niagara Falls, Ontario on the condition that:

i) The manufacturer of the mouldings certifies to the Chief Building Official for the City of Niagara Falls that the expanded polystyrene foam (EPS) is in fact a fire retardant, Type II material.

8. Reasons

i) The material is used for a trim application only and does not exceed 3.5% of the surface area involved;

ii) The trim is being used in a fully sprinklered building;

iii) The EPS foam is a Type II EPS fire retardant material;

iv) The cross-sections are fully adhered to fire rated drywall, concrete, or cement board and all other edges and joints are protected by gypsum joint compound.

Dated at Toronto this **3rd** day in the month of **July** in the year **2003** for application number **2003-30**.

Ruling No. 03-27-925
Application No. 2003-14

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Articles 9.14.2.1., 9.15.4.6., Sentence 9.20.8.3.(1), Articles 9.23.2.2., 9.23.2.3., 9.23.5.1., 9.23.7.2., 9.27.3.2., 9.33.3.1. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the foundation wall located under the garage of the subject Group C occupancy, which has not been provided with a drainage layer, complies with Article 9.14.2.1. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the existing north foundation wall of the subject Group C occupancy that measures approximately 26.08 m in length, and which has not been provided with a crack control joint, provides sufficiency of compliance with Article 9.15.4.6. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the use of wood and grout as an end bearing for certain steel beams located in the basement of the subject Group C occupancy provides sufficiency of compliance with Sentence 9.20.8.3.(1) of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the basement walls in the subject Group C occupancy, which are supported on wood shims that are in contact with the concrete floor provide sufficiency of compliance with Articles 9.23.2.2. and 9.23.2.3.of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the holes drilled in the framing members of the existing Group C occupancy provide sufficiency of compliance with Article 9.23.5.1. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the bottom plate beneath the bearing wall in the basement, and the sill plate located in the garage of the subject Group C occupancy, provide sufficiency of compliance with Article 9.23.7.2. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute

with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the installation of flashing forming part of the as-constructed cladding system on the subject Group C occupancy provides sufficiency of compliance with Article 9.27.3.2. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

AND IN THE MATTER OF an application by Peter Popadiuk, owner, for the resolution of a dispute with John Schonewille, Chief Building Official, Town of Grimsby, to determine whether the central heating and air-conditioning system installed in the subject Group C occupancy provides sufficiency of compliance with Article 9.33.3.1. of the Ontario Building Code at 6 Sophie Court, Grimsby, Ontario.

APPLICANT	Peter Popadiuk 6 Sophie Court Grimsby, Ontario
RESPONDENT	John Schonewille Chief Building Official Town of Grimsby
PANEL	Len King, Vice-Chair Tony Chow Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	July 3, 2003 and November 4, 2003
DATE OF RULING	November 4, 2003
APPEARANCES	Peter Popadiuk, owner 6 Sophie Court Toronto, Ontario **The Applicant** Tom Richardson Sullivan Mahoney Barristers & Solicitors St. Catherines, Ontario **Designate for the Respondent**

RULING

1. The Applicant

Peter Popadiuk, owner, has received a building permit and Order to Comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has constructed a residential dwelling at 6 Sophie Court, Grimsby, Ontario.

2. Description of Construction

The Applicant has constructed a Group C single detached dwelling. The structure is two storeys in building height and approximately 290 m^2 in building area. There are eight separate areas of dispute. These are listed below:

9.14.2.1. Foundation Wall Drainage

The construction at dispute involves the portion of the basement foundation wall where the garage of the subject occupancy abuts the dwelling. The wall is described as an interior foundation wall between the attached garage and the subject dwelling. While a drainage layer has been installed on all of the exterior walls of the subject dwelling, it has been omitted on the interior foundation wall in question on the basis that this wall is not exposed to the elements and, thus, exterior sources of moisture.

9.15.4.6. Crack Control Joints

The construction at dispute involves the north foundation wall of the subject occupancy and the omission of a crack control joint for this wall. The as-constructed foundation wall measures approximately 26.08 m in length. As per the provisions of the Ontario Building Code (OBC), a crack control joint shall be provided in a foundation wall that is more than 25 m in length. In this regard, the subject foundation wall exceeds the maximum length for a wall to be constructed without a crack control joint by 1.08 m.

9.20.8.3.(1) Bearing of Beams and Joists

The construction at dispute involves the adequacy of the load bearing material that has been used to support the steel beams located in the basement of the subject occupancy. Certain steel beams have one, or both, ends supported by a poured concrete foundation wall. At the top of these walls, pockets were created to support the ends of the steel beams. To level out these ends, sections of 2 x 4 wood studs were placed under the steel beams and then packed with grout. As such, the load of the beams is supported by wood and grout.

The Respondent, through an Order to Comply, has indicated that the current situation needs to be rectified and has provided two methods of achieving compliance: i) provide a professional engineer's review of the end bearings for the steel beams, or, ii) provide protection for the wood. The Applicant is of the opinion that the recommendation of providing protection for the wood is inappropriate and will not provide assurance with respect to the wood and grout performing as an adequate load bearing material.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

The construction in dispute involves the basements walls in the subject occupancy that are supported on wood shims, which are in direct contact with the concrete floor. As per the provisions of the OBC,

wood framing members, which are in direct contact with concrete, shall be pressure treated with a wood preservative or shall be separated from the concrete by polythylene film or Type S roll roofing in order to provide protection from decay and dampness. The wood shims in question have not been provided with a wood preservative or protective layer as identified in the Code.

9.23.5.1. Holes Drilled in Framing Members

The construction at dispute pertains to the dimensions of the holes that have been drilled into the framing members of the subject occupancy. Specifically at dispute are the size of the holes that have been drilled into the floor joists to provide for the passage of certain heating ducts. The Applicant maintains that the holes which have been drilled into the framing members are significantly larger than that permitted by Code. The Respondent party, on the other hand, has identified the framing members at dispute to be "Wood I Joists", which are a pre-engineered product that are not subject to the Code's requirements of cutting, notching, and drilling.

9.23.7.2. Levelling of Sill Plates

The construction at dispute pertains to the adequacy of wood shims as a method of levelling the bottom plate located beneath the bearing wall in the basement and a sill plate located in the garage of the subject occupancy. As required by the Code, sill plates shall be levelled by setting them on a full bed of mortar in situations where the top of the foundation wall is not level. Alternatively, in cases where the top of the foundation wall is level, sill plates may be laid directly on the foundation wall provided the junction between the wall and the sill plate is caulked or the sill plate is placed on a layer of mineral wool. The use of wood shims is not identified as a method of levelling sill plates in the Code.

9.27.3.2. Installation of Flashing

The construction at dispute involves the installation of the flashing, which forms part of the as-constructed cladding system at the subject occupancy. Specifically at issue is the omission of flashing forming part of the as-constructed cladding system, which has not been provided between the foundation and the exterior cladding system, nor around the doors and windows of the subject occupancy.

It should be noted that the as-constructed home has an exterior insulation and finish system (EIFS), as its cladding system. In particular, the specific EIFS system used in the subject home was the Dryvit system, which employs a stucco finish. The Applicant asserts that several deviations from the manufacturer's prescribed EIFS installation method occurred during construction. As a result, the Applicant maintains that the as-installed cladding system, including its flashing details, does not meet the intended level of performance.

9.33.3.1. Interior Design Temperature

The construction at dispute pertains to the adequacy of the as-installed central heating system in the subject occupancy. As per the Applicant, the as-installed heating system is not capable of maintaining an indoor design temperature of 22ºC (72ºF) in two of the rooms found in the dwelling. The OBC stipulates that required heating devices shall be capable of maintaining an indoor air temperature of not less than 22ºC (72ºF) in all living spaces.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-constructed Group C

occupancy complies with Article 9.14.2.1. and provides sufficiency of compliance with Article 9.15.4.6., Sentence 9.20.8.3.(1) and Articles 9.23.2.2., 9.23.2.3., 9.23.5.1., 9.23.7.2., 9.27.3.2., and 9.33.3.1. of the OBC.

The following describes the eight issues at dispute with respect to the as-constructed home at 6 Sophie Court, Grimsby, Ontario:

9.14.2.1. Foundation Wall Drainage

Sentence (1) of Article 9.14.2.1. of the OBC stipulates that drainage shall be provided at the bottom of every foundation wall that contains the building interior, unless it can be shown to be unnecessary. Further to this is Sentence 9.14.2.1.(2), which states that a drainage layer is required to be installed adjacent to the exterior surface of a foundation wall when the insulation on the foundation wall extends more than 900 mm (2 ft 11 in) below the adjacent exterior ground level. Sentence (5) is the exception to Sentence 9.14.2.1.(2) however. It states that the drainage layer may be omitted when the foundation wall is not required to be dampproofed or when the foundation wall is waterproofed. At issue is whether the portion of the basement foundation wall where the garage abuts the house is required to be provided with foundation wall drainage in accordance with Article 9.14.2.1. of the Code.

9.15.4.6. Crack Control Joints

Sentence (1) of Article 9.15.4.6. stipulates that a crack control joint shall be provided in foundation walls more than 25 m (82 ft) long at intervals of not more than 15 m (49 ft. 3 in). As noted earlier, the subject dwelling contains a wall measuring 26.08 m in length and which does not contain a crack control joint.

9.20.8.3.(1) Bearing of Beams and Joists

Sentence (1) of Article 9.20.8.3. requires that the bearing area under a beam is designed in order to carry its intended load. As previously stated, the steel beams located in the basement of the subject dwelling are supported by wood and grout and encased in mortar. The Respondent has provided two proposed methods for achieving compliance: i) provide a professional engineer's review of the steel beams, or, ii) provide protection for the wood. The Applicant is of the opinion that the recommendation of providing protection for the wood is inappropriate and will not provide assurance with respect to the wood and grout performing as an adequate load bearing material. At issue is whether these proposed methods for achieving compliance will provide for an appropriate bearing material for the steel beams in question.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

Sentence (1) of Article 9.23.2.2. of the Code is germane to the issue at dispute. It states that the end of wood joists, beams, and other members framed into masonry or concrete shall be treated to prevent decay where the bottom of the member is at or below ground level. Alternatively, a 12 mm (½ in) air space shall be provided at the ends and sides of the member. In other words, where the bottom of a support member is below ground level, the ends of the member must be treated to prevent decay or the ends and side of the member must be surrounded by an air space to prevent contact with the concrete which could lead to dampness and decay.

Sentence (1) of Article 9.23.2.3. is also relevant as it requires, with certain exemptions not applicable here, that wood framing members, which are not pressure treated with a wood preservative, and that are supported on concrete in contact with the ground or fill, be separated from the concrete by not less than 0.05 mm (0.002 in) of polyethylene film or Type S roll roofing. The purpose of this Code provision is to prevent the wood framing member from decaying, and thus, compromising its structural integrity.

At issue is that the shims supporting the framing members have not been protected through either treatment or physical separation from the concrete.

9.23.5.1. Holes Drilled in Framing Members

Article 9.23.5.1. of the Code provides a description of the holes that are permitted to be drilled in roof, floors, and ceiling members. It states that holes drilled into framing members shall not be larger than one-quarter the depth of the member and shall be located not less than 50 mm (2 in) from the edges, unless the depth of the member is increased by the size of the hole. It should be noted that the size limitations outlined in Sentence 9.23.5.1.(1) apply to conventional wood-frame construction in which the framing members are spaced not more than 600 mm (23 5⁄8 in) o.c. as outlined in Sentence 9.23.1.1. of the Code.

At issue is that the Applicant claims that certain framing members, in particular the floor joists, have oversized holes cut into them to permit the passage of mechanical equipment. Despite this, the Respondent party is of the opinion that the joists in question are not subject to the Code's specifications for cutting, notching, and drilling, since they are a pre-engineered product.

9.23.7.2. Levelling of Sill Plates

Sentence 9.23.7.2.(1) of the OBC outlines the appropriate methods for the levelling of sill plates. As per this provision of the Code, sill plates must be laid in a full bed of mortar in instances where the top of the foundation wall is not level. The purpose for this is to compensate for irregularities in order to reduce air leakage and to provide an even bearing for the supported loads. Alternatively, in instances where the top of the foundation is level, the sill plate my be laid directly on the foundation provided the plate is sealed at the foundation to prevent air leakage as noted.

As previously described, wood shims have been used as a method of levelling the bottom plate located beneath the bearing wall in the basement and the sill plate located in the garage of the subject occupancy. To establish whether the shims in question will adequately transfer the loads to the foundation, an engineering analysis is required since the detail is not within the scope of Part 9 of the OBC. Notwithstanding the structural adequacy of the shims, the space below the sill plates still allows the leakage of air.

9.27.3.2. Installation of Flashing

Article 9.27.3.2. of the Ontario Building Code outlines the appropriate methods for the installation of flashing. As per Sentence 9.27.3.2.(1), flashing shall be installed at every horizontal junction between two different exterior finishes, except where the upper finish overlaps the lower finish. Specifically at issue is the omission of flashing forming part of the as-constructed cladding system, which has not been provided between the foundation and the exterior cladding system, nor around the doors and windows of the subject occupancy.

Regarding the entire cladding system installed at the subject house, it should be noted, however, that the use of EIFS is not governed under the OBC, and is instead regulated under a Ruling of the Minister of Housing, Ruling No. 98-02-052 (12788-R), approving the use of Dryvit outsulation. The purpose of this Ruling is to set out installation requirements and intended performance levels. It should be noted that as a product/system regulated under a Minister's Ruling, Dryvit is considered external to the OBC and, thus, in the view of the Commission is not appealable to the BCC. However, when a material is approved under a Minister's Ruling, other parts of the Code may still apply unless the Ruling specifically addresses the matter. On matters where the OBC still governs, such as in this case regarding the

flashing, these items may be appealed to the BCC.

9.33.3.1. Interior Design Temperature

Sentence 9.33.3.1.(1) of the OBC lists the various indoor air temperatures that a Part 9 building is required to maintain. As detailed in this particular provision of the Code, houses intended for year-round use must be equipped with a heating system capable of maintaining an indoor temperature of 22ºC (72ºF) in all living spaces and unfinished basements. This indoor air temperature is based on outside design temperatures recorded for locations in Ontario and listed in Table 2.5.1.1. of the Code. Since the subject occupancy at dispute is located in Grimsby, Ontario, as per Table 2.5.1.1. the building's heating system must be capable of maintaining an indoor temperature of 22ºC (72ºF) when the outdoor design temperature is -16ºC (3.2ºF). According to the Applicant, there are certain areas within the house to which the heating system cannot maintain an average temperature of 22ºC (72ºF).

4. Provisions of the Ontario Building Code

9.14.2.1. Foundation Wall Drainage

(1) Unless it can be shown to be unnecessary, drainage shall be provided at the bottom of every *foundation* wall that contains the *building* interior.

(2) Except as permitted in Sentences (4), (5) and (6), where the insulation on a *foundation* wall extends to more than 900 mm (2 ft 11 in) below the adjacent exterior ground level

(a) a drainage layer shall be installed adjacent to the exterior surface of a *foundation* wall consisting of

(i) not less than 19 mm (¾ in) mineral fibre insulation with a density of not less than 57 kg/m^3 (3.6 lb/ft^3), or

(ii) not less than 100 mm (4 in) of free draining granular material, or

(b) a system shall be installed which can be shown to provide equivalent performance to that provided by the materials described in Clause (a).

(3) Where mineral fibre insulation, crushed *rock* or other drainage layer medium is provided adjacent to the exterior surface of a *foundation* wall, it shall extend to the footing level and facilitate drainage of ground water to the *foundation* drainage system. (See Appendix A.)

(4) Except when the insulation provides the drainage layer required in Clause (2)(a), when exterior insulation is provided, the drainage layer shall be installed on the exterior face of the insulation.

(5) The drainage layer required in Sentence (2) is not required

(a) when the *foundation* wall is not required to be dampproofed, or

(b) when the *foundation* wall is waterproofed.

(6) The drainage layer in Sentence (1) is only required where the *foundation* wall is constructed after the day this Regulation comes into force.

(7) Where drainage is required in Sentence (1), the drainage shall conform to Subsection 9.14.3. or 9.14.4.

9.15.4.6. Crack Control Joints

(1) Crack control joints shall be provided in *foundation* walls more than 25 m (82 ft) long at intervals of

not more than 15 m (49 ft 3 in).

(2) Joints required in Sentence (1) shall be designed to resist moisture penetration and shall be keyed to prevent relative displacement of the wall portions adjacent to the joint.

9.20.8.3.(1) Bearing of Beams and Joists

(1) The bearing area under beams and joists shall be sufficient to carry the supported load.

9.23.2.2. Protection from Decay

(1) Ends of wood joists, beams and other members framing into masonry or concrete shall be treated to prevent decay where the bottom of the member is at or below ground level, or a 12 mm (½ in) air space shall be provided at the end and sides of the member.

(2) Air spaces required in Sentence (1) shall not be blocked by insulation, *vapour barriers* or air tight materials.

9.23.2.3. Protection from Dampness

(1) Except as permitted in Sentence (2), wood framing members that are not pressure treated with a wood preservative and which are supported on concrete in contact with the ground or *fill* shall be separated from the concrete by not less than 0.05 mm (0.002 in) polyethylene film or Type S roll roofing.

(2) Dampproofing material referred to in Sentence (1) is not required where the wood member is at least 150 mm (5⅞ in) above the ground.

9.23.5.1. Holes Drilled in Framing Members

(1) Holes drilled in roof, floor or ceiling framing members shall be not larger than one-quarter the depth of the member and shall be located not less than 50 mm (2 in) from the edges, unless the depth of the member is increased by the size of the hole.

9.23.7.2. Levelling of Sill Plates

(1) Sill plates shall be levelled by setting them on a full bed of mortar, except that where the top of the *foundation* is level, they may be laid directly on the f*oundation* provided the junction between the *foundation* and the sill plate is caulked or the sill plate is placed on a layer of mineral wool not less than 25 mm (1 in) thick before being compressed. (See also Article 9.23.2.3.).

9.27.3.2. Installation (of Flashing)

(1) Flashing shall be installed at every horizontal junction between 2 different exterior finishes, except where the upper finish overlaps the lower finish.

(2) Except as provided in Sentence (4), flashing shall be applied over exterior wall openings where the vertical distance from the bottom of the eave to the top of the trim is more than one-quarter of the horizontal overhang of the eave.

(3) Flashing shall be installed so that it extends upwards not less than 50 mm (2 in) behind the sheathing paper and forms a drip on the outside edge.

(4) Where a window or exterior door is designed to be installed without head flashing, the exterior flange of the window or door frame shall be bedded into a non-hardening type caulking material and the exterior flange screwed down over the caulking material to the wall framing to form a waterproof joint.

9.33.1.1. **Design and Installation Requirements** (See Appendix A.)

(1) The design and installation of central heating systems including requirements for combustion air, shall conform to the requirements in Part 6 and to this Section.

(2) The design and installation of *air-conditioning* systems shall conform to Part 6.

(3) Repairs, adjustments or component replacements that change the capacity or extent of safety of an existing heating, ventilating or *air-conditioning* system and that alter the method of operation shall conform to this Code.

5. Applicant's Position

9.14.2.1. **Foundation Wall Drainage**

The Applicant began by stating that Delta-MS was used in the construction of the subject occupancy. He noted that the use of Delta-MS in construction is authorized by Minister's Ruling 98-02-052, and is an approved drainage and dampproofing material that is applied against the foundation wall to protect against water that may come into contact with the foundation wall. As per the Applicant, the manufacturer of the Delta-MS membrane (Cosella Dorken Products Inc.) specifies that the material be added to all exterior walls. The Applicant stated that despite the manufacturer's specifications, the builder of the subject occupancy failed to install the material on the portion of the foundation wall running under the attached garage. He added that although it may appear that the omission of a wall drainage membrane below the garage is not a critical issue, it does, in his opinion, compromise the integrity of the sub grade drainage system. In this regard, the Applicant submitted that this omission of a drainage layer has left the basement of the subject occupancy vulnerable to water leakage.

9.15.4.6. **Crack Control Joints**

The Applicant stated that the final grading plan for the subject occupancy indicates the north wall of the home to be 26.08 m in length. He submitted that Article 9.15.4.6. of the Code states that a crack control joint shall be provided in walls that are more than 25 m long at intervals of not more than 15 m. The Applicant stated that despite this, no crack control joint was installed on the subject wall even though it exceeds the required length by 1.08 m. The Applicant also added that in a letter from the Respondent party, dated March 14, 2003, the Respondent states that a crack control joint is not required in a foundation wall if it has been laterally supported. The Applicant then stated that he believes the Respondent party has mistakenly tried to apply the conditions under Article 9.20.10.1. of the OBC (Lateral Support Required) to Article 9.15.4.6.

9.20.8.3.(1) **Bearing of Beams and Joists**

The Applicant submitting that he first noted the deficiency with the steel beam end bearings in question when the subject home was being constructed. At that time he observed that the steel beams were resting on 2 x 4 wood blocks and asked the builder whether the wood would be removed upon completion. As per the Applicant, the builder submitted that the wood shims would be removed; however, upon returning to the home the next day, the entire unit was covered in mortar making it

difficult to decipher whether the wood had, in fact, been removed.

The Applicant then continued by stating he retained an engineering firm to review the subject occupancy once construction was complete. It was during this review that the retained engineering firm exposed a steel beam-bearing pocket and found that the beam was still sitting on a piece of 2 x 4 wood. The Applicant submitted that this was brought to the Respondent party's attention shortly thereafter who, in turn, later issued an Order to Comply to the builder of the subject occupancy. The Applicant then stated that while he believes that the Order to Comply was issued correctly, he disagrees with the remedy proposed by the Respondent party. As he noted, the Order to Comply required either a professional engineer's review of the steel beam end bearings or protection for the wood. The Applicant indicated that he believes that the only suitable method for compliance is to have the wood removed, because, in his opinion, the use of wood and grout is not a suitable bearing for steel beams.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

The Applicant advised that the wood shims, located beneath some of the bearing walls in the basement of the subject Group C occupancy, are situated beneath the polythylene film used to damp proof the sill plate and, therefore, are in direct contact with the concrete floor slab. As such, the Applicant submitted that the wood shims are subject to rotting and are in direct violation of the OBC.

9.23.5.1. Holes Drilled in Framing Members

The Applicant began his submission on the drilled holes in the floor joists of the subject occupancy by referring the Commission's attention to a series of photographs that were included with the original application for a hearing before the Building Code Commission. He submitted that the photos clearly indicate that the holes have been drilled to allow for the passage of heating ducts. The Applicant then stated that he believes that the holes are greater than that which is permitted by the Code in Article 9.23.5.1. He submitted that, in his opinion, the size of the drilled holes severely compromise the integrity (namely, strength and stability) of the framing members, as a significant proportion of the core area of the joists has been removed. When questioned on the exact measurements of the drilled holes at dispute, the Applicant submitted that he was unable to provide precise details, as the subject occupancy is now completely constructed and, as such, the floor joists in question are now concealed by drywall.

The Applicant then continued by stating that the Respondent party, when questioned on the adequacy of the drilled holes at dispute, stated that the floor joists provided in the subject occupancy are not traditional wood joists, but rather "Wood I Joists". As per the Applicant, the Respondent maintained that "Wood I Joists" are a pre-engineered product, which are not subject to the Code's requirements of cutting, notching, and drilling. The Applicant also maintained that the Respondent party directed him to refer to the product's specifications, which permit the joists to be cut and drilled in accordance with pre-approved specifications. The Applicant then submitted that he felt the Respondent's response was ambiguous and questioned how the Respondent party could consider the holes at dispute acceptable.

9.23.7.2. Levelling of Sill Plates

The Applicant directed the Commission's attention to a photograph that depicted the use of wood shims as a method of levelling the sill plate located in the garage of the subject occupancy. As illustrated in the photograph, the Applicant stated that the sill plate located in the garage is not in direct contact with the foundation wall, as required in OBC Article 9.23.7.2., but is rather sitting on wood shims. The Applicant also stated that there are two particular instances where wood shims have been used as a method of levelling the bottom plates located beneath the bearing walls in the basement of the subject occupancy. The Applicant maintained that he believes the use of these shims severely compromises the

integrity of the subject occupancy, especially if they experience dampness and decay.

As further evidence citing his position, the Applicant cited a report authored by 2M Architects, which stated that "the wood shims alter the structural forces on the bottom plate with respect to the masonry base, thus effectively rendering the nature of the single bottom plate into a structural member required to horizontally transmit the load weights to the shims". As per the Applicant, this has resulted in the bottom plate performing a structural function it was not designed or constructed to carry. He concluded by submitting that not only are the shims in direct contact with the concrete foundation, and thereby subject to dampness and decay, but also seriously compromise the integrity of the subject dwelling.

The Applicant continued by stating that he retained an engineering firm to review the structural adequacy of the wood shims in question. As per the engineer's report, the instance of wood shims under a load bearing wall supporting a steel beam is unusual, as the normal practice is to use steel shim plates that have greater load-capacity. The Applicant stated that the engineer's report confirms his belief that the shims are structurally inadequate and maintained that, at a minimum, the shims in question should be provided with dampproofing material.

9.27.3.2. Installation (of Flashing)

The Applicant noted that he decided to use stucco as an exterior cladding for the subject occupancy because that was his wife's preference. He continued by stating that there is an abundance of evidence that suggest there are failures associated with stucco as an exterior cladding. In this regard, the Applicant maintained that he wanted to use a product that had a good reputation and, as such, chose an exterior insulation and finish system (EIFS), known as the stucco Dryvit system. As per the Applicant, the building contract clearly specified that a Dryvit system was to be used.

The Applicant continued by stating that he noticed several cracks in the flashing upon moving into the subject occupancy. As a result of these failures, the Applicant arranged for a Technical Representative from Dryvit to inspect the installation. As per the Applicant, the Dryvit Technical Representative noticed discrepancies between the as-installed cladding system and the standardized Dryvit installation. Specifically, the Dryvit Representative noticed that the contractor did not install a secondary moisture barrier and chose to use nails, not adhesive or screws as required in the specifications. In addition, other materials, accessories and caulking were not used according to specifications. The Applicant then stated that these deviations, identified by Dryvit, were also confirmed by Morrison Hershfield Limited, a consulting engineering firm who, as per the Applicant, specialize in EIFS. Morrison Hershfield Limited also noted that there is no flashing between the foundation and the EIFS, nor around the doors and windows. In this regard, the Applicant maintained that the as-installed cladding does not conform with either the manufacturer's specifications or industry practice.

The Applicant then stated that both the Dryvit analysis and the study conducted by Morrison Hershfield Limited were submitted to the Respondent for his review. The Respondent's reply, in a letter dated March 14th, 2003, advised that the Town of Grimsby Building Department is of the opinion that while the as-constructed system may not have been installed in strict accordance with manufacturer's specifications, there appears to be no evident Code contraventions.

9.33.3.1. Interior Design Temperature

The Applicant began by submitting that the subject occupancy has two rooms that do not receive sufficient heating and air-conditioning as a result of inadequate duct work: i) the ensuite (or master bathroom) and ii) one of the bedrooms. He then stated that temperatures in these rooms are below 15°C in the winter months, even though the house is kept at 22°C.

The Applicant noted that an application for a building permit requires the name of the heating, ventilation, and air conditioning (HVAC) contractor, as well as heat loss calculations and heating verification sheets to be submitted prior to installation of an HVAC system. Furthermore, he advised that the terms of the application state that there must be notification when there is substantial completion of the HVAC and air-contamination extraction equipment. Despite this requirement, the Applicant submitted that none of the aforementioned was completed prior to construction, nor was any inspection of the HVAC system carried out by the Respondent.

The Applicant continued by advising that the Respondent, in a letter dated March 14th, 2003, acknowledges these inadequacies, but submits that compliance with OBC Article 9.33.3.1. is not required. He then concluded by stating that the as-installed HVAC system does not achieve the level of performance expected by the Code.

6. Respondent's Position

9.14.2.1. Foundation Wall Drainage

The Respondent submitted that he does not believe that a drainage layer should be installed on the basement foundation wall under the garage of the subject occupancy, since, in his opinion, the interior wall of the garage is not part of the exterior of the building envelope and, thus, is not subjected to the elements. He stated that, in his opinion, usually a drainage layer is required to address the infiltration of moisture from exterior ground surfaces that are exposed to the elements. In this regard however, the Respondent argued that there is no need for a drainage layer, such as that required for a typical exterior wall, because in this instance the exterior walls of the garage protect the garage floor from exterior sources of moisture.

9.15.4.6. Crack Control Joints

The Respondent advised that the northerly foundation wall of the subject occupancy measures approximately 26.08 m, which includes approximately 17 m of full height basement foundation and an additional 9 m (approx.) of reduced height foundation wall for the garage. He argued that due to the change in height between the full height basement wall and the reduced height garage wall, he is of the opinion that there are two walls: one being the dwelling foundation and the other being the garage foundation. The Respondent then stated that he feels the foundation possesses the necessary characteristics to perform its intended functions and, therefore, a crack control joint is unnecessary due to the intersecting walls.

9.20.8.3.(1) Bearing of Beams and Joists

The Respondent stated that his position on the end bearings for the steel beams in question was simple. He noted that he did, in fact, issue an Order to Comply, which proposed two possible methods for remedying the situation at dispute: i) provide a professional engineer's review of the end bearings for the steel beams, or, ii) provide protection for the wood. The Respondent stated that if the Applicant did not want to provide protection for the wood in contact with the concrete foundation wall then a professional engineer's review of the steel beams end bearing was required. He then went on to state that he felt it was not outside of his purview to request such a report from the Applicant party, as Section 18.-(1)(c) of the Building Code Act states that a municipal inspector may require information from any person concerning a matter relating to a building or part thereof.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

The Respondent submitted that his position on the adequacy of the wood shims, located beneath the load bearing wall in the basement of the subject Group C occupancy, was similar to that of the end bearings for the steel beams, which are also in question. He submitted that while an Order to Comply was not issued on this matter, the Applicant could either provide a professional engineer's review on the adequacy of the wood shims or provide protection for the wood in contact with the concrete floor slab.

9.23.5.1. Holes Drilled in Framing Members

The Respondent began by submitting that it is difficult to determine whether the holes that have been drilled into the floor joists of the subject occupancy are in compliance with the OBC, based on the lack of detailed information with respect to their exact sizing. Furthermore, he stated that the drilled holes in question were not identified as a problem in the inspection report for the subject occupancy and, in this regard, he was not aware of the fact that the drilled holes were an issue.

The Respondent then stated that the floor joists provided in the subject occupancy are not traditional wood joists, but rather "Wood I Joists", which are a pre-engineered product that are not subject to the OBC's requirements for cutting, notching, and drilling. He then continued by stating that in viewing the Applicant's photos, it appears that a 127 mm (5 in) diameter duct passes through a circular hole of approximately 178 mm (7 in) in diameter located roughly 1.2 m (4 ft) from the steel beam support. As per the Respondent, the manufacturer's specifications identify this as an acceptable practice.

9.23.7.2. Levelling of Sill Plates

The Respondent submitted that wood shims were provided under the sill plate located in the garage and under certain bearing walls in the basement of the subject occupancy in order to provide reasonable support to the structure in terms of level walls. He then went on to state that the situation of the shims coming into contact with the concrete floor had been corrected and called upon a witness who confirmed that he did, in fact, attempt to ensure that the shims beneath the sill plate would be protected from dampness and decay. When questioned as to how the shims were protected, the witness submitted that he pulled down the vapour barrier from the bottom of the sill plate and then ran the shims under the sill plate above the vapour barrier so that the vapour barrier separated the shims from the concrete floor slab.

9.27.3.2. Installation (of Flashing)

The Respondent submitted that throughout his review of the documents that have been submitted by the Applicant, with regard to the installation of the Dryvit system, it has not been clearly demonstrated that Code contraventions have been identified. The Respondent then advised that he did not have the opportunity to be on site to witness the installation of the as-installed cladding system, nor was he required to perform any mandatory inspections throughout the process. Furthermore, he added that a more definitive review of the claims of Code infractions is required before it can be determined whether the as-installed cladding system fails to provide sufficiency of compliance.

The Respondent called upon an a witness who was questioned as to whether or not the as-constructed cladding is, in fact, a Dryvit system. The witness submitted that Dryvit products were used, but that the process employed during installation deviated from the Dryvit specifications. He stated that flashing was not installed between the foundation and the EIFS, nor around the doors and windows, as it is not required by the manufacturer.

9.33.3.1. Interior Design Temperature

The Respondent indicated that he was aware of the fact that the Applicant had brought the concerns regarding his HVAC system to his homebuilder's attention. The Respondent advised that he responded to these concerns in a letter addressed to the Applicant, dated March 14th, 2003, in which he stated that a review of the HVAC system had been carried out and changes to the system were made in accordance with Section 6 of the Code and good engineering practices. The Respondent stated that he appended to his March 14th, 2003 letter a copy of the review conducted by A-Plus Air Systems, who were retained to analyze the as-installed HVAC system. The Respondent stated that the review conducted by A-Plus Air Systems outlines actions that were taken to balance the system so that it performed as close to its intended design as possible and, furthermore, suggests additional remedial measures.

The Respondent then called upon a representative from A-Plus Air Systems as a witness to speak to the as-installed HVAC system. The witness submitted that in order to further improve problem areas, and meet design requirements, some round runs would have to be replaced and/or added, some balancing dampers would have to be added, and some registers would need to be replaced. When questioned as to why these additional measures were not carried out, the witness submitted that the home builder advised him not to proceed as a result of contractual disputes with the Applicant party.

The Respondent party concluded by stating that although he acknowledges there is still room for improvement of the as-installed HVAC system, he believes that this is not a technical issue with respect to the requirements of the Code, but, rather, a contractual dispute between the Applicant and the home builder.

7. Commission Ruling

The following are the decisions of the Building Code Commission with respect to the as-constructed Group C occupancy located at 6 Sophie Court, Grimsby, Ontario.

9.14.2.1. Foundation Wall Drainage

It is the decision of the Building Code Commission that the foundation wall located under the garage of the subject Group C occupancy, which has not been provided with a drainage layer, complies with Article 9.14.2.1. of the Ontario Building Code.

9.15.4.6. Crack Control Joints

It is the decision of the Building Code Commission that the existing north foundation wall of the subject Group C occupancy that measures approximately 26.08 m in length, and which has not been provided with a crack control joint, provides sufficiency of compliance with Article 9.15.4.6. of the Ontario Building Code.

9.20.8.3.(1) Bearing of Beams and Joists

It is the decision of the Building Code Commission that the use of wood and grout as bearing for the steel beams located in the basement of the subject Group C occupancy does not provide sufficiency of compliance with Sentence 9.20.8.3.(1) of the Ontario Building Code.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

It is the decision of the Building Code Commission that the basement walls in the subject Group C

occupancy, which are supported on wood shims that are in contact with the concrete floor, does not provide sufficiency of compliance with Articles 9.23.2.2. and 9.23.2.3. of the Ontario Building Code.

9.23.5.1. Holes Drilled in Framing Members

It is the decision of the Building Code Commission that there was insufficient evidence submitted to come to a determination with respect to the whether the holes drilled in the framing members of the existing Group C occupancy provide sufficiency of compliance with Article 9.23.5.1. of the Ontario Building Code.

9.23.7.2. Levelling of Sill Plates

It is the decision of the Building Code Commission that the bottom plate located beneath the bearing wall in the basement and the sill plate located in the garage of the subject Group C occupancy, which are supported on wood shims, do not provide sufficiency of compliance with Article 9.23.7.2. of the Ontario Building Code.

9.27.3.2. Installation (of Flashing)

It is the decision of the Building Code Commission that the installation of flashing forming part of the as-constructed cladding system on the subject Group C occupancy does not provide sufficiency of compliance with Article 9.27.3.2. of the Ontario Building Code.

9.33.3.1. Interior Design Temperature

It is the decision of the Building Code Commission that the central heating and air-conditioning system installed in the subject Group C occupancy, does not provide sufficiency of compliance with Article 9.33.3.1. of the Ontario Building Code.

8. Reasons

9.14.2.1. Foundation Wall Drainage

The soil adjacent to the basement foundation under the garage slab and within the enclosed garage, is not exposed to the elements and, hence, the foundation wall between the basement and garage is not considered an exterior wall. As such, the need to provide a drainage layer is not required.

9.15.4.6. Crack Control Joints

The existing north foundation wall, which measures approximately 26.08 m in length, although in excess of the 25 m requirement outlined in Article 9.15.4.6. of the Code, provides sufficiency of compliance since:

i) The exterior of the existing foundation wall has a drainage layer, which will help prevent the infiltration of water if it cracks; and,

ii) The wall exceeds the maximum length that requires a crack control joint by only 1.08 m or 4.1%.

9.20.8.3.(1) Bearing of Beams and Joists

The compliance order issued March 17th, 2003, by the Town of Grimsby addresses the use of wood to

support the end of the steel beams in the basement or cellar of the as-constructed building at dispute. The engineer's report, which dealt with only one of the beam pockets, confirms the Town of Grimsby's compliance order and recommends a method of repair to comply with the order. The engineer's recommendation is to remove the wood supporting the steel beam and replace it with non-shrink, cementitious grout. The Building Code Commission believes that this method of repair would provide sufficiency of compliance with Sentence 9.20.8.3.(1) of the Ontario Building Code.

9.23.2.2. and 9.23.2.3. Protection from Decay and Dampness

The as-installed wood shims are not protected as described in Articles 9.23.2.2. and 9.23.2.3. of the Ontario Building Code.

9.23.5.1. Holes Drilled in Framing Members

Neither the Applicant, nor the Respondent party, were able to give exact measurements of the holes cut into the floor joists since the subject Group C occupancy is completely constructed and the area in dispute is now concealed by drywall.

9.23.7.2. Levelling of Sill Plates

Sentence 9.23.7.2.(1) of the Ontario Building Code requires that sill plates are levelled on a full bed of mortar. The sill plates for the subject walls are supported on non-compliant wood shims.

9.27.3.2. Installation (of Flashing)

Minister's Ruling #99-07-66 (12874-R) states that the use of Dryvit Outsulation must be in accordance with the CCMC Evaluation Report No. 12874-R. The evidence submitted to the Building Code Commission indicated that the as-constructed Group C occupancy does not comply with CCMC Evaluation Report "CCMC 12874-R" in several respects. Since the system, as installed, is not in accordance with the Minister's Ruling, it must then demonstrate sufficiency of compliance with the applicable requirements of the Ontario Building Code. The evidence presented to the Commission indicates that the flashing requirements as outlined in Article 9.27.3.2. had not been complied with. However, with respect to the other applicable cladding requirements found in the Ontario Building Code, there was insufficient information to determine whether other aspects of the cladding system, apart from the flashing details, provided sufficiency of compliance with the Ontario Building Code.

9.33.3.1. Interior Design Temperature

The evidence that was submitted to the Building Code Commission indicated that bedroom #1 receives no air flow from the heating system. As well, the ensuite bathroom has insufficient air flow based on calculations as per the Applicant's evidence.

The ensuite bathroom to the master bedroom has insufficient air flow based on calculations and cannot be heated to 22°C as per the Applicant's evidence.

Dated at Toronto this **4th** day in the month of **November** in the year **2003** for application number **2003-14**.

Ruling No. 03-26-924
Application No. 2003-27

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 7.1.6.4. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00, 283/01 and 220/02 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Ed Applebaum, Montgomery Sisam Associates, for the resolution of a dispute with John Wright, Chief Building Official, Town of Markham, to determine whether the proposed combined water main and combined sanitary main serving the two subject buildings provides sufficiency of compliance with Article 7.1.6.4. at Union Home Society, 4300 Highway No. 7, Markham, Ontario.

APPLICANT	Ed Applebaum Montgomery Sisam Associates Toronto, Ontario
RESPONDENT	John Wright Chief Building Official Town of Markham
PANEL	John Guthrie, Chair-Designate Fred Barkhouse Robert De Berardis
PLACE	Toronto, Ontario
DATE OF HEARING	June 19, 2003
DATE OF RULING	June 19, 2003
APPEARANCES	Leszek Muniak Larden Muniak Consulting Inc. Toronto, Ontario **Agent for the Applicant** Chris Bird Manager of Plans Review Town of Markham **Designate for the Respondent**

RULING

1. The Applicant

Ed Applebaum, Montgomery Sisam Associates, has applied for a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing a care and treatment facility referred to as Unionville Home Society, 4300 Highway No. 7, Markham, Ontario.

2. Description of Construction

The Applicant is constructing a treatment and care facility having a Group B, Division 2 occupancy. The proposed structure is three storeys in building height and approximately 3,851 m^2 in building area.

The construction in dispute involves the proposed installation of a new water service main and sanitary sewer connection intended for the proposed building. The Applicant is proposing to connect the new water and sanitary sewer mains intended to serve the proposed building to existing water and sanitary sewer lines that serve a nearby building located on an adjacent property. The Applicant advises that the two properties are held by the same owner. The Respondent is of the opinion that the proposed connections are not permitted by the Code, since the proposed building is not an ancillary building located on the same property as the existing building that is currently serviced by the existing water and sanitary sewer mains.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed combined water and sanitary mains serving the two subject buildings provides sufficiency of compliance with Article 7.1.6.4. of the Ontario Building Code (OBC).

Sentence (1) of Article 7.1.6.4. of the OBC requires that piping serving a building be connected to the public mains separately from the piping of any another building, unless the subject building is ancillary to another building located on the same property. The purpose of this provision is to minimize the impact of damages if a sewage backup occurs or if a problem arises as a result of servicing/repair of water/sewage mains across property lines. Furthermore, this Code provision is intended to ensure that each property owner is responsible for the repair of his/ her own sewers and water services.

The Appendix note to this Sentence (A-7.1.6.4.), while not an official part of the OBC, offers an alternative to this Code provision. As per A-7.1.6.4., the interconnection of exterior piping serving buildings located on the same property is permitted when the connection is registered on the land titles with the local authority and an agreement has been reached with all interested parties.

4. Provisions of the Ontario Building Code

7.1.6.4. Separate Services

(1) Piping in any *building* shall be connected to the public services separately from piping of any other *building*, except that an ancillary *building* on the same property may be served by the same service. (See Appendix A.).

(2) No *plumbing* serving a *dwelling unit* shall be installed under another unit of the *building* unless the

piping is located in a tunnel, pipe corridor, common basement or parking garage, so that the piping is *accessible* for servicing and maintenance throughout its length without encroachment on any private living space, but this Sentence does not prevent *plumbing* serving a unit located above another unit from being installed in or under the lower unit.

5. Applicant's Position

The Agent for the Applicant began by directing the Commission's attention to a survey plan of the property upon which the subject building is located. He stated that this property is part of a larger 18 acre holding all owned by the same owner, Unionville Home Society, but that the lots were severed in order to obtain more favourable mortgage rates. The Agent advised that the existing building, known as the Wyndham Garden Apartments, is located on an adjacent lot within the same property holding. He submitted that the issue at dispute pertains to the Applicant's desire to connect a new water main and sanitary sewer line, which will serve the proposed building, to the existing water main and sanitary sewer line serving the Wyndham Garden Apartments. This will result in combined service mains serving two buildings that will cross severance lines.

The Agent continued by advising that the proposed combined service connections are understood to be only a temporary measure until the municipality constructs new water and sewage mains along Highway No. 7., at which time the services will be likely reconfigured. He then followed this by submitting that he does not know when the municipality intends on constructing this new water main and sewage line.

When questioned as to the deeds for the property, the Applicant advised that there are two separate names registered on the titles: i) Unionville Home Society and ii) Wyndham Garden Apartments. Despite this, the Applicant maintained that the Unionville Home Society is the sole owner of the entire 18 acre parcel of land in question. The Applicant also added that Unionville Home Society has no intention of selling any of the land and reiterated that the lots were severed for financial purposes only. The Agent then interjected and stipulated that, although the deeds regard the subject land as consisting of separate lots, the Applicant's proposal meets the intent of the Code as the subject property is entirely under the ownership of the Unionville Home Society.

In summary, the Agent argued that the proposal meets the intent of the Code, as the lots in question are all under the same ownership. Furthermore, he argued that the proposal is only a temporary connection that will likely be reconfigured once the municipality constructs new water and sewage mains along Highway No. 7.

6. Respondent's Position

The Designate for the Respondent submitted that, in his opinion, the Applicant's proposal does not conform to Sentence 7.1.6.4.(1) of the Ontario Building Code, which requires the piping serving any building to be connected to the public mains separately from piping of any other building except for an ancillary building located on the same property. The Designate argued that, based on the language of the Code, the Applicant's proposal does not comply with Sentence 7.1.6.4.(1), as the proposed building is not ancillary to the existing one and the buildings are technically located on separate lots.

The Designate continued by submitting that the Appendix note to Sentence 7.1.6.4.(1) [A-7.1.6.4.] elaborates on this provision by stating that the exterior piping of buildings located on the same property may be interconnected if they are registered on the land titles with the local authority and an agreement has been reached by all parties. The Designate added that he does have some reservations with respect

to this Appendix note because, although the easement agreement would run with the land for perpetuity, the subject lots could still be individually sold at any given time. He submitted that if this were to occur, he could foresee legal disputes arising between the property owners should a problem were to arise with the combined service connection. As per the Designate, although registering the combined connection may be an option, there is still no guarantee in determining liability when there are new property owners.

In response to the argument made by the Applicant with respect to the proposed connection being "temporary" in nature, the Designate advised that has no guarantee that the services will be reconfigured when the municipality does, in fact, construct new water main and service lines along Highway No. 7. Furthermore, he submitted that the proposed construction is scheduled to occur anywhere from 3-10 years into the future, which is not a "temporary" connection in his opinion.

In summary, the Designate submitted that he does not believe that the Applicant's proposal to provide a combined service connection complies with Sentence 7.1.6.4.(1) of the Code, because the buildings in question are located on separately owned lots. Furthermore, he added that although Appendix A-7.1.6.4. permits the interconnection of exterior piping serving buildings located on the same property, this easement must be registered on title and does not address situations which may occur if the individually owned lots are sold in the future.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed combined water and sanitary mains serving the two subject buildings does not provide sufficiency of compliance with Article 7.1.6.4. at Union Home Society, 4300 Highway No.7, Markham, Ontario.

8. Reasons

i) Sentence 7.1.6.4.(1) of the Ontario Building Code requires that piping in any building not be connected to piping of any other building except in the case of an ancillary building on the same property.

Dated at Toronto this **19th** day in the month of **June** in the year **2003** for application number **2003-27**.

RULING

1. The Applicant

Shaune Lawton, Executive Director, Sunbeam Residential Development Centre, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing two group homes at 2749 Kingsway Drive, Kitchener, Ontario.

2. Description of Construction

The Applicant is constructing two group homes having Group B Division 3 occupancies. Building 'A' is one storey in building height and approximately 474 m^2 in building area. Building 'B' is also one story in building height and is approximately 470 m^2 in building area. Both buildings are comprised of combustible construction and will be equipped with a sprinkler system.

The construction in dispute involves the requirement of power door openers for the operation of the front entry of the proposed buildings. The Applicant has proposed that the use of power door openers presents a hazard, because residents would be capable of physically activating the opening devices and then possibly leaving the facilities unnoticed or unattended. This would be a dangerous occurrence, because the proposed buildings will house some individuals with profound mental and physical disabilities. The Applicant is seeking relief from this requirement on the basis that there is sufficiency of compliance due to the 24 hour staffing that will be provided at the subject group homes.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the 24 hour per day staffing at the subject residential care facilities offered in lieu of automatic door openers provides sufficiency of compliance with Sentence 3.8.3.3.(5) of the Ontario Building Code (OBC).

Article 3.8.1.2. of the OBC requires that buildings of Group B Division 3 occupancy be provided with *barrier-free* entrances. As defined in the Code, *barrier-free* means that a building and its facilities can be approached, entered, and used by persons with physical or sensory disabilities. Sentence (5) of Article 3.8.3.3. provides some of the construction requirements in order to fulfill the barrier-free standards mandated in Article 3.8.1.2. of the OBC. Specifically, it requires that buildings of Group B, Division 2 or 3 major occupancy, be equipped with a power door opener. The intent of this sentence is to provide freedom of movement for disabled individuals, so that they are not required to depend on assistance when accessing the building.

The Appendix to Sentence 3.8.3.3(5), while not formally part of the OBC, provides useful information regarding the application of the Sentence at hand. It states that; "[d]oors equipped with a power operator activated by a pressure plate identified with the international symbol for accessibility or, where security is required, by a key, card or radio transmitter, and that can otherwise be opened manually meet the intent of the requirement".

To achieve sufficiency of compliance with the Code, the Applicant has submitted that 24 hour staffing will be implemented at the proposed buildings to provide the proper supervision and to assist residents when entering and exiting the buildings. The Applicant has also added that the appropriate rough-ins are being made for the possible installation of automatic door openers should circumstances change in the future.

4. Provisions of the Ontario Building Code

3.8.3.3. (5) Doorways and Doors

(5) Except as permitted in Sentence (7), the door for the entrance described in Article 3.8.1.2. shall be quipped with a power door operator in

(a) *hotels*,
(b) *buildings* of Group B, Division 2 or 3 *major occupancy*, and
(c) *buildings* of Group A, D or E *major occupancy* having more than 300 m^2 (3,230 ft^2) in *building area*.

(See Appendix A.)

5. Applicant's Position

The Agent for the Applicant began by submitting that Sunbeam Residential Development Centre provides care for individuals with some of the most profound mental and physical disabilities. The Agent advised that it is Sunbeam's objective to enhance the quality of their clients' lives by trying to normalize their existence to the greatest extent possible. According to the Agent, Sunbeam's mandate of providing clients with a homelike environment has had a good degree of success in improving the quality of life experienced by these individuals. The Agent added, however, that providing clients with a homelike environment has often caused situations of conflict with the general intent of the OBC.

The Agent stated that he believes the application of power door operators is inappropriate in this particular case due to the nature of the proposed buildings, which are intended as residences for those with physical and mental disabilities. The Agent added that the proposed buildings are not public buildings, but rather private residential occupancies that will serve private clients. The Agent continued by submitting that he regards the intent of Sentence 3.8.3.3.(5) of the OBC as noble and well warranted in cases where a physically adept person needs assistance. He added that the clients who will live in the proposed facilities do not have the cognitive ability to open a door and will therefore always need assistance when entering and exiting the buildings. The Agent coupled this with the fact that there will be full staffing on site at all times and that he believes the application of Sentence 3.8.3.3.(5) of the OBC, which is more suitable to a commercial use, is not called for in these residential environments.

The Agent also submitted that Sunbeam staff has occasionally experienced difficulties when integrating its clients into so-called "community living". The Agent added that Sunbeam has always educated new neighbours on their proposals, the designs of the houses, and the numerous safety features contained therein. Despite these attempts, the Agent argued that Sunbeam still faces certain community pressures regarding the appearance of their residential care facilities. The Agent added that one of the primary

concerns that community members have with the proposed buildings are the entrance doors. The Agent argued that the installation of power door openers would make the proposed buildings look less residential and might not be popular with community members.

In summation, the Agent argued that the application of power door openers in the proposed buildings would present itself to be more of a hazard then an assistance. He reiterated that 24 hour staffing at the proposed buildings would provide the proper supervision and would also assist residents and visitors when entering and exiting the buildings. Lastly, the Agent added that the appropriate rough-ins for the installation of power door operators have been made should circumstances change in the future.

6. Respondent's Position

The Designate for the Respondent submitted that Sentence 3.8.3.3.(5) of the OBC mandates that the main entrance doors of the proposed buildings be equipped with a power door operator and furthermore, that buildings of B3 occupancy are not listed as exemptions from this provision. The Designate added that the City of Kitchener is not in a position to determine the validity of applying Sentence 3.8.3.3.(5) to the proposed buildings. The Designate stated that she could envision a scenario where the use of a power door operator in the subject buildings would be needed (e.g. when an individual in a wheelchair visited the buildings). The Designate reiterated that the City of Kitchener is only in the position to enforce the provisions of the OBC and not to determine whether provisions can be exempt in certain applications.

The Designate concluded by stipulating that she sympathizes with the Applicant's position, but that it is not the City of Kitchener's jurisdiction to determine whether the provisions of the OBC should or should not be applied in the proposed buildings. The Designate also stated that she recognizes that there may be security issues with a power door operator (e.g., individuals being able to easily enter and exit the proposed buildings).

7. Commission Ruling

It is the decision of the Building Code Commission that the 24 hour per day staffing at the subject group homes offered in lieu of the automatic door openers provides sufficiency of compliance with Sentence 3.8.3.3.(5) of the Ontario Building Code at 2749 Kingsway Drive, Kitchener, Ontario.

8. Reasons

i) The facilities require controlled access and staff is available to operate the entrance doors when required.

ii) The front doors are equipped with door bells that are hard wired with audible signals located centrally within the residences.

Ruling No. 03-16-914
Application No. 2003-08

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 9.8.8.2.(4) and Article 9.8.8.5. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by John Kuiack, Wasko Development, for the resolution of a dispute with Rocky Cerminara, Chief Building Official, City of London, to determine whether the as-built stair guard constructed to a height of 819.2 mm as measured vertically above the stair nosings and built in accordance with Sentence 9.8.8.2.(4) of the Ontario Building Code (OBC) complies with the intent of OBC Article 9.8.8.5. to reduce the likelihood of climbing, and whether the same guard with semi-circular elements measured at 698.5 mm above the stair nosings provides sufficiency of compliance with Article 9.8.8.5. of the OBC at 99 Fitzwilliam Boulevard, City of London, Ontario.

APPLICANT	John Kuiack Wasko Development London, Ontario
RESPONDENT	Rocky Cerminara Chief Building Official City of London
PANEL	Bryan Whitehead, Vice-Chair John Guthrie Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	May 1, 2003
DATE OF RULING	May 1, 2003
APPEARANCES	Carl Roes Roes Stair Co. Inc. Mt. Brydges, Ontario **Agent for the Applicant** Dave Howe **(Via Teleconference)** Manager of Inspections City of London **Designate for the Respondent**

RULING

1. The Applicant

John Kuiack, Wasko Development, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a dwelling located at 99 Fitzwilliam Boulevard, City of London, Ontario.

2. Description of Construction

The Applicant has constructed a Group C single detached dwelling. The structure is two storeys in building height and approximately 472 m^2 in building area.

The construction in dispute involves the guard serving the interior stairs. The as-installed guard consists of a wood top rail and wrought iron vertical members (hereafter pickets). The pickets have been designed into groups of three, with each group having a decorative cross member towards the upper portion of the guard system. A curved portion, which extends to the wood top rail, has been attached above each horizontal member; thereby, creating a semi-circular/crescent design. The horizontal members are not continuous and do not extend from one group of pickets to the next. Each picket also has a small decorative protrusion at its midpoint.

The as-installed guard at dispute, when measured vertically from a line drawn through the outside edges of the stair nosings to the top of the handrail, extends to a height of 819.2 mm. The semi-circular/crescent element, as described above, extends to a height of 698.5 mm when measured vertically from the tread of the stair.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-built stair guard constructed to a height of 819.2 mm as measured vertically above the stair nosings and built in accordance with Sentence 9.8.8.2.(4) of the Ontario Building Code (OBC) complies with the intent of OBC Article 9.8.8.5. to reduce the likelihood of climbing, and whether the same guard with semi-circular elements measured at 698.5 mm above the stair nosings provides sufficiency of compliance with Article 9.8.8.5. of the OBC at 99 Fitzwilliam Boulevard, City of London, Ontario.

Sentence 9.8.8.2.(4) of the OBC outlines the height requirements for guards serving stairs located within dwelling units. According to this provision, stairs within dwelling units and stairs serving not more than one dwelling unit shall be not less than 800 mm (2 ft 7 in) measured vertically to the top of the guard from a line drawn through the outside edges of stair nosings. Since the guard in dispute measures to a height of 819.2 mm, the as-installed guard has been built in accordance with Sentence 9.8.8.2.(4) of the OBC.

The Appendix to Article 9.8.8.2. (A-9.8.8.2.), while not an official part of the Code, offers a rationale as to the intent of this Code provision, because it explains how minimum height requirements have been established for guards. It states that guard heights are based on the waist heights of average persons; however, they are generally lower in dwelling units because the occupants become familiar with the potential hazards and, more so, because jostling under crowded conditions are less likely to arise in residential settings.

Sentence 9.8.8.5.(1) stipulates that required guards, which serve buildings of residential occupancy, must be designed in such a way so as not to facilitate climbing between 100 mm and 900 mm above the floor or walking surface of the area the guard is protecting. This requirement provides for a non-climbable zone of 800 mm. The 800 mm protected region, beginning 100 mm above the walking surface, is intended to limit the likelihood that a picket, decorative element, or horizontal/near horizontal member, would produce a ladder effect, which could lead to a child climbing over the guard. In the disputed construction, both the handrail of the guard, and the semi-circular/crescent members, are located within non-climbable zone (at heights of 819.2 mm and 698.5 mm respectively).

It should be noted that the issue of the 800 mm protective zone was addressed by a previous decision at the Building Code Commission (Ruling No. 02-40-895), which pertained to the same as-installed guard system in question here. In this previous decision, the Commission ruled that the 800 mm non-climbable zone, in this particular instance, could be measured directly from the level of the walking surface to a total height of 800 mm.

At dispute, therefore, in the case at hand is whether the handrail portion of the guard, located at 819.2 mm above the walking surface of the stair nosings as permitted by Sentence 9.8.8.4.(4) of the OBC, complies with Sentence 9.8.8.5.(1) requiring guard design to prevent climbing, even though the total guard height is considerably less than 900 mm. In other word, can a handrail as part of a guard serving a stair be located within the non-climbable zone stipulated in Sentence 9.8.8.5.(1) and still meet the intent of that provision? Also at dispute is whether the semi-circular/crescent element may facilitate climbing when considering Article 9.8.8.5. and its zone of non-climbability.

4. Provisions of the Ontario Building Code

Sentence 9.8.8.2. Height of Guards

(4) *Guards* for stairs within *dwelling units* and stairs serving not more than one *dwelling unit* shall be not less than 800 mm (2 ft 7 in) measured vertically above a line drawn through the outside edges of stair nosings, and not less than 900 mm (2 ft 11 in) above landings.

(See Appendix A)

Article 9.8.8.5. Design to Prevent Climbing

(1) *Guards* required by Article 9.8.8.1. and serving *buildings* of *residential occupancy* shall be designed so that no member, attachment or opening located between 100 mm (4 in) and 900 mm (2 ft 11 in) above the floor or walking surface protected by the *guard* will facilitate climbing.

(See Appendix A)

5. Applicant's Position

The Agent for the Applicant began by submitting that there seems to be a contradiction between Sentence 9.8.8.2.(4) and Sentence 9.8.8.5.(1) of the Code. He argued that Sentence 9.8.8.2.(4) requires that the height of a guard measures no less than 800 mm when measuring vertically from above a line drawn through the outside edges of stair nosing; whereas, Sentence 9.8.8.5.(1) stipulates that a guard must be designed in such a way so as not to facilitate climbing between 100 mm and 900 mm above the floor or walking surface of the area the guard is protecting. The Agent argued that when considering these two Sentences in conjunction, it appears that Sentence 9.8.8.2.(4) requires a guard to be designed

to a height of 800 mm, while Sentence 9.8.8.5.(1) requires a non-climbable zone that extends to a height of 900 mm, which is 100 mm above the height of the guard required by Sentence 9.8.8.2.(4). The Agent stated that, in this opinion, these two provisions of the Code are clearly at odds with one another.

The Agent continued by asking the Commission whether they would consider the notion of a "sliding" non-climbable zone downwards to the stair nosing, which would maintain the integrity of the 800 mm non-climbable zone outlined in Sentence 9.8.8.2.(4). In this case, the Agent argued that the non-climbable zone should be measured from the imaginary line that runs through the stair nosings to a height of 800 mm, instead of being measured from 100 mm above the tread of the stair to a height of 900 mm. The Agent continued by stating that the integrity of the 800 mm non-climbable zone would still be maintained; however, it would be shifted slightly downwards. If measured in this manner, the handrail of the guard in dispute, which is 819.2 mm in height when measuring vertically above a line drawn through the outside edges of the stair nosing, would be located 19.2 mm above the non-climbable zone and therefore, would be considered in compliance.

Shifting the non-climbable zone in this manner, however, would not address the semi-circular/crescent elements, as these are located 673.1 mm above the walking surface of the tread and therefore situated in the zone of non-climbability. In order to address this issue, the Agent advised the Commission to consider the overall climbability of the guard at dispute. As per the Agent's opinion, the guard does not pose a ladder effect and, therefore, is not very tempting for a child to climb over.

In summary, the Agent for the Applicant submitted that clearly the Code poses a contradiction with respect to the provisions outlined for residential guard design. As a result, he argued that the Commission should consider concessions with respect to the determination of the non-climbable zone. Finally, the Agent advised that it is both his opinion, and the opinion of the Applicant, that the guard in dispute does not provide a hazard with respect to child climbing.

6. Respondent's Position

The Designate for the Respondent submitted that he had two questions that he wanted the Commission to consider. The first of which was whether the semi-circular/crescent element of the guard in dispute poses a hazard with respect to child climbing. The second question, which was intended for the purposes of clarity, pertained to the Commission's opinion with respect to the 800 mm non-climbable zone outlined in Sentence 9.8.8.5.(1) of the Code and whether it can shifted up or down.

The Designate continued by stating that it is the position of the City of London's Building Division that the interior guard in dispute does not comply with Sentence 9.8.8.5.(1) - Design to Prevent Climbing. In his opinion, the semi-circular/crescent element, which is located 698.5 mm above the tread of the stair, could facilitate climbing, because it is located within the non-climbable zone outlined in Sentence 9.8.8.5.(1) of the OBC.

Furthermore, the Designate added that Sentence 9.8.8.2.(4) permits a guard on a stair to be no more than 800 mm in height. When considering Sentence 9.8.8.5.(1), which stipulates that a guard shall be designed so that no member, attachment, or opening, be located between 100 mm and 900 mm above the walking surface the top of the handrail for the guard in dispute is clearly within the non-climbable zone at a height of 819.2 mm. As per the Designate, this again presents a climbable element; thereby, increasing the probability of hazards resulting from the as-installed guard.

In summary, the Designate stated that his position is clear. He maintained that it is the opinion of the City of London's Building Division that the both the semi-circular element and the handrail of the guard

in dispute could facilitate child climbing, as both are located within the non-climbable zone outlined in Sentence 9.8.8.5.(1) of the Code.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-built stair guard constructed to a height of 819.2 mm, as measured vertically above the stair nosings, and built in accordance with OBC Sentence 9.8.8.2.(4) complies with the intent of Article 9.8.8.5. to reduce the likelihood of climbing at 99 Fitzwilliam Boulevard, London, Ontario.

It is also the decision of the Building Code Commission that the same guard with semi-circular elements measured at 698.5 mm above the stair nosings does not provide sufficiency of compliance with Article 9.8.8.5. of the OBC at 99 Fitzwilliam Boulevard, London, Ontario.

8. Reasons

i) In the BCC's view, the zone of non-climbability between 100 and 900 mm above the walking surface as set out in Article 9.8.8.5. does not need to be fixed at this height and may be moved slightly upwards or downwards as long as the intent of the provision is maintained, i.e., the integrity of the 800 mm zone of non-climbability is not compromised. In the present instance, the Commission holds that the climbable zone can be shifted down to the imaginary line that runs through the stair nosings and therefore the handrail, constructed as part of the subject OBC 9.8.8.2.(4) compliant guard, and measured at 819.2 mm above the stair nosings is considered to comply with the intent of Article 9.8.8.5.

ii) The guard serving a stair, constructed to a height of 819.2 mm, meets and surpasses the prescriptive requirements of OBC Sentence 9.8.8.2.(4), which mandates a minimum height of 800 mm for such guards.

iii) Notwithstanding the above, the subject guard does however contain certain semi-circular elements, the bottom of which are measured at 698.5 mm above the stair nosing. In the BCC's view, these elements represent a possible climbing hazard and are located almost wholly within the 800 mm zone of non-climbability.

iv) No compensatory measures were offered to mitigate the potential climbing hazard presented by the semi-circular elements.

Ruling No. 03-08-906
Application No. 2003-04

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Articles 9.23.17.5., 9.23.17.6. and Article 9.36.2.1.of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Margaret Sisley, owner, for the resolution of a dispute with Neil Donald, Chief Building Official, Township of Muskoka, to determine whether the proposed seasonal boathouse clad with horizontally installed bevelled wood siding and mounted directly onto the framing without the use of a sheathing membrane provides sufficiency of compliance with Article 9.23.17.6. of the Ontario Building Code at 1126-1 Pleasant View Road, Lake Muskoka, Ontario.

APPLICANT	Margaret Sisley, owner Willowdale, Ontario
RESPONDENT	Neil Donald Chief Building Official Township of Muskoka
PANEL	Len King, Vice-Chair Fred Barkhouse Robert De Berardis
PLACE	Toronto, Ontario
DATE OF HEARING	February 20, 2003
DATE OF RULING	February 20, 2003
APPEARANCES	Peter Sisley, Agent Toronto, Ontario **Agent for the Applicant** Henry Hess Building Inspector Township of Muskoka Lakes **Designate for the Respondent**

RULING

1. The Applicant

Margaret Sisley, owner, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing a boathouse located at 1126-1 Pleasant View Road, Lake Muskoka, Ontario.

2. Description of Construction

The Applicant is constructing a boathouse having a Group C occupancy. The proposed structure is two storeys in building height, approximately 60 m^2 in building area, and comprised of combustible construction.

The construction in dispute involves the nature of the wall assembly for the second storey of the proposed structure. This storey is currently used for storage, but it is anticipated that it will be used for seasonal occupation during the summer months at some time in the future. The Applicant wishes, as part of the construction of the second storey, to horizontally mount 16 mm (5/8") rabetted, shiplapped, pre-painted solid wood bevelled siding directly onto the framing of the wall assembly without the use of a sheathing membrane.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the proposed seasonal boathouse clad with horizontally installed bevelled wood siding and mounted directly onto the framing without the use of a sheathing membrane provides sufficiency of compliance with Article 9.23.17.6. of the Ontario Building Code (OBC).

In cases such as the one at hand, where no sheathing is used, Sentence (1) of Article 9.23.17.5. requires that two layers of sheathing membrane be installed beneath the cladding. Sentence 9.23.17.5.(3) permits that one layer of sheathing membrane may be omitted if a single layer of wall sheathing is installed in the wall assembly. However, as the Applicant has not chosen to provide sheathing membranes, Article 9.23.17.6. becomes the relevant OBC provision in dispute.

Sentence (1) of Article 9.23.17.6. provides an exemption to Article 9.23.17.5. in that it permits the sheathing membrane to be omitted beneath cladding where the cladding joints are "formed effectively" to prevent the penetration of wind and rain in conformance with Sentences (2) or (4) of the same Article. Sentence (4), which describes metal siding, is not relevant; however, Sentence (3) is germane. It describes various types of cladding material and the manner in which it should be installed in order to comply with Sentence (1). Sentence 9.23.17.6.(3) adds that the joints described in Sentence (2) should be caulked.

The Appendix to this Article (A-9.23.17.6.), while not an official part of the OBC, provides useful information regarding the case at hand and the application of Article 9.23.17.6. It states that Article 9.23.17.6. only applies to certain types of cladding consisting of very large sheets or panels and it does not apply to material installed in narrow strips, which is intended to look like lapped wood siding. The Appendix goes on to state that; "(s)uch material does not act as a substitute for sheathing membrane

since it incorporates provisions for venting the wall cavity and has many loosely-fitted joints which cannot be counted on to prevent the entry of wind and rain".

It should be noted that, according to Article 9.36.2.1. of the OBC, buildings used or intended to be used as seasonal recreational buildings need not comply with Sections 9.5. to 9.7. and 9.9. to 9.11. of the Code. Although the subject building is intended to serve as a seasonal boathouse, Article 9.36.2.1. provides no relief from the sheathing membrane as required by Subsection 9.23.17. of the OBC.

To achieve sufficiency of compliance with the Code, the Applicant has proposed to provide weathertight joints between the sheets of the solid wood bevelled siding by using shiplapped boards and caulking.

4. Provisions of the Ontario Building Code

9.23.17.5. Sheathing Membranes in Lieu of Sheathing

(1) Except as provided in Article 9.23.17.6., where no sheathing is used, at least 2 layers of sheathing membrane shall be applied beneath the cladding. (See Article 9.23.16.1. and Appendix A.)

(2) All joints in the sheathing membrane required in Sentence (1) shall occur over framing, and the membrane shall be fastened to the framing with roofing nails or staples spaced not more than 150 mm (5⅞ in) along the edges of the outer layer of sheathing paper.

(3) Wall sheathing is permitted to be used in lieu of 1 layer of sheathing membrane required in Sentence (1), and the thickness need not conform to Table 9.23.16.2.A.

9.23.17.6. Face Sealed Cladding

(1) Sheathing membrane is permitted to be omitted beneath cladding when the joints in the cladding are formed to effectively prevent the passage of wind and rain in conformance with Sentence (2) or (4) as applicable.

(2) Cladding consisting of sheets of plywood, hardboard, OSB, waferboard or asbestos cement is considered to meet the requirements of Sentence (1) provided the cladding is applied so that
(a) all edges are directly supported by framing, and
(b) the vertical joints between adjacent sheets are
(i) covered with battens,
(ii) shiplapped, or
(iii) otherwise matched to provide weathertight joints.

(3) Joints between sheets described in Sentence (2) shall be caulked.

(4) Metal siding consisting of sheets of metal is considered to meet the requirements of Sentence where the joints between sheets are of the locked seam type.

9.36.2.1. Exclusions

(1) Except as provided in Articles 9.36.3.1. and 9.36.2.4. and Subsection 9.10.15., *buildings* used or

intended to be used as seasonal recreational *buildings* need not comply with Sections 9.5. to 9.7. and 9.9. to 9.11.

(2) Flooring need not comply with Section 9.30., but tight-fitting floors shall be provided to support the *live* and *dead loads*.

(3) Except as provided in Sentences (4) and (5), thermal insulation, vapour barrier, air-barrier construction, interior finishes, plumbing, heating, mechanical ventilation, *air-conditioning* and electrical facilities, need not be provided, but where any of these are provided, they shall comply with the requirements of this Part.

(4) Where heating and *air-conditioning* are provided, Article 9.33.3.1. need not be complied with.

(5) Where thermal insulation is provided, the minimum thermal resistance of insulation in Table 9.25.2.1. need not be provided.

5. Applicant's Position

The Applicant's Agent submitted that the first storey of the proposed boathouse has been constructed with the use of a sheathing membrane. Despite this, he advised that it is the Applicant's intention to maintain a rustic appearance inside the second storey and that the use of a sheathing membrane would only work to defeat this purpose. Furthermore, the Agent added that several structures located in the area of the proposed boathouse (Lake Muskoka) have been constructed without the use of a sheathing membrane.

The Agent submitted that Sentence 9.36.2.1.(3) of the OBC excludes the proposed boathouse from requiring the use of air-barrier construction. Further, the Agent added that it was the Applicant's belief that Article 9.23.17.6. of the OBC permits a sheathing membrane to be omitted when the joints in the cladding are formed to effectively prevent the penetration of wind and rain. The Agent advised that, in his view, the shiplapped design of the proposed siding would prevent this from occurring and added that only an excessive force of wind would result in water penetrating into the wall assembly.

The Agent added that a bubbler, which constantly agitates the lake's water during the winter months, is located just in front of the boathouse. The Agent submitted that the presence of moisture caused by this bubbler does not pose a huge threat with respect to additional wind driven moisture entering the wall assembly of the proposed boathouse. Furthermore, the Agent advised that any water which penetrates into the wall assembly would have the opportunity to dry out, because of the lack of insulation and interior finish.

In summation, the Agent argued that there should be no concern over water penetrating into the wall cavity, because the shiplap design of the proposed siding would prevent such an occurrence. Lastly, the Agent added that it is the Applicant's intention to provide a weathertight joint by applying caulking to the sheets of the proposed siding.

6. Respondent's Position

The Designate for the Respondent submitted that correspondence from the manufacturer of the

proposed wood bevelled siding clearly states that the product is to be installed in compliance with the OBC and that its shiplap joints will not prevent wind driven rain from migrating into the wall assembly. The Designate submitted that the presence of water in a normally insulted wall assembly would work to reduce the value of the insulation and also cause deterioration of the wood framing, because that space is difficult to dry out once made wet. The Designate added that he does not believe that wind driven rain would sooner dry out in a wall assembly where there is no interior finishing membrane.

The Designate indicated that the Applicant's intention to use the proposed boathouse as a future residential occupancy heightens the need to ensure that wind driven rain does not enter the building, damaging both the framing and interior contents. Moreover, the Designate submitted that renovation is a common occurrence in the Lake Muskoka area and that although the proposed boathouse may be currently used for storage it could be turned into a living space in the future. In this respect, correcting the proposed wall assembly may be a difficult endeavour for future occupants.

The Designate submitted that the absence of sheathing in the wall assembly of the proposed boathouse is not consistent with the fact that in 1997 a decision to make sheathing membranes a requirement in a similar situation was made by the Chief Building Official for Parry Sound. In this respect, the Designate advised that ensuring uniform OBC enforcement across the Parry Sound-Muskoka Region is important, and this extends to the proposed boathouse.

In summation, the Designate stated that the manufacturer of the proposed wood siding indicated that it does not provide protection from water penetration and that furthermore, the manufacturer instructs that the joints between the proposed siding should not be caulked as per the Applicant's intention.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed seasonal boathouse clad with horizontally installed bevelled wood siding and mounted directly onto the framing without the use of a sheathing membrane does not provide sufficiency of compliance with Article 9.23.17.6. of the Ontario Building Code at 1126-1 Pleasant View Road, Lake Muskoka, Ontario.

8. Reasons

i) Provision of a sheathing membrane is a required element in the construction of this boathouse. There is no compelling technical reason as to why this structure cannot be built to comply with the Code.

ii) As noted by the building inspector, it is not unusual in this region of the Province, for unprotected wood building materials to show signs of rot and decay as a result of water penetration. Furthermore, the siding manufacturer does not certify the product to prevent wind driven rain from migrating into the wall cavity behind the siding.

iii) The Commission is concerned that, in the future, the inside of the second storey could be finished, thereby trapping moisture in the wall cavity and causing the walls to deteriorate.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 3.2.2.35.(4) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Bill Campbell, Chairman of Finances, The Glengarry Highland Games, for the resolution of a dispute with Gerald Murphy, Chief Building Official, Township of North Glengarry, to determine whether the two proposed, unsprinklered grandstand buildings, which will include Group D and Group A, Division 2 occupancies beneath a Group A, Division 4 major occupancy, provide sufficiency of compliance with Sentence 3.2.2.35.(4) of the Ontario Building Code at the Glengarry Highland Games at the 2003 Grandstands and Site Improvements, Maxville, Ontario.

APPLICANT	Bill Campbell Chairman of Finances The Glengarry Highland Games Maxville, Ontario
RESPONDENT	Gerald Murphy Chief Building Official Township of North Glengarry
PANEL	Michael Steele, Vice-Chair Tony Chow Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	January 23, 2003
DATE OF RULING	January 23, 2003
APPEARANCES	Geoff Smith, The Thompson Rosemount Group Cornwall, Ontario **Agent for the Applicant**

RULING

1. The Applicant

Bill Campbell, Chairman of Finances, The Glengarry Highland Games, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing two grandstand buildings at the 2003 Grandstands and Site Improvements, Maxville, Ontario.

2. Description of Construction

The Applicant is constructing two grandstand buildings. The first building, Building 'A', is two storeys in building height and approximately 201 m^2 in building area. The ground level has a Group D and Group A, Division 2 occupancy, while the second level, which consists of a portion of open air seating, has a Group A, Division 4 occupancy. The second building, Building 'B', which has a building area of 230 m^2, consists of 13 rows of bench type seating with direct access to the ground floor from the entire front elevation. Building 'B' has a Group A, Division 2 occupancy on the ground level and a Group A, Division 4 occupancy on the second level. Both buildings are comprised of non-combustible construction.

The proposed grandstand buildings are being constructed to provide additional facilities for the Glengarry Highland Games in Maxville, Ontario. The Glengarry Highland Games is an annual event that is host to athletes and spectators from around the world. The proposed grandstand buildings will provide additional spectator areas with protection from the sun and elements.

The construction in dispute involves the requirement to sprinkler below the tiered seating assemblies (herein bleachers) in both of the proposed grandstand buildings. The Applicant contends that the proposed grandstand buildings should be exempt from the sprinkler requirement due to the lack of an available municipal water source and the limited use of the two structures.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the two proposed, unsprinklered grandstand buildings, which will include Group D and Group A, Division 2 occupancies beneath a Group A, Division 4 major occupancy, provide sufficiency of compliance with Sentence 3.2.2.35.(4) of the Ontario Building Code (OBC).

Sentence 3.2.2.35.(4) of the OBC mandates that sprinklers be installed in all spaces below tiers of seats in a building classified as Group A, Division 4 if those spaces are used for *occupancy*. The term *occupancy*, as defined in the Code, means "the use or intended use of a building or part thereof for the shelter or support of persons, animals or property". Sentence 3.2.2.35.(4) is applicable in both of the proposed grandstand buildings since the spaces below the bleachers are in fact intended for various Group D and Group A, Division 2 occupancies. For instance, the ground floor of Building 'A' includes business and personal services, such as a treasurer's office and a washroom, while the ground floor of Building 'B' will have a washroom/change room.

The Appendix to Sentence 3.2.2.35.(4), while not formally part of the OBC, provides useful information to the case at hand, because it identifies some of the various spaces that must be sprinklered as per Sentence 3.2.2.35.(4) of the Code. Appendix A-3.2.2.35.(4) states that; "[s]paces in a building of Group

A, Division 4 occupancy, that are intended to be equipped with sprinklers include, but are not limited to, dressing and changing rooms, concession stands and areas, toilet rooms, locker rooms, storage areas, service rooms, offices and other spaces that provide service to the building".

4. Provisions of the Ontario Building Code

3.2.2.35. Group A, Division 4

(4) Sprinklers shall be installed in all spaces below tiers of seats in a *building* classified as Group A, Division 4 if those spaces are used for *occupancy*. (See Appendix A.)

5. Applicant's Position

The Agent for the Applicant began by submitting that the Glengarry Highland Games is an important cultural event for the village of Maxville, surrounding communities and the Province. He added that spectator needs have changed since the start of the Games in 1948 and that the proposed grandstand buildings are being constructed to provide additional spectator viewing areas.

The Agent continued by stating that the Applicant has several reasons as to why the proposed grandstand buildings should be exempt from the sprinkler requirement outlined in Sentence 3.2.2.35.(4) of the Code. The first of such reasons, as identified by the Agent, is the lack of an available water supply. The Agent stated that the existing site does not have any municipal water available and therefore it would be necessary to have extensive servicing work done in order to provide for sprinklering in the proposed structures. The Agent coupled this with the cost of installing sprinklers, which has been estimated at approximately $240,000. The Agent stated that since the estimated construction cost of the two buildings is $85,000, the additional costing to provide sprinkler protection would ultimately impact the feasibility of the entire project.

The Agent also submitted that the proposed grandstand buildings should be exempt from the sprinkler requirement on the basis that both buildings will be constructed of non-combustible materials. The Agent advised that spectator seating areas and second floor spaces in both buildings will be constructed utilizing concrete slabs supported by structural steel framing. The perimeter walls and partitions will also be framed with hollow block masonry and metal stud wall framing. The Agent added that the spaces below the bleachers would be totally constructed with non-combustible materials and that therefore there would very limited materials within the spaces that would pose a threat of fire. The Agent also noted that the floor assemblies separating the ground and second floor seating areas in both of the proposed buildings have been designed and detailed to provide a minimum two hour fire resistance rating, which is not required under the Code.

Finally, the Agent stated that the sprinkler requirement be waived on the basis that the proposed buildings will be of minimal use, since the Glengarry Highland Games takes place on the first weekend of August for three days. According to the Agent, the infrequent use of the proposed facilities further minimizes fire risk.

In summary, the Agent argued that the proposed grandstand buildings should be exempt from the sprinkler requirement outlined in Sentence 3.2.2.35.(4) of the OBC due to the lack of an available water supply and the costs associated with installing the sprinklers. Furthermore, the Agent added that the buildings will be constructed of non-combustible materials and therefore do not pose a significant threat

of fire. Finally, the Agent argued that the requirement to sprinkler the proposed grandstand buildings be waived on the basis that the buildings will be used on a minimal basis.

6. Respondent's Position

The Respondent submitted that Sentence 3.2.2.35.(4) of the OBC clearly states that sprinklers shall be included in all spaces below tiers of seats in buildings classified as Group A, Division 4, if those spaces are used for occupancy. The Respondent added that the Code defines the term occupancy as "the use or intended use of a building or part thereof for the shelter or support of persons, animals or property". The Respondent stated that the plans submitted by the Applicant do in fact show occupancy under the bleachers in both of the proposed grandstand buildings; however, the required sprinkler system is not shown on these plans. The Respondent stated that the proposed grandstand buildings are classified as Group A, Division 4 occupancy and, as such, any space below the bleachers is required to be protected with sprinklers as per Sentence 3.2.2.35.(4) of the Code.

The Respondent also made reference to a conversation that he had with the Applicant party in which the Applicant mentioned the possibility of an exemption from the sprinkler requirement, based on the limited use of the buildings and the fact that the buildings are not heated. The Respondent stated that while exemptions to Code requirements may be granted in some cases, he did not have the authority to grant such a variance from the provisions outlined in the OBC.

In summary, the Respondent argued that the proposed grandstand buildings are required to be equipped with sprinklers as detailed in Sentence 3.2.2.35.(4) of the Code. The Respondent also added that he is not in the position to exempt the Applicant from the requirement to sprinkler the proposed grandstand buildings.

7. Commission Ruling

It is the decision of the Building Code Commission that the non-combustible bleachers and second floor construction supported by a structural system providing a 2 hour fire resistance rating offered in lieu of the sprinklering of the space below, provides sufficiency of compliance with Sentence 3.2.2.35.(4) of the Ontario Building Code at the 2003 Grandstands and Site Improvements, Maxville, Ontario.

8. Reasons

i) The proposed buildings are to be entirely of non-combustible construction.

ii) The proposed bleachers and second floor construction, including their supporting structural system, provide a fire resistance rating of 2 hours in lieu of sprinklering the spaces below. The 2 hour fire separation provides a greater degree of fire resistance rating than the minimum required under the Ontario Building Code.

Dated at Toronto this **23rd** day in the month of **January** in the year **2003** for application number **2002-51**.

APPLICANT	Celia Johnson Richard Stevens Architects Toronto, Ontario
RESPONDENT	Ann Borooah Chief Building Official City of Toronto
PANEL	Michael Steele, Vice-Chair Tony Chow Gary Burtch
PLACE	Toronto, Ontario
DATE OF HEARING	January 23, 2003
DATE OF RULING	January 23, 2003
APPEARANCES	Jonathan Rubes, Leber/Rubes Toronto, Ontario **Agent for the Applicant** Peter Au, Manager Plans Examination City of Toronto **The Respondent**

RULING

1. The Applicant

Celia Johnson, Architect, has applied for a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is proposing renovation that involves a change in the occupancy of a portion of an existing bus repair garage (Group F, Division 2) to a new bus terminal (Group A, Division 2) at the Toronto Transit Commission's Eglinton Bus Terminal, 2200/2190 Yonge Street, Toronto, Ontario.

2. Description of Construction

The Applicant is proposing renovation to an existing Toronto Transit Commission (TTC) bus garage that will result in a change of occupancy to the new Eglinton Bus Terminal. The existing TCC bus repair garage has a Group F, Division 2 occupancy and is approximately 18,180 m^2 in building area. The proposed renovation will result in a new bus terminal, having a Group A, Division 2 occupancy, that will consist of a platform waiting area for occupants. In addition, retail units having a Group E occupancy have been proposed to be located adjacent to the platform waiting area. The proposed renovation is limited to a building area of approximately 7,851 m^2. The remainder of the floor area, not being renovated, will no longer be used to repair buses. Instead, it will be separated from the new bus terminal area and will remain as decommissioned space. The proposed renovation will be compromised of non-combustible construction and will be equipped with a sprinkler, standpipe and hose, and fire alarm system.

The renovation will take place in an existing development that is five storeys in building height. Two parking garage levels, classified as Group F, Division 3 occupancy, are located directly above the existing bus repair garage and two floors of cinemas, including retail space, are located above the parking garage levels at the north end of the building. The existing floor assembly that currently separates the bus repair garage from the parking garage levels is constructed of a concrete slab supported by unprotected steel trusses and concrete columns. This floor assembly is proposed to be protected with a 1 h fire rated ceiling assembly over the leaseable retail area only. The floor assembly above the remainder of the renovated floor area, which is comprised of the bus terminal, is proposed to remain in its existing condition.

The construction in dispute involves the existing floor assembly that separates the proposed bus terminal from the existing parking garage floor levels above. The Respondent's position is that the existing floor assembly should be upgraded with the required fire-resistance ratings in order to ensure that the performance level of the building is maintained once there is a change in major occupancy. The Applicant's position is that the existing floor assembly meets the intent of the Ontario Building Code, because Part 11 of the Code states that where compliance with a specific requirement presents a construction difficulty, the proposed construction is required to demonstrate that the performance level of the building after renovation will no be less than the performance level prior to the renovation. The Applicant is of the position that the possible approaches for achieving the required fire-resistance ratings present construction difficulties and that, furthermore, the performance level of the building will not be reduced as a result of change in major occupancy.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the existing floor assembly, which will separate a proposed bus terminal below from the existing parking garage above, will provide sufficiency of compliance with Sentence 11.4.2.3.(4) of the Ontario Building Code (OBC).

The provisions outlined in Part 11 of the OBC apply to existing buildings that are subject to renovation, which includes extension, material alteration, and/or repair. Article 11.1.2.1., which details the application of Part 11, has been designed to ensure that the proposed construction to an existing building complies with the provisions outline in Section 11.3 of the Code. Furthermore, Article 11.1.2.1. mandates that the performance level of a building prior to renovation shall be evaluated and maintained. If the performance level of a building is reduced as a result of renovation, then compensating construction shall be undertaken in order to ensure that the performance level is restored.

Sentence 11.4.1.1.(1) of the OBC states that the performance level of a building after construction shall not be less than the performance level of a building prior to construction. As defined in the Code, *performance level* means "[t]he level of performance under which all or part an existing building functions with respect to its building system". Subsection 11.4.2. of the Code outlines the various factors that are considered as resulting in the reduction of performance level. One of the activities listed under Subsection 11.4.2. is a change of major occupancy.

Article 11.4.2.3. lists certain changes of major occupancy in the renovation of existing buildings that would be considered as resulting in the reduction of the performance level of a building and which, therefore, would require compensating construction. Specific to the case at hand is Sentence 11.4.2.3.(4) of the Code, which states that the performance level of a building is reduced where the proposed major occupancy in a building is not separated from the adjoining major occupancies by fire separations having fire resistance ratings conforming to Tables 3.1.3.1. and 11.4.3.4.B. of the Code. In this particular instance, a minimum 1 h fire resistance rating would be required between the new bus terminal (Group A, Division 2) and the parking garage level (Group F, Division 3) located above. In addition, a minimum 2 h fire resistance rating would be required between the new bus terminal and the leaseable Group E retail units, which are proposed to be located adjacent to the bus platform waiting area. It should be noted, however, that Table 11.4.3.4.B. permits the specified 1 h rating to be reduced to 30 minutes and the 2 h fire separation reduced to 1 h, since the subject building is an existing building that is fully sprinklered.

To achieve sufficiency of compliance with Code requirements, the Applicant has proposed to equip the bus terminal with a new sprinkler system that will comply with NFPA 13. This will replace the existing sprinkler system and, according to the Applicant, result in the building having an improved performance level.

4. Provisions of the Ontario Building Code

Sentence 11.4.2.3.(4)

(4) The *performance level* of an existing *building* is reduced where the proposed *major occupancy* in the *building* is not separated from the adjoining *major occupancies* by *fire separations* having *fire-resistance ratings* conforming to Tables 3.1.3.1. and 11.4.3.4.B.

5. Applicant's Position

The Agent for the Applicant began by offering the Commission with a brief overview of the project in dispute. He advised that the project involves the renovation of an existing bus repair garage, which will result in a change in occupancy to the new Eglinton Bus Terminal. The function of the bus terminal will be to pick up and drop off TCC passengers arriving to and departing from the Eglinton subway station. It will consist of a platform waiting area for occupants and leaseable retail units that are proposed to be located adjacent to the bus platform waiting area. According to the Agent, two entrance/exits will serve the bus terminal. Both entrance/exits are open directly to the exterior and located at the north and south ends of the facility.

The Agent continued by stating that it is his opinion that the premise of Part 11 of the OBC is to ensure that the performance level of a building is maintained following renovation (in accordance with Article 11.4.1.1. of the Code). He then noted that there are four possible circumstances under Subsection 11.4.2. that could cause a reduction in performance level. The Agent submitted that the first of these circumstances pertains to the structural floor system and its capability of supporting the dead and live loads imposed by the new major occupancy. As per the Agent, this condition does not apply to the specific case at hand due to the fact that there will not be a change (i.e. increase) in the dead and live loads present in the building following the proposed renovation.

The second circumstance, outlined by the Agent, deals with a reduction in performance level that is a direct result of an increase in occupant load. The Agent submitted that, in this particular case, the proposed renovation will result an occupant load that has been increased by more than 15%. To address this issue, the Code requires that the exits and fire alarm system be upgraded in order to comply. The Agent stated that the Applicant has already implemented these upgrades and, as such, the increase in occupant load will not result in a reduced performance level.

The third circumstance itemized by the Agent concerns a change in major occupancy that results in a building with a greater Hazard Index. As per the Agent, the Hazard Index of the proposed Group A, Division 2 occupancy is 6, which is exactly the same as the previous Group F, Division 2 occupancy. The Agent argued that the performance level has not been compromised in this regard, since the Hazard Index has not been increased as a result of the change of major occupancy.

The fourth, and final, circumstance outlined by the Agent pertains to Sentence 11.4.2.3.(4) of the Code, which references fire separations between adjoining major occupancies. The Agent argued that when considering that the exposure to the underside of the floor slab from use as a terminal is no greater than the previous fire exposure as a bus garage, it can be considered that the performance level of the floor slab has not been reduced as a result of the change of major occupancy.

The Agent continued by arguing that certain measures resulting from the subject renovation will actually result in an improvement, not a reduction, in the performance level of the building. He submitted that the non-renovated floor area of the bus repair garage will be separated from the new bus terminal area and will remain as decommissioned space; thus, reducing the potential hazard. In addition, the leaseable retail units that are proposed to be located adjacent to the bus platform waiting area will be provided with a 1 h rated ceiling assembly. According to the Agent, this will improve fire protection in the renovated building. The Agent also submitted that the existing sprinkler system will be replaced with a new system that will conform with NFPA 13. Egress/early warning systems will also be upgraded to meet OBC requirements.

According to the Agent, the requirement to provide the appropriate upgrades to the existing floor assembly also presents various construction difficulties. As per the Agent, this would involve an intumescent coating/spray-on fire protection or gypsum board protection. He then added that the Applicant has investigated this option and has found that there is a difficulty with the intumescent coating from an application point of view and is impractical from a cost point of view. For instance, in discussions with the manufacturer, it was determined that the existing steel could not be prepared in a suitable manner to accept spray fireproofing. In addition, the Agent submitted that the affected floor assembly could be subject to significant moisture, which could be a problem for a gypsum board system. The Agent concluded that, based on this information, compliance with the requirement to fire rate the underside of the slab above the bus terminal clearly presents construction difficulties. As such, the Agent argued that alternative measures are appropriate and should be accepted by the Respondent party since compliance with Code requirements is impractical due to construction difficulties (in accordance with Article 11.5.2.1. of the OBC).

In summary, the Agent advised that certain measures resulting from the proposed renovation will result in an improvement in the performance level of the subject building and not in a reduction. The Agent maintained that the requirement to provide the appropriate upgrades to the existing floor assembly presents various construction difficulties. As a result, the Agent argued that alternative measures should be accepted by the Respondent party since compliance with Code requirements is difficult from both an application point of view and cost point of view.

6. Respondent's Position

The Respondent submitted that it is the City of Toronto's position that the floor assembly in the proposed renovation needs to be upgraded by virtue of Sentence 11.4.2.3.(4) of the OBC. The Respondent submitted that he concurred with this Sentence of the Code in that he believes that the performance level of the building will be reduced if the floor assembly is not upgraded with the required fire-resistance rating. If the Code stipulates that proposed major occupancies must be separated by fire separations that have the appropriate fire-resistance ratings then, according to the Respondent, this is what the City of Toronto will enforce. The Respondent submitted that regardless of whether the previously discussed fire separations were provided, some form of protection needs to be provided to ensure safety between the proposed bus terminal below and existing parking garage above.

The Respondent continued by arguing that, in his opinion, there are no foreseeable construction difficulties associated with providing appropriate upgrades. Unlike the Applicant, the Respondent maintained that he believes providing the appropriate upgrades is more of a maintenance issue then anything else. He argued that upgrading the fire separation is not a problem of construction, but rather a problem of upkeep and therefore, according to the Respondent, the Applicant should be required to separate the proposed major occupancies from one another with the fire separations described in Sentence 11.4.2.3.(4) of the Code.

In summary, the Respondent argued that it is the City of Toronto's position that the existing floor slab above the proposed bus terminal should be upgraded by virtue of Sentence 11.4.2.3(4) of the Code. The Respondent asserted that the Applicant should be mandated to provide the appropriate upgrades since, in his opinion, there are no foreseeable construction difficulties in doing so.

7. Commission Ruling

It is the decision of the Building Code Commission that the fire-resistance rating of the existing floor assembly, which will separate the proposed bus terminal below from the existing parking garage above, provides sufficiency of compliance with the provisions of 11.4.2.3.(4) of the Ontario Building Code at the Toronto Transit Commission's Eglinton Bus Terminal, 2200/2190 Yonge Street, Toronto, Ontario.

8. Reasons

i) The change in major occupancy has not resulted in a change to the Hazard Index.

ii) The fire load over the entire area has been reduced given that the bus storage and repair garage will be fully decommissioned as a result of the change in occupancy.

iii) The new Group A, Division 2 occupancy will be separated from the decommissioned areas by a one hour fire-resistance rating. Further, the decommissioned areas will be unoccupied.

iv) A new sprinkler system conforming with NFPA 13 standards will be installed throughout the new occupancy area.

v) Improvements will be made to the egress and early warning systems to meet OBC requirements.

Dated at Toronto this **23rd** day in the month of **January** in the year **2003** for application number **2002-50**.

Application No. 2002-45

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Articles 9.10.21.2. and 9.10.21.3. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Jeff Jansen, Fernbrook Homes, for the resolution of a dispute with Frank Asta, Chief Building Official, Town of Oakville, to determine whether the as-installed upper kitchen cabinet valance, situated at the front edge of the underside of the cabinet approximately 360 mm above the counter surface and adjacent to the range/stove opening, provides sufficiency of compliance with Articles 9.10.21.2. and 9.10.21.3. of the Ontario Building Code at 1392 Pinery Crescent and 1392 Clearwater Crescent, Oakville, Ontario.

APPLICANT	Jeff Jansen Fernbrook Homes Concord, Ontario
RESPONDENT	Frank Asta Chief Building Official Town of Oakville
PANEL	Len King, Vice-Chair Tony Chow Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	January 16, 2003
DATE OF RULING	January 16, 2003
APPEARANCES	Jeff Jansen, Fernbrook Homes Concord, Ontario **The Applicant** Frank Asta, Chief Building Official Town of Oakville **The Respondent**

RULING

1. The Applicant

Jeff Jansen, Fernbrook Homes, has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has constructed residential dwellings at 1392 Pinery Crescent and 1392 Clearwater Crescent, Oakville, Ontario.

2. Description of Construction

The Applicant is constructing a residential subdivision in the Town of Oakville. Included in this development are the subject dwellings located at 1392 Pinery Crescent and 1392 Clearwater Crescent. These homes are classified as Group C residential dwellings and have a gross floor area of approximately 279 m^2 (3,000 sq. ft). They are two storeys in building height and constructed of combustible construction.

The construction in dispute involves the valance feature associated with the upper kitchen cabinets. The kitchen cabinets are situated approximately 450 mm (17¾ in) above the counter surface. The subject valance extends downward approximately 77 mm to 90 mm from the underside of the upper cabinets, running along the front edge and returning toward the wall where the cabinet ends. This projection brings the valance to within 360 mm (14 inches) of the counter surface. The valance itself is generally constructed of wood material, approximately 13 mm to 25 mm (½ in to 1 in) in thickness, and finished to complement the kitchen cabinet. This feature is often purchased as an option from the builder and is typically used to camouflage indirect flourescent lighting affixed to the underside of the upper cabinet and used to illuminate the counter surface.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-installed valance feature, situated at the edge of the upper cabinet adjacent to the stove/range area and extending to within approximately 360 mm above the counter surface, provides sufficiency of compliance with Article 9.10.21.3. of the Ontario Building Code (OBC).

Article 9.10.21.3. outlines horizontal clearances associated with fire protection for gas and electric ranges. Sentence (1) stipulates that, except as provided in Sentences (2) and (3) any combustible wall framing, finishes or cabinets within 450 mm of the area where the range is to be located must be protected above the level of the heating elements with a minimum resistance of no less than what would be provided by a 9.5 mm thickness of gypsum board.

As a specific exemption to this requirement Sentence (2) permits that counter-top splash boards or back plates need not be protected. Further Sentence (3) provides that, except for cabinetry described in Article 9.10.21.2 (situated directly above the area of the range), cabinetry located at least 450 mm above the heating element level also need not be protected. The valance is not being proposed for the cabinetry located directly above the range area therefore the vertical clearance provisions of Article 9.10.21.2. are not at issue.

In the subject dispute, a valance has been attached to the underside of the upper kitchen cabinets. As noted above, the bottom of the cabinet itself is approximately 450 mm (17¾ in) above the level of the heating elements and adjacent to the area where the range will be located. With the extension of the valance into this clearance, the projection reaches approximately 360 mm from the counter surface. The

issue in this regard is whether this valance is considered to be part of the cabinet, a finish or framing and/or whether it will provide sufficiency of compliance with Article 9.10.21.3., particularly when considering the exemption in this provision for features such as splash boards and back plates.

4. Provisions of the Ontario Building Code

9.10.21.3. Horizontal Clearances

(1) Except as provided in Sentences (2) and (3), *combustible* wall framing, finishes or cabinets within 450 mm (17¾ in) of the area where the *range* is to be located shall be protected above the level of the heating elements by material providing fire resistance not less than that of a 9.5 mm (⅜ in) thickness of gypsum board.

(2) Counter-top splash boards or back plates which extend above the level of the heating elements need not be protected as described in Sentence (1).

(3) Except for cabinetry described in Article 9.10.21.2., cabinetry located not less than 450 mm (17¾ in) above the level of the heating elements need not be protected as described in Sentence (1).

5. Applicant's Position

The Applicant submitted that the feature in question and being referred to as a valance is attached to the underside of a standard sized upper kitchen cabinet. This is offered to purchasers, primarily of high-end residential dwellings, as an option in the finish of their homes. He advised that the feature has become quite popular and builders throughout the province have been offering it to home buyers. Further, cabinet manufacturing industry has been regularly producing this type of feature as an add-on to standard sized cabinets. In his opinion, it was not part of the cabinet and was frequently added on as an after-thought by many purchasers.

The Applicant advised that it was not until this development in Oakville that the issue had been challenged by a building official. In this regard, he suggested that there is nothing in the Code to specifically prohibit a valance or to regulate the valance encroachment into the area beneath the cabinet. In fact, he argued, the valance feature was similar in nature to the counter back splash that is specifically exempted from providing any level of fire protection in the same Article of the Code. In his opinion, the back splash would be much or more of a hazard than the valance under dispute. Flames erupting from the heating element, he argued, would come into contact with the counter-top extension before ever reaching the valance projection. Furthermore, he argued that, considering the design of many modern kitchens, range surfaces may be directly adjacent to exposed wall board, again causing more concern than a valance extension.

In summation, the Applicant submitted that the cabinetry has been manufactured to meet Code requirements, providing 450 mm clearance. The issue was merely with respect to the valance, which he again considered to be equivalent to a back splash for which there were no restriction on size or projection. He suggested that this ruling would be important industry wide especially when considering the increase in popularity of indirect cabinet lighting and valance additions.

6. Respondent's Position

The Respondent submitted that, while this issue has arisen in the subject homes constructed by the Applicant builder, it is also a concern in other homes presently being constructed. He suggested that as many as 70% to 75% of the high-end homes being constructed offer this feature as an option to the design of the cabinetry. Many home purchasers, he advised, consider the indirect lighting to be appealing and are opting for the decorative valance alternative to hide the light fixtures. This design and the issue associated with it has been evolving in the industry for some time. In his review of the situation, however, he couldn't reconcile how the valance could comply with the present Code requirements for 450 mm of clearance in the area of the stove. To be prudent, therefore, this is an issue to be decided upon by the Commission.

The Respondent advised that, if not for the valance, the cabinet would comply in all other respects with the Code requirements. Valances however, unlike counter-top back splashes, are not addressed in the Code. He was concerned with the projection of radiant heat from the elements or the hazard associated with "aggressive cooking" when considering the encroachment of the valance into the 450 mm required clearance.

In summation, the Respondent submitted that he felt unable to determine whether this type of valance feature would contribute to a fire if the source of ignition was the stove-top burner. Because this feature is relatively new, the Code does not address the issue nor whether this type of encroachment would be acceptable from a fire safety perspective. In conclusion, he stated that he was looking for direction from the Commission as to whether sufficiency of compliance with the OBC requirements is being achieved.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-installed upper kitchen cabinet valance, situated at the front edge of the underside of the upper cabinet approximately 360 mm above the counter surface and adjacent to the area where the range/stove is to be located, does not provide sufficiency of compliance with Article 9.10.21.3. of the Ontario Building Code at 1392 Pinery Crescent and 1392 Clearwater Crescent, Oakville, Ontario.

8. Reasons

i) The valance is considered to form part of the upper cabinet and, as a result, is required to provide a minimum clearance of 450 mm above the level of the heating elements.

ii) Presently, no Code amendment is proposed by the Building and Development Branch of the Ministry of Municipal Affairs and Housing to exempt this type of valance feature from the minimum Code requirements for cabinets outlined in Article 9.10.21.3.

Ruling No. 03-01-899
Application No. 2002-34

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentence 3.2.7.1.(1) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Duff Ryan, Ryan Company Architect Inc., for the resolution of a dispute with Jim Oakely, Chief Building Official, Township of Severn, to determine whether the egress lighting, which is not proposed to be illuminated for 24 hours of each day, complies with Sentence 3.2.7.1.(1) of the Ontario Building Code at St. Francis of Assisi Catholic Church, 3315 Muskoka Street, Township of Severn, Ontario.

APPLICANT	G. Duff Ryan Ryan Company Architect Inc Richmond Hill, Ontario
RESPONDENT	Jim Oakley Chief Building Official Township of Severn
PANEL	Len King, Vice-Chair Tony Chow Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	January 16, 2003
DATE OF RULING	January 16, 2003
APPEARANCES	G. Duff Ryan Ryan Company Architect Inc Richmond Hill, Ontario **The Applicant** Douglas Tennant Fire Chief Township of Severn **The Designate**

RULING

1. The Applicant

G. Duff Ryan, Ryan Company Architect Inc., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and is constructing an addition to the St. Francis of Assisi Catholic Church, at 3315 Muskoka Street, Township of Severn, Ontario.

2. Description of Construction

The Applicant is constructing an addition to a church having a Group A, Division 2 occupancy. The structure is one storey in building height and is approximately 539 m^2 in building area. The building is comprised of combustible construction and is equipped with a fire alarm system.

The issue at dispute pertains to the lighting requirements for exits and access to exits in the proposed addition of the building. The Applicant has proposed an egress lighting scheme that involves manual wall switch lighting, which may be turned on and off at various times throughout the day. The Respondent, however, is of the opinion that exits and access to exits in the subject building, specifically the mezzanine egress stair, should be equipped to provide continuous illumination to an average level not less than 50 Lx at the floor and tread levels.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the egress lighting, which is not proposed to be illuminated for 24 hours of each day, complies with Sentence 3.2.7.1.(1) of the Ontario Building Code (OBC).

Sentence 3.2.7.1.(1) mandates that an exit, a public corridor, a corridor providing access to exit for the public, a corridor serving patients of residents in a Group B, Division 2 or Division 3 occupancy, a corridor serving classrooms, an electrical equipment room, a transformer vault and a hoistway pit shall be equipped to provide illumination to an average level not less than 50 Lx at floor or tread levels. The purpose of this average level of illumination is to facilitate the rapid egress of persons in an emergency situation and to minimize the risk of injury to persons as a result of tripping, slipping, falling, contact or collision.

Germane to the issue at dispute is the statement in Sentence 3.2.7.1.(1) "shall be equipped to provide". In this regard, while the Sentence requires that certain means of egress, a transformer vault, and a hoistway vault, be equipped to provide illumination to an average level, it does not specifically stipulate that illumination must be continuously maintained. In this regard, the issue before the Building Code Commission (BCC) is whether the intent of Sentence 3.2.7.1.(1) is to ensure that illuminations be provided continuously for 24 hours/day.

4. Provisions of the Ontario Building Code

3.2.7.1. Minimum Lighting Requirements

(1) An *exit*, a *public corridor*, a corridor providing *access to exit* for the public, a corridor serving patients or residents in a Group B, Division 2 or Division 3 *occupancy*, a corridor serving classrooms, an electrical equipment room, a transformer vault and a hoistway pit shall be equipped to provide

illumination to an average level not less than 50 lx (4.6 ft-candles) at floor or tread level and at angles and intersections at changes of level where there are stairs or ramps.

5. Applicant's Position

The Applicant began by submitting that the issue at dispute pertains to the egress lighting in the subject building and whether this lighting needs to be continuous for 24 hours/day. He stated that it is the Respondent's position that the egress lighting requirement outlined Sentence 3.2.7.1.(1) is to ensure that continuous illumination is provided in a building even when there are no occupants. The Applicant submitted that, in his opinion, it is not the intention of Sentence 3.2.7.1.(1)to ensure that egress lighting is perpetually activated.

The Applicant then stated that he hired a fire protection consultant in order to obtain a third-party opinion on the interpretation of Sentence 3.2.7.1.(1). As per the Applicant, the retained fire protection consultant concurred with the Respondent's position that the mezzanine stair in the subject building should be equipped to provide illumination to an average level not less than 50 Lx, since it is a means of egress. Despite this, the fire protection consultant also submitted that this requirement only applies when the building is occupied. The Applicant advised that he provided a copy of the fire protection consultant's opinion to the Respondent who, in turn, did not accept it.

The Applicant continued by stating that he contacted the Building and Development Branch (BDB) within the Ministry of Municipal Affairs and Housing, regarding the Respondent's refusal to accept the opinion of the retained fire protection consultant. The Applicant stated that he requested the written opinion of a building code advisor employed with the BDB with respect to the interpretation of Sentence 3.2.7.1.(1). He advised that the opinion offered by the BDB indicates that Sentence 3.2.7.1.(1) of the Code mandates that the average lighting level of at least 50 Lx must be provided in the areas identified, but does not stipulate that such lighting must be left on 24 hours of each day.

The Applicant then stated that the issue at dispute was brought before the BCC, as occupancy for the subject building is contingent upon the Commission's Ruling. He submitted that the requirement to provide continuous lighting in the exits and access to exits in the subject building is a concern due to the associated costs. Moreover, he added that the building is not occupied on most days, thereby resulting in a waste of both money and electricity.

In summary, the Applicant argued that while Sentence 3.2.7.1.(1) of the Code requires exits and access to exits to be equipped to provide illumination to an average level of not less than 50 Lx at floor or tread level, it does not, in his opinion, specify that this illumination be continuous for 24 hours/day. Furthermore, he added that this is not only his opinion, but also that of a professional fire protection consultant and a building code advisor with the Building and Development Branch of the Ministry of Municipal Affairs and Housing.

6. Respondent's Position

The Respondent submitted that he is of the opinion that the intention of Sentence 3.2.7.1.(1) of the Code is to ensure that an exit or access to exit is equipped to provide continuous illumination to an average level not less than 50 Lx at floor or tread level on a 24 hour/day basis. He submitted that this is not only his opinion, but also that of the Designate, Mr. Douglas Tennant, who is the Fire Chief for the Township of Severn. The Respondent added that he has looked seriously into the requirements for egress lighting in an assembly occupancy and has come to the conclusion that illumination should be continuous in order to ensure occupants' safety. He then submitted that the issue at dispute was brought

to the BCC as the lighting scheme proposed by the Applicant does not provide for continuous illumination. As per the Respondent, since the Applicant's proposed lighting scheme involves the use of wall switch lighting, which may be turned on and off at various times throughout the day, the lighting may be inadvertently, or even consciously, turned off at any given time. He then concluded by stating that the Designate also wished to address the members of the presiding BCC panel.

The Designate began by stating that the Ontario Fire Code requires lighting in exits to be maintained at all times in order to ensure the safe egress of occupants in the case of an emergency. The Designate submitted that this is of significant importance in assembly occupancies, where occupants may not be familiar with the means of egress. He then submitted that the risk of injury is heightened in situations where egress lighting is not provided on a continuous basis.

The Designate continued by outlining the risks associated with the egress lighting scheme proposed by the Applicant. He stated that the proposed lighting scheme is not sufficient as the switches may be accidentally turned off. Furthermore, he added that occupant safety is compromised in situations when the egress lighting is not activated, as an individual who is unfamiliar with the building may have to travel through a dark room in order to find the wall switch that activates illumination.

The Designate then continued by stating that the provision of continuous egress lighting is particularly important in certain instances. For example, the Designate cited instances where natural lighting is reduced, such as sudden thunderstorms, and during the winter months when it becomes darker earlier in the evening. Furthermore, he also added that continuous egress lighting should be provided, because there is very little outdoor illumination since the subject building is located in a rural setting.

Finally, the Designate submitted that there are several instances of other assembly occupancies in the Township of Severn that have continuous egress lighting provided 24 hours/day. He stated that, in his opinion, this provision makes sense from a practical point of view and also ensures that safety is maintained while occupants exit the building.

In summary, both the Respondent and Designate submitted that they are of the opinion that the intent of Sentence 3.2.7.1.(1) of the Code is to ensure that an exit or access to exit is equipped to provide continuous illumination to an average level not less than 50 Lx at floor or tread level on a 24 hour/day basis. As a result, both the Respondent and Designate indicated that the proposed egress lighting scheme, which may be manually turned on or off at any given time, fails to comply with Sentence 3.2.7.1.(1) of the OBC.

7. Commission Ruling

It is the decision of the Building Code Commission that the egress lighting required by Sentence 3.2.7.1.(1) of the Ontario Building Code is not required to be illuminated for 24 hours of each day, but rather is required to be illuminated whenever the building is occupied.

It is also the decision of the Building Code Commission that egress lighting in the subject building, as currently designed to be operated, does not provide sufficiency of compliance with Sentence 3.2.7.1.(1) of the Ontario Building Code at St. Francis of Assisi Catholic Church, 3315 Muskoka Street, Township of Severn, Ontario.

8. Reasons

i) The existing design of the egress lighting system, by providing typical wall switches for on/off

activation, does not provide assurance that the lighting will be on when required, nor is there any control over whether it will remain illuminated during times of occupancy.

ii) It is not reasonable to expect a person who is perhaps unfamiliar with the building to travel from room to room, occasionally through darkened areas, to turn on each of the wall switches that will activate the required lighting in this assembly occupancy.

iii) The system should be designed to ensure that the required lighting will not be turned off accidentally, facetiously (as a result of horseplay) or by a well meaning individual concerned with energy consumption.

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Sentences 3.2.1.1.(4), 3.3.1.5.(2), (3) and (4) of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by David MacDonald, Facilities Manager, Coca-Cola Bottling Co., for the resolution of a dispute with Brenda Campbell, Chief Building Official, City of Brampton, to determine whether the viewing walkway, having an area of 207 m^2, is a mezzanine which provides sufficiency of compliance with Sentences 3.2.1.1.(4), 3.3.1.5.(2), (3) and (4) of the Ontario Building Code or whether it is considered to be a storey which must be meet the construction requirements for a storey in a building having a Group F, Division 3 occupancy classification at the Coca-Cola Bottling Company, 15 Westcreek Boulevard, Brampton, Ontario.

APPLICANT	David MacDonald, Facilities Manager Coca-Cola Bottling Co. Brampton, Ontario
RESPONDENT	Brenda Campbell Chief Building Official City of Brampton
PANEL	Michael Steele, Vice-Chair John Guthrie Robert De Berardis
PLACE	Toronto, Ontario
DATE OF HEARING	December 12th, 2002
DATE OF RULING	December 12th, 2002
APPEARANCES	Randy Brown Randal Brown & Associates Toronto, Ontario **Agent for the Applicant** Lillyan McGinn Manager of Plans and Permits City of Brampton **Designate for the Respondent**

RULING

1. The Applicant

David MacDonald, Facilities Manager, Coca-Cola Bottling Co., has received a building permit under the *Building Code Act*, S.O. 1992, c. 23, as amended, and has constructed an industrial building at the Coca-Cola Bottling Company, 15 Westcreek Boulevard, Brampton, Ontario.

2. Description of Construction

The Applicant has constructed a Coca-Cola bottling facility having a Group F, Division 3 occupancy classification. The structure has a building area of 51,900 m^2 according to the Applicant or 53,521.55 m^2 according to the Respondent. It is two storeys in building height and comprised of noncombustible construction. The building is equipped with sprinkler and fire alarm systems.

The northern area of the building has two levels of offices and a mezzanine which is open to the plant below. The upper level of offices and mezzanine, having a combined area of 5,705 m^2, exceeds 10% of the building area and has, therefore, been constructed as a storey, having a two hour fire resistance rating and meeting the exiting requirements for second storey construction.

The item particular to this dispute involves the construction of a viewing walkway intended for use by tour groups for viewing the bottling production area below. The walkway has an area of 207 m^2 and measures 84.73 m (278 ft) long by 2.44 m (8 ft) wide. One end of the walkway is adjoined to the second storey floor area, however, the walkway itself has been constructed as a 10% mezzanine. A one hour fire-resistance rating to the underside of the walkway will be provided including the supporting columns and beams. Three egress facilities leading off the walkway have been provided. Two of the egress stairs lead to the plant floor below and a third leads onto the second storey at the west end of the walkway by way of the connection to this level.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the viewing walkway can be considered to be a mezzanine which provides sufficiency of compliance with Sentences 3.2.1.1.(4), 3.3.1.5.(2), (3) and (4) of the Ontario Building Code (OBC) or whether it must be constructed to the same standards as the second storey to which it is adjoined..

Sentence 3.2.1.1.(4) provides that, with exceptions not applicable here, a mezzanine need not be considered as a storey in calculating building height provided that the aggregate area of the mezzanine is not greater than 10% of the area of the storey or suite in which it is located. The subject viewing walkway, having an area of 207 m^2, is less than 10% of the of the building area. One end of this feature, however, forms an 8 m wide connection with the second storey of the structure.

Further, Sentences 3.3.1.5.(2), (3) and (4) outline the egress requirements for mezzanines. Clause (d) of Sentence (2) stipulates that, except for mezzanines within a dwelling unit, every mezzanine that is not required to terminate at a vertical fire separation as set out in Article 3.2.8.2. is to have two egress facilities located so that one would provide egress should the other become inaccessible in suites where the floor area is sprinklered and the travel distance to an egress doorway is more than 25 m.

Moreover, Sentence (3) provides that if the room or suite in which the mezzanine is located is permitted to have one egress doorway, the travel distance is to be measured from any point on the mezzanine to that doorway. In the alternative, where more than one doorway is required, travel distance is measured from any point on the mezzanine to the nearest egress facility. In addition, as specified in Sentence (4) where the space below the mezzanine is enclosed, an egress facility from the mezzanine shall not lead into the enclosed space.

The subject viewing platform, if considered to be an independent feature relative to the second storey construction, is less than 500 m^2 in area. For the purposes of Sentence 3.3.1.5.(2) it would not be required to terminate at a fire separation. Also, according to the Applicant, a 45 m travel distance can be achieved from any point on the viewing walkway using one of the three egress facilities provided. As noted above, two of these egress facilities lead to the production level where exits are then provided at 60 m intervals around the perimeter of the building. A third egress facility is also provided, leading through the second storey from the walkway connection to that floor area.

In respect to these construction requirements, it should be noted that the Respondent takes the position that the viewing walkway is an extension of the existing second storey and is, therefore, required to meet the same construction standards and exiting requirements as mandated for a storey in an F3 occupancy.

4. Provisions of the Ontario Building Code

Sentence 3.2.1.1. Exceptions in Determining Building Height

(4) Except as required by Sentence (5), a *mezzanine* shall not be considered as a *storey* in calculating *building height* and need not conform to Sentence (3) provided the aggregate area of the *mezzanine* floor is not more than 10% of the area of the

(a) the *suite* in which it is located, where there is more than one *suite* in the *storey*, or

(b) the *storey* in which it is located, in all other cases.

(See A-3.2.1.1.(3) in Appendix A.)

Sentence 3.3.1.5. Egress Doorways

(2) Except for a *mezzanine* within a *dwelling unit*, every *mezzanine* that is not required to terminate at a vertical *fire separation* in Article 3.2.8.2. shall have 2 egress facilities placed in such a manner that one facility could provide egress from the *mezzanine* if the other facility becomes inaccessible to the occupants of the *mezzanine* due to a fire which might originate in the room or *suite* in which the *mezzanine* is located where

(a) the *occupancy* of the *mezzanine*, room or *suite* is classified as Group F, Division 1,

(b) the *mezzanine* is intended for an *occupant load* of more than 60 persons,

(c) in a *floor area* that is not *sprinklered*,

  (i) the area of a *mezzanine* is more than the value in Table 3.3.1.5.A., or

  (ii) the travel distance to an egress doorway or an egress facility is more than the value in Table 3.3.1.5.A., or

(d) in a *floor area* that is *sprinklered*,

  (i) the travel distance to an egress doorway or an egress facility is more than 25 m (82 ft), or

(ii) the area of the *mezzanine* is more than the value in Table 3.3.1.5.B.

(3) For the purpose of Clause (2)(c) and Clause 2(d),

(a) if the room or *suite* in which the *mezzanine* is located is permitted to have one egress doorway, the travel distance is measured from any point on the *mezzanine* to that doorway, or

(b) if the room or *suite* in which the *mezzanine* is located is required to have more than one egress doorway, the travel distance is measured from any point on the *mezzanine* to the nearest egress facility leading from the *mezzanine*.

(4) Except for a *mezzanine* which is not considered as a *storey* in calculating *building height* in Sentence 3.2.1.1.(4), where the space below a *mezzanine* is enclosed, an egress facility from the *mezzanine* shall not lead into the enclosed space. (See Article 3.4.2.2. for *exits* requirements.)

5. Applicant's Position

The Agent for the Applicant described the feature in dispute as a viewing platform which, in his opinion, can be viewed as a mezzanine. He explained that the primary function of this platform will be to allow visitors to tour the plant and view the production area below. It would be used periodically for school field trips and other such educational tours. The Agent advised that a maximum of 36 people would be permitted to use the walkway at any one time and that children must be a minimum of 10 years old to participate in the tour. Conditions to this effect will be included in an approved Fire Safety Plan.

In respect to the construction of the walkway the Agent advised that this is an intermediate floor assembly for which the reduced requirements of a 10% mezzanine apply. The walkway will be provided with a one hour fire resistance rating and the two required egress facilities are provided from the mezzanine level. While noting that one end of the walkway is connected to the second storey he stated that there is nothing in the Code which would prohibit that connection. He considers it to be more of a convenience connection and further noted that a third means of egress is provided as a result.

In addition, the Agent advised that the building is provided with a single stage fire alarm system and that manual pull stations would be provided at the three egress points from the mezzanine. In summation, the Agent argued that the platform should be viewed as a mezzanine which provides sufficiency of compliance with the associated Code requirements.

6. Respondent's Position

The Designate for the Respondent submitted that the initial building permit for this facility was issued in 2000. Since that time 26 permits have been issued at various stages of construction. A final occupancy permit has still not been issued however, the building is fully operational and several partial occupancy permits have been approved.

The Designate submitted that, in her opinion, the feature in question must be considered as an extension to the second storey of the building, consequently requiring a two hour fire-resistance rating and conforming with the exit provisions of Section 3.4. She based this conclusion on the fact that the

viewing platform is an addition to, and continuation of, the second floor area by virtue of the narrow connection at the end of the walkway.

The Designate advised that, in her opinion, "the intent of the building code is not to consider parts of a continuous floor area distinctly and separately for the purpose of determining less restrictive construction requirements, egress and other life safety measures. It is entirely another matter when considering a separate floor area. Indeed, there are numerous separate mezzanine floor areas within the Coca Cola plant which are not considered a storey as they are less than 10% of the building area and thus conform to Sentence 3.2.1.1.(4)." Those mezzanines differ, she stated, because they are separate and distinct floor areas.

In summation, the Designate submitted that the aggregate area of the north mezzanine, upper level offices and the subject viewing platform is considered to be a part of the second storey. She argued that various areas of this storey cannot be considered separately for the purposes of determining less restrictive requirements for the fire resistance rating of the floor assembly, egress from the floor area and life safety requirements.

7. Commission Ruling

It is the decision of the Building Code Commission that the as-constructed viewing walkway is considered to be a mezzanine that will provide sufficiency of compliance with Sentences 3.2.1.1.(4), 3.3.1.5.(2), (3), and (4) of the Ontario Building Code at the Coca-Cola Bottling Company, 15 Westcreek Boulevard, Brampton, Ontario.

8. Reasons

i) Notwithstanding the narrow connection to the second storey, the viewing walkway functions as a mezzanine.

ii) The occupant load is restricted in accordance with the approved Fire Safety Plan.

iii) Additional directional exit signs are to be provided to identify alternate egress routes from the mezzanine.

PLACE	Toronto, Ontario
DATE OF HEARING	December 4, 2002
DATE OF RULING	December 4, 2002
APPEARANCES	David Syrett Leber/Rubes Inc. Toronto, Ontario **Agent for the Applicant** Frank Asta Chief Building Official Town of Oakville **The Respondent**

RULING

1. The Applicant

Bud Johnson, Principal, Jasco Holdings Inc., has received an order under the *Building Code Act*, S.O. 1992, c. 23, as amended, in connection with an alleged deficiency at the Wildwood Learning Centre, 2250 Sheridan Garden Drive, Oakville, Ontario.

2. Description of Construction

The Applicant is constructing a children's learning centre (hereafter "private school") having a Group A, Division 2 occupancy. The L-shaped structure is one storey in building height and approximately 1,650 m^2 in building area. The building is a mix of combustible and noncombustible construction and is equipped with sprinklers and a fire alarm detection system, which is monitored by an independent central station. The fire alarm system includes a control panel, sprinkler flow switches, corridor smoke detection, manual pull stations at each exit corridor and alarm signalling appliances throughout. Emergency lighting and exit signage are also provided throughout the building.

Access to exits for the classrooms, gymnasium, library, lunch/meeting area, service spaces, administration offices and other amenity spaces in the proposed building is by way of two main corridors arranged in an 'L' configuration. The entrance lobby serves as the main entrance and is the intersection of the two corridors. The two main corridors and the entrance lobby are separated from the rest of the building by fire separations not having a fire-resistance rating.

The building has a total of six classrooms. Each classroom has two means of egress: one that leads directly to the building exterior and one that leads to an interior corridor. The library has three means of egress: two that lead to the building exterior and one that leads to the entrance lobby. In addition, the gymnasium has three means of egress: one that leads to the exterior, one that leads to an interior corridor, and one that leads to the entrance lobby. Rooms that have a doorway to one of the main corridors have either an exterior door to the outdoors, a doorway that opens into a subsidiary corridor where it is possible to go in opposite directions to two separate exits without travelling through the entrance lobby, or both.

The construction in dispute involves the open hearth natural gas fireplace, which is located in the entrance lobby of the private school. The Respondent's position is that the entrance lobby is part of a corridor serving as an access to exit, and therefore the location of the fireplace is in contravention of the Code, which prohibits a fuel-fired appliance in a corridor serving as an access to exit. The Applicant maintains that the entrance lobby is not part of a corridor serving as an access to exit, because it is not a required means of egress from other parts of the building.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-installed natural gas fireplace located in the main lobby of a children's learning centre provides sufficiency of compliance with Sentence 3.3.1.2.(3) of the Ontario Building Code (OBC).

Sentence 3.3.1.2.(3) deals with fuel-fired *appliances* and their restrictions regarding corridors serving as an *access to exit*. According to OBC Article 1.1.3.2., an *appliance* means "a device to convert fuel into energy and includes all components, controls, wiring and piping required to be part of the device by the

applicable standards referred to in this Code". Since, by definition, an appliance is a "device to convert fuel into energy", a natural gas fireplace is a fuel-fired appliance under the OBC and, as such, its application is required to conform to the provisions outlined in Sentence 3.3.1.2.(3) of the Code.

Sentence 3.3.1.2.(3) of the Code states that a fuel-fired appliance shall not be installed in a corridor serving as an *access to exit*. Article 1.1.3.2. defines *access to exit* as "part of a means of egress within a floor area that provides access to an exit serving the floor area". Despite the configuration of the corridor at dispute, and the numerous means of egress in a possible emergency situation, the Building Code Commission (BCC) regards the entrance lobby as forming part of the access to exit corridor system, because it provides immediate access to the main entrance doors, which serve as a means of egress from the floor area.

Based on this determination, and the presence of the natural gas fireplace in the entrance lobby, the issue at hand is then whether there are any compensating measures offered by the Applicant party and, if so, whether they are sufficient to adequately address the required level of safety mandated by OBC Sentence 3.3.1.2.(3).

4. Provisions of the Ontario Building Code

Sentence 3.3.1.2. Hazardous Substances, Equipment and Processes

(3) A fuel-fired *appliance* shall not be installed in a corridor serving as an *access to exit*.

5. Applicant's Position

The Applicant's Agent began by submitting that it is his belief that the entrance lobby, in which the proposed fireplace is located, is not part of a corridor serving as an access to exit due to the fact that there are numerous means of egress from the floor area that individuals can access without having to travel through the entrance lobby. For example, he noted that rooms in the proposed building, which have a doorway to one of the two main corridors, have either an exterior door to the outdoors, a doorway that opens into a subsidiary corridor where it is possible to go in opposite directions to two separate exits without having to travel through the entrance lobby, or both.

The Agent continued by stating that he considers the application of a natural gas fireplace in the entrance lobby to be reasonable due to the fact that the proposed building is fully sprinklered and equipped with a fire detection and alarm system. Smoke detection devices have been installed in the corridors and entrance lobby to ensure early detection and warning of a potential emergency. The Agent noted that the gas valve for the fireplace is connected to the fire alarm system control unit, so that it will close automatically upon activation of the fire alarm system. In addition, the automatic sprinkler system serves as automatic fire detection in addition to automatic fire suppression. The Agent added that the system is monitored by an independent central station, so as to ensure timely notification to the Fire Department.

The Agent stated that, according to Sentence 3.3.2.5.(4) of the OBC, the corridors in the subject building are not required to be constructed as fire separations, because the travel distance to an exit from any point of the building does not exceed the 45 m limit outlined in Clause 3.4.2.5.(1)(c)of the Code. Despite this, the two main corridors in the subject building are separated from the remainder of the floor area by unrated fire separations that are continuous from the floor slab to the underside of the roof deck, thereby providing a smoke tight seal should a fire occur. According to the Agent, this not

only provides for fire containment, but also enhances the building's safety by offering increased time for egress from the classrooms and the library. Furthermore, the Agent submitted that the gymnasium is separated from the remainder of the building by a 30 minute fire separation, as required by Sentence 3.3.2.2.(8) of the Code, and also has two means of egress independent of the entrance lobby.

In summary, the Agent reiterated that the entrance lobby is not a corridor serving as an access to exit, because it is not the only means of egress from the floor area of the building. In this regard, it is the Agent's belief that the as-installed fireplace is in compliance with Sentence 3.3.1.2.(3) of the Code. Furthermore, the Agent added that the installation of the natural gas fireplace is reasonable due to the fact that the building is fully sprinklered and equipped with a fire detection and alarm system. Lastly, the Agent submitted that the two main corridor walls have been designed and constructed as fire separations, so as to provide a smoke tight seal should a fire ensue in the proposed building.

6. Respondent's Position

The Respondent submitted that the entrance lobby of the proposed building is what connects the two corridors serving classrooms on both sides. In this regard, the purpose of the entrance lobby, as per the Respondent, is to function as the hub between the two main corridors. He added that Sentence 3.3.1.2.(3) of the OBC clearly states that a fuel fired appliance shall not be installed in a corridor serving as an access to exit. In his view, occupants must travel through the entrance lobby to get to the front door, which is one of the means of egress from the floor area. The Respondent reiterated that the Code prohibits fuel fire appliances in an access to exit, and that it is his opinion that the entrance lobby is, in fact, an access to exit.

The Respondent continued by stating that it appears that the entrance lobby has been designed to be used as a place of congregation, with the fireplace serving as its focal point. The Respondent submitted that while he can appreciate that the fireplace will serve as a focal point, the corridor in which it is located is not permitted to function as a place of congregation/activity. The Respondent stated that he believes the presence of a fuel fireplace in the entrance lobby will only encourage congregation in this area.

In summary, the Respondent submitted that it is his belief that the entrance lobby of the proposed building is, in fact, an access to exit and therefore a fuel-fired appliance is not permitted as outlined in Sentence 3.3.1.2.(3) of the Code. Furthermore, the Respondent stated that he believes that the presence of a fireplace in the entrance lobby will only encourage congregation in this area.

7. Commission Ruling

It is the decision of the Building Code Commission that the proposed natural gas fireplace located in the main lobby of a children's learning centre will provide sufficiency of compliance with Sentence 3.3.1.2.(3) of the Ontario Building Code at the Wildwood Learning Centre, 2250 Sheridan Garden Drive, Oakville, Ontario on condition that:

1. The fireplace is to be enclosed by a secured and lockable glass enclosure.

2. The doors leading from the gymnasium to the exterior of the building are to be equipped with panic hardware and the doors providing access from the gymnasium to the lobby and corridor are to have no locking capabilities.

3. The operating controls for the fireplace and thermostat shall be situated in a remote location and locked to prevent tampering or actuation by unauthorized individuals.

4. The fuel supply to the fireplace is to be shut off by activation of the fire alarm system and in the event of a loss of power.

8. Reasons

i) The corridors are fire separated from the remainder of the floor area which exceeds the requirements of the Building Code.

ii) All major rooms have a separate and second means of egress, at grade level, leading directly to the exterior of the building.

iii) A fire plan will be approved and implemented.

iv) The building is equipped with an independently monitored fire alarm system and is fully sprinklered.

v) Each room having access to the corridor is also provided with a second and separate means of exit without the need to travel through the lobby area.

DATE OF HEARING	November 21, 2002
DATE OF RULING	November 21, 2002
APPEARANCES	Carl Roes Roes Stair Co. Inc. Mt. Brydges, Ontario **Agent for the Applicant** Dave Howe **(Via Teleconference)** Manager of Inspections City of London **Designate for the Respondent**

RULING

1. The Applicant

John Kuiack, Supervisor, Wasko Development, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies with respect to the construction of a single family dwelling located at 99 Fitzwilliam Boulevard, City of London, Ontario.

2. Description of Construction

The Applicant has constructed a Group C single detached dwelling. The structure is two storeys in building height and approximately 472 m^2 in building area.

The construction in dispute involves the design of the guard serving the interior stairs and the open floor area on the second floor. The as-installed guard consists of a wood top rail and wrought iron vertical members (hereafter pickets). The pickets have been designed into groups of three, with each group having a decorative horizontal cross member towards the upper portion of the guard system. A curved portion, which extends to the wood top rail, has been attached above each horizontal member, thereby creating a semi-circular/crescent design. These horizontal cross members, which are located 787 mm above the walking surface, are not continuous and do not extend from one group of pickets to the next. Each picket also has a small decorative protrusion at its midpoint.

3. Dispute

There are two issues at dispute between the Applicant and Respondent. The first is whether the 800 mm non-climbable zone (as measured perpendicularly above the walking surface of the floor area) required for guards in Article 9.8.8.5. of the Ontario Building Code (OBC) may, in the subject case of the as-installed guard at 99 Fitzwilliam Boulevard, City of London, Ontario, be measured directly from the level of the walking surface to a total height of 800 mm. The second dispute is whether the as-installed guard, having pickets with horizontal cross members at approximately 787 mm above the walking surface, provides sufficiency of compliance with Article 9.8.8.5. at the same residence.

Sentence 9.8.8.5.(1) stipulates that required guards, which serve buildings of residential occupancy, must be designed in such a way so as not to facilitate climbing between 100 mm (4 in) and 900 mm (2 ft 11 in) above the floor or walking surface of the area the guard is protecting. This requirement provides for a non-climbable zone of 800 mm (2 ft 7 in). The 800 mm protected region, beginning 100 mm above the walking surface, is intended to limit the likelihood that a picket, or decorative element, would produce a ladder effect, which could lead to a child climbing over the guard system. As noted above, the horizontal cross members, located 787 mm above the walking surface of the floor area, are within the non-climbable zone required by Sentence 9.8.8.5.(1) of the Code.

The Appendix to Article 9.8.8.5. (A-9.8.8.5.), while not an official part of the Code, offers a rationale as to the intent of this Code provision, because it outlines why guards must be designed to prevent climbing. It states that the risk of falling over a guard is especially prevalent for young children, who may use decorative elements as foot and handholds. This risk is especially prevalent in guards that are constructed with horizontal or near horizontal members between pickets, as a ladder effect may be achieved, thereby becoming very tempting for a young child to climb. This could, in turn, result in accidental falls from one level to another. A-9.8.8.5. stipulates that the requirements are stringent for guards in all buildings except industrial occupancies, where children are unlikely to be present unless

under strict supervision. It should be noted that Article 9.8.8.5. is not intended to entirely eliminate the possibility of climbing. Instead, it is intended to reduce the likelihood and temptation of scaling a guard by young children.

4. Provisions of the Ontario Building Code

9.8.8.5. Design to Prevent Climbing
(See Appendix A.)

(1) *Guards* required by Article 9.8.8.1. and serving *buildings* of *residential occupancy* shall be designed so that no member, attachment or opening located between 100 mm (4 in) and 900 mm (2 ft 11 in) above the floor or walking surface protected by the *guard* will facilitate climbing.

5. Applicant's Position

The Agent for the Applicant began by providing the Commission with a sample of the guard in dispute. He maintained that the installation of the guard proceeded without prior discussion with the Respondent party in regards to its shape and design. The Agent cited that it is the opinion of the manufacturer of the guards that its design poses no problem, despite the fact that the Respondent party maintains the opposite opinion.

The Agent added that the issue at dispute pertains to the horizontal elements located 787 mm above the walking surface, and not the ornamental protrusion present at approximately the mid-point of every vertical picket. He stated that a previous ruling made by the Commission dealt with the ornamental protrusions and the Respondent party concurred with this statement.

The Agent added that the entire guard in dispute measures to a height of 921 mm (measuring from the floor to the top of handrail), which is 21 mm higher than required. The Agent submitted that it is his belief that the semi-circular/crescent member, which is attached to, and located immediately above, the horizontal member is the only portion of the guard system that a child can gain a foot or handhold. The lower portion of this semi-circular/crescent member is located 787 mm above the floor of the walking surface.

The Agent then went on to question whether the 800 mm non-climbable zone, required by Sentence 9.8.8.5.(1) of the Code, needs to be measured from 100 mm above the walking surface of the floor area to a height of 900 mm, or whether it can be measured directly from the walking surface of the floor area to a height of 800 mm. The Agent argued that the integrity of the 800 mm non-climbable zone is still maintained if measured from the walking surface of the floor area and that it has only been shifted slightly downward in this particular instance. In this regard, if the non-climbable zone is measured directly from the floor of the walking surface, then the distance from the lower point of the semi-circular/crescent element to the floor of the walking surface, which measures 787 mm, is only 13 mm shy of the 800 mm non-climbable zone outlined in Sentence 9.8.8.5.(1) of the Code. The Agent then asked the Commission whether they would consider the notion of a "sliding" non-climbable zone and, if so, whether the 13 mm variance, provided sufficiency of compliance with the intent of Sentence 9.8.8.5.(1) of the Code.

In summary, the Agent for the Applicant submitted that it is both his opinion, and the opinion of the manufacturer, that the guard system in question poses no design problems with respect to the issue of child climbing.

6. Respondent's Position

The Designate for the Respondent submitted that it is his belief that the climbing protection zone should be measured to the upper portion of the horizontal cross member and not to the lower portion of the semi-circular/crescent element, which is attached to, and featured immediately above, the horizontal cross member. The Designate added that it is his opinion that the horizontal cross member produces a visual effect that is somewhat similar to a ladder, which may entice child climbing. The Designate added that the horizontal cross member, which measures to a height of 775 mm from the floor of the walking surface, is clearly within the 100 mm to 900 mm zone outlined in Sentence 9.8.8.5.(1) of the Code.

The Designate continued by stating that the Code does not address a "sliding" non-climbable zone and therefore disagrees with the Agent's assertion of measuring the zone directly from the walking surface of the floor area to a height of 800 mm. Furthermore, he added that regardless of whether the climbing protection zone is measured from 100 mm above the walking surface to a height of 900 mm, or directly from the floor of the walking surface to a height of 800 mm, the horizontal cross member and its semi-circular/crescent attachment still falls within the vertical zone applicable to guard design that is intended to protect against climbing and, therefore, does not comply with the OBC.

In summary, the Designate argued that the horizontal members could provide a graspable ledge, which may assist a child in pulling him or herself over the guard. In his opinion, the as-installed guard system is not in compliance with the Code, because it could facilitate child climbing.

7. Commission Ruling

It is the decision of the Building Code Commission that the 800 mm non-climbable zone (as measured perpendicularly above the walking surface) required for guards in Article 9.8.8.5. of the Ontario Building Code may, in the subject case of the as-installed guard at 99 Fitzwilliam Boulevard, London, Ontario, be measured directly from the level of the walking surface to a total height of 800 mm.

It is also the decision of the Building Code Commission that the as-installed guard, containing pickets with horizontal cross members located 787 mm above the walking surface, provides sufficiency of compliance with Article 9.8.8.5. of the Ontario Building Code at 99 Fitzwilliam Boulevard, London, Ontario.

8. Reasons

i) Article 9.8.8.5. prescribes a vertical zone applicable to guard design that is intended to protect against climbing. The Article indicates that this zone is to be between 100 mm and 900 mm above the walking surface. In the Commission's view, the prescribed zone of non-climbability does not need to be fixed at 100 to 900 mm and may be moved slightly upwards or downwards as long as the intent of the provision is maintained, i.e., the integrity of the 800 mm zone of non-climbability is not compromised.

ii) The existing guard provides a vertical clearance from the floor to the upperside of the lowest point of the semi-circular elements of 787 mm, which is only 13 mm less than the 800 mm requirement discussed above.

iii) The vertical guard is 921 mm in height which exceeds the minimum height requirement of 900

mm by 21 mm and provides compensation for the above 13 mm compliance discrepancy.

iv) The BCC holds that the existing, as-built design does not entice children to climb the subject guard, nor is it, we believe, easy for young children to climb over.

Ontario

BUILDING CODE COMMISSION

IN THE MATTER OF Subsection 24(1) of the *Building Code Act*, S.O. 1992, c. 23, as amended.

AND IN THE MATTER OF Article 9.16.4.4. of Regulation 403, as amended by O. Reg. 22/98, 102/98, 122/98, 152/99, 278/99, 593/99, 597/99, 205/00 and 283/01 (the "Ontario Building Code").

AND IN THE MATTER OF an application by Robert Muzick, Tri-Valley Development Corporation, for the resolution of a dispute with Mani Navabi, Chief Building Official, City of Vaughan, to determine whether the as-constructed basement concrete floor slab which varies in thickness from 64 mm to 89 mm provides sufficiency of compliance with Article 9.16.4.4. of the Ontario Building Code at 49 Pinemeadow Drive, Vaughan, Ontario.

APPLICANT	Robert Muzick Tri-Valley Development Corporation Weston, Ontario
RESPONDENT	Mani Navabi Chief Building Official City of Vaughan
PANEL	Len King, Vice-Chair John Guthrie Donald Pratt
PLACE	Toronto, Ontario
DATE OF HEARING	November 21, 2002
DATE OF RULING	February 21, 2003
APPEARANCES	Allan Larden Larden Muniak Consulting Inc. Toronto, Ontario **Agent for the Applicant** Mani Navabi Chief Building Official City of Vaughan **The Respondent**

RULING

1. The Applicant

Robert Muzick, Tri-Valley Development Corporation, has received an order to comply under the *Building Code Act*, S.O. 1992, c. 23, as amended, to remedy certain alleged deficiencies at 49 Pinemeadow Drive, Vaughan, Ontario.

2. Description of Construction

The Applicant has constructed a 185.80 m^2 (2,000 ft^2) single detached dwelling. The dwelling is one storey in building height and comprised of combustible construction.

The construction in dispute involves the poured concrete basement floor slab. In this regard, core samples obtained from the concrete slab measure from 64 mm to 89 mm in length. The compressive strength of the concrete as determined by testing of the core samples, ranges from 36.5 Mpa to 38.1 Mpa.

An order to comply has been issued by the municipality as the Code standard in respect to concrete slabs requires a minimum thickness of 75 mm in this instance.

3. Dispute

The issue at dispute between the Applicant and Respondent is whether the as-constructed concrete basement floor slab which varies in thickness from 64 mm to 89 mm provides sufficiency of compliance with Article 9.16.4.4. of the Ontario Building Code (OBC).

This Article stipulates that concrete slabs shall not be less than 75 mm thick, exclusive of concrete topping. The subject concrete slab, as noted above measures from 64 mm to 89 mm in thickness, thereby surpassing Code requirements in some areas while proving to be deficient in thickness in others. That being the case, the Applicant notes that the compressive strength of the concrete exceeds the OBC requirement of 25 Mpa. This fact is offered as compensation for the minimal reduction in thickness below the 75 mm requirement.

4. Provisions of the Ontario Building Code

Article 9.16.4.4. Thickness

(1) Concrete slabs shall be not less than 75 mm (3 in) thick exclusive of concrete topping.

5. Applicant's Position

The Agent for the Applicant advised that a situation had occurred whereby new homeowners were being approached by an independent third party and advised that their basement floor slabs may not meet the prescribed thickness requirements of the Code. The suggestion made by this third party to the homeowners, he explained, is that, if this proved to be the case, they may be able to extract some compensation from the builder. How this worked was, following discussions with the homeowner of

the subject dwelling, the third party individual would obtain core samples from the concrete slab, some of which were found to be less than the 75 mm requirement while others exceeded the minimum standard. This fact was then brought to the attention of City officials who subsequently issued an order to comply to the homebuilder, i.e. the Applicant in this dispute.
